The dollars-and-cents impact can't be pinned down now for another reason—the Russians might end up buying more grain than originally anticipated because of bad harvests in the Soviet Union and throughout Eastern Europe. When the deal was announced July 8, the $750 million was supposed to be spent largely on corn and other grains to feed Russian livestock. So far, though, the Soviets have been concentrating on buying wheat. If other grains are purchased in amounts predicted a month ago, trade sources say the three-year deal could total $1 billion.

The Russians aren't saying what their plans are, and the U.S. exporters with whom they are doing business are even more secretive. Since July 8, $127 million of wheat for export to Russia has been registered with the government's Export Marketing Service, a procedure necessary to qualify for some of the $500 million credit that the U.S. is extending Russia. That $127 million will buy about 82 million bushels.

However, sources in the grain trade say that much more wheat has been bought by Russia for cash; most of this wheat is the hard red winter type used mainly for breadmaking. Some sources figure that Russia could buy 350 million to 400 million bushels of U.S. wheat this year alone.

PUSHING PRICES UP

Such bullish reports have spurred one of the sharpest climbs in wheat prices on record. Ordinary hard red winter wheat hit a peak last week in Kansas City of $1.86 a bushel, the highest in five years and up 35 cents from the day before the Russian deal was announced. Wheat-futures trading on the Kansas City Board of Trade is setting records, and during a recent three-day period a speculator could have turned a $1,000 profit on a $500 investment on a single futures contract for 5,000 bushels.

Since Aug. 1, the New York wholesale price of 100-pound sacks of flour has increased to $7.44 from $6.57. The big baking companies, which normally are in the market at this time of year contracting for about a six months' supply, have been buying enough to keep operating on a day-to-day basis.

"It looks as if we missed the bus this year," sighs one Southwestern baker, who figures he could have saved 60 cents to 90 cents on each 100 pounds if he'd bought his supplies three weeks ago. "Our only hope is that the bottom will fall out of the wheat market, but I don't think it will."

Bread, cookie and cracker bakers say they'll be forced to raise prices sometime this fall unless the wheat and flour prices lose some of their gains. R. H. Uhlmann, president of Standard Milling Co., Kansas City, says flour costs constitute 15% of the retail price of bread, roughly six cents for a one-pound loaf. The increase in flour prices so far would justify a one-cent boost in the retail bread price, some bakers continued.

SUBSIDY PAYMENTS MOUNT

Rising wheat prices are taking their toll on Uncle Sam's pursestrings, too. A month ago, the wheat prices here and throughout the rest of the world were so close that the U.S. government had to subsidize exports from Gulf of Mexico ports by only two cents a bushel. Now, mostly because of the Russian purchases, the Gulf port subsidy has swelled to 36 cents a bushel.

One day in mid-July, when the subsidy had risen to about 15 cents, a record 77 million bushels of wheat were registered for export and covered by subsidies totaling $11.5 million. Since the Russian grain deal was announced, export subsidies have been granted for some 200 million bushels of wheat (not all of it for Russia).

On the other hand, the government might save as much as $100 million on wheat subsidy payments to farmers because of the rise in the market price. The subsidy program for U.S. wheat farmers is very complex, but basically as the market rises the subsidies decline. The government previously estimated its subsidies to wheat farmers this year would be $890 million.

Millers and bakers contend the subsidy to exporters is helping push wheat prices higher than they should be, and they are asking the government to lower that subsidy or suspend it. The Agriculture Department can do this, but hasn't given any indication that it will.

Wheat buyers also are unhappy that the government isn't unloading enough of its wheat stocks—which now amount to some 300 million bushels from surplus production in recent years—in an effort to stem the wheat price spiral. Market prices have risen far above the trigger level at which the government can sell the grain it acquired from farmers as part of its price-support program, but the government has chosen to sell at the higher market price instead of the "trigger" price. In the past two weeks, the government has sold more than 50 million bushels of wheat.

THE BRIGHTER SIDE

Enthusiasts of the Russian grain deal say the benefits to the economy will more than offset these unforeseen or at least unmentioned costs to the public.

"It's going to start right at the farm, where the little guys with maybe 5,000 bushels to sell are getting the best price in years," says a vice president of a grains export firm. "He and his family are going to use that extra money not only for a new tractor or something but also to get a new refrigerator or new car. Those Russian rubles are going to ripple through our whole economy."

The government figures that every million tons of grain exported creates 3,000 to 5,000 jobs in the U.S. Among the first to benefit are the grain handling and transportation industries, which are directly involved in gathering the wheat and other grains from across the country and moving it to the ports, mainly on the Gulf of Mexico.

Only the Western "granger" railroads will cash in on the export business; the profit-pinched Eastern roads won't get any of the business. Fortunately, there won't be a harvest-season boxcar shortage this year for the first time in many years, railroad officials say. They explain they are keeping better track of their boxcars and hopper cars with the aid of computers, and shippers are being encouraged with lower rates to load and unload faster.

BOON FOR BARGES

Barge lines' business is booming, too. Traffic down the Mississippi River to New Orleans is running 15% to 25% ahead of a year ago for five major barge operators, says John Creedy, president of the Water Transport Association. August and September are usually dull months on the river, he says, but the grain exporting firms "are booking all the barges they can find."

Even some truckers are getting grain business because shipping deadlines in some cases won't allow a leisurely barge trip or even a day's wait for a freight train. Truckers moving Russia-bound grain from the upper Midwest to Great Lakes ports recently got premiums of 10 cents a hundred pounds to make speedy delivery.

Because of the Russian orders, the total U.S. wheat exports to all customers in the year ending next June 30 could be a record one billion bushels. If so, and if domestic use is 805 million bushels as predicted, surplus U.S. wheat stocks held by this government and others on June 30, 1973, could be cut by a whopping 200 million bushels to about 620 million bushels, the smallest surfeit in several years.

As a result, there is speculation that the government may have to revise its 1973 farm program for wheat, announced late last month. The program aims at reducing wheat acreage next year and further cutting the surplus stocks by another 100 million bushels.

However, Washington sources say the Agriculture Department is unlikely to change gears now and encourage increased wheat plantings. "The farm planners think all the Russian wheat-buying is a one-shot deal," says one observer. "And if it isn't, the market price will stay up and farmers will plant more wheat anyway, farm program or no."

OUR WITHDRAWAL FROM VIETNAM

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Mr. WYMAN. Mr. Speaker, in recent days there have been many thoughtless and self-serving criticisms of the President's various initiatives to end our involvement in the war in Indochina. The central theme of all this talk from those who wish to be President is that any other administration could disengage from Vietnam in an easy fashion without any trouble whatsoever. This is just not the case. Our withdrawal from Vietnam is proceeding in as expeditious a fashion as possible. A precipitous withdrawal, as some who should know better have suggested, would lead to a catastrophe in South Vietnam and cheapen the word of the United States in its relations with other countries around the world.

The lead editorial in August 14 Washington Star-News dealt with this matter in a timely and perceptive way and I believe its message should be made available to all who read the RECORD.

MASSACRE IN BINHDINH

It is a fervently held article of liberal faith that if the United States will just get out of Indochina, all will be sweetness and light among the Vietnamese people, North and South, Communist and non-Communist. Those who chant this doxology ignore the execution of thousands of Vietnamese and flight of tens of thousands more when the Communists took over in the North in 1954. They ignore the mass graves containing the bodies of more than 2,600 South Vietnamese civilians murdered at Hue during the 1968 Tet offensive. So they should have no difficulty whatsoever in glossing over the less numerous casualties of the more calculated reign of terror which has taken place at Binhdinh province on the central coast of South Vietnam the past three months.

Binhdinh fell quickly to the North Vietnamese in early April and it was not until July that Saigon's forces launched a serious effort to retake it. So the Communists had plenty of time. There was no need to hurry, as there was in Hue in 1968, when American and South Vietnamese forces counterattacked within days of the city's fall.

According to intelligence reports and on-the-spot interviews with survivors, the Communists were extremely methodical. They rounded up hamlet and village chiefs, pacification workers, policemen, militiamen, teachers, doctors, nurses, clerical workers, literally anyone who had had any connection with the Saigon government. "People's courts" executed several hundred (perhaps as many as 500) and shipped an estimated 6,000 others off to "people's prisons" in remote areas of the Communist-held Anlao valley. Most of those killed apparently were executed by rifle fire but others were buried alive, beheaded or hacked to pieces.

None of this represents any new departure in tactics on Hanoi's part. Aside from the general massacres in the North in 1954 and in the South during the 1968 Tet offensive, the murder and kidnaping of South Vietnamese officials has been part and parcel of Communist "liberation" since the war began. In the past four and a half years, nearly 25,000 South Vietnamese civilians and officials have been executed by the North Vietnamese Communists and the Viet Cong.

There have, of course, been atrocities on the Allied side. But anyone who is still prepared to maintain that a Communist takeover in South Vietnam would not lead to a bloodbath of major dimensions is simply ignoring the evidence at hand. A politician like Senator McGovern, who advocates a quick and unilateral American withdrawal from Southeast Asia, need look no farther than the shallow graves of Binhdinh province to see where the policies he advocates would lead those who have placed their trust in the United States.

EXIT FEES RISING FOR SOVIET JEWS

HON. GILBERT GUDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. GUDE. Mr. Speaker, a most disturbing development in the struggle of the Jews of Russia for freedom was brought to light yesterday in Moscow. The Soviet authorities have established a new system of exit fees, ranging from $5,000 to $25,000 for educated Jews who wish to emigrate to Israel. It is quite clear that more Jewish intellectuals and technicians have been applying for exit visas lately. They have traditionally been harassed upon application for permission to emigrate, but this highly punitive measure is an unconscionable step. The new system of graduated fees—the higher the level of education, the more expensive it is to leave the country—cannot be justified. It is a clear attempt to discourage the highly qualified scientists and other intellectuals from applying for visas, if not eliminate the feasibility of their leaving altogether. I urge my colleagues to make note of this as reported in the New York Times, August 17:

SOVIET JEWS SAY EXIT FEE IS RISING FOR THE EDUCATED

(By Hedrick Smith)

MOSCOW, Aug. 15.—Jewish sources reported tonight that Soviet authorities are instituting a new system of heavy exit fees ranging from $5,000 to $25,000 for educated Jews who want to emigrate to Israel.

The sources said they learned of the new measure, replacing the old general fee of about $1,000, while some Jews were applying for exit visas with a branch of the Interior Ministry today. No official confirmation was possible.

The Government explanation, the sources said, was that the fees were necessary repayment to the Government for the costs of state-financed education. A similar reason had long been given for the earlier fee.

Earlier today, 10 Jewish intellectuals charged that the Government was discriminating against educated Jews in handling emigration requests and that harassment and delays had increased in the last two months.

Under present Government policies, the 10 said in a joint statement, there was a danger that highly qualified scientists and educated Jews were in danger of becoming "a new category of human beings—the slaves of the 20th century."

RARE NEWS CONFERENCE HELD

The statement was read at a rare news conference by Benjamin G. Levick, a 55-year-old chemist and scholar, the highest-ranking Soviet academician to apply for an exit visa to Israel. He is a corresponding member of the prestigious Academy of Science and so far the only person associated with the academy to apply for permission to emigrate.

Educated Jews have long encountered more difficulties in emigrating than blue-collar or office workers and tradesmen, and Western diplomats said tensions between Jews and Soviet authorities were evidently rising because more intellectuals had been applying for exit visas lately.

Western diplomats reported that through the first six months of this year about 15,000 Jews had been allowed to emigrate, roughly the same number as in all of 1971.

Some Jews are contending, however, that the flow since midyear has slowed down, reflecting a change in Soviet attitude. So far there has been no official confirmation, nor any confirmation from diplomats who follow such affairs closely.

GRADUATED FEE SYSTEM

A new schedule of fees for educated applicants, if put fully into practice, would be aimed not only at blocking those who have already applied but at deterring others from applying, Jewish sources said.

They reported having been told today that Jews who had graduated from a teachers institute faced fees of 4,500 rubles—$5,400. University graduates were to pay 11,000 rubles—$13,200—and holders of the candidate degree, equivalent to a Ph.D. in America, were to be charged 22,000 rubles—$26,400. Other Jewish sources reported slightly different figures but in the same range.

Even without a graduated fee scale, Dr. Levich and his colleagues contended that educated Jews were being discriminated against. "Jews wishing to leave are being divided according to their educational and intellectual level," they said in their statement. "The higher the level, the more difficult it is to get permission to get a visa."

They asserted that obstacles to intellectuals had been stepped up lately—discharge from work after applying for visas, the threat of prosecution for lack of employment, sudden military call-ups and the danger of trials for those who refused to serve, disconnection of telephones and interference with mail.

These measures, the statement asserted, came at the same time as new pressures against non-Jewish civil rights activists here and trials of liberals in Czechoslovakia.

Professor Levich, who was demoted since his unsuccessful application for an exit visa last March, said that his son, Yevgeny, a 24-year-old astrophysicist, has been ordered to report for two years' military service despite chronic physical disabilities and despite the normal exemption granted to scientists with Ph.D.'s.

Besides the Leviches, those who endorsed the statement were Dr. David S. Azbel, 61, a retired chemistry professor who spent 16 years in Stalinist prison camps; Prof. Aleksandr V. Voronel, 41, a physicist; Prof. Boris G. Moisheson, 34, mathematician; Dr. Vladimir G. Zaylavsky, 43, molecular biologist; Viktor S. Yakhot, 28, solid-state physicist; Dmitri K. Simis, 24, sociologist formerly with the Institute of World Economics and International Relations; Gregory L. Svechinsky, 32, an engineer and teacher, and Viktor B. Nord, 27, a film director whose recent movie, "The Debut," won critical acclaim.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks:

"How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,757 American prisoners of war and their families.

How long?

THE NATIONAL CONGRESS ON THE WORD OF GOD

HON. HUGH L. CAREY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. CAREY of New York. Mr. Speaker, a "National Congress on the Word of God" will be held at the National Shrine of the Immaculate Conception, Washington, D.C., September 5 to 7, inclusive. Hosts for this far reaching effort for a renewal in Gospel preaching are the U.S. Catholic Conference, the National Conference of Catholic Bishops and, in particular, the Archbishop of Washington, Patrick Cardinal O'Boyle, D.D.

People of all faiths are invited, and several Protestant dignataries will participate as leaders in the concurrent conferences on various aspects of bringing the Word of God more fruitfully to all peoples. In these times it is encouraging that our people are giving evidence of a growing desire to study, proclaim, pursue and live what God's Word instructs through the sacred Scriptures.

People of every faith, or of none, and particularly clergymen and young people are urged to take advantage of this end-of-summer opportunity to attend one of the significant religious events of 1972.

I include the editorial from the current July-August issue of the Priest magazine, and the lead article to which it refers, "Faith Comes Through Hearing, National Congress on the Word of God," by Robert M. Donihi, in the Record. Mr. Donihi, an attorney of Upper Marlboro, Md., and former director of the U.S. Catholic Conference Office of Public Information, and Editor Jordan Aumann, O.P., speak for the magazine to recall the clergy to a renewal of Gospel preaching.

The material follows:

PRIMARY PRIESTLY APOSTOLATE

(By Jordan Aumann, O.P.)

It is likely that a large number of priests, especially those ordained many years ago, were puzzled and somewhat shocked to read in the *Decree on the Ministry and Life of Priests* that "priests, as co-workers with their bishops, have as their primary duty the proclamation of the Gospel of God to all" (no. 4) and in Pope Paul's *Ecclesiam Suam* that "preaching is the primary apostolate." Some priests may even have interpreted these statements as an implicit downgrading of the priestly ministry of the sacraments and, in particular, of the ministry of the Eucharist.

Did not the Council of Trent, following the medieval theologians, expressly define the Catholic priesthood in terms of the Eucharist and the Mass? And even Vatican Council II stated that the Eucharist is at once the source and the summit of the Christian life: *a fortiori*, of the priesthood. How does one explain the apparent conflict of emphasis?

In order to clarify and defend the statements on preaching and at the same time to avoid erroneous conclusions and incorrect pastoral applications, a distinction is necessary. The Eucharist enjoys the primacy of excellence and therefore it transcends all other priestly ministries and, indeed, all the other sacraments. But the preaching of the Gospel has primacy in the work of evangelization, in the apostolate of the salvation of souls. Thus, when Christ gave his apostles their mission, his mandate to them was that they should preach the Gospel and baptize those who believe. But, Paul asks: "How shall they believe if they do not have the Gospel preached to them?"

The preaching of the Gospel, therefore, has the primacy in the priestly apostolate—preaching unto faith, faith unto baptism, and baptism unto reception of the Eucharist. The Eucharist is the summit or goal to which evangelization leads; it can then become the source from which the priest fashions and directs the Christian community. It is not, however, the source of unity of faith as some modern ecumenists would have us think. Faith derives from the hearing of the good news of the Gospel as proclaimed by the preacher; then comes baptism, as Christ taught; and then comes the invitation to the table of the Eucharist.

The sad fact is that today, as yesterday, there are still far too many priests who do not preach the Gospel. Even some who preach, are not preaching the Gospel. Some of them are the most vocal in attacking what they call the Trindentine concept of a cultic priest, but what they opt for is not a preacher of the Gospel; they seem to want the contemporary priest to be a composite of social worker, militant demonstrator against society's evils, and charismatic leader. Now, there have been priests—and even saints—in the Church who were one or all of these things, but they always acted within the context of Gospel teaching and with an uncanny ability to discern the spirit by which they were led.

Here we are touching on a nerve in the crisis of priestly ministry. We should bless the day that priests began to speak out and to act against the moral evils of modern society. We should emulate those dedicated priests who are sincerely trying to adapt their preaching of the Gospel to topics and problems that preoccupy the minds and hearts of their parishoners. But there is such a thin line between preaching the Gospel in this way and letting oneself be so overwhelmed by the difficulties and evils of modern society that one's preaching becomes pulpit-thumping harangue that does nothing but reveal the frustration and anger of the preacher. Most of our people know the problems as well or better than we do, and perhaps there are some who could come forth with better possible solutions. But what they want to hear from the preacher of the Gospel is an application of Christ's teaching both to their own lives and the life of society at large. They may be willing to listen to a priest's views on social problems in a discussion group or social gathering; they may listen attentively to a priest's philosophical or theological opinions; but when that priest is in the pulpit as proclaimer of the Gospel, they expect to hear him speak not in his own name, but in the name of Christ and the Church.

It is practically overwhelming to think of the conversion and renewal that would occur if all our priests throughout the United States would commit themselves unswervingly to preach the Gospel faithfully at all the Sunday Masses. And if you tend to doubt this, then just remember what the Twelve accomplished by preaching the Good News until repentance and conversion.

NATIONAL CONGRESS ON THE WORD OF GOD

(By Robert M. Donihi)

"Everyone who calls on the name of the Lord will be saved." But how shall they call on him in whom they have not believed? And how can they believe unless they have heard of him? And how can they hear unless there is someone to preach? And how can men preach unless they are sent? Scripture says, "How beautiful are the feet of those who announce good news!" But not all have believed the gospel. Isaiah asks. "Lord, who has believed what he has heard from us?" Faith, then, comes through hearing, and what is heard is the word of Christ. (Rom. 10:13–17; inspiration for the National Congress).

When was the last time you preached a sermon that changed your life? Or when was the last time you preached a sermon that changed the lives of others?

The National Congress on the Word of God believes the lives of both of us—you as a priest and myself as a layman—should be changed for the better by your sermons.

The Puritans are credited with the saying: "Brown bread and the Gospel is good fare" (Matthew Henry, 1662–1714). To me, a former Southern Baptist, that saying still has the ring of "Gospel-truth." Simply speaking, the Baptists believe that there is something about the truth—in this case the word of God—which rings true to those who seek truth. God spoke, man recorded, but (and here's the rub) too many men misinterpreted. The result: chaos.

For Protestant and Catholic alike, the current crisis of faith was predictable, considering the nature of man himself. Each of us is tempted to prefer his own personal theology, all of which makes for a great many conflicting opinions in every pew.

But now, thanks be to God, a renewal in Gospel preaching approaches. All "who profess belief in Jesus Christ" are summoned to bear united witness to the power of the word of God against the crisis of faith at the National Congress on the Word of God, September 5 to 7 at the National Shrine of the Immaculate Conception in Washington under the sponsorship of the Catholic University of America. One strongly feels that it will be one of those occasional moments in human history when the People of God resolutely and joyfully turn their faces away from the darkness toward the light.

The National Congress on the Word of God is peculiarly the province of pastors and all priests. It is the direct outgrowth of the Institute for Pastoral Communication and Liturgical Celebration, established at Catholic University in 1970 as a year-round operation aimed at making each sermon of the preacher so significant and each celebration of the liturgy so vivid that they can serve as vehicles for the grace of God to change the lives of those who hear him; to reestablish that tradition of the Church which recognizes preaching as the principal work of the Church and its priests, especially during the celebration of the Eucharist.

Patrick Cardinal O'Boyle, the host bishop and chancellor of Catholic University, states in his invitation to "brother bishops, fellow priests, pastors of souls and all those who profess belief in Jesus Christ" that "the National Congress on the Word of God will give us, the People of God, the opportunity to make a great hope-filled affirmation that God's word begets, strengthens and renews Christian faith when it is proclaimed by enlightened, convinced and holy preachers of his Church."

As a layman, I often listen to the sermons of the clergy, and markedly less often it seems of late, to the words of the Gospel. Sometimes I have been filled with thanksgiving and a quickening of the spirit; and sometimes with dismay. In that, I was clearly not alone.

Pope Paul speaks often, and always with

pain, of the current crisis of faith. Both religious and laymen today often feel themselves uprooted, and even that doughtily—if silently—Protestant publication, The Reader's Digest, has become so exercised by recent trends in religion as to devote major articles in three of its more recent issues to the aberrations and changes from the old-time religion within the World Council of Churches. Meanwhile, seminary professors report that the young clerics seemed to be turned off by theological hair-splitting but turned on by scriptural studies of the word of God.

In its Decree on the Ministry and Life of Priests, Vatican II states: "The People of God finds its unity first of all through the word of the living God, which is quite properly sought from the lips of priests. Since no one can be saved who has not first believed, priests, as coworkers with their bishops, have as their primary duty the proclamation of the Gospel of God to all. In this way they fulfill the Lord's command: 'Go into the whole world and preach the gospel to every creature' (Mark 16:15). Thus they establish and build up the People of God" (n. 4).

In Ecclesiam Suam, Pope Paul writes: "Preaching is the primary apostolate. Our apostolate, Venerable Brothers, is above all the ministry of the word of God. We know this very well, but it seems good to remind ourselves of it now, so as to direct our pastoral activities aright. We must go back to the study, not of human eloquence or human rhetoric, but of the genuine art of the sacred word."

This stress on Scripture has placed new and to some extent unfamiliar demands on the parish priest, whom one priest staff coordinator of the National Congress on the Word of God calls "the ultimate executor of the Church's pastoral directives." And Father John Burke, O.P., who heads the Institute for Pastoral Communication and Liturgical Celebration, says: "Within a few brief years the parish priest has been called upon to preach mainly on Scripture; at the same time it has been simply assumed that he has the intimate familiarity with a wide range of texts necessary to preach effectively."

All priests were exposed to scriptural studies in the seminary, nevertheless it remains difficult to arrive at the meaning of the various passages and to translate the mysteries revealed in them into terms relevant to the lives of modern congregations. Preachers, discouraged with their efforts to master Scripture, sometimes substitute psychological, social, moral and political theories for scriptural truths, merely accommodating biblical quotations to give verbal support to their preconceived ideas—some valid, some not—regarding issues.

This kind of philosophical preaching does not build a community of believers who, in spite of their difficulties, have a basically optimistic outlook because of trust in the loving power of our heavenly Father. On the contrary, passing off theological opinion for revealed truth can be divisive.

Potential results of philosophical preaching, substituted for the divinely inspired liturgical sermon on the word of God, include factionalism within congregations; condemnatory attitudes are mistaken for zeal; people begin to drift away from regular worship, discouraged because they hear nothing from the pulpit they are not already familiar with from books, magazines, newspapers and television. The "relevant" has become irrelevant to their deepest longings for personal meaning and fulfillment.

The liturgical sermon is not an ornament or enhancement. It is intrinisc to the entire divine plan of salvation to men of all ages. It is an integral element in the dynamic manifestation of Christ in salvation history. The liturgical sermon is itself a saving event in that history. It reveals Jesus and makes his sacramental actions show meaning for his worshippers. It enables the People of God to perceive the mystery which the liturgy makes present and it thereby takes its place with Scripture, the Church and the sacraments as part of the unfolding of the plan of God for the salvation of men.

As integral to the liturgy, the liturgical sermon also partakes of its characteristics. It, too, is an exercise of the priestly activity of Christ and is both an act of worship and sanctification of men. Preaching within the liturgy follows from the very nature of the Church as the image of Christ, who both reveals and makes holy, preaches and redeems.

(I apologize for parts of this article which are outside the authoritative competence of a layman and may well sound too dogmatic. The extent to which the sermon has been diverted from Scripture has been somewhat trying to me, to put it mildly. Recently I witnessed the concelebration of the liturgy of the Eucharist for a national Catholic organization composed primarily of priests, religious women and brothers, none of whom voiced protest over the movie and soundtrack disturbances deliberately thrusting audiovisual shock into the congregaton composed of more than a thousand persons. The film and sound were used to accent the homily on the theology of liberation. Though I received the Eucharist at this Mass, I did so with a sad and tired feeling. This may prove nothing but my lack of preparation, but the need for such activity at Mass in lieu of preaching on the word of God has not been explained to me satsfactorily.)

The liturgical sermon is not part of a systematic approach to solving problems of life-situations. It, especially the Eucharistic homily, has as its primary task the expounding of the mystery of Christ as that mystery is revealed in Scripture and celebrated in the liturgy. At the same time, like all instructions of the faithful, it must take into account their age, condition, way of life and standard of religious culture. In other words, the sermon on the word of God must be immediately directed to the audience of the assembly and perfectly adapted to their lives.

The bishops and other priests who have cooperated to make the National Congress a possibility are too numerous to be mentioned individually. Through their efforts, there has been a remarkable response by way of manpower and financial contributions. In no instance has there been a refusal to give help when it has been asked. Credit must be given to the Serran Clubs of the United States for primary financial backing of the Congress.

One of the founders of the Congress, Archbishop Hannan of New Orleans, comments on the phrase "primary duty" in the *Decree on Priestly Life and Ministry:* "There is no qualification about the primacy of this duty. In fact, one can hardly imagine the choice of another phrase when we recall the blunt command of Christ: 'Go into the whole world and preach the gospel to every creature' (Mark 16:15). The simplicity of the command does not mean that the task is simple. We live in an age of competing communication systems. To proclaim effectively the word of God, we need specialization and thorough training.

Above all, we need the inspiration of the Spirit so that the authenticity and power of the word as uttered by us will command acceptance. Our best efforts are required to fill the hunger today for the word of God. Every poll of the People of God attests to this fact. To secure an enthusiastic hearing from any gathering of the People of God, a priest need only say that he believes deeply in improving the quality of his sermons. The response is always immediate and enthusiastic. The Congress on the Word of God is essential at this time and in this country for the advance of the kingdom of God."

In addition to concurrent conferences on a variety of topics related to preaching, the National Congress will also feature the following as homilists at the Eucharistic liturgy or as principal speakers during the day of the Congress; Archbishop Timothy Manning of Los Angeles; Archbishop Fulton J. Sheen; Father Barnabas Ahern, C.P.; Father Eugene Maly of Cincinnati; and Bishop John Quinn of Oklahoma City.

The crisis of faith is not simply an academic problem that can be resolved by enlightened discussion. It is a way of life that has been revealed. It is no longer a world or a Church in which the preacher can assume belief in the revealed Jesus; rather, it is his sacred task to beget that belief through his proclamation of the Gospel to all.

It is the purpose of the National Congress to give members of the hierarchy, leading theologians, Scripture scholars, religious educators and all the people of God an opportunity to come together to witness the power of the Word of God to resolve the crisis of faith. The Congress itself will be an act of celebration in which those participating in the various liturgical ceremonies will proclaim that the preaching of the word is the primary source for priestly formation, liturgical renewal and religious education.

If on a national level a resurgence of interest and enthusiasm can be generated about the preacher's mission in the Church today, an integral step will have been taken toward the revitalization of the Christian community. And for both priests and laymen it will make the Sunday sermon a renewed source of growth for our spiritual life.

The deposit of faith does not lie in a box to be opened or closed. What exists is a living quality of soul. The only place in the Church where the faith lives is in the hearts of believers. The National Congress is an act of faith that God's word has power for all of us.

THE DEATHS OF 24 SOVIET JEWS IN 1952 AND ITS CONTEMPORARY SIGNIFICANCE

HON. PETER A. PEYSER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. PEYSER. Mr. Speaker, 20 years ago, 24 of the most outstanding representatives of Soviet Jewry were executed in the basement of Moscow's notorious Lubianka Prison. They had been found guilty of being, "enemies of the U.S.S.R., agents of American imperialism, bourgeois nationalist Zionists, and rebels who sought by armed rebellion to separate the Crimea from the Soviet Union and to establish their own Jewish bourgeois, nationalist, Zionist republic there." This was the fate of the leaders of the Jewish Anti-Fascist Committee which had been organized in 1942 by the Soviet Government to mobilize Soviet Jewry against the threat of Nazi Germany. Their execution was the culmination of Stalin's 5-year campaign to eradicate "rootless cosmopolitanism" from Soviet society.

On Tuesday, August 15, 1972, a memorial meeting for these martyrs was held on the steps of the Capitol. The purpose of the meeting was not only to remember the slain Jews, but also to focus attention on the plight of Soviet Jews today.

I include the following address, given at the memorial by Dr. Isaac Franck, executive vice president of the Jewish Community Council of Greater Washington:

Soviet Jewry's Bridge 1952–72

Congressman Peyser, Other Members of the Congress, Ladies and Gentlemen: Two decades have passed since Stalin's monstrous act on August 12, 1952, a date which lives in infamy. On that date, in the dark of night, in the subterranean cellars of Moscow's notorious Liubianka prison, the bullets fired by the executioners in the employ of Stalin, extinguished one by one 24 of the leading luminaries in the firmament of Jewish cultural life and artistic creativity in the USSR. Poets, novelists, essayists, actors in the Moscow Yiddish State Theatre, young, middle aged, and old. There beloved medium of expression was the warm, colorful folk-language, the Yiddish language. Their burning desire was to keep alive the flame of the Jewish spirit which Stalin wanted to snuff out, and to contribute to the cultural and artistic creativity of the masses of Jews who had survived the Nazi Holocaust. This was their crime; for this were these 24 gentle giants of the spirit felled by the bullets of the Soviet tyrant.

The epic poet, Peretz Markish; the sensitive novelist, David Bergelson; the distinguished actor, Binyamin Zuskin; the gentle lyricist, David Hofshteyn; the benign writer of poems and stories for children, Leib Kvitko; the proud and powerful poet, Itzik Feffer; Shmuel Persov, Itsik Nusinov, Solomon Lozovsky, Eliahu Spivak, and on and on this catalogue of diabolic death continues. For, the 24 who were murdered on that night in August of 1952 were not the only victims. They were only a part of the Jewish aristocracy of the intellect whom Stalin liquidated. One historian estimates that a total of 431 outstanding Soviet Jewish arists and writers were arrested and exiled to Siberian labor camps during this period: 217 Yiddish writers and poets, 108 Yiddish actors, 87 painters and sculptors, and 19 musicians. Most of them perished in the Soviet labor camps. The first victim in this exalted assembly was Shlomo Mikhoels the great actor of the Yiddish stage, who was brutally beaten to death and then run over by a truck in Minsk, on January 13, 1948; and parts of Peretz Markish's courageous poem on Mikhoels' death will be read later in our program today.

Two decades have passed since the executions of August 12, 1952. But we here mourn and cry out against the death not only of 24, or of 431 precious persons whose lives were brutally taken because they were exponents of Jewish culture. We mourn here today, and protest against, the brutal annihilation of Jewish culture itself in the Soviet Union, by Stalin and his successors.

For across this span of years, across this bridge of years, we have witnessed a forced march of death of the culture of a people. Across this bridge of years, from Stalin's first days to this very day, driven by the whips of the Soviet Secret Police; by the terror of arrests, phony trials and imprisonment; by the whipped up hysteria in the Soviet press; by government approved anti-semitic books like Kichko's notorious "Judaism without embellishment"; by official threats and intimidations—driven, I say, by these diabolically calculated methods—a forced march to death has taken place.

Across this bridge of time the Soviet regime has driven to death and annihilation all but the remaining miserable 58 Synagogues in the USSR; all Jewish schools—in Yiddish, Hebrew, or Russian; all Jewish newspapers; all Jewish libraries; all Jewish publications except for a small monthly; all Jewish theatres; all Jewish community institutions; all production of Jewish ritual objects; all printing of the Hebrew Bible; all printing of the Hebrew Prayer Book (except for 10,000 in 1968). No other religious or nationality group in the Soviet Union has been subjected to this systematic cultural destruction. So far as one could discern, this Soviet policy and practice left three million Soviet Jews spiritually and culturally desolate; bereft of poets, writers, teachers, leaders, artists, Rabbis;—three million Jews silenced after nearly four decades without any Jewish education, victims of enforced assimilation, and on their way to oblivion as a people.

This was Stalin's plan, and his successors continued its execution. No de-Stalinization in Soviet Jewish policy followed Stalin's death. It appeared that the forced march of death for Soviet Jewry was irreversible, and that in this Stalin would succeed even after his death.

But they were mistaken. They did not count on the deathless, indomitable Jewish spirit that continued glowing under the surface, and erupted into a flame of freedom in the past three years. Secretly, at serious peril to their safety, Jews continued to study Hebrew and Yiddish; to circulate secretly reprinted Jewish books; to listen to broadcasts about Jewish life in the freedom of Israel and the United States; and to nurture the hope of liberation that would enable them to join their fellow Jews in the Holy Land.

And then it all broke out into the open. We here protested, and Soviet Jews acted publicly. They began to demand their right to emigrate to Israel where they could live freely as Jews. They applied for exit permits. Thy sat in in the offices of Soviet totalitarian officialdom. They wrote letters and manifestos of freedom and sent them out to the free world. The Soviet regime responded in a cruel but puzzled fashion. They tried to suppress this Jewish Liberation movement. In 1970 they began a series of phony trials of activist leaders among the Jews seeking liberation, and over 40 of them are languishing in Soviet prisons today. Vladimir Markma of Sverdlovsk, who was sentenced to 3 years in prison on trumped up charges only last week, is the latest among these victims whose sole crime is their desire to emigrate to Israel.

But this freedom movement of the Soviet Jews cannot be stifled. In spite of terror and intimidation, close to 100,000 Soviet Jews have applied for exit permits, at great peril to themselves and their families. The Soviet government has had to relax its closed door policy and permits a limited number of Jews to leave for Israel, in response to Soviet Jewish activism, and in response to our protests. And so, the march across the bridge of time has not turned out to be what Stalin wanted, namely, an irreversible march of death. The direction of this march *has* been reversed. And across this bridge of years there has appeared a new march, a march of renaissance, of revival; a reaffirmation by Soviet Jews of their Jewishness, and an increasingly clamoring insistence before the conscience of the world that they want to live as Jews, and that toward this end they want the right to emigrate to Israel, a right guaranteed by civilized law and international covenents.

Their struggle goes on. More and more are joining the march back to Jewish existence, even though the penalties imposed upon them by the Soviet regime are grave and often unendurable, from prison sentences, to continuous harassment, to loss of jobs and a life near destitution. This is what the widow and son of the poet Peretz Markish are enduring now, and the Soviets will not let them go.

We here, today, meeting in the sacred memory of Peretz Markish and the others who were executed in the Lubianka prison on August 12, 1952, we will continue to protest, to appeal to the conscience of the world, and we will continue to demand of the Soviet Union: free the prisoners, remove the obstacles, stop the terror and punishments, let Soviet Jews go to their freedom, and we will do this until every Soviet Jew who wishes to do so, is free to be reunited with his fellow Jews, to live freely, as a free member of the Jewish people.

SENATE—*Friday, August 18, 1972*

The Senate met at 10 a.m. and was called to order by Hon. JOHN V. TUNNEY, a Senator from the State of California.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O God of this day and of all history, come to us in this quiet of the morning hour with a fresh awareness of Thy presence. Guide us through the duties of this day with joyous hearts and confident spirits. Be ever amongst us as the unseen reality to guide, strengthen, and uplift all who serve in this place. Be with us when we separate. Give journeying mercies to all who travel. Out of the coming contests forge a new and better nation where the things that are unseen and eternal transcend the things which are seen and temporal. Lead us in paths of righteousness for Thy name's sake and bring us at last to the haven of Thy peace.

We pray in that name which is above every name. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., August 18, 1972.

To the Senate:

Being temporarily absent from the Senate on official duties, I appoint Hon. JOHN V. TUNNEY, a Senator from the State of California, to perform the duties of the Chair during my absence.

JAMES O. EASTLAND,
President pro tempore.

Mr. TUNNEY thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Thursday, August 17, 1972, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider nominations on the Executive Calendar.

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The nominations on the Executive Calendar will be stated.

DISTRICT OF COLUMBIA COURT OF APPEALS

The second assistant legislative clerk read the nomination of Stanley S. Harris, of Maryland, to be Associate Judge of the District of Columbia Court of Appeals.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

SUPERIOR COURT OF THE DISTRICT OF COLUMBIA

The second assistant legislative clerk read the nomination of H. Carl Moultrie, of the District of Columbia, to be an Associate Judge, Superior Court of the District of Columbia.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the calendar, beginning with Calendar No. 1001.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MARY DANOS NAYAK

The bill (S. 2816) for the relief of Mary Danos Nayak, was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

> *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That, for the purposes of section 301(a)(7) of the Immigration and Nationality Act, Mary Danos Nayak shall be held and considered to have been physically present in the United States prior to May 10, 1971, for a period of ten years, five of which were after attaining the age of fourteen years.

REYNALDO CANLAS BAECHER

The bill (S. 3835) for the relief of Reynaldo Canlas Baecher, was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

> *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That, for the purposes of section 203(a)(1) and 204 of the Immigration and Nationality Act, Reynaldo Canlas Baecher shall be held and considered to be the natural-born alien son of Donald Leslie Baecher, a citizen of the United States. The natural parent, brother, or sister of the said Reynaldo Canlas Baecher, by virtue of such relationship, shall not be accorded any right, privilege, or status under the Immigration and Nationality Act.

ANTONIO BENAVIDES

The bill (H.R. 2394) for the relief of Antonio Benavides, was considered, ordered to a third reading, read the third time, and passed.

MRS. CONCEPCION GARCIA BALAURO

The bill (H.R. 2703) for the relief of Mrs. Concepcion Garcia Balauro, was considered, ordered to a third reading, read the third time, and passed.

MARIA ROSA MARTINS

The bill (H.R. 5158) for the relief of Maria Rosa Martins, was considered, ordered to a third reading, read the third time, and passed.

AMENDMENT OF UNITED STATES CODE WITH RESPECT TO FINALITY OF SETTLEMENTS

The bill (H.R. 5814) to amend section 2735 of title 10, United States Code, to provide for the finality of settlement effected under sections 2733, 2734, 2734a, 2734b, or 2737, was considered, ordered to a third reading, read the third time, and passed.

KYONG OK GOODWIN (NEE WON)

The bill (H.R. 9256) for the relief of Kyong Ok Goodwin (nee Won) was considered, ordered to a third reading, read the third time, and passed.

WILMA BUSTO KOCH

The bill (H.R. 10713) for the relief of Wilma Busto Koch was considered, ordered to a third reading, read the third time, and passed.

GERALD VINCENT BULL

The Senate proceeded to consider the bill (S. 3583) for the relief of Gerald Vincent Bull which had been reported from the Committee on the Judiciary with an amendment to strike out all after the enacting clause and insert:

> That, for the purpose of the Immigration and Nationality Act, the periods of time Gerald Vincent Bull has resided in the United States shall be held and considered to meet the residence and physical presence requirements of section 316 of the said act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

NAOYO CAMPBELL

The Senate proceeded to consider the bill (S. 173) for the relief of Naoyo Campbell which had been reported from the Committee on the Judiciary with an amendment strike out all after the enacting clause and insert:

> That, in the administration of the Immigration and Nationality Act, Mrs. Naoyo Campbell, the widow of a citizen of the United States, shall be held and considered to be within the purview of section 201(b) of that Act and the provisions of section 204 of such Act shall not be applicable in this case.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended, so as to read: "A bill for the relief of Mrs. Naoyo Campbell."

RENATO M. DIOQUINO

The Senate proceeded to consider the bill (S. 3252) for the relief of Renato M. Dioquino which had been reported from the Committee on the Judiciary with amendments on page 1, line 6, after the word "of", where it appears the first time, strike out "the date of the enactment of this Act" and insert "January 6, 1965,"; and, on page 2, after line 4, insert a new section, as follows:

> SEC. 2. The periods of time Renato M. Dioquino has resided in the United States since January 6, 1965, shall be held and considered to meet the residence and physical presence requirements of section 316 of the said Act.

So as to make the bill read:

> *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That, for the purposes of the Immigration and Nationality Act, Renato M. Dioquino shall be held and considered to have been lawfully admitted to the United States for permanent residence as of January 6, 1965, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to reduce by one number, during the current fiscal year or the fiscal year next following, the total number of immigrant visas and conditional entries which are available to natives of the country of the alien's birth under paragraphs (1) through (8) of section 203(a) of the Immigration and Nationality Act.
>
> SEC. 2. The periods of time Renato M. Dioquino has resided in the United States since January 6, 1965, shall be held and considered to meet the residence and physical presence requirements of section 316 of the said Act.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

PUBLIC HEALTH SERVICE ACT AMENDMENTS

The Senate proceeded to consider the bill (S. 3858) to amend the Public Health

Service Act to improve the program of medical assistance to areas with health manpower shortages, and for other purposes which had been reported from the Committee on Labor and Public Welfare with an amendment to strike out all after the enacting clause and insert:

That this Act may be cited as the "Emergency Health Personnel Act Amendments of 1972".

SEC. 2. (a) Section 329(a) of the Public Health Service Act is amended to read as follows:

"SEC. 329. (a) There is established, within the Service, the National Health Service Corps (hereinafter in this section referred to as the 'Corps') which shall consist of those officers of the Regular and Reserve Corps of the Service and such other personnel as the Secretary may designate and which shall be utilized by the Secretary to improve the delivery of health care and services to persons residing in areas which have critical health manpower shortages."

(b) Section 329(b) of such Act is amended to read as follows:

"(b)(1) The Secretary shall (A) designate those areas which he determines have critical health manpower shortages, (B) conduct information programs in such areas as may be necessary to inform the public and private health entities serving those areas of the benefits available under this Act and to encourage their application for such benefits, and (C) assist such entities to apply for the assignment of Corps personnel and other benefits authorized under this Act.

"(2)(A) Upon request of a State or local health agency, or any public or nonprofit private health entity in an area designated by the Secretary under paragraph (1)(A), and upon certification to the Secretary by the State and the district medical societies (or dental societies, or other appropriate health societies as the case may be) for that area, and by the local government for that area, that such health personnel are needed for that area, the Secretary may assign personnel of the Corps to provide, under regulations prescribed by the Secretary, health care and services for all persons residing in such areas except that where all of the foregoing conditions are met in an area, except certification of need by the State and local medical, dental, or other health societies, and the Secretary finds from all the facts presented that such certification has clearly been arbitrarily and capriciously withheld, then the Secretary may, after consultation with the appropriate medical, dental, or other health societies, assign such personnel to that area. Corps personnel shall be assigned to such area on the basis of the extent of the need for health services within the area and without regard to the ability of the residents of the area to pay for health services.

"(B) In providing health care and services under this section, Corps personnel shall utilize the facilities and organizational forms adapted to the particular needs of the area and shall make services equally available to all persons in such area regardless of the ability of such person to pay for the care and services provided in connection with—

"(i) direct health care programs carried out by the Service;

"(ii) any direct health care programs carried out in whole or in part with Federal financial assistance; or

"(iii) any other health care activity which is in furtherance of the purposes of this section.

"(C) Any person who receives health care or services provided under this section shall be charged for such care or service at a rate and in a manner (including prepayment, capitation, incentive reimbursement, fee-for-service, or other basis) established by the Secretary, pursuant to regulations, to recover the reasonable cost of providing such care or service; except that if such person is determined under regulations of the Secretary to be unable to pay such charge the Secretary shall provide for the furnishing of such care or service at a reduced rate or without charge. If a Federal agency, an agency of a State or local government, or other third party would be responsible for all or part of the cost of the care or service provided under this section if such care or service had not been provided under this section, the Secretary shall collect on a capitation, prepayment, incentive reimbursement, fee-for-service, or other basis from such agency or third party the portion of such cost for which it would be so responsible. Any funds collected by the Secretary under this subparagraph shall be deposited in the Treasury as miscellaneous receipts and funds allocated or obligated under this section shall not be dependent on or related to such fees collected in any way.

"(D) Notwithstanding the provisions of the Federal Property and Administrative Services Act (40 U.S.C. 471), the Secretary may transfer the title to any or all facilities, equipment, and supplies, belonging to the Service and being utilized by the Corps in a medically underserved area designated by the Secretary under subsection (a) to any public or private nonprofit institution which the Secretary determines will conform to minimum standards of operation prescribed by him. In a case where the Secretary determines, after a hearing on the record, that such real or personal property is not being utilized in conformance with such minimum standards, title shall revert (after payment of proper compensation for facility improvements, if any) to the United States. This paragraph shall not apply to any hospital or clinical facilities operated by the Service prior to December 31, 1971."

(c) Section 329(c) of such Act is amended by striking out "Service' 'and inserting in lieu thereof "Corps".

(d) Section 329(d) of such Act is amended—

(1) by striking out "Service" in the first sentence and inserting in lieu thereof "Corps", and by inserting before the period at the end of such sentence the following: ", except that if such area is being served (as determined under regulations of the Secretary) by a hospital or other health care delivery facility of the Service, the Secretary shall, in addition to such other arrangements as the Secretary may make to insure the availability of care or services by Corps personnel in the area, arrange for the utilization of such hospital or facility by Corps personnel in providing care and services in such area, but only if such utilization shall assure the continual provision of care to persons entitled to care and treatment at such facilities at such time.";

(2) by striking out "If there are no such facilities in such area" in the second sentence and inserting in lieu thereof "If there are no health facilities in or serving such area";

(3) by adding after the second sentence the following new sentence: "In providing such care and services, the Secretary may (A) make such arrangements as he determines are necessary for the use of equipment and supplies of the Service and for the lease or acquisition of equipment and supplies, and (B) secure the temporary services of nurses and allied health professionals."; and

(4) by inserting "(1)" after "(d)" and by adding at the end the following:

"(2) The Secretary shall conduct at medical and nursing schools and other schools of the health professions and training centers for the allied health professions, recruiting programs for the Corps. Such programs shall include the wide dissemination of written information on the Corps and visits to such schools by personnel of the Corps.

"(3)(A) For the purpose of recruiting persons for the Corps who have gained experience in the provision of health services at a direct result of specialized military training, the Secretary, in cooperation with the Department of Defense and the Veterans' Administration shall develop a list of persons having such experience.

"(B) In the assignment of personnel to designated health manpower shortage areas, the Secretary shall give priority to persons recruited from the list developed under paragraph (A), with respect to such individuals' desires.".

(e) Section 329(f) of such Act is amended (1) by striking out "Service" in paragraphs (1) and (3) and inserting in lieu thereof "Corps", and (2) by striking out "to select commissioned officers of the Service and other personnel" in paragraph (2) and inserting in lieu thereof "to select personnel of the Corps".

(f) Subsection (g) of section 329 of such Act is redesignated as subsection (k) and the following new subsections are inserted after subsection (f) of such section:

"(g) The Secretary shall report to Congress no later than May 15 of each year—

"(1) the number of areas designated under subsection (b) in the calendar year preceding the year in which the report is made as having critical health manpower shortages and the number of areas which the Secretary estimates will be so designated in the calendar year in which the report is made;

"(2) the number and types of Corps personnel assigned in such preceding calendar year to areas designated under subsection (b), the number and types of additional Corps personnel which the Secretary estimates will be assigned to such areas in the calendar year in which the report is submitted, and the need (if any) for additional personnel for the Corps; and

"(3) the number of applications filed in such preceding calendar year for assignment of Corps personnel under this section and the action taken on each such application."

"(h) Section 5532 of title 5, United States Code, shall not apply to a retired officer of a regular component of a uniformed service who, holds a full-time position with the Corps, during the time he holds such position.

"(i) The Secretary may from time to time and for such period as he deems advisable, secure the assistance and advice of experts, scholars, and consultants, including the services of advertising and other public information specialists, to foster, promote, and improve the image of the Corps with regard to the provision of health services and with the further aim of emphasizing recruitment of new and retention of present members of the Corps.

"(j) The Secretary may reimburse applicants for positions in the Corps for actual expenses incurred in traveling to and from their place of residence to an area in which they would be assigned for the purpose of evaluating such area with regard to being assigned in such area. The Secretary shall not reimburse an applicant for more than one such trip."

(g) Section 329(k) as redesignated by this Act, of such Act is amended by striking out "and" after "1972;" and by striking out the period at the end and inserting in lieu thereof "; $30,000,000 for the fiscal year ending June 30, 1974; $40,000,000 for the fiscal year ending June 30, 1975, sum appropriated under this section shall remain available until expended."

(h) Section 329 of such Act is further amended by adding at the end thereof the following new subsection:

"(l) Where the Corps requires personnel assigned to designated shortage areas to obtain State and local licenses or permits, the Secretary shall pay the fees therefor."

SEC. 3. (a) The Secretary may not close or transfer control of a hospital or other health care delivery facility of the Public Health Service unless—

(1) he transmits to each House of Congress, on the same day and while each House is in session, a detailed explanation (meeting the requirements of subsection (b)) for the proposed closing or transfer, and

(2) a period of ninety calendar days of continuous session of Congress has elapsed after the date on which such explanation is transmitted.

For purposes of paragraph (2), continuity of session is broken only by an adjournment of Congress sine die, and the days on which either House is not in session because an adjournment of more than three days to a day certain are excluded in the computation of the ninety-day period.

(b) Each explanation submitted under subsection (a) for closing or transferring control of a hospital or other health care delivery facility of the Public Health Service shall contain—

(1) (A) assurances that persons entitled to treatment and care at the hospital or other facility proposed to be closed or transferred and persons for whom care and treatment at such hospital or other facility is authorized will, after the proposed closing or transfer, continue to be provided such equivalent care and treatment through such hospital or other facility, or under such new arrangement and (B) a detailed explanation of how such care will be provided to such persons, and an estimate of the cost of providing such care and treatment to such persons after the proposed closing or transfer;

(2) (A) assurances that the capacity to supply health services to the critical manpower shortage areas near the facility will not be impaired by the closing or transfer and (B) a detailed explanation of how persons residing in such areas will be provided such care and treatment after the proposed closing or transfer;

(3) (A) assurances that any teaching program conducted at the hospital or other facility proposed to be closed may be conducted at other appropriate facilities, and (B) a detailed explanation of how such program will be conducted after the proposed closing or transfer; and

(4) the approval of those agencies established under section 314 (a) and (b) of the Public Health Service Act, having jurisdiction in the area in which such hospital or other facility is located, where both such agencies exist or the approval of only one such agency where only one exists in such area.

SEC. 4. Section 741 (f) of the Public Health Service Act is amended (1) by striking out "The payments" in paragraph (2) and inserting in lieu thereof "Except as otherwise provided in this paragraph, the payments", and (2) by adding after and below subparagraph (C) the following:

"In the case of any individual who qualified under paragraph (1) for payments on the principal of and interest on a loan and who, as a member of the National Health Service Corps, practices his profession in an area designated under section 329(b), the portion of the principal of and interest on the loans for which payments may be made for and on his behalf under paragraph (1) shall, upon completion of the first year of such practice, be 50 per centum and, upon completion of the second year of such practice, be the remaining 50 per centum."

SEC. 5. Section 218 of the Public Health Service Act is amended to read as follows:

"PUBLIC HEALTH AND NATIONAL HEALTH SERVICE CORPS SCHOLARSHIP TRAINING PROGRAM

"SEC. 218. (a) The purpose of the Public Health and National Health Service Corps scholarship training program (hereinafter referred to as 'such program') is to obtain trained physicians, dentists, nurses, and other health-related specialists for the National Health Service Corps and the Public Health Service Corps of the Department of Health, Education, and Welfare.

"(b) To be eligible for acceptance and continued participation in such program, each applicant must—

"(1) be accepted for enrollment, or be enrolled as a full-time student in an accredited (as determined by the Secretary) educational institution in the United States, or its territories or possessions;

"(2) pursue an approved course of study, and maintain an acceptable level of academic standing, leading to a degree in medicine, dentistry, or other health related specialty, as determined by the Secretary;

"(3) be eligible for, or hold an appointment as a commissioned officer in the Regular or Reserve Corps of the Public Health Service or be selected in the National Health Service Corps; and

"(4) agree in writing to serve in the Commissioned Corps of the Public Health Service or as a civilian member of the National Health Service Corps following completion of training as provided in subsection (f) of this section, in the National Health Service Corps, the Indian Health Service, the Federal Health Programs Service, and such other programs as the Secretary may designate.

"(c) Each participant in such program will be authorized a stipend for each approved academic year of training, not to exceed four years, in an amount prescribed by the Secretary and payable in monthly installments. The stipend shall not exceed an amount equal to the basic pay and allowances of a commissioned officer on active duty in pay grade O–1 with less than two years of service, plus an amount to cover the reasonable cost of books, supplies, equipment, student medical expenses, and other necessary educational expenses which are not otherwise paid as a part of the basic tuition payment.

"(d) The Secretary may contract with an accredited educational institution for the payment of tuition and other education expenses, not otherwise covered under subsection (c) of this section, for persons participating in such program. If necessary, persons participating in such program may be reimbursed for the actual cost of tuition and other educational expense authorized in this subsection, in lieu of a contract with the educational institution.

"(e) A person participating in such program shall be obligated to serve on active duty as a commissioned officer in the Public Health Service or as a civilian member of the National Health Service Corps following completion of academic training, for a period of time prescribed by the Secretary which will not be less than one year of service on active duty for each academic year of training received under such program. For persons receiving a degree from a school of medicine, osteopathy or dentistry, the commencement of a period of obligated service can be deferred for the period of time required to complete internship and residency training. For persons receiving degrees in other health professions the obligated service period will commence upon completion of their academic training. Periods of internship or residency shall not be creditable in satisfying an active duty service obligation under this section except that if such residency is served in a Public Health Service facility or facility of the National Health Service Corps such residency shall be counted as satisfying the active duty service obligation under this section.

"(f) If, for any reasons, a person fails to complete an active service obligation under this section, he shall be liable for the payment of an amount equal to the cost of tuition, and other education expenses, and salary expenses, paid under this section plus interest at the maximum legal prevailing rate. Any amount which the United States is entitled to recover under this paragraph shall, within the three-year period beginning on the date the United States becomes entitled to recover such amount, be paid to the United States. Until any amount due the United States under this paragraph on account of any grant under this subpart is paid, there shall accrue to the United States interest on such amount at the same rate as that fixed by the Secretary of the Treasury with respect to the grant on account of which such amount is due the United States.

"(g) When a person undergoing training in such program is academically dismissed or voluntarily terminates academic training, he shall be liable for repayment to the Government for an amount equal to the cost of tuition and other educational expenses paid from Federal funds, plus all salary payment which he received under such program.

"(h) The Secretary shall by regulations provide for the waiver or suspension of any such obligation applicable to any individual whenever compliance by such individual is impossible or would involve extreme hardship to such individual and if enforcement of such obligation with respect to any individual would be against equity and good conscience.

"(i) Notwithstanding any other provision of law, persons undergoing academic training under such program shall not be counted against any employment ceiling affecting the Department of Health, Education, and Welfare.

"(j) The Secretary of Health, Education, and Welfare shall issue regulations governing the implementation of this section.

"(k) To carry out the purposes of this program, there are authorized to be appropriated $10,800,000 for the fiscal year ending June 30, 1974, and $11,500,000 for the fiscal year ending June 30, 1975."

SEC. 6. Section 2(f) of the Public Health Service Act is amended by inserting after "Puerto Rico," the following: "Guam, American Samoa, and the Trust Territory of the Pacific Islands,".

Mr. MANSFIELD. Mr. President, on behalf of the Senator from Massachusetts (Mr. KENNEDY), I submit a statement on this measure and ask unanimous consent that it be printed in the RECORD.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

STATEMENT BY SENATOR KENNEDY

Mr. President, the Committee on Labor and Public Welfare, by a vote of 18–0 ordered S. 3858, the Emergency Health Personnel Act Amendments of 1972, reported to the Senate for consideration. This bill is aimed at strengthening our Nation's ability to deal with one of the most difficult and intransigent problems in our health care system, namely, the problem of attracting physicians, dentists, nurses and other health care personnel into rural and inner-city communities across our land.

I doubt that there is a Senator in this body who does not have a rural or inner-city community in his home State that is desperate for health professionals of some kind. During the Health Subcommittee's field hearings a year ago, we heard first hand from rural communities in West Virginia and Iowa, that have searched for years for a physician willing to offer health care to their people. This story is repeated in thousands of communities across our Nation. Doctor McDonald Rimple, Director of the National Health Service Corps, indicated there are approximately 5,000 communities in the United States without any health services. Indeed, he indicated there are 132 counties where there is no doctor in the entire county, and 225 counties where there is no dentist.

Moreover, Mr. President, it is likely that the situation will get worse before it gets better. The continuing trend toward specialization in medical education and the general trend of our population toward suburban areas result in most young physicians, dentists, and other health professionals practicing in the suburbs or near large urban medical centers. As physicians who have practiced in rural and inner-city areas retire, it is increasingly difficult to replace them.

These trends have created a genuine crisis for many rural and inner-city communities. It is a crisis: when children in these areas grow up with limbs unnecessarily twisted or minds unnecessarily retarded because they did not receive the routine child care that most suburban Americans take for granted; when simple childhood diseases cause unnecessary suffering and complications because routine immunizations were never given, or because parents waited too long to make the long arduous trip to the doctor; and when people are unnecessarily disabled or even die because it simply took too long to get the health care that might have made them whole.

Mr. President, the Senate has responded to these problems by establishing special scholarship and loan forgiveness programs intended to attract health professionals into shortage areas. The Senate will also soon consider legislation aimed at establishing health maintenance organizations, health service organizations, and area health education centers. These new forms of health care delivery also hold promise for making practice in rural and inner-city areas more attractive to health professionals.

However, every expert who has looked at the problem of rural and inner-city areas in America has indicated that these measures are only partial answers. No one has yet come up with the sure answer on how to attract health professionals into these areas. I am personally convinced, that we will not be able to adequately respond to this problem until we have passed a program of national health insurance in this country. Only when equal financing is available to cover health care to all Americans where they live, and only when adequate resources are available to underwrite health care facilities and networks appropriated to every type of community will be able to adequately deal with this problem.

I am also convinced, however, that we currently have an emergency of national health insurance, there will remain parts of our country which cannot attract health professionals. The bill which is before the Senate today is addressed both to this current emergency, and the long-range problem of supplying health care professionals to shortage areas.

Several years ago, the Senator from the State of Washington, Mr. MAGNUSON, introduced the National Health Services Corps Act. That legislation was signed into law on December 31, 1970. Under this authority, the Secretary of HEW to date has designated 144 communities to receive Federal health personnel. The bill which is before the Senate today strengthens this program in order that the Secretary of HEW may move more rapidly to identify and assist all shortage areas in our Nation.

1. The bill incorporates a major new scholarship program introduced originally by Senator STEVENS of Alaska as S. 3867. This program, plus an enhanced loan forgiveness program, and other new authorities are intended to enhance the Secretary's ability to recruit young professionals into the corps. These proivsions are vital, given changes in the military draft, and their impact on recruitment for this program.

The bill requires that the Secretary of HEW take the initiative of designating all areas of the country which require National Health Service Corps assistance and providing such assistance without regard for the ability of the people in the area to pay for these services. This provision is especially important given the slow implementation of this program to date, and the specific priority given by HEW to areas that can pay for services in spite of the lack of any basis in the law for such a priority.

The bill also provides the Secretary authority to override State and local medical, dental and other health professional societies which refuse to certify the need for National Health Service Corps personnel. State and local medical and dental societies have withheld certification to date on over 30 physicians and dentists. It is questionable whether a private, nonelective organization should have absolute veto rights over whether a group of Americans receives the benefit of a Federal program for which they help pay through their taxes.

It is more than questionable, indeed, it is an outrage if such a veto is exercised out of racial prejudice or other arbitrary and capricious reasons. In most cases, professional societies have been an enormous help in implementing the National Health Service Corps. I am pleased, however, that the committee has seen fit to give the Secretary an override authority in order that he can protect the rights of Americans who may be the victims of arbitrary or capricious actions under this program.

Mr. President, this bill also addresses the long perplexing problem of the disposition of Public Health Service hospitals and clinics. For several years, the beneficiaries of these Public Health Service hospitals and the employees have lived under a giant question mark regarding their future. There have been rumors, intercepted memos from HEW to OMB, and plan after DHEW plan. Some have been discussed and reviewed with local communities, while other plans have been kept secret only to leak in rumor and innuendo, and further aggravate the misgivings of everyone concerned with these Public Health Service hospitals and clinics.

Last year the Congress passed a concurrent resolution, S. Con. Res. 6, which insisted that no Public Health Service hospital or clinic be closed or transferred through June 30, 1972, and that any plan for these facilities be reviewed with the Congress. This bill, S. 3858, includes provisions which write these requirements into the law. The bill requires that any plan for closure or transfer of the facility be forwarded to the Congress 90 days before the plan is implemented. It requires that this plan include strong assurances that Federal beneficiaries will be properly cared for, that on-going service and teaching programs in the facility be continued, and that the closure or transfer of the facility will not decrease the capacity of the community to respond to its own health care needs.

In addition, the bill requires that all such plans receive the approval of the State and local health planning agency involved. These agencies have been established and funded by the Department of Health, Education and Welfare to assure that health facilities are used in a way which controls inflation and assures maximum efficiency and economy. The Department of Health, Education and Welfare requires such clearance of hospitals that are reimbursed under medicare; it makes equally good sense for changes in DHEW health care facilities in a community to be subject to similar review. Moreover, this requirement will assure that the Department's planning process takes into consideration the views of the local community.

Mr. President, I believe this is an urgent bill which responds thoughtfully to many of the program requirements in the National Health Service Corps, and the Public Health Service hospital system. It will extend the Health Service Corps for two years, through June 30, 1975. I urge the Senate to pass this measure. Thank you.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

BILLS PASSED OVER

The bills, S. 3716, to amend the Public Health Service Act to provide for continued assistance for health facilities, health manpower, and community mental health centers, and H.R. 14370 to provide payments to localities for high priority expenditures, to encourage the States to supplement their revenue sources, and to authorize Federal collection of State individual income taxes, were announced as next in order.

Mr. MANSFIELD. Mr. President, I ask that these two bills go over.

The ACTING PRESIDENT pro tempore. The two bills will be passed over.

AUTHORIZATION FOR THE COURT OF CLAIMS TO IMPLEMENT ITS JUDGMENTS FOR COMPENSATION

The bill (H.R. 12392) to amend title 28, United States Code, section 1491, to authorize the Court of Claims to implement its judgments for compensation was considered, ordered to a third reading, read the third time, and passed.

AMENDMENT OF STATUTORY CEILING ON SALARIES OF U.S. MAGISTRATES

The Senate proceeded to consider the bill (H.R. 7375) to amend the statutory ceiling on salaries payable to U.S. magistrates which had been reported from the Committee on the Judiciary with an amendment on page 2, line 2, after "$100", insert "nor more than $15,000".

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

METRIC CONVERSION ACT OF 1972

The Senate proceeded to consider the bill (S. 2483) to provide a national program in order to make the international metric system the official and standard system of measurement in the United States and to provide for converting to the general use of such system within 10 years after the date of enactment of this act which had been reported from the Committee on Commerce with an amendment to strike out all after the enacting clause and insert:

SHORT TITLE

SECTION 1. This Act may be cited as the "Metric Conversion Act of 1972".

FINDINGS

SEC. 2. The Congress finds that—

(1) the use of the metric system of weights and measures in the United States was authorized by the Act of July 28, 1866 (14 Stat. 339); and

(2) the United States was one of the original signatories to the Convention of the Meter (20 Stat. 709), which established the General Conference of Weights and Measures, the International Committee of Weights and Measures, and the International Bureau of Weights and Measures; and

(3) the metric measurement standards recognized and developed by the International Bureau of Weights and Measures have been adopted as the fundamental measurement standards of the United States and the customary units of weights and measures used in the United States have been since 1893 based upon such metric measurement standards; and

(4) the United States is the only industrially developed nation which has not established a national policy committing itself to and facilitating conversion to the metric system; and

(5) as a result of the study to determine the advantages and disadvantages of increased use of the metric system in the United States authorized by Public Law 90–472 (82 Stat. 693), the Secretary of Commerce has found that increased use of the metric system in the United States is inevitable, and has concluded that a national program to achieve a metric changeover is desirable; that maximum efficiency will result and minimum costs to effect the conversion will be incurred if the conversion is carried out pursuant to a national plan; that the changeover period be ten years, at the end of which the Nation would be predominantly, although not exclusively, metric; that a central planning and coordinating body be established and assigned to plan and coordinate the changeover in cooperation with all sectors of our society; and that immediate attention be given to education of the public and to effective United States participation in international standards making.

STATEMENT OF POLICY AND PURPOSE

SEC. 3. It is therefore declared that the policy of the United States shall be:

(1) to facilitate and encourage the substitution of metric measurement units for customary measurement units in education, trade, commerce, and all other sectors of the economy of the United States with a view to making metric units the predominant, although not exclusive, language of measurement with respect to transactions occurring after ten years from the date of the enactment of this Act;

(2) to facilitate and encourage the development as rapidly as practicable of new or revised engineering standards based on metric measurement units in those specific fields or areas in the United States where such standards will result in rationalization or simplification of relationships, improvements of design, or increases in economy;

(3) to facilitate and encourage the retention in new metric language standards of those United States engineering designs, practices, and conventions that are internationally accepted or embody superior technology;

(4) to cooperate with foreign governments and public and private international organizations which are or become concerned with the encouragement and coordination of increased use of metric measurement units or engineering standards based on such units, or both, with a view to gaining international recognition for metric standards proposed by the United States;

(5) to assist the public through information and educational programs to become familiar with the meaning and applicability of metric terms and measures in daily life. Programs hereunder should include:

(a) public information programs conducted by the Board through the use of newspapers, magazines, radio, television, other media, and through talks before appropriate citizens groups and public organizations;

(b) counseling and consultation by the Secretary of Health, Education, and Welfare and the Director, National Science Foundation with educational associations and groups so as to assure the metric system of measurement is made a part of the curriculums of the Nation's educational institutions and the teachers and other appropriate personnel are properly trained to teach the metric system of measurement;

(c) Consultation by the Secretary of Commerce with the National Conference of Weights and Measures so as to assure that State and local weights and measures officials are appropriately informed of the intended metric changeover and are thus assisted in their efforts to bring about timely amendments to weights and measures laws.

(d) such other public information programs by any Federal agency in support of this Act which relate to the mission of the agency;

(6) to accomplish a changeover to the greatest practical extent within ten years by Federal agencies to the metric system of measurement pursuant to the comprehensive plan developed by the Board; and

(7) to utilize Federal procurement activities to encourage the general use of the metric system of measurement.

DEFINITIONS

SEC. 4. For the purpose of this Act—

(a) The term "metric system of measurement" means the International System of Units as established by the General Conference of Weights and Measures in 1960 and interpreted or modified for the United States by the Secretary of Commerce.

(b) The term "engineering standard" means a standard which prescribes a concise set of conditions and requirements to be satisfied by a material, product, process, procedure, convention, test method, and the conformance characteristics thereof.

(c) The term "changeover period" means the length of time for the United States to become predominantly, although not exclusively, metric.

ESTABLISHMENT OF NATIONAL METRIC CONVERSION BOARD

SEC. 5. There is hereby established a National Metric Conversion Board (herein referred to as the "Board") to implement the policy set out in this Act.

SEC. 6. The composition of the Board shall be as follows:

(a) Nine members shall be appointed by the President, with the advice and consent of the Senate, from among those persons with experience and competence in the following areas: business, labor, education, consumer protection, science, and technology. The President shall designate one member appointed by him to serve as Chairman. The members first appointed under this section shall continue in office for terms of 1, 2, 3, 4, and 5 years, respectively, from the date this section takes effect, the term of each to be designated by the President at the time of nomination. Their successors shall be appointed each for a term of five years from the date of the expiration of the term which his predecessor was appointed. No more than five of the members shall be appointed from the same political party;

(b) One Member of the Senate shall be appointed by the President of the Senate; and

(c) One Member of the House of Representatives, who shall not be a member of the same political party as the Member of the Senate, shall be appointed by the Speaker of the House of Representatives.

SEC. 7. No vacancy on the Board shall impair the right of the remaining members to exercise all the powers of the Board. Six members of the Board shall constitute a quorum for the transaction of business. The Board shall annually elect a Vice Chairman to act in case of the absence or disability of the Chairman or in case of the vacancy in the Office of the Chairman.

SEC. 8. (a) Within eighteen months after funds have been appropriated to carry out the provisions of this Act the Board shall, in furtherance and in support of the policy expressed in section 1 of this Act, develop and submit to the President and the Congress a comprehensive plan to accomplish a changeover to the metric system of measurement in the United States. Such a plan may include recommendations for legislation deemed necessary and appropriate. Such a plan shall include proposed Executive orders or other directives, which the President is authorized to promulgate and make effective, requiring such conversion activities of the Federal Government, including procurement, in accordance with an appropriate time schedule and pursuant to the comprehensive plan. In developing this plan the Board shall—

(1) consult with and take into account the interests and views of the United States commerce and industry, including small business; science; engineering; labor; education; consumers; government agencies at the Federal, State, and local level; nationally recognized standards developing and coordinating organizations; and such other individuals or groups as are considered appropriate by the Board to carry out the purposes of this section;

(2) consult, to the extent deemed appropriate, with foreign governments, public international organizations, and, through appropriate member organizations, private international standards organizations. Contact with foreign governments and intergovernmental organizations shall be accomplished in consultation with the Department of State.

(b) Any amendment to the plan shall be submitted by the Board to the President and the Congress under the provisions set out in subsection (a) of this section and section 9 of this Act.

(c) Unless otherwise provided by the Congress, the Board shall have no compulsory powers.

SEC. 9. The Board shall begin implementation of the plan at the end of the first period of sixty calendar days that Congress is in session after the date on which the plan is transmitted to it and to the President unless between the date of transmittal and the end of the sixty-day period, either House passed a resolution stating in substance that it does not favor the plan or the President disapproves the plan and gives his reasons therefor.

SEC. 10. In carrying out its duties, the Board is authorized to:

(a) enter into contracts in accordance with the Federal Property and Administrative Services Act of 1949, as amended, with Federal or State agencies, private firms, institutions, and individuals for the conduct of research or surveys, the preparation of reports, and other activities necessary to the discharge of its duties;

(b) conduct hearings at such times and places as it deems appropriate;

(c) establish such committees and advisory panels as it deems necessary to work with the various sectors of the American economy and governmental agencies in the development and implementation of detailed changeover plans for those sectors; and

(d) perform such other acts as may be necessary to carry out the duties prescribed by this Act.

SEC. 11. Members of the Board who are not in the regular full-time employ of the United States shall, while attending meetings or conferences of the Board or otherwise engaged in the business of the Board, be entitled to receive compensation at a rate of $100 per day, including traveltime, and, while so serving on the business of the Board away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for persons employed intermittently in the Government service. Payments under this section shall not render members of the Board employees or officials of the United States for any purpose.

SEC. 12. (a) The Board is authorized to appoint an Executive Director who shall serve full time and receive basic pay at the rate not to exceed the rate provided for GS–18 in section 5332 of title 5, United States Code, and to appoint and fix the compensation of such staff personnel as may be necessary to carry out the provisions of this Act.

(b) The Board is authorized to employ experts and consultants or oganizations thereof as authorized by section 3109 of title 5, United States Code, compensate individuals so employed at rates not in excess of the rate prescribed for grade 18 of the General Schedule under section 5332 of such title, including traveltime, and allow them, while away from their homes or regular places of business, travel expenses (including per diem in lieu of subsistence) as authorized by section 5703 of said title 5 for persons in the Government service employed: *Provided, however,* That contracts for such employment may be renewed annually.

SEC. 13. Financial and administrative services (including those related to budgeting, accounting, financial reporting, personnel, and procurement) and such other staff services as may be requested by the Board shall be provided the Board by the Secretary of Commerce, for which payment shall be made in advance, or by reimbursement, from funds of the Board in such amounts as may be agreed upon by the Chairman of the Board and the Secretary of Commerce. In performing these functions for the Board, the Secretary is authorized to obtain such information and assistance from other Federal agencies as may be necessary.

SEC. 14. (a) The Board is hereby authorized to accept, hold, administer, and utilize gifts, donations, and bequests of property, both real and personal, and personal services, for the purpose of aiding or facilitating the work of the Board. Gifts and bequests of money and the proceeds from sales of other property received as gifts or bequests shall be deposited in the Treasury in a separate fund and shall be disbursed upon order of the Board.

(b) For the purpose of Federal income, estate, and gift taxes, property accepted under subsection (a) of this section shall be considered as a gift or bequest to or for the use of the United States.

(c) Upon the request of the Board, the Secretary of the Treasury may invest and reinvest in securities of the United States any moneys contained in the fund herein authorized. Income accruing from such securities, and from any other property accepted to the credit of the fund authorized herein, shall be disbursed upon the order of the Board.

SEC. 15. The Board shall cease to exist no later than ten years after submission of a comprehensive plan to accomplish a changeover to the metric system of measurement that is not disapproved by the President or either House of Congress.

SEC. 16. The Board shall submit annual reports of its activities to the President and the Congress with respect to (1) progress being made under such plans; (2) tangible costs and benefits being incurred thereunder; and (3) any additional legislation needed to carry out the policy stated in this Act.

SEC. 17. There are hereby authorized to be appropriated not to exceed $3,000,000 for the fiscal year beginning July 1, 1972, not to exceed $4,000,000 for the fiscal year beginning July 1, 1973, and for each of the following three fiscal years not to exceed $2,500,000. Appropriations to carry out the provisions of this Act may remain available for obligation and expenditure for such period or periods as may be specified in the Acts making such appropriations.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended, so as to read: "A bill to provide a national program in order to make the international metric system the predominant but not exclusive system of measurement in the United States and to provide for converting to the general use of such system within 10 years.

Mr. MANSFIELD. Mr. President, that concludes the call of the calendar.

EXCURSION FROM CAMBODIA

Mr. MANSFIELD. Mr. President, apart from Vietnam, there are other situations in which we are enmeshed in Southeast Asia. It is difficult to keep them continuously in mind, so remote are they from any vital interest of the people of this Nation. Nonetheless, they go on, these irrelevant involvements. There is the half-forgotten war in Laos. There is the almost completely forgotten war in Cambodia. They cost this Nation hundreds of millions of dollars of public funds each year. They cost lives—some American lives, many other lives—men, women, and children. They open ever wider fans of destruction over Indochina.

How many months ago, or years, was it, that we moved into Cambodia? Perhaps it will be only dimly remembered but that blitzkreig tactic was debated for weeks at the time. The "incursion" into the Cambodian-Vietnamese border region was launched with great fanfare. It was supposed to result in the capture of the enemy headquarters, the destruction of the border "sanctuaries," the hastening of the end of the war and the insuring of the "safe" withdrawal of our forces.

Of course, the Cambodian invasion did none of these things. The high command, if it was ever there in the first place, simply moved out long before the invasion began. To the mounting casualties in Vietnam and Laos, Cambodia added new accumulations of United States and other casualties.

What had been a constricted border hideout for the supply of a limited number of Vietcong and North Vietnamese was turned by the incursion into a broad highway for the deployment and movement of any number of North Vietnamese and Vietcong forces almost at random throughout most of Cambodia.

In short, the Cambodian gambit brought, not peace, but another costly extension of our involvement in Southeast Asia and one more expensive dependent government. It contributed to converting into one more desert of war, the last oasis of civil stability and modest progress in Indochina—the Cambodia of Prince Norodom Sihanouk. This dubious conversion was paid for almost entirely with the money of the American people. How many American lives also paid for it, Mr. President? How many limbs? How many more drug addictions?

Over and over again, the press has documented this exercise in tragic futility in Cambodia. The sorry recitation of internal devastation, corruption, incompetence, disassociation of people from government, mystic militarism, the growth of indigenous revolutionary forces and so on is all to familiar to anyone who has followed the situation in Southeast Asia over the years. Regrettably, the Cambodian situation is one in which we permitted our involvement—again as we did in Vietnam, as we did in Laos—to rise from the wetting of a toe up to the level of our necks. Indeed, we played the major part through military aid programs, air support and B–52 bombing in converting what was a tolerable, productive and certainly peaceful existence for ordinary Cambodians into a life of aimless refugees among the spreading ruins of their towns and villages. All that has been spared, it would seem, is the corruption in the capital of Phnom Penh.

So far as I can see, Mr. President, the best thing that could happen to the people of the United States in this situation would be for the administration to end, forthwith, our military involvement in every form in the Cambodian theater of the Indochina war. As for the Cambodian people, the matter is for them to decide but it would seem to me they would be a lot better off if Prince Sihanouk were to be returned to Phnom Penh to head an interim government at least until such time as the war ends in a peace settlement. The Peking government with whom the President and his foreign policy adviser, Dr. Kissinger, have established such excellent working relations, might well be prevailed upon to assist in the diplomacy of this endeavor. May I add that I would be remiss if I did not acknowledge, as remote, the likelihood of this development's coming to pass in the near future. It looks to me, Mr. President, that we select our lemons and having done so, seem determined to hold on to them until, not they, but we, ourselves, are squeezed dry.

THE SITUATION IN CAMBODIA

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Weary Cambodians Losing Confidence in Lon Nol," written by Arnold R. Isaacs, and published in the Baltimore Sun of August 18, 1972.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEARY CAMBODIANS LOSING CONFIDENCE IN LON NOL

(By Arnold R. Isaacs)

PHNOM PENH, CAMBODIA.—President Lon Nol's popular support is draining away as Cambodia's war weariness grows and his government seems increasingly remote, erratic, corrupt and inefficient.

The 58-year-old president, who came to power after the overthrow of Prince Norodom Sihanouk in March 1970; has managed to keep his country from collapsing altogether—perhaps a remarkable achievement in itself.

HOPED FOR TWO THINGS

But he has disappointed the millions of Cambodians who, in their initial outpouring of support, hoped above all for two things: the expulsion of Vietnamese Communists from Cambodian territory and an end to the whimsical, unpredictable and corrupt Mandarin style of the Sihanouk government.

The atmosphere of political bickering is worse than ever, many Cambodians feel.

The current political turmoil began in March, when Marshal Lon Nol, after ruling for two years as prime minister, declared himself president, assuming extremely broad executive powers and dissolving the National Assembly.

At the same time, he scrapped a draft of a republican constitution prepared by the legislators and substituted a draft written hastily to his own specifications, legalizing nearly all the extraordinary powers he had seized.

The new document was put to a referendum and was approved, by official tally, by more than 97 per cent of the voters.

On June 4, presidential elections were held and Marshal Lon Nol, to no one's surprise, was elected, though his opponents charged the voting was flagrantly rigged.

In the course of these events, many of the president's associates went over to the opposition.

The most prominent were In Tam, who had been National Assembly president and who ran against Marshal Lon Nol in June, and Sisowath Sirik Matak, who as prime minister-delegate had virtually run the country.

MORALE UNDERMINED

The next step after the presidential election is the choice of a new National Assembly, scheduled for September 4. In Tam's Democratic party and Prince Sisowath's Republicans, after a vain effort to change election laws that heavily favor government candidates, decided not to enter any candidates.

These political intrigues among the privileged have little meaning for the average Cambodian, but the general sense of national disunity has seriously undermined the country's morale and self-confidence.

There is no one to serve, as Prince Sihanouk did even at his worst, as a symbol of the nation.

Everyone, too, is affected by corruption, which seems, according to most neutral observers, to be spreading.

The local newspapers and foreign diplomats have documented examples of truck drivers paying bribes at no fewer than 17 checkpoints during a 35-mile journey, of farmers doubling the price of a pig because they have been shaken down for that much while bringing it to market, of officers collecting pay for thousands of "ghost soldiers" and sometimes leaving real soldiers unpaid for six months or more while pocketing the money.

REFUGEES CROWD CAPITAL

Hundreds of thousands of Cambodians, fleeing the fighting, have crowded into Phnom Penh, where living costs are higher than in the countryside.

The government does not have funds to provide more than marginal assistance to war refugees, and officials at the War Victims Commission, the government relief agency, say that of the estimated half million refugees, only about one-third have received any help at all.

The assistance is nominal. A "registered" refugee family, averaging five persons, normally gets one week's rations—15 kilograms of rice, 7 tins of fish, a kilogram of salt, and sometimes a few vegetables or other foods.

After a week, most refugees must find a way to support themselves, usually by living with relatives.

NO CONFIDENCE IN GOVERNMENT

At an unfinished hotel in Phnom Penh, now being used as temporary quarters for recent evacuees from Svay Rieng, conversations with a dozen or more refugees suggested that they, like other Cambodians, have lost much of their confidence in the government's ability to protect them.

Without exception, those interviewed planned to remain in Phnom Penh, saying they would not return even if government troops recaptured their villages, for fear they would simply have to run again.

The war has so disrupted the countryside that travel outside Phnom Penh for most civilians is limited to perhaps 20 or 30 miles.

Even roads officially classed as "secure," like the highway to the principal port of Kompong Som, are actually traveled only by escorted convoys.

The sense of isolation and the difficulty of visiting homes or relatives have also disheartened many Cambodians. In the Khmer expression, "the country is broken."

All of this could perhaps be borne if the government had scored any significant victories on the battlefields, but it has not, and Communist forces now occupy most of the eastern half of the country, except for a few government-held enclaves around the major towns.

If any motivation to carry on the war remains, it is not rooted in any commitment to the Lon Nol government but simply in the Cambodian's traditional fear and hatred of the Vietnamese.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Does the Senator from Oregon, the acting minority leader, desire to be recognized?

Mr. PACKWOOD. I do not.

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Virginia (HARRY F. BYRD, JR.) is recognized for not to exceed 15 minutes.

TRIBUTE TO SECRETARY OF TRANSPORTATION VOLPE

Mr. HARRY F. BYRD, JR. Mr. President, I want to make a few comments this morning in regard to the distinguished Secretary of Transportation, the Honorable John A. Volpe. This week, Mr. President, Secretary Volpe gave a series of five brief interviews with a Virginia radio station, WAVA, of Arlington, Va. These interviews are most interesting and, I think, enlightening.

I am not prepared at this time to endorse all of the proposals suggested by Secretary Volpe. However, I am impressed with the imaginative and able way in which he has handled his responsibilities as Secretary of Transportation.

Secretary Volpe had a highly successful career in private business. He was an outstanding Governor of the Commonwealth of Massachusetts and, in my judgment, he is an outstanding Cabinet officer serving as Secretary of Transportation.

I am impressed with the fact that he is readily accessible, that he is prompt in handling his correspondence, and that his department is operated with a high degree of efficiency. I might say that to the Senator from Virginia, Secretary Volpe seems very refreshing as compared to some of the other high officials of government who put themselves in an ivory tower and deal in theory and seem unaware of realities. But not John Volpe.

Mr. President, I want to comment on one or two of the interviews of Secretary Volpe. He cites in his interview of Wednesday, August 16, the Shirley Highway project in northern Virginia as an example of how the use of public transportation facilities can be greatly increased. He points out that the Department of Transportation set up an exclusive busway with express bus service for commuters and turned the rush hour driving habits around. More Shirley Highway commuters today ride the bus than drive.

A recent survey, Secretary Volpe points out, of the Shirley Highway morning rush hour count showed 9,100 bus passengers as compared to 7,700 auto commuters; a 110-percent increase for mass-transit and a reduction of 2,800 cars, along with a more efficient use of the highways for those automobiles.

This Shirley Highway proposal was worked out with the Department of Transportation along with the North Virginia Transportation Commission under the able chairmanship of Joseph Alexandria, a member of the board of supervisors of Fairfax County. I think this is a very desirable experiment and that it has proven to be a very successful one.

I was interested also, Mr. President, in Secretary Volpe's comment in regard to skyjacking. He said that the hijacking of planes is a preventable crime if the airlines are tough enough in their boarding procedures on the ground. If they are tough enough on the ground, Secretary Volpe says, there will be no necessity to have to get tough in the air.

He points out that in one 3-month period 2,000 passengers were prevented from boarding and 800 were arrested. And of those arrested, about half of them were armed.

Ground security is being intensified, and that is good news for air travelers. He points out that Congress is appropriating enough money to equip virtually every boarding gate at every U.S. airport with metal-detecting equipment.

I think all of this is good news for the hundreds of thousands of Americans who daily use the Nation's airlines.

Again I commend the work of Secretary Volpe, who is an outstanding Cabinet officer who is rendering effective and outstanding service to his fellow citizens.

Mr. President, I ask unanimous consent to have printed in the Record at this point the five interviews, beginning with Monday, August 14, 1972, and continuing through Friday, August 18, 1972, which Secretary Volpe gave to radio station WAVA, Arlington, Va.

There being no objection, the interviews were ordered to be printed in the Record, as follows:

MONDAY, AUGUST 14, 1972

Q. Do you consider TRANSPO a success?

A. Definitely yes. I find it significant that so many people came to what was essentially a trade show. The long lines of people who stood in line for an hour or more to ride on the Personal Rapid Transit models—to go through the various new trains and commuter cars—to look over the Experimental Safety Vehicles—in fact, to see everything the industry and government had to offer—indicates to me a tremendous public interest in what we're trying to do in transportation. I'm glad we were able to reward that interest with such an outstanding exposition.

It's hard to know what the economic impact will eventually be but our best estimate at this time is that TRANSPO 72 will generate sales in the neighborhood of $200 million. Some of the companies that exhibited almost reluctantly—you might say out of a sense of patriotic duty—were the most enthusiastic about results once the show got underway.

I personally feel we should count as a benefit of great potential significance the tremendous amount of international good will that was generated in connection with this undertaking. Delegations of more than 50 nations from around the world met with us in formal conferences and informal visits to discuss mutual problems and exchange ideas for their solutions. They all seemed favorably impressed with what they saw of U.S. technology. I can tell you that some of the nations that declined to exhibit at the first TRANSPO have indicated they'd like to reconsider if we stage another one. I might add that exhibitors, visitors, foreign officials, have all encouraged us to stage other TRANSPO's on a regular basis.

This first exposition of its kind gave the casual viewer new faith in America's leadership in the transportation field. It gave planners new insight into what's available now and what's coming up in transportation hardware and software. And it gave exhibitors sales and leads in new markets, both domestic and foreign. I'm convinced TRANSPO was good for the United States and good for the future of transportation.

TUESDAY, AUGUST 15, 1972

Q. I have heard references in transportation discussions to a single urban fund? What does this mean?

A. We are proposing that some of the Federal Highway Trust Fund be set aside and that it be made available to states and cities for improving local urban transportation. The decision on how these funds will be spent will be made by state and local authorities. Under the present Federal Aid Highway Act all funds must be spent for highways and highway related projects. The difficulty is, however, a number of cities simply don't need highways. Their highest transportation priority may be buses or rail transit or perhaps upgrading commuter railroads.

Our proposal is based on the idea that local authorities are best qualified to determine local transportation problems and their solutions. Consequently, we want them to determine what's best. And we'll provide most of the funding. By 1975 we anticipate there will be about 6 billion dollars in the Highway Trust Fund and about 2 billion would go into the single urban category for use on a flexible basis for any mode of transportation. Now I want to make one thing clear. This is not a program to promote mass transit, or railroads, or highways. It is a program to promote the very best transportation possible, balanced transportation. And whatever our cities and states decide, they can go ahead and build. We have just sent up to the Congress a new study of transportation needs for the next two decades. The data for this report was contributed by all 50 states and this report shows very dramatically that transportation priorities vary from state to state and from city to city. And we here in Washington must cooperate with these local authorities and help them meet their special needs.

The present highway program dictates highways, but we must help cities find an alternative to the highway. We simply can no longer accept the spectre of increased air pollution, highway congestion and urban strangulation. We have tried to make the motor vehicle the complete answer to our surface transportation problems. We cannot do this any longer. Now we must assist with alternatives.

WEDNESDAY, AUGUST 16, 1972

Q. Mr. Secretary, do you foresee a return of widespread use of public transportation in our cities?

A. I certainly do! It won't happen overnight but the trend has started already. We in the Department of Transportation are working to make public transportation better for people—cleaner, quieter, safer, more comfortable, less congested—easier on the traveler and the environment. This is our most compelling task—to revitalize urban transportation—to release the strangle hold the automobile has on our cities. And it is an intermodal task, involving the co-operation of highway and transit planners, industry and government, citizen groups and community officials.

During the present Administration, the Urban Mass Transportation Administration has spent a billion dollars for public transportation. That's more than the total Federal funding for all the previous five years. Additionally, under President Nixon's Urban Mass Transportation Assistance Act of 1970, another billion dollars for mass transit for Fiscal 1973 has been budgeted. As a result of this program, faltering or failing transit systems have been saved or stabilized in some 60 U.S. cities. Think of that!

We have proposed, also, to help the cities meet the transportation crisis by proposing a single category of funding, supported by Highway Trust Fund resources, for urban transportation purposes. We want to give the States and cities a choice of technologies, plus a choice of spending options.

We feel local officials know problems best. Nearly 300 transit systems have gone out of business in the last 20 years. There is no doubt that we must halt that decline and reverse the trend; not by forcing people to ride buses and transit cars, but by making public transportation so attractive the private car will become, in many instances, "second choice" for intercity trips.

The Shirley Highway Project in Northern Virginia is a prime example. We set up exclusive busway with express bus service for commuters and turned rush hour driving habits around; more Shirley commuters today ride the bus than drive.

A recent Shirley Highway morning rush hour count showed 9,100 bus passengers and 7,700 auto commuters; a 110 percent increase for mass transit, a reduction of 2,800 cars, and a more efficient use of highways for those automobiles.

At certain points during rush hour bus patronage is up 300 percent. The new group of delighted bus riders find that they are saving—on the average—at least 30 minutes each day. On Shirley Highway, we are proving by means of technology and by hold and innovative plans, that public transportation can be reborn and find new favor with the public.

THURSDAY, AUGUST 17, 1972

Q. Mr. Secretary, is the Government's policy toward skyjackers still one of resistance, and—if so—how can you "get tough" with hijackers without endangering the lives of passengers and crew?

A. Hijacking is a "preventable" crime. If the airlines are tough enough in their boarding procedures on the ground, there will be no necessity to have to get tough" in the air.

The FAA behavioral profile, for example, is amazingly effective—if it is religiously applied and faithfully enforced. In the late July hijacking of the Delta plane, you may remember, it turned out that two of the skyjackers had aroused suspicions, but the "profile alert" was not followed up by a search procedure. I have since directed that not only must the airlines screen all passengers, but any who fit the behavioral profile *must* have their hand luggage searched and pass an electronic device before they can board.

President Nixon has taken a firm policy of resistance ever since September 1970, when three commercial aircraft were hijacked and subsequently blown up. The President immediately implemented the Sky Marshal force as a back-up to preboarding screening procedures.

The profile, incidentally, is more effective than people realize. In one three-month period 2,000 passengers were prevented from boarding. Eight hundred were arrested, and about half of them were armed.

Ground security is being progressively intensified. Congress is appropriating enough money to equip virtually every boarding gate at every U.S. airport with metal-detecting equipment.

So when we say we're going to fight back, violence is the last thing we want. The safety of passengers and crew always has been and always will be our first concern. Our weapons are surveillance, technology, and determination. The odds are now heavily against the hijacker . . . and getting tougher all the time. Out of 28 hijacking and extortion attempts this year, 21 failed. That means only 7 successful hijackings out of more than two and a half million flights in this period. Pretty good average I'd say—but we won't be satisfied until there are no hijackings, successful or otherwise. President Nixon has said we won't be intimidated. We shall continue to take whatever actions are necessary to make air commerce safe and secure.

FRIDAY, AUGUST 18, 1972

Question. Mr. Secretary, we are all concerned with the increasing threat of death on our highways and in particular the number of alcohol-related deaths each year. Can you tell us what is being done to get the drunk driver off the road?

Answer. I can tell you that no task in our Department is more urgent than lowering the highway death toll, and solving the drinking-driving problem is basic to that objective.

The statistics are appalling. Of last year's 55,000 highway fatalities, 50% or 28,000 were alcohol-related. Even more appalling is the fact that two-thirds of those fatalities, 19,000 were caused by problem drinkers who drive.

At the Direction of President Nixon, a wide-ranging alcohol countermeasures program has been developed. In my Department, we've committed $84 million for a three and one-half year period to set up model, community-level demonstration projects—Alcohol Safety Action Programs—in 35 locations across the country. They are designed to educate the driver and rehabilitate the problem drinker.

In addition a massive information-education campaign designed to generate public awareness of the continuing threat of the drunk driver was launched in March 1972. Research and development programs for better hardware, such as breath testing devices and ignition control systems have been established. And Federal funds have been made available to the states in order to assist them in bringing their programs in line with Federal standards.

As long as 25,000 people die each year as a result of abusive drinking and driving then drunk driving will remain our concern. President Nixon feels that way. I feel that way—and so should every citizen of this Nation. It is our problem—our responsibility—to get the drunk driver off the road and into an appropriate course of rehabilitation.

Mr. HARRY F. BYRD, JR. Mr. President, how much time do I have remaining?

The ACTING PRESIDENT pro tempore. The Senator from Virginia has 8 minutes remaining.

ECONOMIC EXPANSION

Mr. HARRY F. BYRD, JR. Mr. President, the August 1972 issue of the Economic Research Division of the Chase Manhattan Bank goes into some detail regarding the U.S. economic expansion and it discusses also the Federal budgetary situation.

The report of the Chase Manhattan Bank emphasizes that U.S. economic expansion is gaining momentum. It points out that if the economy follows the path most observers expect for the balance of the year the real growth for all of 1972 will approximate 6 percent. Perhaps equally important, it notes this will be only the second year since 1966 when the gain in real activity was greater than the increase in prices.

The only other such year was 1968 when the economy was artificially stimulated, according to the Manhattan report, by spending in support of the war in Southeast Asia.

It makes the very important point that growth will not solve all economic problems of the United States, but it notes "it can create a climate in which attempts to deal with this problem are more likely to be successful." The report states:

> In particular, continued economic growth would provide an opportunity to deal responsibly with persistent and potentially inflationary Federal budget deficits.

Then, it states:

> As matters stand, the outlook for the U.S. budget is decidedly unhealthy.

Most certainly that is no exaggeration; if anything, it is an understatement.

The outlook for the U.S. budget is decidedly unhealthy, and this report of the Economic Research Division of the Chase Manhattan Bank states:

> In these circumstances, the next administration and Congress will face an unpleasant choice. They can raise taxes or limit spending. Or they can leave fiscal matters as they are and allow the Federal budget to feed a new inflation.

Yes, Mr. President, I think the new administration and the new Congress beginning in January will face unpleasant choices. Ironically, those unpleasant choices are being fostered on both the Congress and the administration by both the Congress and the administration themselves. I do not see any evidence that either the administration or the Congress is attempting to get Federal spending under control. In fact, it is getting more out of control every day.

The administration estimates the Federal funds deficit for the current fiscal year will equal $38 billion. In my judgment, it will exceed $40 billion. A $40 billion deficit in 1 year is a fantastic figure, particularly when it is added on top of all the other deficits which the Government has run for many, many years.

Mr. President, I have prepared a table showing deficits in Federal funds and interest on the national debt, 1954 to 1973, inclusive. I ask unanimous consent that the table may be printed in the RECORD at the conclusion of my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. (See exhibit 1.)

Mr. HARRY F. BYRD, JR. Mr. President, I have prepared another table entitled "U.S. Gold Holdings, Total Reserve Assets and Liquid Liabilities to Foreigners." Liquid liabilities to foreigners today totals $67 billion whereas total assets are only $13 billion. I ask unanimous consent that this table may be printed in the RECORD at the conclusion of my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. (See exhibit 2.)

Mr. HARRY F. BYRD, JR. Mr. President, I yield back the remainder of my time.

EXHIBIT 1

DEFICITS IN FEDERAL FUNDS AND INTEREST ON THE NATIONAL DEBT, 1954-73 INCLUSIVE

[In billions of dollars]

	Receipts	Outlays	Surplus (+) or deficit (−)	Debt interest
1954	62.8	65.9	−3.1	6.4
1955	58.1	62.3	−4.2	6.4
1956	65.4	63.8	+1.6	6.8
1957	68.8	67.1	+1.7	7.2
1958	66.6	69.7	−3.1	7.6
1959	65.8	77.0	−11.2	7.6
1960	75.7	74.9	+.8	9.2
1961	75.2	79.3	−4.1	9.0
1962	79.7	86.6	−6.9	9.1
1963	83.6	90.1	−6.5	9.9
1964	87.2	95.8	−8.6	10.7
1965	90.9	94.8	−3.9	11.4
1966	101.4	106.5	−5.1	12.0
1967	111.8	126.8	−15.0	13.4
1968	114.7	143.1	−28.4	14.6
1969	143.3	148.8	−5.5	16.6
1970	143.2	156.3	−13.1	19.3
1971	133.7	163.7	−30.0	20.8
1972 [1]	147.1	179.3	−32.2	21.2
1973 [1]	152.6	190.4	−37.8	22.3
20-year total	1,927.6	2,142.2	214.6	241.5

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Iowa is recognized for 15 minutes.

THE TIP OF THE ICEBERG

Mr. HUGHES. Mr. President, several weeks have passed since I last reported to the Senate on the status of the investigation into the unauthorized attacks on North Vietnam by aircraft under the command of General Lavelle. Since the Armed Services Committee will be holding hearings on this subject in the near future, I wanted to inform my colleagues of the issues as they stand at this point.

Recent attention has focused on the fact that General Lavelle was retired with a startling 70 percent disability only a few weeks after he had been certified as flight-qualified. Other voices have demanded a court-martial for the general.

The primary issue is not General Lavelle, however, but the command and control system which permitted and then allowed to be concealed the unauthorized attacks against North Vietnam. Nor should General Lavelle be made the lone scapegoat if it turns out that others in the chain of command are also responsible for these actions.

I might add it seems almost impossible that one man along that chain of command could have been the only man aware of or issuing orders in relation to those strikes.

So far we have seen only the tip of the iceberg—one man disciplined on the basis of one investigation prompted by one letter to one U.S. Senator. Now we must go further, and I trust that the committee's hearings will explore all relevant facets of this issue.

At my request, a special subcommittee of the Armed Services Committee held a hearing to take testimony from Adm. Thomas H. Moorer, Chairman of the Joint Chiefs of Staff, about the Lavelle incident. Admiral Moorer's nomination for reappointment as Chairman was pending before the Armed Services Committee, and he appeared in that connection.

It was my feeling that the committee wanted a more complete picture of his role in the command and control structure, particularly with respect to our military operations in Indochina, and the questions I devised for Admiral Moorer were intended to elicit that information.

Mr. President, I believe my colleagues in the Senate would be interested in reading some of Admiral Moorer's opening statement to the subcommittee regarding these matters, and I ask unanimous consent that the statement be printed in the RECORD at the conclusion of my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HUGHES. Mr. President, in answer to a series of questions, Admiral Moorer, in his testimony, provided the subcommittee with insight into the process by which General Lavelle forwarded his requests for authorization to strike certain targets—including targets that he regarded as military targets in North Vietnam.

This testimony is basic to our investigation, Mr. President, because there are strong indications that specific requests from General Lavelle were specifically turned down at several levels, in keeping with U.S. policy against attacking targets of opportunity in North Vietnam.

Mr. President, this testimony is most important because it demonstrates that there were numerous written communications that traveled up and down the chain of command—from General Lavelle to Secretary Laird and back—communications that are vital to an understanding of what, exactly, transpired in connection with General Lavelle's attempts to secure approval for his air strikes against North Vietnam.

I will insist that these orders be examined in detail by the Armed Services Committee and, wherever possible consistent with reasonable security precautions, they be made a part of the public record to be published by the committee.

The chain of command reached both up and down from General Lavelle. In fact, Admiral Moorer testified that there were several points of importance along the chain of command through which orders, reports, and requests for bombing authority passed.

Beneath General Lavelle were the commanders of forces operating in South Vietnam, near the DMZ in North Vietnam, in Laos and Cambodia, and from the 7/13th Air Force elements in Thailand.

Upward from General Lavelle, the orders, reports, and requests were channeled through General Abrams, commander of American forces in Vietnam, to Admiral McCain, commander in chief, Pacific forces, and then to the Joint Chiefs of Staff and, when appropriate, to Secretary of Defense Laird.

I have already informed the Senate of my request to the distinguished chairman of the Armed Services Committee (Mr. STENNIS) to have the airman who first wrote to me called as a witness in the forthcoming hearings. I have also suggested by letter to the chairman calling on others in the chain of command between General Lavelle and this brave sergeant.

In addition, I have requested that the committee hear from General Abrams and Admiral McCain, as well as General Lavelle, before action is taken on any of the nominations regarding these men that are pending before the committee.

Since we need the personal testimony of officers involved in this chain of command, I have requested that no action be taken by the committee on a series of nominations in which these officers are involved.

First there was the nomination of General Lavelle to retire at a reduced grade of lieutenant general.

Second, the nomination of Gen. Creighton Abrams, former military commander in Vietnam, as Army Chief of Staff.

Third, the nomination of Adm. John D. McCain, Jr., commander in chief, Pacific, for retirement at the rank of full admiral.

In each of these cases, I have requested that these nominations be deferred until the committee has had an opportunity to examine in detail the operation—and apparent failure—of the command and control system that we used in Southeast Asia and what role, if any, each of them had in connection with General Lavelle's transgressions.

Only if we examine each link in the chain of command can we be sure that we will find and correct whichever ones may have been defective.

Mr. President, my own doubts about the command and control system were not eased when Admiral Moorer testified that he had known about one unauthorized attack during the 4-month period in question. In this instance, in December, one or two planes fired on a radar installation which was used to control North Vietnamese fighters. Since that particular facility was not authorized, Washington brought the incident to the attention of the field commander.

But instead of being suspicious of such violations of orders, the military command also went to Secretary Laird and received his permission to hit similar targets in the future.

In other words, the Pentagon authorized what it had been unable to prevent.

Mr. President, the effectiveness of our system of command and control is clearly the focal point of the concern aroused by the Lavelle affair, but there are grounds to worry about larger and more fundamental issues, also.

The Senator from North Carolina (Mr. ERVIN) has said that the Lavelle affair involves a problem of military control over the military more than a concern over civilian control over the military.

Mr. President, I for one believe that this incident—and a combination of others—raises a question as to the strength of civilian commitment to control military actions.

Policy is not merely what our civilian authorities say, but more importantly it is what is done.

We say that our policy is not to bomb North Vietnam except in retaliation, but the Air Force under General Lavelle bombed North Vietnam at will.

We say it is not our policy to bomb the dikes in North Vietnam, but the dikes are bombed.

We say it is not our policy to bomb schools and hospitals and other civilian targets, yet schools, hospitals, and civilian targets all over Indochina are damaged and destroyed by American bombs.

We say it is not our policy to attack civilians, yet columns of civilian refugees are napalmed as they stream away from areas of intense battle activity.

We say it is not our policy to achieve a first-strike capability in strategic nuclear weapons, yet the President requests funding for weapon systems that have unquestionable capability as first-strike weapons.

We say it is not our policy to strike first with lethal chemical weapons, yet the Army is in the advanced stages of developing new lethal chemical weapons to add to our arsenals.

As I said earlier, Mr. President, these are all contradictions of policies asserted by the civilian leaders of our Government who seem undisturbed by the fact that actual events frequently and sometimes consistently contravene these policies.

It is, in other words, a situation in which civilian leadership is willing to state a policy, but shows little willingness to enforce it.

Newspaper reports have quoted several present and former officials to the effect that the current administration has loosened the reins of control over military operations in Indochina. Whether this occurred because of military assertiveness or White House indifference remains unknown.

Under President Johnson, as we all know, the targeting of attacks in North Vietnam was considered so closely tied to diplomatic strategy that such decisions were made at the highest level.

Under President Nixon, however, this is not the case. When Admiral Moorer was asked whether Dr. Kissinger's office knew or approved of targets in North Vietnam, he replied that large scale operations like the mining of Haiphong would be coordinated with the White House, but not details of "target A or target B."

If the question deals with whether you hit a bridge or a ferry slip or a supply center, of course it is not coordinated.

Yet these very details make the difference between hitting SAM sites on dikes or dikes themselves and bombing supply centers near schools and hospitals or those which are not.

If the civilian authorities refuse to assert their control and monitor the activities done to carry out their policies, they run the risk of criminal neglect.

Only this week I was shocked to read in the New York Times that:

> More than half the ordnance delivered (in Indochina) falls outside the intended target area.

If this is true, it utterly destroys the credibility of our claims of "pinpoint accuracy" and the avoidance of civilian targets.

There is another paradox that strikes one who gives some careful thought to the whole picture of command and control—extended upward from our Military Establishment into the civilian leadership, as well as downward from the fighting man to the very weapons he fights with.

Mr. President, in every military man there is a strong vein of humaneness—an overpowering desire to be able to perform his distasteful task of waging battle without injuring the innocent and uninvolved.

I believe that this humaneness is at the heart of requests from the fighting man for weapons that are more accurate, more predictable, and better tailored to the terrible task.

In other words, Mr. President, the military man strives for weapons over which he has better control—"smart" bombs, laser-guided munitions, pinpoint antitank weapons, costly and sophisticated guidance systems for our aircraft, improved surveillance systems for pinpoint targeting, and a thousand other weapons improvements.

The fighting man asks for these weapons improvements, and the Congress almost without question grants his requests.

We grant them because it just makes good, simple sense for the man in combat to have complete control over the destructive powers at his command.

And there is other technology that receives general approval from the Congress in the name of better command and control. The President has requested—and I predict that Congress will approve—$10 million in fiscal 1973 for acceleration of improvements in C–cubed systems—Command, Control, and Communications.

We can grant this request for better communications gear—we can grant request after request for better weapons that can be better controlled—but the control we urgently need to improve relates to the people who use the systems.

Unless we take strong measures to improve military control over the military man, and above that civilian control over the military establishment, all of the careful and expensive steps for controlling our weapons of destruction are totally wasted.

Exhibit 1

Testimony of Admiral Moorer

Admiral Moorer. I think it would be helpful, Mr. Chairman, and Senator, if I simply give a little background here with respect to the way that the operations have been and are conducted in Southeast Asia. They are conducted on the basis of rules of engagement which were, of course, promulgated in 1965 when the activity first commenced.

As you can appreciate, over this extended period of time the rules of engagement have been modified and updated. For instance, the change in the status of Cambodia would generate a requirement to change the rules of engagement. And so they are continually updated depending upon the situation at the time.

In addition to the standing rules of engagement, we also have what we call authorities of limited duration wherein the forces in the field are ordered to conduct a specific operation for a limited duration.

Now, the requests for these authorities or the genesis of these authorities can come from several places. For instance, the field commander can ask authority to conduct such and such type operation or the unified commander in Hawaii. Admiral McCain, may recommend a certain type of action. The Joint Chiefs of Staff may recommend an action of a certain kind.

However, I want to emphasize to the committee, since this subject always comes up about the question of civilian control, since I have been Chairman of the Joint Chiefs of Staff, and I am sure this has been true in the past, not one directive has ever been given to the forces in the field without first receiving the approval of the Secretary of Defense, and I think that is an important point.

In order to follow operations so far as the air operations are concerned, we have a very, I think, complete and thorough reporting system. This system is called the operation reporting system, and for short the various reports are called OPREPS. There are five of these OPREPS. OPREPS 1, 2, 3, 4, 5.

OPREP 1 indicates the intent to conduct the operation and the nature of the operation.

The OPREP 2 indicates that the operation is now underway, the aircraft have been launched, for instance.

OPREP 3 reports special events that are of particular interest which may occur during the progress of the operation.

OPREP 4 is the report that the pilots make immediately after they return from the flight.

We recognize that this report may not be complete and may be subject to reevaluation but it gives us immediate information on what has happened.

For instance, when the mining operation was conducted in Haiphong, within 30 minutes we had the OPREP 4 back telling us that the mines had been put in the proper position, that all aircraft had returned safely, and a brief outline of the enemy reaction. That type of thing is in OPREP 4.

And finally there is an OPREP 5 which gives a good summary of the verified information that has been reviewed and evaluated and more or less winds up the reporting on the particular operation.

These reports come, of course, to the senior commanders. They come to Hawaii where they are recorded and reviewed by Admiral McCain and they come to Washington where I keep a very detailed record of these reports which are placed in the automatic data processing system and in that way we are able to extract information and statistics concernnig almost any operation that has been conducted under this system.

And I can assure you, Mr. Chairman and Senator Smith, that I watch these reports very carefully in order to evaluate what has taken place, the results of the operations and, of course, from that we develop recommendations concerning other operations of this type or perhaps different operations which might be indicated as desirable.

Last fall when the dry season developed in Laos it became quite apparent that the North Vietnamese were going to lay on a very heavy effort leading to military operations in South Vietnam.

For instance, they deployed south finally a large number of battalions of SA–2 missiles—that is the surface to air missiles—and positioned them north of the DMZ and around their most valuable targets or rather most valuable facilities which were necessary in order to conduct this buildup.

For instance, such a place would be the Mugia Pass or the Dong Hoi transshipment point.

In addition to these ——— battalions of SA–2 missiles, some of which were finally put in Laos, they also deployed south an exceptionally large number of triple A antiaircraft sites and regiments.

In addition to that, they commenced for the first time to operate aircraft, their MIG aircraft, down south, and on frequent occasions they made excursions into Laos. South of Hanoi beginning with Baithuong airfield, they had three other good airfields and they commenced construction of two more, and so we had every indication that they were going to do everything they could to interfere with U.S. air operations.

That was the situation that existed during this period of time in question.

If I may at this point go back a bit. I think, as you recall, when the bombing was halted in 1968, one of the understandings was that we would continue unarmed photo reconnaissance of North Vietnam in order to observe any efforts on the part of the North Vietnamese to move men and material to the south and into South Vietnam.

As I recall, we first endeavored to conduct reconnaissance without any escort for the reconnaissance plane and very shortly after the bombing halt in November 1968 one of our unarmed photo reconnaissance planes was shot down even though the North Vietnamese had agreed that the reconnaissance could take place.

So at that point we began to escort these aircraft, sometimes with two planes, sometimes with four planes, the average I would say was something betwen two and four depending on what the anticipated threat was.

And the authority which permitted these planes to take counteraction in the event they were fired on, the reconnaissance plane was fired on, was an authority which termed such action as protective reaction.

In other words, the authority clearly states that before these aircraft can take action against either the missile or any antiaircraft that fires at them, that there must be evidence that they have in fact been fired upon. This has been the authority and I think it is crystal clear.

As you can appreciate, when the North Vietnamese added Migs to the missiles and antiaircraft and projected them as far south as they did last winter, this presented quite a threat. Therefore, in addition to the flak suppression aircraft, that is the escort aircraft, it was necessary also to provide high-altitude protection against any possible Migs that might come down and attempt to shoot down the reconnaissance plane, and that was done on occasions whenever the field commander felt that there was in fact a Mig threat present.

So you had in the reconnaissance effort a photographic plane which was escorted by two to four aircraft and one or two occasions six, but I don't recall ever having over six, and that is very rare, planes whose orders were in the event the photographic plane was fired upon they in turn were to react against the ground unit firing at the reconnaissance plane. And on occasion up at higher altitude above the photographic plane, we had other aircraft that we call a Mig cap, the Mig is the fighter aircraft that the North Vietnamese use which was charged with the responsibility of preventing the enemy Mig fighters from shooting down the photographic plane.

There were other types of operations which were labeled protective reaction. For instance, we have an aircraft missile which is an antiradiation missile. In other words, it homes on the enemy radar which directs either the guns or the SH–2 missiles. And this particular missile is what one would call a standoff missile. In other words, the plane that fires it does not have to be right at the radar, it can be several miles back, and so consequently the authority has been granted again to use these antiradiation missiles against the radars that directed the antiaircraft and the missiles against our aircraft, but that involves one missile at a time at one radar as compared to bombs that were dropped immediately over the missile site or the missile van or the antiaircraft site.

There was one other authority that dealt with protective reaction. As a matter of fact, two others. One permitted the aircraft, if they were operating in Laos, and were fired upon by antiaircraft or missiles just inside the North Vietnamese border, such as at the Mugia Pass, to take action against those guns or missiles. In other words, the enemy was not allowed to have a sanctuary where they could sit across the line and fire away as they chose without getting a reaction from our planes.

And, finally, we had protective reaction operations of limited duration. For instance, we noted that a large number of 130-mm artillery pieces were positioned just north of the DMZ system around last Christmas and we requested and received authority to attack these 130-millimeter artillery pieces and they were destroyed.

So those then were the authorities that were given the operating forces and which were used by them during this buildup period that the North Vietnamese used to put themselves in a position to commence this invasion on March 30, 1972.

* * * * *

The CHAIRMAN.

General Lavelle testified that he made numerous requests for authority to hit targets in North Vietnam and that he was turned down. I assume he is quoting now from the Laos hearings. He said he testified.

Did those requests come to your attention?

Admiral MOORER. The procedure for General Lavelle to follow in requesting these authorities is for him to submit them to General Abrams who, in turn, would submit through Admiral McCain to the Joint Chiefs of Staff and we would in turn request authority from the Secretary of Defense.

In other words, the point I am trying to make here, General Lavelle would not make a request directly to the Joint Chiefs of Staff, he would only make a request directly to General Abrams.

So, the answer is "Yes," I did receive requests from General Abrams which I am sure in many cases General Lavelle initiated.

The CHAIRMAN. And they were brought to your attention then by General Abrams?

Admiral MOORER. Yes, sir; that is correct via Admiral McCain.

The CHAIRMAN. But at that time you assumed they came from Lavelle?

Admiral MOORER. Generally—but not always—the requests for air authorities would come from General Lavelle and requests for the ground authorities would come from the Army commander; it works that way.

The CHAIRMAN. He was in charge of the Air Force in that area?

Admiral MOORER. That is right.

The CHAIRMAN. All right, the next question.

Admiral MOORER. If I may, I explained at the outset that the requests for authorities originate in many places. They could come from General Lavelle who, in turn, asked General Abrams at that point, COMUSMAC V—we call him to request from Admiral McCain, or Admiral McCain may originate this himself, or in some cases the Joint Chiefs of Staff may originate the request. We are all watching this all the time, but in the particular case we did receive requests from General Abrams for air authorities.

The answer to that question is "Yes," I did receive them.

The CHAIRMAN. Like a telephone call, it can originate anywhere along the line, it is coming to the same destination?

Admiral MOORER. Yes, sir; the decision is made the same way regardless of where it originates.

Senator SMITH. General Abrams did not identify the person who was making the request to you?

Admiral MOORER. No; he would not do that. It is not necessary and not expected.

The CHAIRMAN. His next question, how did you handle them, still referring to the requests?

Admiral MOORER. In the cases relating to air authorities, I, of course, prepared then a paper and forwarded them to the Secretary of Defense, sir, and requested his approval.

The CHAIRMAN. Suppose you denied the request?

Admiral MOORER. In that case, if the Joint Chiefs of Staff felt that this was not a proper action, we would simply not request approval.

The CHAIRMAN. Wouldn't pursue it further?

Admiral MOORER. Yes, sir; although the Secretary of Defense is informed of the request.

The CHAIRMAN. His next question: Did you communicate with General Abrams about the denial of the request?

Then he says, with Secretary Laird? With General Lavelle? The last three: Abrams, Laird, and Lavelle?

Admiral MOORER. We communicate with General Abrams through Admiral McCain. In other words, we always reply to the request but the Joint Chiefs of Staff send their reply for this, whether it is positive or negative, to the Commander in Chief, Pacific, an information copy goes to General Abrams. So the answer to that is "Yes," I communicated with Admiral McCain; and General Abrams was informed simultaneously what I was telling Admiral McCain and Admiral McCain picks it up and directs General Abrams to take action accordingly. I do not communicate with General Lavelle.

The CHAIRMAN. That is the ordinary course then that these requests take coming in and then going back?

Admiral MOORER. That is correct, sir. Because the Commander in Chief, Pacific, Admiral McCain, is of course, in command of overall operations in the Pacific. So the Joint Chiefs of Staff deal directly with Admiral McCain.

In order to expedite action and to keep everyone informed, we list General Abrams, sometimes General Lavelle, Admiral Clarey, and others that are involved, as we call them, information addresses, so they will know what I told Admiral McCain and that will expedite the action. But I would not give General Abrams a direct order. The order would be given to Admiral McCain who, in turn, would see to it that the action was taken by General Abrams.

Admiral MOORER. No, sir. I am very careful not to do that.

The CHAIRMAN. You already said you didn't skip Abrams either and go to Lavelle.

Admiral MOORER. No, sir. I wouldn't have occasion to communicate directly with General Lavelle.

The CHAIRMAN. Going back to the question. To be sure that it's been fully answered I will repeat it: did you communicate with General Abrams about the denial of these requests, with Secretary Laird, with General Lavelle? I think you have answered those as to Lavelle and as to Abrams but what about Secretary Laird?

Admiral MOORER. Yes, sir.

The CHAIRMAN. If you approved them then, they went on to Mr. Laird?

Admiral MOORER. That is correct. I prepare the rationale explaining why we want approval and I send the rationale plus a message, a proposed message to Admiral McCain and others involved, to Secretary Laird and if he approves the message he signs. He may deny it or he may modify it on occasion. But I want to repeat what I said at the outset, that since I have been chairman of the Joint Chiefs of Staff I have never sent an order to the field without getting approval of the Secretary of Defense.

The CHAIRMAN. All right.

Did you read any of the operations reports or damage assessments filed after the unauthorized raids or any summary reports of them?

Admiral MOORER. Yes, sir. As I explained to you, Mr. Chairman, I keep a very careful record, a machine run. General Pauly, for instance, whom you are well acquainted with through your regular Vietnam briefings, is one of the officers responsible for this, and so the answer to that question is "Yes."

The CHAIRMAN. The next question. Did those reports raise any suspicion in your mind that the 7th Air Force was striking unauthorized targets?

Admiral MOORER. No, sir. The reports do not indicate that the strikes were other than in accordance with current instructions.

There was one case which occurred in December, and this is rather involved, if I may start at the beginning.

The authority for the standoff missiles that I explained to you—the antiradiation missiles—was such that they could be used against the radars that control the missiles and the radars that controlled the antiaircraft. They did not provide authority to strike the radars that are used to control fighters at that particular time.

It became evident to us that the enemy was using the radars that are used to control fighters to aid in directing their missiles. They had developed a system wherein they used the radars that controlled the fighters to pick up the targets and this meant that the radar controlling the missile also was on the air a very short time and, consequently, was not as vulnerable to the antiradiation missiles as it had been before. That was the purpose of tie-in between these various radars systems.

One of the aircraft, as a matter of fact there were one or two of the aircraft, I have forgotten the number, did fire at a radar that is used to control the fighters. Because we were all working on the feasibility of what we suspected the enemy was doing and in the eyes of the pilot, I think he felt that the fighter control radar was part of the missile system. In fact, it was, but literally he did not have authority to do that because we only covered the two types. We are talking about three types: One that controlled the missile, one that controlled antiaircraft and one that controls the fighters. At the moment this strike took place the authority actually covered only two of the radars. I am only talking about one missile; I am not talking about a large formation of airplanes, I am talking about one airplane firing one missile at one radar.

The CHAIRMAN. Pardon me. That is almost a distinction without a difference, isn't it, because it was a converted radar.

Admiral MOORER. Yes, sir.

The CHAIRMAN. Converted?

Admiral MOORER. Yes, sir. We had suspected this and we were examining it technically. I am bringing this up because I wanted to show you that we had picked this firing incident up immediately, that they had fired at this radar. We called the field commander's attention to it. In the meantime we had taken it up with the Secretary of Defense and on 26th of January he expanded this authority to permit firing at all three radars, and this is the case now.

I only mention this to show you and to answer your question that we do review the reports and that we did pick up immediately from the reports, and in this case that there was a misinterpretation, but it was a minor one and was corrected right away.

The CHAIRMAN. With that exception then of this special radar that was being misused, you didn't have any other suspicions that the 7th Air Force was striking unauthorized targets?

Admiral MOORER. None whatever, sir. And I don't think there is anything in these reports that would cause me to have any suspicion.

I should point out that when General Ryan informed me of these letters he received and the fact that he had ordered his

Inspector General to go to Southeast Asia, I was concerned about this and in order to be sure what the interpretation was, that it was correct, and that the order was clear, I sent General Pauly to Southeast Asia to go aboard our carriers because they are also conducting air operations under the same identical rules, and I wanted to cover all aircraft in Southeast Asia, not only the 7th Air Force that General Ryan was inspecting, but I wanted to inspect the Navy, too, to be sure that they had not misinterpreted the intent of the directive, that the directive was in fact clear. And so I have been looking into this continuously in terms of the reporting system—by sending one of my key officers out to take a look, by talking to Admiral McCain about this problem, and we are still in the process of trying to analyze and evaluate and improve the reports, if we can, so that we can properly monitor these things.

ROUTINE MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, there will now be a period for the transaction of routine morning business for not to exceed 15 minutes, with statements therein limited to 3 minutes.

U.S. BOMBING OF VIETNAM MOST SHAMEFUL CHAPTER IN AMERICAN HISTORY

Mr. PROXMIRE. Mr. President, the Senator from Iowa has just given a very, very important speech. I certainly hope Senators will have an opportunity to review it in the RECORD. It is most significant, and I think its importance will become more apparent as the Abrams nomination and other military nominations come before this body.

I speak now on another very closely related subject.

Mr. President, the U.S. part in the Vietnam war has in the last few weeks become outrageous. Every day the headlines in our papers tell us that this country is carrying on the biggest bombing raids in the history of the war on North and South Vietnam. Literally millions of tons of death are being rained down on those pitiful little countries by the most powerful air force in the history of the world.

Mr. President, this just has to be the sorriest most shameful chapter in the history of this great and gallant country we love. There was a time when the Vietnam war made some sense—to some of us. We were opposing a Communist aggression that could result in Red Chinese takeover of Asia. We were fulfilling our obligations under the protocol of the SEATO treaty. That obligated our defense of South Vietnam. I supported the war. The war may have been wrong then and I may have been wrong to support it. I have opposed the war for the past 5 years.

And Mr. President, that war has certainly become wrong and evil now. This country has fulfilled its obligations under the SEATO pact with 50,000 dead Americans and more than $100 billion. And Communist aggression? Let us stop kidding ourselves.

Peking is out of the Vietnam war. There has not been a single Chinese or Russian soldier in combat in Vietnam throughout the war. Not a single Chinese or Russian bomber pilot has dropped even a 1-pound bomb in this war.

Sure we have withdrawn our troops, but from the skies 6 miles above Vietnam we are raining down a concentration of lethal, terrible death and destruction—day after day as never before. I repeat, as never before. It is killing hundreds of Vietnamese—many of them innocent. If the Mylai massacre was wrong, what is it when a B–52 drops tons of bombs in populated areas, killing scores of helpless women and children and babies, and when this slaughter is planned and directed by the top officials of this Government?

Mr. President, the time has come to ask what the hell are we doing out there? Yes American ground combat troops are away from it all. Draftees no longer go to Vietnam unless they ask for it. Our casualties are way down. And this has worked political magic for this administration. Sam Lubell one of the best public opinion experts in the country says that the American people now want us to finish off North Vietnam with our bombing attack. Now that most of the American boys are safe, the American people may well support this tragic, shameful, senseless rain of death and destruction on a little primitive country. Well, if they do they are wrong.

Just for one night every American father and mother should look at his own children as they sleep peacefully and quietly in their safe and secure home, and then think of the Vietnamese children who are being killed and maimed for life by the hundreds with American bombs every day and every night. For what? For what?

What in hell are we trying to accomplish? No one, I repeat, no one thinks this war is now preventing a potential Red Chinese takeover of Asia. Does little North Vietnam with her 17 million people, her pathetic bicycle and wagon economy represent a threat to America? Do not be silly.

Let us face it. We, the Congress and the administration, are carrying on this war because we want to save face. Somehow too many of us think that if we can bomb North Vietnam into acceptance of our terms that will constitute victory. America will have won. Our moral purpose will have been vindicated. Those who supported the war to the end will be proven right.

Mr. President, this is nonsense. The American people are going to be deeply shamed by this war. History will find that in the glorious record of this country—a record which the poet, Archibald MacLeish, once said is honored by the fact that America has always fought its wars in the name of freedom and to establish, preserve, and protect freedom. Well, this chapter of the Vietnam war—this appalling repetition of scores of new Mylai cases every day—will make this Congress and this administration the most shameful in our history.

Mr. President, I yield the floor.

AMERICAN BAR ASSOCIATION SUPPORTS THE TREATY AND THE INTERIM AGREEMENT ON LIMITATION OF STRATEGIC WEAPONS

Mr. MANSFIELD. Mr. President, I have received today in the form of a telegram, in my capacity as majority leader of the Senate, a resolution from Mr. Kenneth J. Burns, Jr., secretary of the American Bar Association. I shall not read the whereases nor all of the resolves, but the telegram concludes as follows:

> Be it further resolved, that the President or his designee be authorized to appear before the appropriate committees of the Congress in support of such action; and
>
> Be it further resolved, that the American Bar Association urges the Government of the United States to seek promptly to reach agreement with the Soviet Union on further measures limiting and reducing strategic offensive arms, and on general and complete disarmament, in accordance with the provisions of the preamble and Article XI of said treaty and of Article VII of said interim agreement.

Mr. President, I ask unanimous consent that the telegram setting forth the resolution adopted by the American Bar Association on Wednesday last be printed in the RECORD at this point.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

> SAN FRANCISCO, CALIF.,
> *August 17, 1972.*
>
> Hon. MIKE MANSFIELD,
> *Majority Leader of the Senate,*
> *Capitol Hill,*
> *Washington, D.C.:*
>
> On Wednesday afternoon, August 16, 1972, the House of Delegates of the American Bar Association adopted the following resolutions:
>
> Whereas, the United States has undertaken by the terms of Article VI of the Non-Proliferation Treaty of 1968, to which it is a party to "pursue negotiations in good faith on effective measures relating to cessation of the nuclear arms race at an early date and to nuclear disarmament, and on a treaty on general and complete disarmament under strict and effective international control", and expressed a similar intention in the preamble of the Limited Test Ban Treaty of 1963; and
>
> Whereas, it has for some years been a major objective of the United States to reduce the risk of military confrontation with the Soviet Union, particularly if involving the use of strategic or nuclear weapons; and
>
> Whereas, it has also been a major objective of the United States to slow down and arrest the escalation of armaments, in particular in the field of strategic weapons; and
>
> Whereas, the needs of the people, in the United States and elsewhere, require the allocation of greater financial and other resources, some of which might not be available if increased military expenditures occur; and
>
> Whereas, the United Nations and various of its committees have for many years urged strategic nuclear arms control and disarmament measures; and
>
> Whereas, the United States and the Soviet Union have sought since 1967 to begin negotiations on agreements to limit strategic weapons, and began such negotiations in November 1969, and have reached certain agreements expressed in a proposed treaty and interim agreement. Both signed in Moscow on May 26, 1972, by President Nixon and General Secretary Brezhnev; and
>
> Whereas, the Senate, on August 3, 1972,

advised and consented to the ratification of the said treaty; and

Whereas, negotiations on further agreements will be facilitated by approval by the Congress of the said interim agreement as well; and

Therefore, be it resolved, that the American Bar Association urges the Senate and House of Representatives to authorize approval by the President of the United States of the interim agreement on certain measures with respect to the limitation of strategic offensive arms, and the associated protocol, all of which were signed at Moscow on May 26, 1972 by President Nixon and General Secretary Brezhnev; and

Be it further resolved, that the president or his designee be authorized to appear before the appropriate committees of the Congress in support of such action; and

Be it further resolved, that the American Bar Association urges the government of the United States to seek promptly to reach agreement with the Soviet Union on further measures limiting and reducing strategic offensive arms, and on general and complete disarmament, in accordance with the provisions of the preamble and article XI of said treaty and of article VII of said interim agreement.

KENNETH J. BURNS, Jr.,
Secretary of the American Bar Association.

LEAVE OF ABSENCE

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, on the basis of a long standing official engagement, the distinguished Senator from Iowa (Mr. HUGHES) be authorized to be absent from the Senate on official business from September 5, when we return after the recess, through September 9, 1972.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

THE RETIREMENT OF GENERAL LAVELLE

Mr. HARRY F. BYRD, JR. Mr. President, the distinguished Senator from Iowa, in his remarks a few moments ago, mentioned the matter of General Lavelle. I do not wish to prejudge that case. General Lavelle will come before the Senate Armed Services Committee, and any comments that I make this morning should not be construed as either favorable or unfavorable to General Lavelle.

But there was one point in the remarks of the able Senator from Iowa that caught my attention. I want to comment on it this morning and ask the Senator from Iowa a question.

Did I correctly understand the Senator from Iowa to say that General Lavelle received from the Army a disability discharge, which tends to increase his retirement pay, a week or 2 weeks after having passed a medical examination for flight pay, which itself tends to increase an officer's pay?

Mr. HUGHES. If the Senator from Virginia will yield for response, the Senator from Iowa did not say 1 or 2 weeks. The Senator from Iowa stated a few weeks after a physical examination, had certified the general as flight qualified. The Senator from Iowa does not have the specific facts before him to say just at what date the general was certified and what date physical disability was certified.

I certainly want to join the distinguished Senator from Virginia in saying that the statement I have made here is not a judgment of the physical disability of General Lavelle in any sense whatsoever, because the Senator from Iowa has no formal documents as to the physical ability or disability of General Lavelle, only news reports as to what Air Force spokesmen have said—that General Lavelle was flight-qualified at the time of his retirement.

Mr. HARRY F. BYRD, JR. I thank the Senator from Iowa.

The point I am suggesting this morning is that perhaps the Armed Services Committees of Congress should look into the matter of how flight pay is handled and how disability is being determined. As we know, if an officer is qualified for flight pay, he receives additional compensation; and if he is discharged for physical disability, he receives a tax advantage on his retirement pay.

So I think that perhaps the appropriate committees of Congress would do well to delve a little into how these matters are being handled in the Defense Department, to be sure that those officers who are entitled to flight pay are, indeed, qualified for the work for which they are receiving additional pay, and, by the same token, that those officers who are being retired for disability are, in fact, entitled to such a discharge, which gives to that officer a very desirable tax advantage on his retirement pay.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. TUNNEY) laid before the Senate the following letters, which were referred as indicated:

REPORT ON CHEMICAL WARFARE AND BIOLOGICAL RESEARCH PROGRAMS

A letter from the Deputy Secretary of Defense, transmitting, pursuant to law, a secret semi-annual report on chemical warfare and biological research programs (with an accompanying report); to the Committee on Armed Services.

REPORT OF THE SECRETARY OF THE SENATE

A letter from the Secretary of the Senate, transmitting, pursuant to law, a statement of the receipts and expenditures of the Senate, from January 1, 1972, through June 30, 1972 (with an accompanying report); ordered to lie on the table and to be printed.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. BENNETT, from the Committee on Finance, with amendments:

H.R. 11185. An act to amend the Internal Revenue Code of 1954 with regard to the exempt status of veterans' organizations (Rept. No. 92–1082).

By Mr. MANSFIELD (for Mr. CANNON), from the Committee on Commerce, with amendments:

S. 2741. A bill to amend the act of September 7, 1957, authorizing aircraft loan guarantees, in order to expand the program pursuant to such act (Rept. No. 92–1083).

By Mr. RANDOLPH, from the Committee on Public Works:

S. 3939. A bill to authorize appropriations for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes (Rept. No. 92–1081). Referred to the Committee on Banking, Housing and Urban Affairs.

Mr. RANDOLPH. Mr. President, I report an original bill from the Committee on Public Works to authorize appropriations for the construction of certain highways in accordance with title 23, United States Code and for other purposes. I ask unanimous consent that the committee have until midnight tongiht to file the report.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. RANDOLPH. Mr. President, I ask unanimous consent that the bill be referred to the Committee on Banking, Housing and Urban Affairs for their consideration of that portion of paragraph 3 of section 105 requiring that at least $300 million of funds authorized for fiscal years ending June 30, 1974, and June 30, 1975, be used for highway public transportation in urbanized areas, and of those provisions of section 128 of the bill authorizing the purchase of passenger equipment other than rolling stock for fixed rail, and that the Committee on Banking, Housing and Urban Affairs have until the close of business on Friday, September 8, 1972, to act on this referral.

The PRESIDING OFFICER. Is there objection?

Mr. RANDOLPH. Mr. President, the able chairman of the committee to which the referral would be made is in the Chamber. We have discussed this matter, and perhaps with the understanding of the Senator from Alabama, he would allow his colleague just for a moment to engage in a colloquy.

Mr. ALLEN. Yes, Mr. President, I yield under the same understanding as before.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SPARKMAN. Mr. President, let me say we have worked out an agreement as stated by the chairman of the Public Works Committee. It is our plan in the committee to hold hearings on September 7, and we have assured the chairman that we would complete action on the bill during that week.

Of course, the 7th is Thursday. The chairman requested until Friday. I suppose if there is a legislative session on Saturday, we could act then. However, I have no doubt but that we will be able to report it back on the 8th, as the chairman has requested.

Mr. President, I have no objection.

Mr. RANDOLPH. Mr. President, I thank my colleague from Alabama, the able chairman of the committee, and if no action has been taken on the unanimous-consent request for referral, I ask unanimous consent that the question be put.

The PRESIDING OFFICER. Is there objection to the request of the Senator from West Virginia? The Chair hears none, and it is so ordered.

EXECUTIVE REPORTS OF COMMITTEES

As in executive session, the following favorable reports of nominations were submitted:

By Mr. LONG, from the Committee on Finance:

James E. Smith, of Virginia, to be a Deputy Under Secretary of the Treasury.

By Mr. BENNETT, from the Committee on Finance:

Cynthia Holcomb Hall, of California, to be a judge of the U.S. Tax Court.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. PERCY (for himself and Mr. TAFT):

S. 3936. A bill to amend title III of the Trade Expansion Act of 1962 so as to provide more effective adjustment assistance thereunder, and for other purposes. Referred to the Committee on Finance.

By Mr. MATHIAS:

S. 3937. A bill to amend the act of August 4, 1950 (64 Stat. 411), to provide salary increases for members of the police force of the Library of Congress. Referred to the Committee on Rules and Administration.

By Mr. HART (for himself and Mr. BURDICK):

S. 3938. A bill to amend the Federal Property and Administrative Services Act of 1949, as amended, to permit the disposal of surplus property, both real and personal, to Indian, Eskimo, or Aleut tribes, bands, groups, pueblos, and communities recognized by the Federal Government, and for other purposes. Referred to the Committee on Government Operations.

By Mr. RANDOLPH (from the Committee on Public Works):

S. 3939. A bill to authorize appropriations for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes. Referred to the Committee on Banking, Housing and Urban Affairs.

By Mr. SPARKMAN (for himself, and Mr. ALLEN):

S. 3940. A bill to amend the black lung benefits provisions of the Federal Coal Mine Health and Safety Act of 1969 to extend those benefits to miners who incur silicosis in iron mines and surface coal mines. Referred to the Committee on Labor and Public Welfare.

By Mr. CRANSTON (for himself and Mr. MATHIAS):

S. 3941. A bill to establish Capitol Hill as a historic site. Referred to the Committee on Public Works.

By Mr. GRAVEL:

S. 3942. A bill for the relief of Clifford and Yvonne Gibbons. Referred to the Committee on the Judiciary.

S. 3943. A bill to amend the Public Buildings Act of 1959, as amended, to provide for the construction of a civic center in the District of Columbia, and for other purposes. Referred to the Committee on Public Works.

By Mr. ROBERT C. BYRD (for himself and Mr. RANDOLPH):

S. 3944. A bill to provide for repair and conversion to a fixed-type structure of dam numbered 3 on the Big Sandy River, Kentucky, and West Virginia, in the interest of water supply and recreation for local interests. Referred to the Committee on Public Works.

By Mr. BUCKLEY:

S.J. Res. 262. A joint resolution to provide for the designation of the week which begins on September 24, 1972, as "National Microfilm Week." Referred to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. PERCY (for himself and Mr. TAFT):

S. 3936. A bill to amend title III of the Trade Expansion Act of 1962 so as to provide more effective adjustment assistance thereunder, and for other purposes. Referred to the Committee on Finance.

TRADE ADJUSTMENT ASSISTANCE ACT OF 1972

Mr. PERCY. Mr. President, the world has experienced in the past 40 years the effect of restrictive trade policies, closed markets and nationally oriented economies. In 1934, the United States realized the need to encourage cooperative commercial ventures by enacting the Reciprocal Trade Act. This legislation was the first in a long line of trade bills which have recognized that American prosperity and security rely on the health of the world economy. Neither domestic nor international events can be so serious as to require the United States to close its markets and curtail its international relationships. This tenet has been the foundation of U.S. economic policies for more than three decades.

The Trade Expansion Act of 1962 was a further evolution of this policy. The bill authorized tariff reductions of up to 50 percent on many goods; the Kennedy round of negotiations, which was the embodiment of this authorization, subsequently produced an important international commercial agreement. Its goal was to stimulate U.S. economic growth with increased sales abroad and strengthened economic relations with foreign countries.

The 1962 Trade Act was significant for another reason. It recognized that a lowering of tariff barriers would possibly cause economic hardships to some sectors of the economy. The sudden removal or reduction of the protective wall could have adverse effects on firms and workers which had not previously felt the full force of competition. The philosophy of the Trade Act was that all segments of the American economy would benefit from duty reductions and it was therefore the Nation's responsibility to share in the cost of compensating injured workers and firms for any dislocations which would result. Uncompetitive firms and workers should not have to bear unassisted the burden of economic adjustment stemming from the implementation of a freer trade policy.

Thus the 1962 Trade Act introduced a program of adjustment assistance for those firms and workers injured by increased imports that result from tariff concessions. Various European nations had practiced adjustment assistance for many years, successfully guiding the retraining of workers and the modernizing of outdated facilities. As the Secretary of Commerce said when the TEA was sent to Congress, the assistance was not to be "an indemnity or a franchise to remain noncompetitive."

The rigid requirement in the 1962 act that firms and workers show that injuries are related to tariff concessions resulted in negative findings by the Tariff Commission. No adjustment assistance was offered until 1969, when the Tariff Commission began to reinterpret the eligibility criteria. This reinterpretation was not, however, the broad revision which the Trade Act needed in order to make it effective. Labor organizations and businesses who were facing tough, damaging import competition had already come to distrust this adjustment program, which failed to offer any effective assistance. Because of their experience with the Trade Act's adjustment assistance provision, many of those who have grievances have become convinced that protectionist legislation or restrictive international trade arrangements are the only meaningful alternatives available to deal with damaging foreign imports.

For the purpose of providing a workable alternative to protectionist restrictions on international trade, I am introducing today the Trade Adjustment Assistance Act of 1972. In my opinion, this bill is a reasonable, responsive means of making adjustment assistance a workable answer to the dislocations caused by imports.

The bill would amend title III of the 1962 Trade Expansion Act, a section which deals wholly with tariff adjustment, and adjustment assistance.

Whereas the scope of assistance in the 1962 bill—and in subsequent attempts to amend it—has been limited to firms and worker groups, the Adjustment Assistance Act would permit new groups to apply for help. Communities would for the first time be eligible, as would cooperative firm-worker, firm-community, and worker-community groups. This is in recognition of the dislocation which communities can and have experienced if they are dependent on one firm which is seriously affected by increased imports. In my own State of Illinois, several small towns in the southern part of the State have experienced great hardships because of the demise of shoe factories, upon which much of the towns' populations were economically dependent. If enacted as law the Trade Adjustment Assistance Act I am proposing would have assisted in modernization of the industries and retraining of the workers, and would have lightened the adjustment burden on the communities themselves.

This bill would encourage cooperative firm-worker, firm-community, and worker-community petitions and adjustment proposals. This integrated effort to apply for and use the adjustment assistance would speed the readjustment for all concerned parties. This principle was endorsed in the report of the President's Commission on International Trade and Investment Policy, the "Williams Commission" and in Peter G. Peterson's report titled "Foreign Economic Perspective of December 1971."

The bill also makes needed changes in the criteria and in the process for receiving adjustment assistance. First, the criteria for receiving assistance are liberalized by eliminating the requirement that injury-creating imports must result from tariff cuts, and by requiring that imports need only be a substantial cause of injury. The idea of breaking the causal link between tariff cuts and increased imports has been widely accepted since the passage of the 1962 Trade Act. This change was proposed in the 1968 Trade Expansion Act drafted by the Johnson administration, in the 1970 Trade Act proposed by President Nixon, and in the International Trade Act of 1971 introduced by Senators Harris and a group of other Senators. The concept was also advocated in the 1971 Williams Commission study and in former Ambassador William M. Roth's 1969 report to the President, Future United States Foreign Trade Policy.

Secondly, the Tariff Commission will become an investigative body only, as sugested in the 1968, 1970, and 1971 trade bills. Application for adjustment assistance will be made to the President. The modification of these sections provides firms, workers and communities with a more accessible application procedure, one that is not an insurmountable hurdle, as in the past, but one that makes reasonable demands that injury is substantial and is the result of imports and not of other factors.

This easing of the adjustment assistance requirement does not, however, apply to petitions for tariff adjustment. The basic tenet of the 1962 Trade Act is respected that tariffs should be raised to protect domestic industry only in exceptional and critical cases, and that assistance to help the adjustment of the domestic industry is the preferred remedy.

In instances where tariff adjustment is sought, the Trade Adjustment Assistance Act provides that increased imports must be shown in the primary cause or threat of injury, and firms must submit detailed plans of the actions they will take to become more competitive during the period for which they are protected. The 1962 Act also tied tariff adjustment to trade agreements concessions. With the elimination of this criterion in the 1972 Trade Adjustment Assistance Act, a new test is required which would allow only those critical cases which result primarily from imports to be eligible for tariff action. This differs from the adjustment assistance criteria which require only a substantial increase in imports to qualify for benefits. Under the 1962 Trade Act, the Tariff Commission makes annual reports to the President on tariff adjustment cases. The Trade Adjustment Assistance Act of 1972 would in addition require the Commission to: First, suggest whether adjustment assistance is a more appropriate remedy and second, find the probable effect of a tariff increase on consumers and exporters. Firms applying for a renewal of tariff protection must report on the efforts and progress they have made in their attempts to become competitive. These provisions will attempt to insure that firms actually use the protection to attempt to adjust to import competition and that a tariff increase does not have adverse effects on other economic groups, particularly consumers.

The adjustment assistance program has proven to be extremely slow in the delivery of benefits, as recognized in the Roth Report, the Williams Commission Report, and the Peterson Report. Delivery has been delayed by as much as 2 years in some cases, negating the intended effectiveness of the adjustment program. To assure a minimum of hardship, this bill imposes time limits throughout the determination process.

After an application has been investigated by the Tariff Commission, approved by the President, and certified by the Secretary of Labor or Commerce, the next step is the awarding of assistance. This is based on the recognition that the firm is the "engine of economic adjustment" and that all sectors have an interest in the restoration of its vitality. The technical, tax and financial assistance presently provided by the 1962 act will be supplemented with interim assistance—a Williams Commission innovation. This interim assistance consists of low-interest loans, tax credits, and grants to firms while they await delivery of their benefits. Firms are encouraged to take initiatives toward readjustment themselves. The Federal guarantee of loans is raised from 90 to 100 percent if firms take substantial measures to assist their own adjustment.

The assistance offered workers has become woefully inadequate in the decade since the 1962 Trade Act was passed. Federal and State unemployment benefits have been upgraded to correspond to cost-of-living increases. To become more consistent with these, the trade readjustment allowance in this bill is raised from 65 percent of the average manufacturing wage to 80 percent. This also acknowledges that an impacted worker should be able to receive a decent percentage of his own wage rather than, as presently provided, a percentage of a national average wage. Under present law the worker is obligated to take the lesser of the two sums, and can consequently be placed in a difficult financial position.

Under the Trade Adjustment Assistance Act of 1972 workers are encouraged to seek retraining. Workers who find assistance from other manpower development services—such as State unemployment and retraining programs—will now be eligible to receive a total of 100 percent—rather than 75 percent—of their former wage. This means, for example, that a worker receiving a State retraining allowance equal to 80 percent of his former wage will be eligible for a Federal allowance of 20 percent of his former wage. This Federal contribution is reduced as the worker approaches his previous wage level. Otherwise, the adjustment allowance continues throughout the period of retraining.

Eligible workers over 60 years of age often find reemployment and retraining difficult to obtain. They should receive adjustment assistance benefits until the time they qualify for social security. The bill I am introducing today provides for such assistance.

The new chapter concerning community adjustment would be administered by the Secretary of Commerce. Communities dependent on a firm which faces hardships due to increased imports would be eligible for adjustment assistance if their proposals would contribute to economic adjustment, give consideration to the workers and the firm, and importantly, demonstrate the efforts of the community to use its own resources. Community adjustment can take the form of industrial diversification, improvement of transportation facilities, and other projects related to the encouragement of industry.

In an effort to assure that consumers are not seriously and adversely affected by adjustment actions, the Trade Adjustment Assistance Act of 1972 makes a provision for the protection of consumers. The economic effects of increased tariffs and of international orderly marketing agreements on consumers must be annually investigated by the Tariff Commission and reported to the President. The price and availability of articles being protected must be considered. The Tariff Commission shall also have the responsibility of recommending reduction or removal of a duty, should it be found to be having a substantially adverse effect on consumers.

Finally, Mr. President, I have included a provision for eventual coordination of this adjustment assistance program. The lack of direction in this area is a serious handicap to the entire program. No governmental agency or department now in existence can fairly and adequately administer all aspects of the assistance programs. This bill, therefore, simply recommends inclusion of a coordinating body at the time of the creation of a Cabinet-level Department of Economic Affairs, such as is provided in S. 1433.

The Trade Adjustment Assistance Act of 1972 is in the best tradition of American trade policy. It provides adequate benefits to those workers, firms, and communities affected by trade dislocations. It makes the substantive alterations which will help American industry and agriculture, relieves them of the complete readjustment which may be involved in a free exchange of goods and services and facilitates the movement of capital and labor into more efficient uses. The provisions included here will reinforce the U.S. commitment to an open world economy and discourage those who would seek to discredit the progress of the past four decades. It is in answer to the competition we meet now on various levels and in various markets and preserves the driving competitive philosophy of the American economy.

I ask unanimous consent that the text of the Trade Adjustment Assistance Act of 1972 be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 3936

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Trade Adjustment Assistance Act of 1972."

SEC. 2. Section 301 of the Trade Expansion Act of 1962 (19 U.S.C. 1901) is amended to read as follows:

"SEC. 301. PETITIONS AND DETERMINATIONS.

"(a) (1) A petition for tariff adjustment under section 351 may be filed with the Tariff Commission by a trade association, firm, certified or recognized union, or other representative of an industry.

"(2) A petition for a determination of eligibility to apply for adjustment assistance under chapter 2 may be filed with the President by a firm or its representative, by a duly authorized joint firm-worker representative, by a duly authorized community representative, or by a duly authorized joint firm-community representative. A petition for a determination of eligibility to apply for adjustment assistance under chapter 3 may be filed with the President by a group of workers or by their certified or recognized union or other duly authorized representative. A petition for a determination of eligibility to apply for adjustment assistance under chapter 4 may be filed with the President by a community or its representative.

"(3) Whenever a petition is filed under paragraph (1), the Tariff Commission shall transmit a copy thereof to the Secretary of Commerce.

"(b) (1) Upon request of the President, upon resolution of either the Committee on Finance of the Senate or the Committee on Ways and Means of the House of Representatives, upon its own motion, or upon the filing of a petition under subsection (a) (1), the Tariff Commission shall promptly make an investigation to determine whether increased quantities of imports of an article directly competitive with an article produced by a domestic industry have been the primary cause or threat of serious injury to such industry. In making its determination under this paragraph, the Tariff Commission shall take into account all economic factors which it considers relevant, including idling of productive facilities, inability to operate at a level of reasonable profit, and unemployment or underemployment, and detailed plans, submitted by the firm, for use of time requested.

"(2) For purposes of paragraph (1), the term 'domestic industry' means that portion or subdivision of the producing organizations manufacturing, assembling, processing, extracting, growing, or otherwise producing like or directly competitive articles in commercial quantities. In applying the preceding sentence, the Tariff Commission shall (so far as practicable) distinguish or separate the operations of the producing organizations involving the like or directly competitive articles referred to in such sentence from the operations of such organizations involving other articles.

"(3) If a majority of the Commissioners present and voting make an affirmative determination under paragraph (1), the Commissioners voting for such affirmative injury determination shall also determine the amount of increase in, or imposition of, any duty or other import restriction on such article which is necessary to prevent or remedy such injury. For purposes of this title, a remedy determination by a majority of the Commissioners voting for the affirmative injury determination shall be treated as the remedy determination of the Tariff Commission.

"(4) In the course of any proceeding initiated under paragraph (1), the Tariff Commission shall investigate any factors which in its judgment may be contributing to increased imports of the article under investigation; and whenever in the course of its investigation the Tariff Commission has reason to believe that the increased imports are attributable in part to circumstances which come within the purview of the Antidumping Act, 1921, section 303 or 337 of the Tariff Act of 1930, or other remedial provisions of law, the Tariff Commission shall promptly notify the appropriate agency and take such other action as it deems appropriate in connection therewith.

"(5) In the course of any proceeding initiated under paragraph (1), the Tariff Commission shall, after reasonable notice, hold public hearings and shall afford interested parties opportunity to be present, to present evidence, and to be heard at such hearings.

"(6) The Tariff Commission shall report to the President the determinations and other results of each investigation under this subsection, including any dissenting or separate views, and any action taken under paragraph (4).

"(7) The report of the Tariff Commission of its determinations under this subsection shall be made at the earliest practicable time, but not later than 4 months after the date on which the petition is filed (or the date on which the request or resolution is received or the motion is adopted, as the case may be). Upon making such report to the President, the Tariff Commission shall promptly make public such report, and shall cause a summary thereof to be published in the Federal Register.

"(8) No investigation for the purposes of this subsection shall be made, upon petition filed under subsection (a) (1), with respect to the same subject matter as a previous investigation under this subsection, unless 1 year has elapsed since the Tariff Commission made its report to the President of the results of such previous investigation.

"(c) (1) In the case of a petition by or on behalf of a firm for a determination of eligibility to apply for adjustment assistance under chapter 2, the President shall determine whether increased quantities of imports of an article like or directly competitive with an article produced by the firm have been a substantial cause or threat of serious injury to such firm.

"(2) In the case of a petition by a group of workers for a determination of eligibility to apply for adjustment assistance under chapter 3, the President shall determine whether increased quantities of imports of an article like or directly competitive with an article produced by such workers' firm, or an appropriate subdivision thereof, have been a substantial cause or threat of unemployment or underemployment of a significant number or proportion of the workers of such firm or subdivision.

"(3) In the case of a petition by a community for a determination of eligibility to apply for adjustment assistance under chapter 4, the President shall determine whether increased quantities of imports of an article like or directly competitive with an article produced by a firm in such community have been a substantial cause or threat of serious injury to such firm and hence to the economic base of the community.

"(4) In order to assist him in making the determinations referred to in paragraphs (1), (2), and (3) with respect to a firm, group of workers, or community, the President shall promptly transmit to the Tariff Commission a copy of each petition filed under subsection (a) (2) and, not later than 5 days after the date on which the petition is filed, shall request the Tariff Commission to conduct an investigation relating to questions of fact relevant to such determinations and to make a report of the facts disclosed by such an investigation. In his request, the President may specify the particular kinds of data which he deems appropriate. Upon receipt of the President's request, the Tariff Commission shall promptly publish notice thereof in the Federal Register.

"(5) In the course of any investigation under paragraph (4), the Tariff Commission shall, after reasonable notice, hold a public hearing, if such hearing is requested (not later than 10 days after the date of publication of its notice under paragraph (4)) by the petitioner or any other interested person, and shall afford interested persons an opportunity to be present, to produce evidence, and to be heard at such hearing.

"(6) The report of the Tariff Commission of the facts disclosed by its investigation under paragraph (4) with respect to a firm, group of workers, or community shall be made at the earliest practicable time, but not later than 60 days after the date on which it receives the request of the President under paragraph (4).

"(d) Should the Tariff Commission find with respect to any article, as the result of its investigation, the serious injury or threat thereof described in subsection (b), it shall find the amount of increase in, or imposition of, any duty or other import restriction on such article which is necessary to prevent or remedy such injury as well as the appropriateness of adjustment assistance to remedy such injury and shall include such finding in its report to the President. In addition, the Tariff Commission shall find the probable effect of such increase or imposition upon consumers, including the price and availability of such article and the like or directly competitive article produced in the United States.

SEC. 3. (a) Section 302 of the Trade Expansion Act of 1962 (19 U.S.C. 1902) is amended by striking out "DETERMINATION" in the heading of such section and inserting in lieu thereof "REPORTS".

(b) Section 302(a) of such Act is amended by striking out "or" at the end of paragraph (3), and by striking out paragraph (4) and inserting in lieu thereof the following:

"(4) provide, with respect to such industry, that the affected communities may request the Secretary of Commerce for certification of eligibility to apply for adjustment assistance under chapter 4, or

"(5) take any combination of such actions."

(c) Section 302(b) of such Act is amended to read as follows:

"(b) (1) Within thirty days after receiving a request for certification from a firm in an industry with respect to which the President has acted under (a) (2), the Secretary of Commerce shall certify such firm as eligible to apply for adjustment assistance under chapter 2 unless he makes a determination that the increased quantities of imports have not been a substantial cause or threat of serious injury to such firm. Any such determination shall be supported by written findings of fact and shall be issued within thirty days after receipt of the initial request for certification unless, within that period, the Secretary notifies the firm that he requires it to submit additional information in order to enable him to resolve specific questions as to the firm's eligibility, in which event he shall issue his decision as to eligibility within fifteen days after receiving such information.

"(2) Within thirty days after receiving a request for certification from a group of workers in an industry with respect to which the President has acted under (a) (3), the Secretary of Labor shall certify such group of workers as eligible to apply for adjustment assistance under chapter 3 unless he makes a determination that the increased quantities of imports have not been a substantial cause or threat or unemployment or underemployment of a significant number or proportion of workers of such workers' firm or subdivision thereof. Any such determination shall be supported by written findings of fact and shall be issued within 30 days after receipt of the initial request for certification unless, within that period, the Secretary notifies the group of workers that he requires it to submit additional information in order to enable him to resolve specific questions as to the group of workers' eligibility, in which event he shall issue his decision as to eligibility within fifteen days after receiving such information.

"(3) Within 30 days after receiving a request for certification from a community affected by an industry with respect to which the President has acted under (a)(4), the Secretary of Commerce shall certify such community as eligible to apply for adjustment assistance under chapter 4 unless he makes a determination that the increased quantities of imports have not been a substantial cause or threat of serious injury to the economic base of such community. Any such determination shall be supported by written findings of fact and shall be issued within 30 days after receipt of the initial request for certification unless, within that period, the Secretary notifies the community that he requires it to submit additional information in order to enable him to resolve specific questions as to the community's eligibility, in which event he shall issue his decision as to eligibility within 15 days after receiving such information."

(d) Secton 302(c) of such Act is amended to read as follows:

"(c)(1) In the case of any petition for adjustment assistance filed under section 301(c), the President shall make his determination at the earliest practicable time after receiving the report of the Tariff Commission of the facts disclosed by its investigation under section 301(c)(4), but not later than 30 days after the date on which he receives such report, unless within such 30-day period, he requests additional factual information from the Tariff Commission. If the President requests such additional factual information, the Tariff Commission shall, not later than 25 days after the date on which it receives the President's request, furnish such additional factual information in a supplemental report, and the President shall make his determination not later than 15 days after the date on which he receives such supplemental report.

"(2) The President shall promptly publish in the Federal Register a summary of each determination under section 301(c) with respect to any firm, group of workers, or community.

"(3) If the President makes an affirmative determination under section 301(c) with respect to any firm, group of workers, or community, he shall promptly certify that such firm, group of workers, or community is eligible to apply for adjustment assistance.

"(4) The President is authorized to exercise any of his functions with respect to determinations and certifications of eligibility of firms, workers, or communities to apply for adjustment assistance under section 301 and this section through such agency or other instrumentality of the United States Government as he may direct."

SEC. 4. (a) Section 311(a) of the Trade Expansion Act of 1962 (19 U.S.C. 1911) is amended by striking out the second sentence and inserting in lieu thereof the following: "Within a reasonable time after filing its application, the firm, the firm-worker group, or the firm-community group, shall present a proposal for the economic adjustment of the firm."

(b) Section 311(b)(2) of such Act is amended by striking out "actions taken in carrying out trade agreements" and insert-amended by striking out "by the increased imports".

(c) Section 311 of such Act is amended by redesignating subsection (d) as (f), and by inserting after subsection (c) the following new subsections:

"(d) Immediately after the certification by the Secretary of Commerce, the firm shall be eligible for interim assistance (between approval and delivery of assistance). Such interim assistance may consist of low-interest loans, tax credits, and grants.

"(e) Certification procedures and forms prescribed by the Secretary of Commerce pursuant to this section shall be designed to simplify and expedite the provision of adjustment assistance to firms."

SEC. 5. Section 315(a) of the Trade Expansion Act of 1962 (19 U.S.C. 1915) is amended by inserting after "90 percent" the following: "(or, if the Secretary determines that the firm has already taken substantial measures to assist its own economic adjustment, 100 per cent)".

SEC. 6. Section 317(a)(2) of the Trade Expansion Act of 1962 (19 U.S.C. 1917) is amended by strikng out "by the increased imports which the Tariff Commission has determined to result from concessions granted under trade agreements" and inserting in lieu thereof "by the increased quantities of imports identified by the Tariff Commission under section 301(b)(1) or by the President under section 301(c)(1), as the case may be".

SEC. 7. Section 321 of the Trade Expansion Act of 1962 (19 U.S.C. 1931) is amended by inserting "(a)" immediately before "The", and by adding at the end thereof the following new subsection:

"(b) Procedures and forms prescribed by the Secretary of Labor pursuant to this section shall be designed to simplify and expedite the provision of adjustment assistance to workers."

SEC. 8. Section 322 of the Trade Expansion Act of 1962 (19 U.S.C. 1941) is amended—

(1) by striking out subsection (c), and

(2) by striking out "subsections (b) and (c)" in subsection (a) and inserting in lieu thereof "subsection (b)".

SEC. 9. (a) Section 323 (a) of the Trade Expansion Act of 1962 (19 U.S.C. 1942) is amended by striking out "65 percent of his average weekly wage or to 65 percent of the average weekly manufacturing wage, whichever is less" and inserting in lieu thereof "80 percent of his average weekly wage".

(b) Section 323(e) of such Act is amended to read as follows:

"(e) Whenever, with respect to any week of unemployment, the total amount payable to an adversely affected worker as remuneration for services performed during such a week, as unemployment insurance, as a training allowance referred to in subsection (d), and as a trade readjustment allowance—

"(1) would be less than 100 percent of his average weekly wage, his trade readjustment allowance shall be increased by the amount of such deficiency, or

"(2) would exceed 100 percent of his average weekly wage, his trade readjustment allowance shall be reduced by the amount of such excess."

SEC. 10. Section 324 of the Trade Expansion Act of 1962 (19 U.S.C. 1943) is amended to read as follows:

"SEC. 324. PERIOD OF PAYMENT OF TRADE READJUSTMENT ALLOWANCES.

"(a) Payment of trade readjustment allowances shall be made to an adversely affected worker for the entire period of his retaining to assist him in the completition of that retaining as approved by the Secretary of Labor.

"(b) Payment of a trade readjustment allowance shall be made to an adversely affected worker who has attained the age of 60 years for the period of time until he qualifies for social security payments, or until he has been relocated in suitable employment."

SEC. 11. Section 326 of the Trade Expansion Act of 1962 (19 U.S.C. 1951) is amended to read as follows:

"SEC. 326. IN GENERAL.

"(a) To assure that the readjustment of adversely affected workers shall occur as quickly and effectively as possible, with minimum reliance upon trade readjustment allowances under this chapter, every effort shall be made to prepare each such worker for full employment in accordance with his capabilities and prospective employment opportunities. To this end, and subject to this chapter, adversely affected workers shall be afforded, where appropriate, the testing, counseling, training, and placement services and supportive and other services provided for under any Federal law. Qualified workers should be provided the opportunity to pursue further training in technical, professional, and academic areas, as well as in vocational areas. Such workers may also be afforded supplemental assistance necessary to defray transportation and subsistence expenses for separate maintenance when such training is provided in facilities which are not within commuting distance of their regular place of residence. The Secretary of Labor in defraying such subsistence expenses shall not afford any individual an allowance exceeding $5 per diem; nor shall the Secretary authorize any transportation expense exceeding the rate of 10 cents per mile.

"(b) To the extent practicable, the Secretary of Labor shall encourage joint firm-worker adjustment assistance proposals, as well as joint community-firm proposals, for the expedition of retraining and readjustment. Lacking such a coordinated effort, the Secretary of Labor shall consult with such workers' firm and their certified or recognized union or other duly authorized representative and develop a worker retraining plan which provides for training such workers to meet the manpower needs of such a firm, in order to preserve or restore the employment relationship between the workers and the firm."

SEC. 12. Section 328 of the Trade Expansion Act of 1962 (19 U.S.C. 1961) is amended to read as follows:

"SEC. 328. RELOCATION ALLOWANCES AFFORDED.

"Any adversely affected worker who has been separated or has voluntarily separated may file an application for a relocation allowance, subject to the terms and conditions of this subchapter."

SEC. 13. Section 330(2) of the Trade Expansion Act of 1962 (19 U.S.C. 1963) is amended to read as follows:

"(2)(A) a lump sum equivalent to two and one-half times the average weekly manufacturing wage, or (B), in the case of an adversely affected worker who cannot obtain adequate information and assistance through public employment services, a low-interest loan in such amount as is reasonable and necessary under regulations prescribed by the Secretary of Labor (but not less than the amount specified in clause (A)), repayment of which shall be waived if the worker actively seeks and locates employment within a reasonable period."

SEC. 14. Section 331(a) of the Trade Expansion Act of 1962 (19 U.S.C. 1971) is amended to read as follows:

"(a) The Secretary of Labor is authorized on behalf of the United States to enter into an agreement with any State, or with any State agency. Under such an agreement, the State agency (1) as agent of the United States Government, will receive applications for, and will promptly provide, assistance on the basis of this chapter, (2) will afford adversely affected workers who apply for assistance under this chapter testing, counseling, referral to training, placement services, and supportive and other services, and (3) will otherwise co-operate with the Secretary of Labor and with other State and Federal agencies in providing assistance under this chapter."

SEC. 15. Section 338 of the Trade Expansion Act of 1962 (19 U.S.C. 1978) is amended—

(1) by striking out paragraph (3).

(2) by isserting the following fourth sentence in paragraph (4):

"For purposes of this paragraph, the Secretary of Labor is authorized to issue regulations providing that the term 'total wages' may include the monetary equivalent of insurance, retirement, and other benefits obtained in addition to wages."

(3) by inserting after "severance" in paragraph (11) "(including voluntary severance)", and

(4) by striking out "75 percent" in paragraph (14) and inserting in lieu thereof "100 percent".

SEC. 16. Title III of the Trade Expansion Act of 1962 is amended by renumbering chapters 4 and 5 as chapters 5 and 6, respectively, and by inserting after chapter 3 the following new chapter:

"Chapter 4—ASSISTANCE TO COMMUNITIES

"SEC. 339. AUTHORITY.

"The Secretary of Commerce shall determine whether applicants are entitled to receive assistance under this chapter and shall pay or provide such assistance to applicants who are so entitled.

"SEC. 340. QUALIFYING REQUIREMENTS.

"(a) A community certified under section 302 as eligible to apply for adjustment assistance may, at any time within two years after the date of such certification, file an application with the Secretary of Commerce for adjustment assistance under this chapter. Within a reasonable time after filing its application, the community shall present a proposal, either separately or in conjunction with a firm or a group of workers, or both, for its economic adjustment.

"(b) Adjustment assistance under this chapter consists of technical assistance and financial assistance. Except as provided in subsection (c), no adjustment assistance shall be provided to a community under this chapter until its adjustment proposal shall have been certified by the Secretary of Commerce—

"(1) to be reasonably calculated materially to contribute to the economic adjustment of the community,

"(2) to give adequate consideration to the interests of the communities' workers and firms adversely affected by substantially increased imports,

"(3) to demonstrate that the community will make all reasonable efforts to use its own resources for economic development.

"(c) In order to assist a community which has applied for adjustment assistance under this chapter in preparing a sound adjustment assistance proposal, the Secretary of Commerce may furnish technical assistance to such community prior to certification of its adjustment assistance proposal.

"(d) Any certification made pursuant to this section shall remain in force only for such period as the Secretary of Commerce may prescribe.

"SEC. 341. USE OF EXISTING AGENCIES.

"(a) The Secretary of Commerce shall refer each certified adjustment proposal to such ageney or agencies as he determines to be appropriate to furnish the technical and financial assistance necessary to carry out such proposal.

"(b) Upon receipt of a certified adjustment proposal, each agency concerned shall promptly—

"(1) examine the aspects of the proposal relevant to its functions, and

"(2) notify the Secretary of Commerce of its determination as to the technical and financial assistance it is prepared to furnish to carry out the proposal.

"(c) Whenever and to the extent that any agency to which an adjustment proposal has been referred notifies the Secretary of Commerce of its determination not to furnish technical or financial assistance, and if the Secretary of Commerce determines that such assistance is necessary to carry out the adjustment proposal, he may furnish adjustment assistance under sections 342 and 343 to the community concerned.

"(d) There are hereby authorized to be appropriated to the Secretary of Commerce such sums as may be necessary from time to time to carry out his functions under this chapter in connection with furnishing adjustment assistance to communities, which sums are authorized to be appropriated to remain available until expended.

"SEC. 342. TECHNICAL ASSISTANCE.

"(a) Upon compliance with section 341 (c), the Secretary of Commerce may provide to a community, on such terms and conditions as he determines to be appropriate, such technical assistance as in his judgment will materially contribute to the economic adjustment of the community.

"(b) To the maximum extent practicable, the Secretary of Commerce shall furnish technical assistance under this section and section 340(c) through existing agencies, and otherwise through private individuals or institutions.

"(c) The Secretary of Commerce shall require a community receiving technical assistance under this section or section 340 (c) to share the cost thereof to the extent he determines to be appropriate.

"SEC. 343. FINANCIAL ASSISTANCE.

"(a) Upon compliance with section 341(c), the Secretary of Commerce may provide to a community, on such terms and conditions as he determines to be appropriate, such financial assistance in the forms of guarantees of loans, agreements for deferred participations in loans, or loans, as in his judgment will materially contribute to the economic adjustment of the community. In addition, grants for specific economic development projects, transportation facilities, community economic development corporations, government feasibility studies, and joint firm-worker adjustment assistance programs patterned for specific economic enterprises shall be provided by the Secretary of Commerce if, in his judgment, they will materially contribute to the economic adjustment of the community.

"(b) Guarantees, agreements for deferred participations, loans, grants, or studies shall be made under this section only for the purpose of making funds available to the community for diversification and encouragement of industry.

"(c) To the maximum extent practicable, the Secretary of Commerce shall furnish financial assistance under this section through agencies furnishing financial assistance under other laws.

"SEC. 344. CONDITIONS FOR FINANCIAL ASSISTANCE.

"(a) No loan shall be guaranteed and no agreement for deferred participation in a loan shall be made by the Secretary of Commerce in an amount which exceeds 90 percent of that portion of the loan made for purposes specified in section 343(b).

"(b)(1) Any loan made or deferred participation taken up by the Secretary of Commerce shall bear interest at a rate not less than the greater of—

"(A) 4 percent per annum, or

"(B) a rate determined by the Secretary of the Treasury for the year in which the loan is made or the agreement for such deferred participation is entered into.

"(2) The Secretary of the Treasury shall determine annually the rate referred to in paragraph (1)(B), taking into consideration the current average market yields on outstanding interest-bearing marketable public debt obligations of the United States of maturities comparable to those of the loans outstanding under section 343.

"(c) Guarantees or agreements for deferred participation shall be made by the Secretary of Commerce only with respect to loans bearing interest at a rate which he determines to be reasonable. In no event shall the guaranteed portion of any loan, or the portion covered by an agreement for deferred participation, bear interest at a rate more than 1 percent per annum above the rate prescribed by subsection (b) (determined when the guarantee is made or the agreement is entered into), unless the Secretary of Commerce shall determine that special circumstances justify a higher rate, in which case such portion of the loan shall bear interest at a rate not more than 2 percent per annum above such prescribed rate.

"(d) The Secretary of Commerce shall make no loan or guarantee having a maturity in excess of 25 years, including renewals and extensions, and shall make no agreement for deferred participation in a loan which has a maturity in excess of 25 years, including renewals and extensions. Such limitation on maturities shall not, however, apply to—

"(1) securities or obligations received by the Secretary of Commerce as claimant in bankruptcy or equitable reorganization, or as creditor in other proceedings attendant upon in solvency of the obligor, or

"(2) an extension of renewal for an additional period not exceeding 10 years, if the Secretary of Commerce determines that such extension or renewal is reasonably necessary for the orderly liquidation of the loan.

"(e) No financial assistance shall be provided under section 343 unless the Secretary of Commerce determines that such assistance is not otherwise available to the community, from sources other than the United States, on reasonable terms, and that there is reasonable assurance of repayment by the borrower.

"(f) The Secretary of Commerce shall maintain operating reserves with respect to anticipated claims under guarantees and under agreements for deferred participation made under section 343. Such reserves shall be considered to constitute obligations for purposes of section 1311 of the Supplemental Appropriation Act, 1955 (31 U.S.C., sec. 200).

"SEC. 345. ADMINISTRATION OF FINANCIAL ASSISTANCE

"(a) In making and administering guarantees, agreements for deferred participation, and loans under section 343, the Secretary of Commerce may—

"(1) require security for any such guarantee, agreement, or loan, and enforce, waive, or subordinate such security;

"(2) assign or sell at public or private sale, or otherwise dispose of, upon such terms and conditions and for such consideration as he shall determine to be reasonable, any evidence of debt, contract, claim, personal property, or security assigned to or held by him in connection with such guarantees, agreements, or loans, and collect, compromise, and obtain deficiency judgments with respect to all obligations assigned to or held by him in connection with such guarantees, agreements, or loans until such time as such obligations may be referred to the Attorney General for suit or collection;

"(3) renovate, improve, modernize, complete, insure, rent, sell, or otherwise deal with, upon such terms and conditions and for such consideration as he shall determine to be reasonable, any real or personal property conveyed to or otherwise acquired by him in connection with such guarantees, agreements, or loans;

"(4) acquire, hold, transfer, release or convey any real or personal property or any interest therein whenever deemed necessary or appropriate, and execute all legal documents for such purposes; and

"(5) exercise all such other powers and take all such other Acts as may be necessary or incidental to the carrying out of functions pursuant to section 343.

"(b) Any mortgage acquired as security under subsection (a) shall be recorded under applicable State law.

"Sec. 346. Protective Provisions.

"(a) Each recipient of adjustment assistance under section 342 or 343 shall keep records which fully disclose the amount and disposition by such recipient of the proceeds, if any, of such adjustment assistance, and which will facilitate an effective audit. The recipient shall also keep such other records as the Secretary of Commerce may prescribe.

"(b) The Secretary of Commerce and the Comptroller General of the United States shall have access for the purpose of audit and examination to any books, documents, papers, and records of the recipient pertaining to adjustment assistance under sections 342 and 343.

"(c) No adjustment assistance shall be extended under section 342 or 343 to any community unless the officials or representatives of such community certify to the Secretary of Commerce—

"(1) the names of any attorneys, agents, and other persons engaged by or on behalf of the community for the purpose of expediting applications for such adjustment assistance, and

(2) the fees paid or to be paid to any such person.

"Sec. 347. Penalties.

"Whoever makes a false statement of a material fact knowing it to be false, or knowingly fails to disclose a material fact, or whoever willfully overvalues any security, for the purpose of influencing in any way the action of the Secretary of Commerce under this chapter, or for the purpose of obtaining money, property, or anything of value under this chapter, shall be fined not more than $5,000 or imprisoned for not more than two years, or both.

"Sec. 348. Suits.

"In providing technical and financial assistance under sections 342 and 343, the Secretary of Commerce may sue and be sued in any court of record of a State having general jurisdiction or in any United States district court, and jurisdiction is conferred upon such district court to determine such controversies without regard to the amount in controversy; but no attachment, injunction, garnishment, or other similar process, mesne or final, shall be issued against him or his property. Nothing in this section shall be construed to except the activities pursuant to sections 342 and 343 from the application of sections 507(b) and 2679 of title 28 of the United States Code, and of section 367 of the Revised Statutes (5 U.S.C., sec. 316)."

Sec. 17. (a) Section 351(a)(1) of the Trade Expansion Act of 1962 (19 U.S.C. 1981) is amended by inserting before the period at the end thereof ", taking into account the probable effect of such increase or imposition upon consumers, including the price and availability of the imported article and the like or directly competitive domestic article, and upon competition in the domestic markets for such articles".

(b) Section 351(d) of such Act is amended to read as follows:

"(d)(1) So long as any increase in, or imposition of, any duty or other import restriction pursuant to this section remains in effect, the Tariff Commission shall keep under review, and make annual reports to the President on—

"(A) the specific efforts being made by the firms in the industry concerned to adjust to import competition, and other developments with respect to such industry,

"(B) the effect of such increase or imposition upon consumers, including the price and availability of the imported article and the like or directly competitive article produced in the United States, and upon competition in the domestic markets for such articles, and

"(C) the impact upon United States exports and exporters of any action taken by foreign countries as a consequence of such increase or imposition.

"(2) When in the Commission's judgement the effect of such increase or imposition is

(A) substantially adverse to the interests of consumers, or

(B) that the impact on U.S. exports and exporters is materially adverse,

then it may recommend to the President reduction or removal of the tariff."

"(3) No later than 2 years after the effective date of a proclamation providing for the increase in, or imposition of, any duty or other import restriction pursuant to this section, or upon request of the President, or upon its own motion, the Tariff Commission shall advise the President of its judgment as to the probable economic effect on the industry concerned of the reduction or termination of such increase or imposition.

"(4) Upon petition on behalf of the industry concerned, filed with the Tariff Commission not earlier than the date which is nine months, and not later than the date which is six months, before the date any increase or imposition referred to in paragraph (1) or (2) of subsection (c) is to terminate by reason of the expiration of the applicable period prescribed in paragraph (1) or an extension thereof under paragraph (2), the Tariff Commission shall advise the President of its judgment as to the probable economic effect on such industry of such termination. Such petition shall include a detailed account of the specific efforts made by the firms in the industry to adjust to import competition after the effective date of such increase or imposition.

"(5) In advising the President under this subsection as to the probable economic effect on the industry concerned, the Tariff Commission shall take into account the specific efforts made by the firms in such industry to adjust to import competition, as well as all other economic factors which it considers relevant, including idling of productive facilities, inability to operate at a level of reasonable profit, and unemployment or underemployment. In so advising the President, the Tariff Commission shall also provide its judgment as to the probable effect of the reduction or elimination, as the case may be, upon—

"(A) consumers, including the price and availability of the imported article and the directly competitive article produced in the United States, and upon competition in the domestic markets for such articles, and

"(B) United States exports and exporters affected by any action taken by foreign countries as a consequence of the increase in, or imposition of, any duty or other import restriction pursuant to this section.

"(6) Advice by the Tariff Commission under this subsection shall be given on the basis of an investigation during the course of which the Tariff Commission shall hold a hearing at which interested persons shall be given a reasonable opportunity to be present, to produce evidence, and to be heard."

Section 352(a) is amended by adding thereto the following new second and third sentences:

(1) So long as any international agreement pursuant to this section remains in effect, the Tariff Commission shall keep under review and make annual reports to the President on—

(A) the specific efforts being made by the firms in the industry concerned to adjust to import competition, and other developments with respect to such industry,

(B) the effect of such international agreement on consumers, including the price and availability of the imported article and the like or directly competitive article produced in the United States, and on competition in the domestic markets for such articles, and

(C) the impact upon United States exports and exporters of any action taken by foreign countries as a consequence of such international agreement.

(2) When in the Commission's judgment the effect of such international agreement is

(A) substantially adverse to the interests of consumers, or

(B) that the impact on U.S. exports and exporters is materially adverse,

then it may recommend to the President a revocation or modification of the agreement.

Sec. 18. Title III of the Trade Expansion Act of 1962 is amended by adding at the end thereof the following new chapter:

"Chapter 7—PUBLICITY

"Sec. 371. Publicity of Adjustment Assistance Programs.

"(a) The President shall take all appropriate steps to insure that the adjustment assistance available under chapters 2, 3, and 4 is made known in a prompt and effective manner throughout the United States to persons who might need such assistance, including persons in areas of substantial unemployment as determined by the Department of Labor.

"(b) In particular, the President shall direct the Departments of Commerce and Labor, and such other agencies as he deems appropriate—

"(1) to use their services and programs in the several States to furnish interested persons with information concerning the various kinds of adjustment assistance available under chapters 2, 3, and 4 and the procedures for obtaining such assistance, and

"(2) to provide timely and appropriate assistance, through their field offices in the several States, to any person seeking to applv for, and to obtain, adjustment assistance under chapters 2, 3, and 4.

"(c) In any area of the United States where a language other than English is used by a significant number of persons, the President shall insure that information and assistance under this chapter are provided in both English and such other language."

Sec. 19. Upon the establishment of a Department of Economic Affairs, the functions, powers, and duties of the Secretary of Commerce and the Secretary of Labor under title III of the Trade Expansion Act of 1962 are hereby transferred to the Secretary of Economic Affairs.

Mr. PERCY. Mr. President, at the request of the distinguished Senator from Ohio (Mr. Taft), I ask unanimous consent to have printed in the Record a statement by him relative to the Adjustment Assistance Act of 1972.

There being no objection, the statement was ordered to be printed in the Record, as follows:

Statement by Senator Taft

Millions of American workers are gripped by the fear that imports are going to cost them their jobs. Andrew Biemiller, Director of Legislation for the AFL–CIO has estimated that approximately 700,000 American jobs were lost directly as a result of foreign competition between 1966 and 1969 alone. This trend was not peculiar to any specific industry, but was evidenced in such diverse types of concerns as textiles, appliances, shoes, bicycles, steel, and tennis rackets.

Representative Burke and Senator Hartke, with the support of the AFL–CIO, have proposed across-the-board import quotas as part of the answer to this problem. I reject this approach because it would lead to higher prices for American consumers and invite a trade war that would cost American jobs in export-related industries. The Burke-Hartke bill might even result in a net reduction of American jobs.

It would be irresponsible, however, to dismiss the Burke-Hartke bill without suggesting any viable alternative. In view of the tremendous impact which imports have had on workers, industries, and entire communities, a positive alternative to Burke-Hartke is called for. The Government must help those hurt by imports, but it must do so in a manner which balances their interests with the interests of taxpayers in the role of consumers and exporters. I am joining Senator Percy as a cosponsor of the Adjustment Assistance Act of 1972 because it would provide this kind of assistance.

One of the major reasons for the enactment of the Trade Expansion Act of 1962 was to provide aid in the form of tariff increases or import quotas where necessary, and subsidized loans and grants on a more widespread basis, to help workers and firms adjust to increased imports. Relief cannot be provided, however, unless the Tariff Commission makes a positive finding that it is needed. In the first 7 years of the Trade Expansion Act, the Tariff Commission reviewed 13 industry applications for assistance without making a positive finding! To this day, only 5 positive findings on such applications have been made. I believe that tariffs should not be increased nor import quotas imposed unless the situation is extremely serious, but I see no reason to be so miserly with respect to the provision of relief for individual workers. An adequate level of assistance has just not been provided under the present law.

The Adjustment Assistance Act would deal with this problem by eliminating the requirement that adjustment assistance be made available only if the damage due to increased imports results from U.S. trade concessions. Instead, tariff increases or import quotas could be invoked if increased imports have been the primary cause or threat of serious injury to the industry in question. I am not certain that this is the best solution to the problem, but I do feel that it should be brought before the Senate for full consideration. Loans and direct subsidies for workers, firms, and communities would be made available whenever imports have been a substantial cause of the industry's problems. I hope that the latter provision will result in a much more realistic utilization of this type of adjustment assistance.

The legislation would also expedite the provision of assistance by placing time limits on the Tariff Commission's administration of various stages of the application process. An extremely constructive provision of the Act makes clear that any tariff increases or import quotas would be applied only to the specific articles affected and not on an industry-wide basis.

I believe that the increased relief for workers which this bill provides will alleviate many of the hardships that they now face upon losing a job due to increased imports. It will also facilitate any necessary retraining and relocation of these workers. The increased loans subsidies to firms which have already made substantial efforts to adjust to import competition will serve as an incentive for firms to make such adjustments. In addition, the establishment of an entirely new program of assistance to adversely affected communities who need to diversify their industrial base will be particularly helpful. For example, in my own State of Ohio, the town of East Liverpool could seek aid for ending its dependence on the now-depressed ceramics industry. Similarly, a city such as Massillon, which is dependent upon the import-plagued specialty steel industry, could ask for assistance in attracting new sources of employment.

This legislation goes further than any bill ever introduced before to protect consumers and exporters against abuse of the Adjustment Assistance program. It is imperative that any shelter which domestic industries are provided by the artificial restraint of competition through higher tariffs or import quotas be utilized to give these industries time to increase their competitiveness. We cannot permit tariffs or import quotas to be used as vehicles simply to raise prices. To ensure that this condition is fulfilled, the bill directs the President to take consumer interests into account as he decides whether to increase tariffs or impose import quotas. It requires the Tariff Commission to report on any protected industry's efforts to adjust to import competition, to survey the effects of any increased tariffs, import quotas, or import restraints ("orderly marketing") agreement on consumers, and to document the impact on U.S. exporters of any measures adopted by foreign countries in response to such protective arrangements. Most importantly, the legislation puts teeth in these provisions, by giving the Tariff Commission the power to recommend reduction, modification, or elimination of increased tariffs, import quotas, or import restraint agreements if the arrangement in question has had a substantially detrimental effect on consumers or exporters.

This legislation is not pro-business or pro-labor. The measure is not protectionist. It simply attempts to provide the kind of assistance that workers, firms, and communities desperately need to adjust to increased import competition, while maintaining adequate safeguards to ascertain that the interests of consumers and exporters are not allowed to fall by the wayside in the process. I hope that the Senate will give the Adjustment Assistance Act of 1972 full consideration at the earliest possible date.

By Mr. MATHIAS:

S. 3937. A bill to amend the act of August 4, 1950 (64 Stat. 411), to provide salary increases for members of the police force of the Library of Congress. Referred to the Committee on Rules and Administration.

Mr. MATHIAS. Mr. President, I am pleased to introduce today a bill which would bring long-overdue recognition to the members of the special police force of the Library of Congress by raising their salaries to parity with the Supreme Court and Capitol Police forces.

If we are to maintain a competent, professional police force at the Library, we cannot continue to overlook the important responsibilities and duties which they fulfill. They guard a world-famous collection of books and documents of immeasurable, irreplaceable value. They serve a large Library staff as well as thousands of visitors every year. The Library's proximity to the Capitol, the Supreme Court, and the congressional office buildings makes a competent force particularly important.

The Librarian of Congress has indicated his hearty support for this measure, and in fact has stated that a salary scale comparable to those of other police organizations serving Federal facilities is essential to overcoming present difficulties in hiring and keeping skilled personnel. I would like to have printed in the RECORD at this point a table prepared by the Librarian of Congress which illustrates the present disparity in pay scales among such organizations.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

COMPARISON OF STARTING AND ENDING SALARIES OF LIBRARY OF CONGRESS AND OTHER POLICE

Rank	Library of Congress		GSA		U.S. Capitol		National Zoological Park	
	Starting	Ending	Starting	Ending	Starting	Ending	Starting	Ending
Private	$8,295	$8,295	[1] $8,295	[1] $10,491	$8,610	$12,300	$9,053	$10,261
Jergeant	9,241	9,241	[1] 8,697	[1] 11,145	11,562	15,252	10,013	11,349
Sunior Lieutenant	9,657	10,261	10,013	13,019	14,022	17,712	11,046	12,518
Senior Lieutenant	11,046	12,518	10,013	13,019	14,022	17,712	11,046	12,518
Captain	12,151	13,053	12,151	15,796	16,728	20,418	12,151	13,771

[1] Saved rate—new hires start at base of GS-5, GS-6, etc.

Note: Special rates used by GSA are canceled effective Feb. 6, 1972. Supreme Court Special Police paid at same rates as U.S. Capitol Police, 5.5-percent increase not yet adopted.

Mr. MATHIAS. Mr. President, I am pleased to note that our colleague in the other body, the Honorable HARLEY O. STAGGERS has introduced there H.R. 14640, an identical measure. It is evident that the salary adjustment in this legislation is not only that, but requisite to the security of the Library of Congress and the entire Capitol Hill complex.

By Mr. CRANSTON (for himself and Mr. MATHIAS):

S. 3941. A bill to establish Capitol Hill as a historic site. Referred to the Committee on Public Works.

Mr. CRANSTON. Mr. President, I introduce for appropriate reference a bill to establish Capitol Hill as a historic district. Capitol Hill is an unique area. It is anchored by public buildings of unequalled significance to Americans—the Capitol Building, the Supreme Court, and the Library of Congress. With the exception of the White House, no other landmarks have equal power in capturing the public imagination. This is true now, and will be especially true in 1976, when in honor of the bicentennial of the American Revolution, people from across the country will come to Washington to get a sense of themselves as descendants of the American past and participants in its future. Certainly, a celebration of the birth of our Nation begins with a visit to Capitol Hill.

Besides being the seat of the Nation's Government, Capitol Hill is an area of historic and cultural significance. It contains landmarks listed on the National Register of Historic Places, such as the Frederick Douglass Memorial House, the Folger Shakespeare Library, and Christ Church; residences of Senators, Congressmen, Supreme Court justices, and other public officials, who, in the 19th and 20th century clustered on Capitol Hill. It also has singular attractions like the Eastern Market and the Congressional Cemetery. Its neighborhoods display almost every style of the 19th century architecture, much of which has been restored to its former beauty to the delight of visitors and residents alike.

But Capitol Hill is noteworthy for another reason. Because it is an area within the District that is experiencing rebirth. Washingtonians recall that during the 1930's, some of the District's worst slums buttressed the Capitol. Housing had changed hands and deteriorated, and a jarring disparity existed between the poor blacks living in the shadow of the Capitol and the gleaming houses of government.

Now, like Georgetown or San Francisco's Russian Hill, Capitol Hill is undergoing transformation. Individuals with money to finance costly restoration are buying property on Capitol Hill. Old townhouses are being restored to their former charm, and whole blocks have been rejuvenated. New construction is going on—deliberately in 19th century style to conform with neighboring houses. People are putting down roots; "The Hill" has once more become a desirable address.

A sign of the vitality of Capitol Hill are the citizen groups that have organized to respond to community issues. Two weeks ago, one such group came out in force to oppose the demolition of century-old houses on East Capitol Street—which already has a special landmark designation—so as to make way for a parking lot. These residents could not stop the leveling of three Victorian houses, and the preservation of the rest of the block is not assured.

As a Washington Post editorial of August 12, 1972, ably points out, the events on East Capitol Street are a portent of things to come unless we provide mechanisms to shield our cultural heritage from the wrecking ball.

Mr. President, I ask unanimous consent that the Washington Post editorial of August 12, 1972, be printed in the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

Landmarks and Parking Lots

With three down and nine to go—nine charming, century-old houses, that is—the Capitol Hill Metropolitan Baptist Church and the citizens of Capitol Hill have reached an uneasy truce in a battle that, in the end, affects the future of this city's past. The church owns all but one corner property on the north side of the 500 block of East Capitol Street which officially has been declared a National Capital Landmark. Despite this designation, which has no legal standing, the church decided to demolish this row of Victorian townhouses, in part, it seems, because the trustees found their maintenance too expensive, and in part because it has some vague plans for expansion. Some trustees said they needed more parking space during the Sunday services, despite the fact that the church already owns an ample and underused parking lot alongside its church building and that street parking is freely available on Sundays. Other trustees hinted at building a youth hostel and, perhaps a home for the elderly. Over 400 residents of Capitol Hill signed a petition opposing these designs and their representatives met with church officials, urging them to postpone the demolition until the church had worked out its plans and secured the funds for new, permanent buildings. The chairman of the trustees rejected this citizen recommendation and without any further ado called in the bulldozers. A street demonstration on the part of the citizens, armed with such signs as "Jesus Does Not Need a Parking Lot," called the controversy to city-wide attention, but could not prevent the hasty demolition of the first three buildings. The parking lot is an accomplished fact. It is, said the Rev. C. Wade Freeman Jr., "in the best interest of the church." The vigorous citizen protest did, however, result in the promise that the church would discuss its further plans with the community. The truce now gives both the church and the city time to reflect on basic issues involved in the dispute. Just where do we want our city to go?

The church might, more specifically, ponder the question whether it is possible to love your neighborhood any less than you love your neighbor. We should think that the two go hand in hand. It was, after all, the people, the neighbors on Capitol Hill, who gave of themselves, their civic pride and their sense of beauty to build those houses and other buildings (including the Metropolitan Baptist Church), which now return these intangible values by giving the people who live there a sense of belonging and an identity. It is the physical neighborhood that engenders the strong neighborhood spirit you find on Capitol Hill.

The City Council and the Zoning Board, meanwhile, might do well to ponder ways to give the landmark designation some practical meaning. At the very least the regulations should provide that the capital expansion plans of churches should be, like those of any other tax-exempt institutions, subject to review by the Board of Zoning Adjustment so that their effect on the surrounding community can be publicly considered. Demolition permits of buildings that have been designated landmarks or that are part of a landmark environment, furthermore, should not be granted without full public hearings. The authorities now presume that any building whose owner claims that it is not making a profit is guilty and must be destroyed. Let landmarks be presumed innocent unless their owners can prove that there is no way to save them. Unless the will to preserve what we can of our past is anchored in legislation and zoning and building regulations, it will soon be entirely gone. And a city given over entirely to parking lots and unloved money-making buildings surely doesn't have much of a future.

Mr. CRANSTON. Mr. President, it is out of this sense of urgency that I introduce my bill to establish Capitol Hill as a historic district, for as the seat of the Nation's government, the location of unique historic and cultural landmarks, and as a residential sector critical to the vitality of the District, I believe Capitol Hill deserves the protection that such a designation affords.

My primary desire is to protect the fabric of Capitol Hill from brutal ruptures like parking lots or high-rise office buildings. But, this is not the sole purpose of my bill. I do not believe that Capitol Hill should be preserved as a historic district in order to solidify it in its present state. I hope my bill will encourage innovation and the application of talent and energy to the problem of developing the area within a historical context.

For this reason, my bill goes beyond the designation of Capitol Hill as a historic district and requires that a comprehensive plan be created for the area to guide future growth. One of the requirements of the comprehensive plan is that the District government, in cooperation with the National Capitol Planning Commission, develop strategies to encourage the continuation of a racial and economic mix in the historic district.

Pending before the Department of Housing and Urban Development is a District application for Federally Assisted Code Enforcement—FACE—a program that provides grants and loans to lower income residents to correct code violations and to perform modest home improvements. The application would affect a sizable portion of Capitol Hill.

I am pleased to see that the District government has plans for improving the housing so that long-time residents will be encouraged to stay on Capitol Hill. Code enforcement is a useful tool, but I urge the District government and the National Capital Planning Commission to develop other strategies for assisting families to remain. Otherwise, I fear that without assistance, Capitol Hill will come full circle.

Black families will be displaced and the area will become almost exclusively middle and upper income, and almost exclusively white. In my view, the shift from an all-black population to all white—which took place in Georgetown and intensified the housing problems for blacks in other sections of the city—should be prevented. The District as a whole will, I believe, be healthier if its neighborhoods retain racial and economic diversity.

My bill, which draws upon examples of historic district zoning, particularly the Old Georgetown Act of 1950 (Public Law 808), has several features that I want to emphasize. First, the National Capital Planning Commission, after determining the boundaries of Capitol Hill and after performing a historical and cultural survey of the area, will recommend that Capitol Hill be nominated to the National Register, maintained by the Secretary of the Department of the Interior. This nomination will bring Capitol Hill under the protection of the National Historic Preservation Act of 1966 (Public Law 89–665), and will enable the District government to take advantage of matching grants-in-aid provided by that act.

Second, my bill divides responsibility between the National Capital Planning Commission and the Office of Planning and Management within the District government for the survey of Capitol Hill and the comprehensive plan for the conservation, development, and redevelopment of the historic district. The intent is to capitalize on the special capabilities of each and to enhance those capabilities. By requiring the cooperation of these planning bodies, I hope a more unified approach to historic preservation will take form in the District.

The National Commission of Fine Arts was given authority under the Old Georgetown Act to review plans for construction, alteration, reconstruction, or razing of structures within Old Georgetown. It was not given authority to review plans for demolition. The events on East Capitol Street demonstrate that this is a serious weakness. My bill gives the Fine Arts Commission authority to comment on demolition. Further, it requires that the District delay demolition for 90 days, so that if the Commission finds the structure to have historical or architectural significance, there will be time for public discussions, and there will be time to develop possible ways of saving the structure. This provision is extremely important if historical preservation is to have success.

In addition, I have urged the Fine Arts Commission not to preclude the approval of contemporary design when it is compatible with older styles of architecture. To assist the Fine Arts Commission in its review, I have authorized the District government to appoint four residents of Capitol Hill who are knowledgeable in historic preservation as advisers to the Commission.

Lastly, my bill provides two special authorizations: $280,000 for the restoration of the eastern market, and $50,000 for minor beautification of public places within the historic district.

The livability and vitality of a city depends upon the character of its neighborhoods. Significant structures play an important role in forming and maintaining a neighborhood. In my own State of California, I have sought to continue the usefulness of historic buildings, and point with success to the preservation of the San Francisco Mint and the Mission Inn in Riverside. Last year I introduced S. 737, a bill that would designate the residence of Eugene O'Neill in Danville, Calif., as a national historic site.

But while structures often generate a neighborhood sense, other factors that make a neighborhood "work," factors that coalesce to give satisfactions to its residents, are not always perceived. I believe that aside from the value of preserving the historical flavor of Capitol Hill and channeling future growth within prescribed guidelines, the designation of Capitol Hill as a historic district will give us insight into how an area is revitalized and what kinds of policies promote that process. It is my hope that since this bill provides legislation for a specific purpose that the lessons of Capitol Hill will be instructive to the rebuilding of our cities.

I ask unanimous consent that the full text of the bill be printed in the RECORD at this time.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 3941

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Congress finds and declares that—

(1) districts of historical and cultural significance should be preserved to enrich the lives of present and future generations of Americans;

(2) as the seat of the Nation's government, the Capitol Hill district is unique and is of great national and international importance;

(3) the creation of the Capitol Hill historic district within the District of Columbia will foster civic pride and tourism and enhance the vitality of the entire city; and

(4) the creation of a Capitol Hill historic district will encourage private and public actions to restore the visual beauty and usefulness of landmarks, sites, and dwellings, and, thus, preserve the special character of the area.

TITLE I

SEC. 101. (a) To facilitate the testing of new methods of revitalizing neighborhoods within a metropolitan area and to encourage the coordination among agencies having responsibility for comprehensive planning within the District, the National Capital Planning Commission shall survey Capitol Hill district for the purpose of recommending that said district be included on the National Register as established by Public Law 89-665.

(b) The Capitol Hill historic district is defined as that area bordered on the west by 2nd Street between E and C Streets, west on C Street to New Jersey Avenue, and south on New Jersey Avenue to the Southwest Freeway; bordered on the south by the Southwest Freeway east to 19th Street, including the Congressional Cemetery; bordered on the east by 19th Street north to E Street; and bordered on the north by E Street west to 2nd Street.

(c) The National Capital Planning Commission may modify these boundaries based upon its survey of the area and upon the advice of Federal and District of Columbia agencies having responsibility for historic preservation, as well as private groups and individuals, whose knowledge and talent are relevant to historic preservation.

(d) In addition to determining the boundaries of the Capitol Hill historic district, hereafter referred to as Capitol Hill, the National Capital Planning Commission shall include the following in its survey:

(1) a revised list of landmarks for nomination to the National Register prepared in conjunction with and with the review of the Joint Committee on Landmarks;

(2) a definition of the historic and cultural character of Capitol Hill, drawing upon a detailed architectural inventory of the location, style, and condition of structures; and

(3) an analysis of present conditions in the district, including neighborhood facilities, parks, type and conditions of streets and pavements, and other site features.

(e) Such survey shall be made at a cost not exceeding $100,000, which amount is hereby authorized to be appropriated.

(f) Included in such survey shall be a comprehensive plan for the conservation, development, or redevelopment of the historic district, which shall be prepared by the Office of Planning and Management of the District of Columbia, but which shall be coordinated with the findings of the National Capital Planning Commission, as described in paragraphs (1), (2), and (3) of subsection (d) of this section. Such comprehensive plan shall include, but not be limited to, the following:

(1) an analysis of present land-use patterns, with emphasis on the applicability and reasonableness of present zoning laws and regulations to preserve the character of Capitol Hill;

(2) an analysis of recent economic, demographic, and social trends in the district; and

(3) a statement of objectives for the future conservation, development, or redevelopment of the district, which shall include strategies to encourage the continued racial and economic integration of the historic district.

(g) Such comprehensive plan shall be made at a cost not exceeding $150,000, which amount is hereby authorized to be appropriated.

SEC. 102. The National Capital Planning Commission shall submit the survey, which includes the comprehensive plan, to the Congress of the United States, to the Commissioner of the District of Columbia, and to the National Commission of Fine Arts no later than one year after the enactment of this Act, and shall serve as the guide to the preservation and development of Capitol Hill.

TITLE II

SEC. 201. In order to promote the general welfare and to preserve and protect the places and areas of historic interest, exterior architectural features and examples of the type of architecture used in Capitol Hill since its initial years, the Commissioner of the District of Columbia, before issuing any permit for the construction, alteration, reconstruction, razing, or demolition of any building within said Capitol Hill district, shall refer the plans to the National Commission of Fine Arts for a report as to the exterior architectural features, height, appearance, color, and texture of the materials of exterior construction which is subject to public view from a public highway, and, including, the impact of such plans upon the environs of the building.

The Commission's review shall not preclude the approval of contemporary design which is compatible with the architectural styles prevailing in the historic district.

SEC. 202. The National Commission of Fine Arts shall report promptly to said Commissioner of the District of Columbia its recommendations, including such changes, if any, as in the judgment of the Commission are necessary to preserve the historic value of said Capitol Hill district. The said Commissioner shall take such actions as in his judgment are right and proper in the circumstances: *Provided,* That, before issuing a permit of demolition, the Commissioner of the District of Columbia shall refer such plans to the National Commission of Fine Arts, and shall delay for 90 days the demolition of such property. Within the period of postponement of such demolition, the Commission of Fine Arts shall take steps to ascertain what the Commissioner of the District of Columbia can or may do to preserve such building, including consultation with private civic groups, interested private citizens, and other public boards or agencies, when the preservation of a given building is clearly in the interest of the general welfare of the community and of certain historic and architectural significance. The Commission shall then make its report to the Commissioner of the District of Columbia: *Provided,* That, if the said Commission of Fine Arts fails to submit a report on plans within forty-five days, its approval thereof shall be assumed and a permit may be issued.

SEC. 203. The Commissioner of the District of Columbia shall appoint four citizen members, who are residents of the historic district and who have demonstrated outstanding interest and knowledge in historical or architectural development of the historic district, as advisers to the National Commission of Fine Arts. Such citizens shall advise the Commission on plans referred to it and shall serve without expense to the United States.

SEC. 204. The National Commission on Fine Arts may also advise interested parties on the design and appearance of walls, fences, signs, light fixtures, and steps so that such design and appearance may be compatible with the architectural styles of Capitol Hill.

SEC. 205. Nothing in this title shall be construed to prevent the ordinary maintenance or repair of any exterior elements of any building or structure within the historic district; nor shall anything in this title be construed to prevent the construction, reconstruction, alteration or demolition of any such elements which the authorized municipal officers shall certify as required by public safety.

SEC. 206. This title shall become effective upon the approval of the Secretary of the Interior for the nomination of the Capitol Hill historic district to the National Register.

TITLE III

SEC. 301. For the purpose of restoring the Eastern Market, at 7th Street and North Carolina Avenue, S.E., to its full usefulness and beauty, there is authorized to be appropriated $280,000, to be administered by the District of Columbia.

SEC. 302. For the purpose of undertaking minor beautification of public sites in the historic district and for the purpose of marking with plaques, or other means, places of historical and cultural significance, there is authorized to be appropriated $50,000, to be administered by the District of Columbia.

By Mr. SPARKMAN (for himself, and Mr. ALLEN):

S. 3940. A bill to amend the black lung benefits provisions of the Federal Coal Mine Health and Safety Act of 1969 to extend those benefits to miners who incur silicosis in iron mines and surface coal mines. Referred to the Committee on Labor and Public Welfare.

Mr. SPARKMAN. Mr. President, today I am introducing, with my colleague from Alabama (Mr. ALLEN) as cosponsor, the so-called red-lung bill, which is designed to benefit those miners who have developed serious lung problems, and other related health problems, as a result of working in iron ore mines for a number of years.

What the bill will do is provide the same benefits to iron ore miners that the black lung legislation did to coal miners.

I think everyone agrees that a person has no more precious possession than good health. Without it, we are practically helpless to provide either for ourselves or our families.

Many fine men, in my State and throughout the country, spent their lives toiling in the iron ore mines. These are the men who helped build this great country; they worked the mines long before mine safety became a by-word of the mining industry.

As a result, many of these men—possibly as many as 5,000 in Jefferson County, Ala., alone—have suffered serious health problems resulting from breathing the iron ore dust over the years.

I think it is only just and humane that this Nation provide help to these people who have spent a lifetime building this country and providing the very backbone of our economy. They made tremendous sacrifices—even including their health—to provide for their families and their country. It is now time for this Nation to help them.

I urge the Senate to act swiftly on this matter, to provide equity and justice to the thousands of iron ore miners who are deserving of our concern and our help.

A number of my constituents in the Jefferson County area have been working to organize support for this legislation. Recently, the Honorable Ben Erdreich, a young Birmingham attorney, came to Washington and presented petitions with over 4,000 signatures from people who are interested in the health of Alabama miners afflicted with red lung disease.

Companion bills have been introduced in the House of Reuresentatives and I hope that Congress will soon have good news for these suffering people.

By Mr. ROBERT C. BYRD (for himself and Mr. RANDOLPH):

S. 3944. A bill to provide for repair and conversion to a fixed-type structure of dam No. 3 on the Big Sandy River, Ky., and W. Va., in the interest of water supply and recreation for local interests. Referred to the Committee on Public Works.

Mr. ROBERT C. BYRD. Mr. President, I introduce a bill on behalf of myself and my colleague from West Virginia (Mr. RANDOLPH), and I ask that it be appropriately referred.

The PRESIDING OFFICER. The bill will be appropriately referred.

Mr. ROBERT C. BYRD. Mr. President, this bill would authorize the Department of the Army, through the Corps of Engineers to rebuild dam No. 3 on the Big Sandy River in order to restore the water supply for the towns of Fort Gay, W. Va., and Louisa, Ky. There is an existing dam which was constructed in the late 1800's and maintained for navigation until 1947, at which time ownership of this dam was transferred to Fort Gay and Wayne County, W. Va., and Louisa and Lawrence County, Ky. Flooding and other adverse conditions have subsequently caused severe deterioration of the dam structure and the surrounding abutments. These damages have, in turn, resulted in a lowering of the pool behind the dam from which Louisa and Fort Gay derive their water supply.

The Corps of Engineers, by letter of July 26, 1972, expressed the view that this proposal is feasible and is considered to be the most appropriate solution to meet this problem. This legislation extends to the Corps the authority to accomplish this work and to authorize appropriations of $300,000 for this purpose.

By Mr. BUCKLEY:

S.J. Res. 262. A joint resolution to provide for the designation of the week which begins on September 24, 1972, as "National Microfilm Week." Referred to the Committee on the Judiciary.

Mr. BUCKLEY. Mr. President, today I am introducing a joint resolution calling upon the President to proclaim the week of September 24, 1972, as "National Microfilm Week." An identical resolution has already been introduced in the House of Representatives as House Joint Resolution 1193, which I am hopeful will call attention to an industry which has revolutionized the information collection, retrieval, and dissemination process within our lifetime.

This resolution takes note of the extensive contribution this industry has made to every sphere of our national life; commercial, historical, cultural, and governmental. The widespread employment of microfilm technology has contributed to the development of the means by which our society can be assured of retaining broad and meaningful access to historical information in every field of endeavor in the most efficient manner possible.

In recognition of this formidable contribution to American society, I offer this resolution, and hope for early Senate approval.

ADDITIONAL COSPONSORS OF BILLS

S. 3880

At the request of Mr. HANSEN (for Mr. SCHWEIKER) the Senator from New York (Mr. JAVITS) and the Senator from Alaska (Mr. STEVENS) were added as cosponsors of S. 3880, the National Diabetes Education and Detection Act.

S. 3906

At the request of Mr. FANNIN, the Senator from Pennsylvania (Mr. SCHWEIKER) was added as a cosponsor of S. 3906, a bill to protect the safety of users of compressed gas cylinders, and for other purposes.

SENATE RESOLUTION 356—ORIGINAL RESOLUTION REPORTED AUTHORIZING ADDITIONAL EXPENDITURES BY THE COMMITTEE ON THE JUDICIARY

(Referred to the Committee on Rules and Administration.)

Mr. HART, from the Committee on the Judiciary, reported an original resolution as follows:

S. RES. 356

Resolved, That the Committee on the Judiciary is authorized to expend from the contingent fund of the Senate $18,000, in addition to the amount, and for the same purposes and during the same period, specified in Senate Resolution 256, Ninety-second Congress, agreed to March 6, 1972, authorizing an investigation of antitrust and monopoly laws and their administration.

REVENUE SHARING ACT OF 1972—AMENDMENT

AMENDMENT NO. 1460

(Ordered to be printed and to lie on the table.)

PASSING ON BENEFITS TO SENIOR CITIZENS

Mr. TUNNEY. Mr. President, I am submitting today an amendment to H.R. 14370, the revenue sharing legislation, to pass through some of the benefits of the recently approved 20-percent increase in social security payments to the more than one and a quarter million elderly people who depend on both social security and public assistance payments for their income. My colleague from California (Mr. CRANSTON) is a cosponsor of this amendment.

Unless this action is taken before the social security increases are paid, none of these people will receive any of the increase which Congress voted for them.

Their assistance payments will be reduced dollar for dollar according to the size of the increase in their social security entitlements. Some will find their welfare payments cut off altogether.

In a number of places, the social security increase will make many receipients ineligible for State medicaid programs and also reduce food stamp allotments—in real terms, the increase could cost them far more than they gain.

In California, the latest figures available show that some 229,000 retired persons receiving social security benefits are also on the rolls for old age assistance payments.

They comprise 70 percent of all those on old age assistance, and 14 percent—one in every seven—of all Californians receiving social security retirement benefits.

In the Nation as a whole, there are approximately 1,277,000 on both OAA and OASDHI—more than 7 percent of all people on social security retirement benefits.

By definition, these are all people with few resources and very low income, with no capacity to absorb the impact of increasing costs and prices.

The Senate, by its overwhelming vote of 82 to 4 in favor of the across-the-board increase in benefits, demonstrated its conviction that it was of the greatest importance to grant a very substantial increase in income to the elderly who depend on social security for their support.

The House concurred in that decision.

Of all the groups of social security recipients, the one whose need is greatest—with the smallest resources to face the constant increases in the daily costs of living—is this group.

It would be a contradiction of the action of Congress at that time not to make the effort to pass through at least a part of the increase.

It is pertinent to recall the considerable increases in costs which elderly people have faced in the last 18 months. I shall mention only two. Food alone accounts for about 27 percent of the income of old people—far more than for the general population.

Food costs have gone up 6 percent or more since the beginning of January 1971, and as everyone knows these prices are currently the source of continuing great concern.

At the same time, property taxes which hit both homeowners and those who rent, have risen 14 percent.

To face these increased demands on their meager income—or rather to continue facing them, for they have been forced to cope with the situation for upwards of 18 months without any extra help—these people need the help which this pass-through provision would give them.

My amendment adds an extra title to the bill, imposing an additional requirement on States as a condition for approval of a State plan to provide aid to individuals under title I, X, XIV, or XVI of the Social Security Act.

This requirement is that, once the 20-percent increase is effective, an individual who receives both social security and OAA payments must receive in total from the two sources an extra $15 a month, or an extra amount equal to the full amount of his personal social security increase, whichever is the lesser.

States will be permitted to pass on this extra amount to them either by increasing the amount of income disregarded in determining eligibility for and amount of payments, or by other means, such as increasing the standard of need or payment for all recipients of public assistance for the aged, whether social security beneficiaries or not.

The average lift in social security benefits under the 20-percent increase was $28 a month for a single retired worker and $47 for a retired couple. In view of this, and of the fact that no pass-through has yet been granted for last year's social security increase, I think it must be agreed that this pass-through is not at all excessive. Personally, I would prefer that it could be set at an even higher level.

I do think, however, that it is also important not to create too much of a differential between the treatment of recipients with some social security entitlements, and those with no other resources at all.

In this connection it should also be kept in mind—and kept in mind very prominently—that unless the pass-through is implemented, the increases which we voted 2 months ago for these people will simply constitute a direct fiscal relief operation for the States. For each dollar of the social security increase which goes to decrease a recipient's public assistance grant will be a dollar off the State welfare bill, not in the pockets of the elderly poor.

It has been suggested that it would be more appropriate for this provision to be handled in connection with general welfare provisions, sometime after the recess.

Two main considerations militate strongly against this. First, the program for action on welfare changes is, to say the least, not altogether clear or certain. If battle is eventually joined on the issue, it will be a long and bloody conflict, and no one can be sure what the body count will be at the end of the day.

Second, and more urgent, is the fact that the 20-percent increase is to be paid for the month of September, in the October checks.

If we are to act to pass through these benefits without considerable added administrative expense, it must be done as soon as possible.

Because of the administrative lead-time needed, I understand some States are already preparing for changes they expect to have to make in entitlements, in order to prevent an unmanageable log jam at the time of the actual payment of the increase.

If we are to forestall a situation which gives rise to unnecessary and wasteful administrative expenses, we must act quickly.

The time to get this done is now.

Overriding all these considerations, however, is the fact of the undeniable need of the old people of our Nation, not to share in the affluence of the rest of the population—this is not a level of income where it makes the remotest sense to talk in terms of affluence—but to be given help in counteracting the inroads already made into their inadequate incomes.

I urge my distinguished colleagues to give this matter their fullest support.

Mr. President, I request unanimous consent that the text of the amendment be printed in full in the RECORD at this point.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT No. 1460

At the end of the bill, add the following new title:

TITLE IV—DISREGARD OF SOCIAL SECURITY BENEFITS IN DETERMINING NEED FOR PUBLIC ASSISTANCE

DISREGARD OF SOCIAL SECURITY BENEFITS IN DETERMINING NEED FOR PUBLIC ASSISTANCE

SEC. 401. In addition to the requirements imposed by law as a condition of approval of a State plan to provide aid to individuals under title I, X, XIV, or XVI of the Social Security Act, there is hereby imposed the requirement (and the plan shall be deemed to require) that, in the case of any individual found eligible (as a result of the requirement imposed by this section or otherwise) for aid for any month after August 1972 who also receives in such month a monthly insurance benefit under title II of such Act, the sum of the aid received by him for such month, plus the monthly insurance benefit received by him in such month, shall not be less than the sum of the aid which would have been received by him for such month under the State plan as in effect for August 1972, plus either—

(1) the monthly insurance benefit which was or would have been received for August 1972, plus $15; or

(2) the monthly insurance benefit to which he would be entitled for the month of September, 1972, whichever is less (whether this requirement is satisfied by disregarding a portion of his monthly insurance benefit or otherwise).

AMENDMENTS NOS. 1461 THROUGH 1464

(Ordered to be printed and to lie on the table.)

Mr. HARTKE submitted four amendments intended to be proposed by him to the bill (H.R. 14370) to provide payments to localities for high priority expenditures, to encourage the States to supplement their revenue sources, and to authorize Federal collection of State individual income taxes.

NOTICE OF HEARING

Mr. SPARKMAN. Mr. President, I should like to announce that the Subcommittee on Housing and Urban Affairs of the Committee on Banking and Currency will hold a hearing on Thursday, September 7, at 3 p.m., to receive testimony on S. 3939, the Federal-Aid Highway Amendments of 1972. This hearing will be limited to that part of the bill relating to the use of highway funds for highway public transportation, the authorization levels for these purposes and the impact of these upon funding needs of the urban mass transportation program.

The hearing will be held in room 5302, New Senate Office Building.

The subcommittee welcomes statements for inclusion in the record of hearings.

ADDITIONAL STATEMENTS

THE PEOPLE OF CZECHOSLOVAKIA

Mr. PERCY. Mr. President, as we mark the fourth anniversary of the Soviet invasion of Czechoslovakia, I wish to express my continuing admiration for the people of that unhappy land who, despite every pressure, despite the calculated treachery committed against them, still maintain an irrepressible love of freedom.

At the same time, I want to express my appreciation to the many organizations in our own country which seek to keep alive public consciousness of the plight of the people of Czechoslovakia.

For myself, I can say that I have not forgotten, nor will I forget, the people of Czechoslovakia. They bear burdens which no men should have to bear. They are deprived of freedom. Their destiny is not in their own hands. They suffer a cruel subjugation to the wishes of a foreign state.

The people of Czechoslovakia deserve our concern, our sympathy and our prayers.

ANTENNAS OF SKEPTICISM

Mr. HUGHES. Mr. President, because of official policies of secrecy and news management on the part of our Government and the Thieu regime regarding events in the war in Indochina, it has always been difficult for the American public to get an accurate view of what is going on in Vietnam.

According to some recent news reports, the truth of what is happening may be further distorted by exaggeration by allied sources of alleged acts of terrorism by North Vietnamese and Vietcong troops. If this is true, I submit that it is regrettable. There is enough brutality to be reported without doctoring the news and undermining the credibility of our official news sources.

One well-publicized atrocity story deals with a so-called convoy of death in which civilians retreating from Quang Tri last spring were attacked by North Vietnamese soldiers. Certainly any attack on civilians cannot be condoned. But these particular charges have since been partially discredited by an AP reporter on the scene, who says that half of the victims were South Vietnamese troops fighting their way out of the battle area.

Atrocities in this war should be condemned wherever they occur. But Laurence Stern, in an article published in the Washington Post on August 11, 1972, makes a point that I believe is worth everyone's sober consideration.

He writes that—

> When government spokesmen on either side begin to moralize about the outrages of the enemy's troops it is time to raise the antennas of skepticism rather than to join the parade.

Mr. Stern also discusses the reports of selective assassination by local government officials during the occupation of Binh Dinh Province earlier this year. He says:

> It is the mirror image of conditions when territory is under Saigon control and the suspected Vietcong cadre and infrastructure become the chief target for "neutralization" under the Phoenix program.

Mr. President, I ask unanimous consent that Mr. Sterns' article, entiled "The 'Convoy of Death,'" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CONVOY OF DEATH

(By Laurence Stern)

Last week in Saigon, newsmen were briefed by American officials on the "Convoy of Death"—an alleged attack by North Vietnamese ambush teams on a retreating column of unarmed refugees from Quangtri during the Communist capture of that city at the end of April. As reported by the official briefers, the incident falls into the category of atrocity. The claim was that 1,000 to 2,000 defenseless civilians were killed in the attacks on April 29–30.

And within the past few days The New York Times has carried two dispatches from its able Saigon correspondent, Joseph B. Treaster, on reports from refugees and estimates of "allied Intelligence officials" that some 250 to 500 civilians were executed by the Communists during their three-month occupation of northern Binhdinh Province in South Vietnam's central coastal region.

These reports are bound to invoke the memory of the Hue massacre and the specter of a future Communist "blood bath" that high administration figures claim could accompany a political settlement of the Vietnamese conflict. The "blood bath" theory has long served as a potent argument against trying to come to terms with Hanoi and the Southern Front on a formula for sharing the power in Saigon.

The new reports also come on the heels of North Vietnam's protests, condemned by the administration as propaganda, against American bombing of the Red River Valley dike system and other non-military targets.

So, the decibels of accusation and counter-accusation are rising both above and below the DMZ as the Paris talks flounder on. If the past is any guide, there are undoubtedly elements of the true, the false and great gobs of the unknown in the charges of both sides. Furthermore, as the international climate grows increasingly shrill so will the possibilities of reasonable inquiry be drowned out by the noise.

The "Convoy of Death" story was challenged in some important respects by Associated Press correspondent Holger Jensen, who reported that half the victims of the April 29–30 attacks were South Vietnamese troops battling their way out of besieged Quangtri—and not just unarmed civilians. He puts his maximum estimate of those killed, soldiers and civilians, at 600, less than a third of the officially-claimed toll.

This is not to say that the killing of civilians fleeing with the South Vietnamese army and ranger units is an attractive piece of heroism, any more than the bombing of civilians in retaliatory American air strikes is a pardonable misdemeanor.

But when government spokesmen on either side begin to moralize about the outrages of the enemy's troops it is time to raise the antennas of skepticism rather than to join the parade, as this war has repeatedly taught us.

The reports from Binhdinh Province deserve even closer attention. For there is little doubt that the "bloodbath" demonologists in the administration and elsewhere will soon begin banging the kettle drums.

In his dispatches on the Communist occupation of northern Binhdinh, an entrenched Vietminh and then Vietcong stronghold, Treaster carefully separates what the refugees said from the assertions of "allied intelligence officials."

Those refugees who chose to escape from the Communist zones spoke of heavy political indoctrination, of execution of Saigon government functionaries and of conscript hard labor in the service of the Communist troops. The chief targets, Treaster was told were the agents of the Saigon government: hamlet and village chiefs, police and militiamen. It is the mirror image of conditions when territory is under Saigon control and the suspected Vietcong cadre and infrastructure becomes the chief target for "neutralization," under the Phoenix program.

Some Washington officials closely concerned with Vietnam matters feel it is too early to judge how representative a picture it is of the Communist occupation of northern Binhdinh. Individual refugees have their own motives for running, whether from ideology, bombs or artillery. Each has a limited perspective on something far bigger than anyone's individual perceptions.

"What this tells me more than anything is that the White House sees little possibility of a negotiated settlement," said one such source. His point was that when the conference table is bare the war of rhetoric waxes strongly.

SOVIET EXTORTION-THROUGH-EDUCATION AGAINST JEWS

Mr. BUCKLEY. Mr. President, an article published on the front page of the New York Times for Wednesday, August 16, told of a new and insidious practice of discrimination against Jews by the Soviet Union. The article told of a new system of heavy exit fees ranging from $5,000 to $25,000 for educated Jews who want to emigrate to Israel.

Soviet officials have a ready explanation for this practice. They claim that the fees are "repayment for the costs of state-financed education." Since there is no other system of education allowed in the Soviet Union, it is difficult to imagine how Soviet officials can justify, even by their curious logic, such an extortion. If a person has never had a choice as to what kind of school he can attend, then it might be said that he has "paid" for whatever education the state gives him by the loss of his freedom to choose his own kind of educational system.

The world learns, once more, that by whatever means it has at its disposal, the Soviet Union continues to carry out its program of discrimination against and, ultimately, the destruction of, Soviet Jewry. That their means of destruction are extortion, terror, and unrelenting psychological pressure does not make the intent less evil than the intent of former persecutors of the Jews who have used less subtle, more horrible means.

Equally important we learn that when the state is all-powerful, even the most highly desirable institutions can be perverted to evil ends. When the state has total control over the educational process, there is no chance for anyone to escape the threat of state sanctions at any time of life, for whatever reason. The total state gives and the total state can take away—or, in the example quoted above, the state gives and then the state demands payment, at its leisure, for its own political reasons, without hope of appeal.

Let us never get to a condition in our own country where the state can blackmail or terrorize or extort from citizens because of some educational debt that is supposedly owed to the state. Nature and the just laws of nations have placed the primary responsibility and right for the education of the young in the hands of parents, where it belongs. If parents choose to send their children to a state-supported school, that is their business. But we must have a strong pluralistic system of education—as President Nixon has suggested on a number of occasions—if we are to have true freedom.

I ask unanimous consent that the Times article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOVIET JEWS SAY EXIT FEE IS RISING FOR THE EDUCATED

(By Hedrick Smith)

MOSCOW, August 15.—Jewish sources reported tonight that Soviet authorities are instituting a new system of heavy exit fees ranging from $5,000 to $25,000 for educated Jews who want to emigrate to Israel.

The sources said they learned of the new measure, replacing the old general fee of about $1,000, while some Jews were applying for exit visas with a branch of the Interior Ministry today. No official confirmation was possible.

The Government explanation, the sources said, was that the fees were necessary repayment to the Government for the costs of state-financed education. A similar reason had long been given for the earlier fee.

Earlier today, 10 Jewish intellectuals charged that the Government was discriminating against educated Jews in handling emigration requests and that harassment and delays had increased in the last two months.

Under present Government policies, the 10 said in a joint statement, there was a danger that highly qualified scientists and educated Jews were in danger of becoming "a new category of human beings—the slaves of the 20th century."

RARE NEWS CONFERENCE HELD

The statement was read at a rare news conference by Benjamin G. Levick, a 55-year-old chemist and scholar, the highest-ranking Soviet academician to apply for an exit visa to Israel. He is a corresponding member of the prestigious Academy of Science and so far the only person associated with the academy to apply for permission to emigrate.

Educated Jews have long encountered more difficulties in emigrating than blue-collar or office workers and tradesmen, and Western diplomats said tensions between Jews and Soviet authorities were evidently rising because more intellectuals had been applying for exit visas lately.

Western diplomats reported that through the first six months of this year about 15,000 Jews had been allowed to emigrate, roughly the same number as in all of 1971.

Some Jews are contending, however, that the flow since midyear has slowed down, reflecting a change in Soviet attitude. So far there has been no official confirmation, nor any confirmation from diplomats who follow such affairs closely.

GRADUATED FEE SYSTEM

A new schedule of fees for educated applicants, if put fully into practice, would be aimed not only at blocking those who have already applied but at deterring others from applying, Jewish sources said.

They reported having been told today that Jews who had graduated from a teachers institute faced fees of 4,500 rubles—$5,400. University graduates were to pay 11,000 rubles—$13,200—and holders of the candidate degree, equivalent to a Ph.D. in America, were to be charged 22,000 rubles—$26,400. Other Jewish sources reported slightly different figures but in the same range.

Even without a graduated fee scale, Dr. Levich and his colleagues contended that educated Jews were being discriminated against. "Jews wishing to leave are being divided according to their educational and intellectual level," they said in their statement. "The higher the level, the more difficult it is to get permission to get a visa."

They asserted that obstacles to intellectuals had been stepped up lately—discharge from work after applying for visas, the threat of prosecution for lack of employment, sudden military call-ups and the danger of trials for those who refused to serve, disconnection of telephones and interference with mail.

These measures, the statement asserted, came at the same time as new pressures against non-Jewish civil rights activists here and trials of liberals in Czechoslovakia.

Professor Levich, who was demoted since his unsuccessful application for an exit visa last March, said that his son, Yevgeny, a 24-year-old astrophysicist, has been ordered to report for two years' military service despite chronic physical disabilities and despite the normal exemption granted to scientists with Ph.D.'s.

Besides the Leviches, those who endorsed the statement were Dr. David S. Azbel, 61, a retired chemistry professor who spent 16 years in Stalinist prison camps; Prof. Aleksandr V. Voronel, 41, a physicist; Prof. Boris G. Moisheson, 34, mathematician; Dr. Vladimir G. Zaylavsky, 43, molecular biologist; Viktor S. Yakhot, 28, solid-state physicist; Dmitri K. Simis, 24, sociologist formerly with the Institute of World Economics and International Relations; Gregory L. Svechinsky, 32, an engineer and teacher, and Viktor B. Nord, 27, a film director whose recent movie, "The Debut," won critical acclaim.

WHEN MENTAL HARM IS GENOCIDE

Mr. PROXMIRE. Mr. President, Mr. George Aldrich, the Deputy Legal Adviser of the State Department, has provided the Subcommittee on Foreign Relations with some very useful testimony concerning the category of "mental harm" in the Genocide Convention's definition of genocide. His testimony does much to dispel the fear that the treaty's definition of "mental harm" is so vague that it will open up many innocent citizens to the charge of genocide.

According to article II of the Genocide Convention, genocide includes "Causing serious bodily or mental harm to members of the group," with intent to destroy that group in whole or part.

A self-explanatory understanding of this definition proposed by the President, is attached to the treaty as reported out by the committee. It states:

> The U.S. Government understands and construes the words "mental harm" appearing in article II(b) of this Convention to mean permanent impairment of mental faculties.

Mr. Aldrich has provided a good explanation of the implications of this understanding—

> Thus, before a charge could be sustained, it must be proved that permanent impairment of mental faculties occurred and that the defendant brought about this injury with the intent to destroy, in whole or in part, one of the protected groups. This standard is rigid enough to discourage frivolous allegations of genocide through mental harm.

In my opinion, nothing could be clearer. The understanding and the explanation by Mr. Aldrich show that a suspected loophole in the Genocide Treaty does not exist. The definition of genocide is precise enough to prevent convictions of people on imprecise and undocumented charges of mental harm. Therefore, I urge the ratification of the Genocide Convention.

INTERIM AGREEMENT ON OFFENSIVE ARMS

Mr. STEVENSON. Mr. President, the negotiations which led to the Interim Agreement on offensive weapons, and the negotiations yet to come, offer hope that we can end the costly and perilous race in strategic arms. That hope is diminished by the amendment offered by our esteemed colleague, Senator JACKSON.

The proponents of his amendment have professed a need for "stable parity," for a "stable strategic relationship based on survivable strategic forces," for a "prudent strategic posture," for a "credible deterrent." To listen to them, the Jackson amendment would only record the Senate's support for principles we all support. But the Jackson amendment goes beyond those principles to give implicit, if not explicit, support to principles I do not support. It could lead to another round in an arms race which the agreement rightly attempts to stop.

The interim agreement contains disparities between the number of offensive launcher systems allotted to each side. But those disparities in the number of certain launcher systems clearly do not limit the United States to a position of inferiority in any essential category or in overall strategic force.

That is because the agreement does not by any means cover all categories of offensive weapons. It does not, for example, limit our vastly superior tactical forces, principally in Europe, which enter into the overall strategic differences between our forces in every category which will offset many of the quantitative differences. These qualitative differences weigh heavily in our favor, as in the case of the Poseidon submarine and its MIRV'd missiles. And besides, this agreement is expected to be supplanted by a treaty before the end of its 5-year period.

I submit that the Jackson amendment, not the agreement itself, is the real threat to our security. If the argument of the Jackson amendment supporters for "equality" is to be taken literally, and enshrined in the Senate's approval of the interim agreement, could it not then be logically argued that the Soviet Union as well as the U.S. was invited to seek "equality." Indeed, what else can "equality" mean—except equality? By this logic is not the Soviet Union invited to deploy MIRV'd missiles on nuclear submarines in such numbers as to overcome our superiority?

As it stands now, from submarines alone we can deliver 3,504 warheads against as many targets in the Soviet Union. The Soviet Union can deliver 518 warheads from its 60 submarines against targets in the United States. That warhead gap will widen to our further advantage during the term the agreement is in effect. By supporting numerical "equality" would we really mean to support numerical equality in the number of deliverable nuclear warheads from submarines during the interim agreement? If not, does the Jackson amendment suggest that the United States should be free to do what the Soviets cannot? Indeed, what does the amendment mean by demanding numerical equality? No one really knows.

The same arguments could be made on the other side for numerical equality in every category of offensive weapons. To the extent the Soviets demanded "equality" and, for example, were encouraged to MIRV missiles on submarines, the United States would under the Jackson amendment be called upon to both accept the "equality," and inconsistently, to deploy more weapons and conduct more research. If it chose the latter course, as seems to be intended, the arms race would lurch ahead again in derogation of all our professed purposes and those of the interim agreement. If "equality" is to mean anything, it must mean equality for both sides, and I submit that should mean overall equality in offensive arms. But if that were the real purpose of the Jackson amendment I suspect it would not now be offered. The amendment leaves little room for our negotiators to seek arms limitations based on true equality.

The purpose of offensive strategic nuclear weapons—ours and theirs alike—is to deter the other side from a first strike. A stable condition exists when each side has a force which deters the other from striking first. That is the situation now. We are ahead in numbers of warheads and bombers, and they are ahead in numbers of land based launchers and submarines. Inequality exists in every category of hardware. What matters is that the two overall forces are equal in their ability to deter a first strike. This agreement will not disturb that equality of deterrent capability which now exists. The Jackson amendment could.

The Jackson amendment's apparent definition of equality is so selective that it could completely undermine the possibilities for SALT II. It ignores the fact that variations in accuracy can more than make up for differences in megatonnage. It prevents silo hardness, which can enhance the survivability of a deterrent force, from being taken into account.

It prevents the present fundamental differences in ABM deployment from being taken into account. It prevents our enormous advantages in bomber forces from being taken into account. There are other factors, such as system reliability, time on station, antisubmarine warfare proficiencies, the ranges of missiles, which negotiators, the President and the Senate could consider in framing a comprehensive treaty on offensive weapons. The Jackson amendment seems to contemplate equality where we presently have lesser numbers and superiority where we have the greater numbers. The most likely consequence of the Jackson amendment, if adopted, is another spiral in the hideously expensive, dangerous and destabilizing nuclear arms race.

I have no quarrel with the notion of overall equality in nuclear offensive weapons. But I have to suspect that the purport of this amendment is to seek a nuclear superiority long since abandoned in a recognition that "superiority" is elusive and, at best, unnecessary. Each advance by one side begets a response from the other side. We end up having run very hard to stay in the same place, but always poorer and a little closer to the flash point. Superiority is now admitted even by the supporters of the Jackson amendment to be a recipe for a continued arms race which neither side can win.

The Jackson amendment has served to focus attention on shopworn and simplistic yardsticks of launchers and megatonnage. If it passes in any form it will be interpreted as a Senate effort to put our SALT II negotiators in a straightjacket of narrow numerical equality by category of arms. Nothing could make a second SALT treaty harder to obtain than to require the negotiators to produce an agreement the sole characteristic of which would be numbers adding up to equal sums on both sides for every category of weapons. No future negotiating team will conclude, let alone the President and the Senate approve, a SALT II agreement which will put our deterrent in jeopardy. We should allow the negotiators a chance. We should give them bargaining room—rather than bargaining chips—and then pass judgment on their handiwork.

Mr. President, I had thought that long before this debate we, Mr. Nixon included, had accepted the concept of "sufficiency." No one in a position of responsibility avows the need for a first strike capability.

Our nuclear deterrent has always been sufficient, and the new ABM Treaty makes it even more certain that it will remain so for the foreseeable future—long beyond the 5-year term of this agreement. The Soviet Union is exposed by the ABM Treaty limitations to attack by our tactical nuclear forces, by ICBM's, by bombers, and by nuclear warheads launched from submarines. Our submarines are by all the admissions of the Pentagon, invulnerable to enemy attack—and will remain so for many years to come. That submarine force has by itself the capability to virtually destroy the Soviet Union. We will continue to have that capacity. Enough is enough.

Our national security would be better served if we were armed in this world with a big stick—and also with our own best ideals. Strength is made up of many things. The morbid insistence upon more arms for the sake of more arms is a confession of American weakness, insecurity, and inability to establish effective civilian control of the military. We were once made strong by our ideals and our love of our country. Now our prestige in the world is at an all time low. The SALT agreements and, above all, the prospect for a comprehensive agreement on offensive strategic arms afford us the chance to carry that big stick, to harmonize our actions in the world with our own best principles, to make peace at home—and be strong. And so, Mr. President, I must oppose the efforts of Senator JACKSON and support without such counterproductive amendments as he has offered, the interim agreement which the President brought back from his momentous meeting in Moscow.

PATRIARCH ATHENAGORAS

Mr. PERCY. Mr. President, recently a great religious leader, Patriarch Athenagoras I, died in Constantinople. He was a man of great wisdom and compassion, a constructive man, a saintly man.

On July 14, 1972, the Greek Star printed a speech given by Archbishop Iakovos on the occasion of the 50th anniversary of the Patriarch's service to the Greek Orthodox Church. In his moving statement, the Archbishop refers to the Patriarch as slave to his people, proud for his service and full of joy. This was truly a man of total commitment and I shall never forget him.

I ask unanimous consent that the following excerpts from Archbishop Iakovos' speech, which so eloquently chronicles the life of Patriach Athenagoras, be printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

SPEECH OF ARCHBISHOP IAKOVOS

January 1931, together with its sky smiled in joy as did the eyes of the Greek-Americans, upon the arrival of Athenagoras to America. His coming foretold of a Spring without end. And this Spring did not delay coming. The hope in the hearts of his new flock budded with new promise. By looking up to him the moral fortitude of his people was exalted. In his open arms their souls found a warm abode. They saw in his eyes a new sun that would warm and enlighten their faith further.

Thus his 18 years here were spent; like a constant spring, full of creation, full of inspiration, filled with the fragrance of wonderful achievements. Until another January, January 1949, took him away and carried him on the wings of a presidential plane (of President Truman) to that place, where Orthodoxy had been waiting the arrival of its own Spring.

He was building. As a worker and founder, he created; hecreated for 18 years in Amerca. What did he not build! Churches, schools, community centers. All the flowers of his dreams set seed; and they fruited, and from their rich substance the soul of our people is nourished even today. The ruins of division were shortly covered by an evergreen ivy, his peace-making love for all. To the conclaves of our people and their organizations he brought a new and brighter viewing of reality. To the White House he took the heart of Orthodoxy through the traditional embrace and kiss of love. Boldly and lovingly he expressed it by his kiss of endearment on the foreheads of two Presidents, Roosevelt and Truman. True love casts out fear. This was his credo and his "slogan."

Twenty-three years have elapsed, since January 1949. Each one constitutes a volume of an amazing history. Historians and Chroniclers relate deeds, events, documents, statements. Their is not always the study of the spirit of events. For this reason those who would attempt to only historically sketch his Patriarchal tenure will fail. One must have lived by his side for years, must have filled his ears with his words, his eyes with his glance (which tells in silence the things the tongue does not say), one must have allowed his soul to be filled by Athenagoras' love and faith. Intangible characteristics, these. Researchers and even critics have stopped seeking them. The time of Athenagoras as Patriarch is in the nature of a flash of light "from East to West." Darkness has retreated in fright.

The Golden Jubilee of 1972 is for us Orthodox, especially in America, the fifty years of the Episcopal service of our Patriarch. Fortunately, it coincides with another Golden Jubilee, that of our Archdiocese. One would say that the two find their true meaning in each other. They are inseparable, essentially and chronologically. And thus we, Greek-Americans, combine the one with the other as our own celebration joyful and bright. This double jubilee is, therefore, a time of reawakening, a time of giving thanks, a time of rededication. Rededication to the message and mission of our Archdiocese and our Patriarch. Cycles of years and anniversaries can prove to be cycles of vicious petty ambitions if they do not carry with them the spirit and the soul of the people and institutions that created them.

However, the two cycles within which the two Jubilees—those of our Archdiocese and our Patriarch—are brought into unison as if in a golden and unbreakable chain, contain a period of creative years, of founding years, years of progression and extension, years of rekindling and revivification, years of lighting and radiation; radiation of faith that works greatness, of love that transforms and transcends, and of hope that breeds no shame.

TRIBUTE TO SENATOR ELLENDER

Mr. SPARKMAN. Mr. President, the Senate and the country suffered a great loss when Senator Allen Ellender died.

Senator Ellender came to the Senate at the same time that I came to the House of Representatives. I have known and admired him throughout the years.

When I came to the Senate, 10 years later, I came to know Allen Ellender much more closely. I was amazed at his energy, his capacity for work, and his absolute devotion to his responsibilities whatever they were.

Allen Ellender was a man of unquestioned integrity, boundless energy, dedicated to the service of his State and the Nation.

Senator Ellender was for a long time chairman of the Agriculture Committee. Much of the legislation that is now on the statute books for the betterment of conditions among farmers throughout the entire Nation was put there under his leadership.

He was throughout the years a member of the Appropriations Committee heading some of its most important subcommittees. I remember so clearly his enthusiastic support of the development of the waterway potential of our country. As it happens, Alabama is blessed with a wonderful network of navigable streams—more miles of navigable water than any other State in the Union possesses. Our State delegation, in both Houses, has worked diligently throughout the years to have those streams improved. Year after year we have presented our case to Senator Ellender and he has always approved our programs and put them through the Senate.

Senator Ellender later became chairman of the full Appropriations Committee. As every Senator can attest, he did a tremendous job in that capacity. Still later, he became President pro tempore of the Senate and was serving in that high position awarded to him by his fellow Democratic Senators at the time of his death.

Senator Ellender rendered a great service to the Nation in his tireless work every year following the adjournment of the Congress traveling to virtually every nation of the world, inspecting our Embassies and offices in each country and at the same time observing and studying conditions there. His reports, his pictures, movies, and comments became annual classics, valuable to our understanding of world conditions.

His going was a great loss to all of us and I join my colleagues in paying tribute to him and in mourning the loss of so good a man.

PRESIDENT'S COMMITTEE ON THE NATIONAL MEDAL OF SCIENCE

Mr. PERCY. Mr. President, on July 20, President Nixon announced the appointment of nine persons to be members of the President's Committee on the National Medal of Science. The committee is responsible for making recommendations to the President for the award of the medal, which was established by law in 1959 and has been presented each year since 1963.

The purpose of the National Medal of Science is to honor individuals who, in the judgment of the President:

> Are deserving of special recognition by reason of their outstanding contributions to knowledge in the physical, biological, mathematical, or engineering sciences.

The medal is the highest recognition offered by the Federal Government for distinguished achievement in these fields of endeavor.

I am pleased to note that Dr. Charles P. Slichter has been designated as chairman of the committee for a 2-year term. Dr. Slichter has served as a member of the committee since December 1968.

Dr. Slichter is a distinguished scientist in the field of solid state physics and has spent the major portion of his time at the University of Illinois, where he is now professor of physics. He has served as a member of the President's Science Advisory Committee and the Defense Special Projects Group Science Advisory Committee. He has been a consultant to the National Science Board of the National Science Foundation, and is a member of the National Academy of Sciences.

He has received numerous awards from his scientific colleagues, among which are the Langmuir prize from the American Physical Society and an Alfred P. Sloan Fellowship.

I am also pleased to note that another distinguished Illinois scientist has been named to the committee. Dr. Nathan M. Newmark is a professor of civil engineering and the head of the engineering department at the University of Illinois. Dr. Newmark's work has been concerned with the design of complex structures, particularly those required to resist unusual stresses. His outstanding contributions to engineering have earned him a variety of awards, including the J. James R. Croes Medal, the President's Certificate of Merit, and the Vincent Bendix Award of the American Society of Engineering Education.

Also appointed to the committee was a man I have known and admired for many years, Dr. Edwin Land of Cambridge, Mass. Dr. Land's achievements as a physicist and an inventor are well known to most Americans.

Others who will serve on the President's Committee on the National Medal of Science are:

Dr. William D. McElroy of San Diego, Calif., chancellor, University of California, San Diego.

Dr. Thomas S. Smith of Appleton, Wis., president, Lawrence University, Appleton, Wis.

Dr. James H. Boggs of Stillwater, Okla., vice president for academic affairs and research coordinator, Oklahoma State University, Stillwater, Okla.

Dr. Howard O. McMahon of Lincoln, Mass., former president, Arthur D. Little, Inc., Cambridge, Mass.

Dr. H. Guyford Stever of Pittsburgh, Pa., Director, National Science Foundation, Washington, D.C.

Mr. William P. Lear, Sr., of Verdi, Nev., chairman of the board, Lear Motors, Reno, Nev.

FORTHCOMING VISIT TO THE PHILIPPINES BY SENATOR INOUYE

Mr. INOUYE. Mr. President, during the fall of 1959, soon after my election as Hawaii's first Representative to Congress, I journeyed to the far reaches of the Pacific to visit with some of our friends and neighbors in that distant part of the world. Without doubt the most memorable days of that journey were those I spent in the Philippines. The hospitality of the people of the Philippines was beyond every expectation. Although I was but a freshman Member of Congress from a freshman State, I was accorded the privilege of conferring with President Carlos Garcia and with his Cabinet.

To this day, I remember the wonderful and happy day that I spent at the barrio of the Honorable Alejo Santos, the Minister of Defense. The people of the village set aside a whole day to prepare a fiesta in my honor. It was a wonderful experience.

Again, in December 1965, as a member of the Mansfield mission, I revisited the "Pearl of the Orient." Once again it was a most joyous visit. The time was immediately following the 1965 national elections in the Philippines. We were privileged to meet with the President-elect, the most distinguished soldier, statesman, and leader, the Honorable Ferdinand E. Marcos.

Like all members of the Mansfield mission, I was deeply moved by the charm, the beauty, the brilliance of the First-Lady-to-be, Imelda R. Marcos.

There was much joyful anticipation in Manila. The atmosphere was exciting as the people of the Philippines prepared for the gala inaugural ceremony. People were literally dancing in the streets.

Mr. President, I will now once again return to the Philippine Islands. This time it will not be for a happy occasion, for I will be returning as the newly designated chairman of the Foreign Operations Subcommittee of the Senate Appropriations Committee to make a personal, on-the-spot, onsite investigation of the aftermath of the terrible and devastating floods which have ravaged much of this land during the last 3 weeks of July and the first week of August.

Our analysis to date shows not only a heavy loss of life—estimated in excess of 500—but also more than 2 million made homeless with a massive destruction of property, crops, transportation systems, water supplies, irrigation systems, and public and private facilities of all kinds.

An exact dollar amount is not available but the latest U.S. estimate totals $375 to $450 million loss in terms of damage to the infrastructure and lost production. For a nation with the resources and GNP of the Philippines, this imposes a dreadful burden which cannot be met from local resources.

Predisaster assistance requirements were estimated at $200 million. The disaster assistance requirements are estimated to range in the $200 to $275 million range for a total assistance requirement of $400 to $475 million. This is, and should be, a multinational and multilateral effort.

The recent flood is the worst natural disaster in recorded Philippine history. It is the greatest devastation to hit that nation since World War II. Beginning July 7 and continuing through the first week of August, rains dumped more than 80 inches of rain in the central Luzon lowlands and as much as 180 inches in the highland areas surrounding that valley. The typhoon season will continue for yet another 6 weeks to 2 months.

These floods have not only been accompanied with significant loss of life and property but with cholera, gastroenteritis, and pneumonia as well. Food is scarce and it may prove impossible to replant the current rice crop in this area which accounts for some 26 percent of the Philippines total rice production. Many of the rice fields have been covered with sand and rocks and will be unusable for that crop now or in the future. Many farm animals have drowned, feed stocks have been destroyed, dikes and drainage ditches have been impaired, and the heavy monsoon winds drove salt water inland at some points for 60 miles, further impairing rehabilitation of the land.

The breakdown in transportation hampered relief efforts and has made recovery most difficult. Large sections of the roads and railroads have been washed away as have some 25 major bridges and a number of dikes. The area lying between Manila Bay and Lingayen Gulf was turned into a virtual sea stretching for some 125 miles in length and in some places up to 35 miles in width. The truly awesome task of rehabilitating the 3,000 square miles which is the home of almost 8 million people is about to begin.

Thirteen years ago during my first visit to the Philippines, a distinguished member of President Garcia's Cabinet said in all seriousness to me:

> We Filipinos are the children of America.

Mr. President, a very honest appraisal of the history of our relationship with the people of the Republic of the Philippines will disclose that there may have been moments when the Filipinos have had reason to believe that they were the neglected and forgotten sons and daughters of America.

Mr. President, in this, their hour of tragedy and disaster, let us not forsake our sons and daughters. Let us not forget our friends. As a Member of the U.S. Senate and as an American, I feel confident that in this time of need, all Americans will respond as one to offer to our Filipino friends our sincere and compassionate hand of help.

Mr. President, I intend to leave the United States on Saturday, August 26, and return a week later. I hope to return with sufficient information and insight to assist the Senate in formulating and pushing forward a plan of appropriate assistance to our friends in the Republic of the Philippines.

CRISIS OF THE SPIRIT

Mr. HUGHES. Mr. President, on Wednesday the distinguished junior Senator from Missouri (Mr. EAGLETON) spoke to the National Student Association about America's crisis of the spirit.

He discussed the war, racial strife, and poverty in his usual compelling and forthright way. And he called upon his listeners, and all Americans—

> Not to demean those who oppose you, but to encourage understanding—not to scorn disbelievers, but to convince by reason—not to belittle, but to search out and praise those qualities that are praiseworthy—not to contribute to polarization, but to inspire unity.

So that all may have an opportunity to read this message, I ask unanimous consent that Senator EAGLETON's speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH TO THE NATIONAL STUDENT ASSOCIATION, CATHOLIC UNIVERSITY NURSING AUDITORIUM, WASHINGTON, D.C.

On the ancient walls of the Greek temple at Delphi there is inscribed the words, "Know thyself"—an admonition that has survived the ages as a fundamental principle for mankind.

Knowledge of one's self is an essential first step in finding the sources of strength to persevere in the face of adversity. I believe that the same principle has profound meaning for nations, as well as for individuals. It could well be applied to America today.

America is undergoing a crisis of the spirit. As a nation, we are beset with a series of disturbing problems . . . status anxieties . . . persistent racism . . . repression, frustration, and aggression . . . outburst of violence . . . and a general melancholy feeling of alienation and disenchantment.

As a society, we reflect a multitude of polarizations . . . young against old . . . poor against rich . . . city dweller against suburbanite . . . white against black . . . the forgotten Middle American against the Establishment.

It is time that we apply the principle of self knowledge to our nation as a whole. It is time that we realize that democracy is not only a system but a state of mind. It is time to understand that we as a nation are not only a composite of institutions and ideologies but attitudes and mentalities. It is time that we begin the process of knowing ourselves.

A few months ago I received a letter from a man in Kansas City whose son had died the previous day of a drug overdose. The man was understandably emotional but his view of the tragedy that had beset him is reflected every day in our polarized society. He talked of a deteriorating society, and he blamed unbridled permissiveness and excessive freedom. He was a distraught man who felt that America had betrayed him.

The frustrations and the fears of this bereaved father are not exceptional today. They run deeply in the minds and hearts of an alienated and troubled middle America.

Unfortunately there are those in positions of power in this country who would prefer to encourage frustration and transform fear to political gain. This activity is being pursued in this election year with an enthusiasm that is undercutting our national purpose and will. Our challenge, yours and mine, is to prove that our free society can withstand these appeals based on fear and suspicion, and remain free, humane, and creative.

We ask ourselves as we look at the issues that have torn the fabric of our society—Vietnam, racial strife, poverty, law and order—are they the causes or the effects of America's crisis of the spirit?

In Vietnam this past weekend another record was broken—a record we cannot be proud of. More B–52 bombing runs—200—were made over North Vietnam than ever before.

Prominent Americans have reported that schools, hospitals, homes, dikes, and people have been obliterated by American bombs.

These reports are deeply disturbing, not only to those of us who over the years have opposed our involvement in Vietnam, but also to millions of other Americans who have hesitated to question decisions made by the President. Beneath the anger and dismay they direct at the messengers who bring the bad news from North Vietnam, there lies a sorrow and despair over this never-ending violence.

The Administrator, sensing only the anger and dismay, prefers to play to those emotions and to question the loyalty and the patriotism of the messengers. They prefer to "curse the darkness" rather than "light the candle" and discover the sadness felt by America.

The real conscience of America questions the larger issue—the bombing of a backward, agricultural society to preserve a policy built on the false pride of the President of the United States.

The pride of a nation is much like the pride of a man.

A great man is acclaimed by others and need not acclaim himself. A weak man compensates with artificial power and boisterous bravado. A great man understands his fallibility and acknowledges error. A weak man admits no fault.

What we are doing today in Vietnam is not a sign of greatness it is a compensation for failure.

The only conclusion I can draw is that we have embarked on a course of raw retaliation. The President's policy has been threatened, and there is nothing more vengeful than the wounded pride of a king.

America is a great country. We do not need false pride. We can acknowledge error and we must.

Even those citizens who believe that America should support its President, must be deeply troubled by the moral vacuity of our bombing policy.

Never before in our history have the American people been subjected to such a conflict of previously unquestioned values. And never before has moral leadership been so conspiciously absent in the President of the United States.

But in Vietnam a cause or an effect of America's crisis of the spirit?

Four years ago a nation deeply troubled by the violence of racial riots searched its heart for an answer to what appeared to be blind hatred. President Johnson established a commission to study the matter and to report to the nation. This Report of the National Advisory Commission on Civil Disorders—the Kerner Report—was not widely read, but the impact was great. When the report was released the headlines read, "America is a Racist Society."

No one enjoys being called a racist. And America was again forced to cope with an unbecoming view of itself.

Since the Kerner Report we have learned a new term that somehow buffers the reality of our image. We are now told that much of the racism in America is "institutional." It's a fine term. It tells Americans that they are not really to blame. Americans aren't racists, the institutions of our society are racist.

So, we ignore the medicine prescribed in the pages of the Kerner Report, we depersonalize the terminology . . . and we perpetuate racism.

But is racial conflict a cause or an effect of America's crisis of the spirit?

In 1964, President Lyndon Johnson declared a "War on Poverty." For a nation that badly needed a lift after the assassination of one of its most beloved Presidents, the effort to extinguish poverty was a compelling challenge—and it salved a pained national conscience.

As a nation, our best instincts were awakened by this opportunity to tackle a problem that had defied mankind for ages. The air of optimism grew as programs were formulated and agencies created. In the face of such human and monetary resources victory would only be a matter of time.

But what was the result?

Today we are left with nothing more than the remnants of good intention and the hollow feeling of failure. The effort to eliminate poverty has largely been abandoned and unemployment is now regarded by the Administration as a tool to stop inflation. The result is a lingering cynicism among those whose hopes were first elevated—and then dashed—as commitment turned to benign neglect.

But is poverty a cause or an effect of America's crisis of the spirit?

America is a great nation—but not because its greatness is often and loudly asserted by public figures whose leadership consists largely of leading cheers. Rather it is because we have demonstrated time and again throughout our history that we have the capacity to look within our society, to recognize where we have gone wrong, to regenerate ourselves and emerge from the ordeal even stronger. In short, we have demonstrated that the admonition, "Know thyself" is as apt for a nation as it is for an individual.

Your generation has been in the forefront in forcing America to confront its conscience. But today your challenge is greater than ever. You must sell yourselves and your ideas as never before.

As you carry your message in 1972 you must remember that your mission is not to demean those who oppose you, but to encourage understanding . . . not to scorn disbelievers, but to convince by reason . . . not to belittle, but to search out and praise those qualities that are praiseworthy . . . not to contribute to polarization, but to inspire unity. This way you can help America to know itself.

This year more than any other in our history the American political process offers a choice. The new message of hope that is being carried by George McGovern is being countered by Richard Nixon's appeal to fear. The destiny of our nation will be decided by this struggle between faith and anxiety.

If those of you who have the message will work hard to carry it to every American . . . if you will get out and register the young, the poor, the minority Americans, to vote for change . . . if you will help America to know itself . . . we will say on November 8 that 1972 was the year, not when America lost its way, but the year when America found its conscience.

CEQ REPORTS ON THE DELAWARE VALLEY

Mr. BOGGS. Mr. President, the President's Council on Environmental Quality recently issued its third annual report. As with the two previous documents, this report provides an excellent evaluation of our environmental challenges.

Press attention, however, has centered less on excellence of the report than on the so-called lost chapters. Contrary to some opinion, it seems to me that no evidence exists that these chapters were omitted in an effort to "hide" information, as some have argued.

The truth is that these portions of the report have not been completed. Although they are still in rough draft form, the chapters are available to the public and to the press for review. I have recently had the occasion to review these chapters, and I would like to give Senators a brief description of their contents.

There are three unpublished chapters. One involves energy, analyzing the types of energy-producing systems in use today, the fuels demands of these systems, and the systems' impact on the environment.

Another chapter concerns recycling. It discusses the problems associated with the various types of waste recovery, mentioning various proposals seeking to improve the demand for, and reducing the cost of, recycled materials.

The third, and most comprehensive, chapter involves an environmental study of the Delaware River Valley.

This region, which includes portions of my own State of Delaware, as well as New York, Pennsylvania, and New Jersey, was apparently selected because it offers a wide contrast of various threats to the environment. This great region encompasses both highly industrialized urban and port centers and untouched, rural mountain and coastal regions. The environmental challenges confronting the Delaware Valley are varied, the draft report notes, ranging from air and water pollution to urban blight to land-use confrontations.

The draft report stresses the historical development of the valley, for knowledge of these development patterns is helpful to an understanding of present-day challenges.

Natural harbors and waterways, plus rich mineral deposits, enabled the region to foster American commerce and industry. Factories and railroads sprouted along the banks of the Delaware River and its tributaries. Industrialization brought sharp population growth to the valley.

Over the past few decades, changes in technology and transportation have caused much heavy industry to leave the crowded river fronts in search of suburban locations near highways. The population has followed.

After developing this general background the study focuses on several specific topics.

One is the so-called urban problem. Such problems are not necessarily new to the valley, as they are not new to any major area in the East. In view of a diminishing tax base created by a migration of middle- and upper-income families to the suburbs, city governments confront an awesome task in trying to restore housing, improve services, and enhance the environment.

Urban waterfronts have become industrial graveyards lined with rail lines and abandoned piers and factories. The draft report makes the point that the possibility of reclaiming these areas for recreational purposes exists, but that the historic trend makes this appear unlikely.

The report, however, examines in detail two examples of waterfront revival. One is the Penn Landing-Society Hill section of Philadelphia, where new life and vitality have been brought in to the area of restored housing, new shopping districts, and easy access to highways. Only a few years ago, this was the site of decaying warehouses and obsolete wharves.

South of Philadelphia one finds a good example of wetland preservation in an urban area, the Tinicum Marsh. Although some of the marsh area was used for the construction of Interstate Highway 95, 200 acres remain. Another 130 acres could be reclaimed. In fact, this marsh has been designated a National Wildlife Refuge by the Department of the Interior, the first instance of such a site in an urban area.

It seemed to me, in evaluating the draft CEQ study, that such urban environmental revival is necessary and vital.

The draft report also examines the suburban expansion that has occurred in the urban corridor that cuts down and across the Delaware Valley. The burgeoning suburbs, once limited to the peripheries of cities, have now spread into once rural regions. Improved transportation has made such areas easily accessible. The financial incentive to development has produced rapid change, with little thought to the environmental impact, the report notes.

The report goes, in some detail, into the difficulty in obtaining effective regional planning on land use, due to decentralized control and conflicts in the goals of various groups.

Of course, the Delaware Valley is but an example of a situation that is occurring from Casco Bay to San Diego Bay. That, I believe, is why this report is important, and should not be rushed out in final form just to suit a timetable.

This draft report then turns its attention to the Delaware Bay region. This area, which lies outside the corridor of the New York-Washington megalopolis, is relatively untouched by the hand of man. Its farmland is among the most productive in the Nation. Its tidal marshlands, and the bay itself, are home to a wide variety of wildfowl, fish, and shellfish.

This region, however, confronts the possibility of major change from tranquility to development. Once of little interest to industry and developers because it lacked proximity to urban markets and raw materials, the lower bay has grown increasingly attractive, the report notes, because of improved highways and the need of major industries to find the space outside the crowded cities.

Perhaps the most important potential impact of all is the fact that Delaware Bay could provide the potential deepwater facilities needed for huge, bulk-cargo ships.

Indeed, this port question is an issue of considerable controversy at the moment. According to the draft CEQ report, conservationists in New Jersey and Delaware believe that the creation of deepwater ports, even miles at sea, would eventually mean an end to the tidal marshes and wildlife refuges that line the bay.

The report also devotes considerable attention to the fact that the State of Delaware has passed legislation to ban or control industrial development along the bay's shore.

But heavy industry is not the only threat to preservation of the coastal environment, the report notes. Poorly planned vacation homes, warehouses, and the destruction of sand dunes by man and by nature are other factors. The report makes the point that few tools exist for long-range planning on such complex problems.

The New Jersey Wetlands Act made a step in this direction, requiring permits for development in wetland areas.

While the draft report does not make this point—an oversight that may be cleared up in the final report—Delaware has recently taken steps to place a freeze on future wetlands development, as part of an overall environmental and developmental study.

The CEQ concludes with an environmental analysis of air and water pollution in the Delaware Basin, and the steps to correct it. The report discusses the work of the Delaware River Basin Commission, which is composed of the Governors of Delaware, New Jersey, Pennsylvania, and New York, as well as the Secretary of the Interior. This Commission serves as a forum and a mechanism for working toward effective pollution control.

In conclusion, Mr. President, the report appears to me to be an objective analysis of the Delaware Valley: its challenges and its opportunities. As I said earlier, I can find nothing in these chapters that would lead anyone to conclude that they are being suppressed. Rather, I believe they are being evaluated carefully so that they can provide the best information and analysis possible when eventually published.

SUSPENSION OF EUROPEAN TARIFF ON BEEF COULD HELP ALABAMA FARMERS

Mr. SPARKMAN. Mr. President, the European Community on June 5 suspended its 20-percent tariff on beef imports. A recent edition of its publication, European Community, notes that consumer demand in the nations of the Common Market will outpace supply by 600,000 tons this year, an increase of 14 percent over last year.

Even so, beef consumption in the Common Market is only about 57 pounds per person, compared with well over 100 pounds in the United States—so they have a long way to go. And, the Common Market with 190 million people is only part of Western Europe, which has a population of nearly 300 million.

The Senate may recall that in 1965–66, the Senate Small Business Committee held extensive hearings on the potential for exporting American beef to Europe.

At that time, our committee estimated that a total import gap in Western Europe approaching 1 million tons a year would be a reasonable prediction for the future.

We also found that Europe was hedged around with barriers to trade in American beef products. Some were official, such as the variable import levy; and some were very unofficial, such as unfamiliarity with the excellence of American grain-fed table meats. However, the June action of the European Community appears to be a step in the right direction in reducing these barriers.

It is well known that the sale of beef animals accounts for nearly one-fourth of farm income in this country and has always been one of the leading commodities in my own State of Alabama. Thus, many small farmers and livestock raisers in the Southeast would be in a position to benefit from the development of an additional large market for U.S. beef on the increasingly wealthy European continent.

This is especially true since American balance of payments is in such sad shape. I believe that our overall balance of payments was in deficit last year by the sum of almost $30 billion, which approximates the total deficits for the 10 years before 1971. Through the first half of 1972, the figures for merchandise trade, which have been a consistent money earner for the United States since 1893, stood in deficit by a striking $3.3 billion.

This market, therefore, seems an area where American farmers could help their country as well as themselves, and I hope that farm, meatpacking, and other organizations concerned will keep abreast of these developments and opportunities.

I ask unanimous consent that an article published in the European Community, August–September 1972, page 7, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EC REMOVES TARIFF ON BEEF IMPORTS

In hopes of halting the spiraling cost of meat in the European Community, the Commission on June 5 suspended the Common Market's 20 per cent tariff on beef imports.

The Common Market has used tariffs to protect domestic suppliers of meat, whereas the United States limits imports by quantitative restrictions. In a similar action on June 26, President Richard M. Nixon ordered quotas removed on meat imports into the United States.

More than 10 per cent of Community beef needs have been imported in recent years. According to the Commission's calculations, Community demand for beef will outstrip Community supply by 600,000 tons this year, an increase of 14 per cent over 1970–71. World market supplies may not fill this gap, the Commission said. For example, Eastern Europe, an exporter until 1969, has now become an importer of frozen beef.

Despite price increases, consumption of beef in the Community has been steadily rising. In 1966–67 Community consumers were eating an average of 49.25 pounds of beef a year. By 1969–70, consumption had risen to 56.75 pounds.

Increased competition from abroad in EC markets, following the suspension of Community tariffs on beef imports, does not alarm France's famed Charolais beef cattle. Tariffs will be reapplied if the EC average falls below 113 per cent of the recommended guide price, or if prices in any country fall below 109 per cent of the guide price.

THE COMMUNIST MASSACRE AT BINHDINH

Mr. BUCKLEY. Mr. President, last Monday's Washington Evening Star and The News contained a timely reminder of the nature of the North Vietnamese enemy. I say timely because the reports of the unspeakable atrocities—including live burial—committed by the Communists come at a time when there are those who scoff at the idea that a Communist victory in Vietnam would lead to a bloodbath.

The methodical, well-planned and deliberate Communist slaughter of South Vietnamese, whose only crime was to work for the South Vietnamese Government, is evidence that cannot be ignored. This kind of atrocity has been an acknowledged part of the Communist campaign to dominate the south ever since this war began. The massacre at Binhdinh demonstrates beyond any doubt that such a policy is still in effect.

Mr. President, how can anyone continue to cling to the belief that the Communists will show mercy to their conquered enemies in the face of such evidence. In Binhdinh Province we have an unequivocal and horrible portent of things to come if South Vietnam is overrun by the Communists.

I ask unanimous consent that the editorial entitled "Massacre at Binhdinh" be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MASSACRE IN BINHDINH

It is a fervently held article of liberal faith that if the United States will just get out of Indochina, all will be sweetness and light among the Vietnamese people, North and South, Communist and non-Communist. Those who chant this doxology ignore the execution of thousands of Vietnamese and flight of tens of thousands more when the Communists took over in the North in 1954.

They ignore the mass graves containing the bodies of more than 2,600 South Vietnamese civilians murdered at Hue during the 1968 Tet offensive. So they should have no difficulty whatsoever in glossing over the less numerous casualties of the more calculated reign of terror which has taken place at Binhdinh province on the central coast of South Vietnam the past three months.

Binhdinh fell quickly to the North Vietnamese in early April and it was not until July that Saigon's forces launched a serious effort to retake it. So the Communists had plenty of time. There was no need to hurry, as there was in Hue in 1968, when American and South Vietnamese forces counterattacked within days of the city's fall.

According to intelligence reports and on-the-spot interviews with survivors, the Communists were extremely methodical. They rounded up hamlet and village chiefs, pacification workers, policemen, militiamen, teachers, doctors, nurses, clerical workers, literally anyone who had had any connection with the Saigon government. "People's courts" executed several hundred (perhaps as many as 500) and shipped an estimated 6,000 others off to "people's prisons" in remote areas of the Communist-held Anlao valley. Most of those killed apparently were executed by rifle fire but others were buried alive, beheaded or hacked to pieces.

None of this represents any new departure in tactics on Hanoi's part. Aside from the general massacres in the North in 1954 and in the South during the 1968 Tet offensive, the murder and kidnaping of South Vietnamese officials has been part and parcel of Communist "liberation" since the war began. In the past four and a half years, nearly 25,000 South Vietnamese civilians and officials have been executed by the North Vietnamese Communists and the Viet Cong.

There have, of course, been atrocities on the Allied side. But anyone who is still prepared to maintain that a Communist takeover in South Vietnam would not lead to a bloodbath of major dimensions is simply ignoring the evidence at hand. A politician like Senator McGovern, who advocates a quick and unilateral American withdrawal from Southeast Asia, need look no farther than the shallow graves of Binhdinh province to see where the policies he advocates would lead those who have placed their trust in the United States.

BETTER TRANSPORTATION FOR THE AGED

Mr. CHURCH. Mr. President, I invite the attention of the Senate to a most provocative article published in the summer edition of the periodical City. The article, by the Institute of Public Administration's transportation expert Sumner Myers, is entitled "Turning Transit Subsidies into 'Compensatory Transportation'."

Aside from discussing the need for urban transportation reform in a most knowledgeable way, Sumner Myers makes some excellent suggestions as to how public transit could be made more available and more convenient for the aged and the infirm. He suggests that subsidies for public transportation be weighted so as to make it more attractive for transportation companies to provide better service for the aged. He suggests, for example, that bus companies use tokens that would give them extra subsidies for elderly riders. A special token used by the aged would qualify the company for extra payments. This would result in a move by those companies interested in higher revenues to attract more elderly riders. Schedules and routes that appealed to the elderly would receive more attention from transportation companies. These and similar ideas point in the direction in which transportation reform should move.

I call this excellent article to the attention of those legislators who are concerned with the provision of better transportation to those who must rely on means other than the private automobile.

I ask unanimous consent that the article be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Turning Transit Subsidies Into "Compensatory Transportation"

Several years ago an MIT professor observed that ". . . transit subsidies are needed to enhance the mobility of the poor and the physically handicapped whose relative mobility has been steadily decreasing." At the time, his recommendation was academic: The Nixon Administration was in no mood to subsidize transit, much less on behalf of the disadvantaged.

But times have changed. The professor, Alan Altschuler, is no longer an academic; he is secretary of transportation and construction for the state of Massachusetts. And federal subsidy is no longer an academic issue; it is a virtual certainty. A well organized and highly effective coalition of transit, city, and suburban forces seems likely to push an operating subsidy program through Congress this year. Led by Fred Burke, whom the National Journal has called "the heart, soul, and brain of the urban transportation lobby," the coalition has split the administration's opposition and all but convinced Congress that help is desperately needed. Even Virginia's conservative Joel Broyhill allows that "Subsidy has always been obnoxious to me, but in the case of local transit there ain't no other way.

Broyhill is right: Without subsidy, local transit is likely to shrivel in most cities, disappear in others. Surely transit has to be kept alive and healthy, but it's time to ask, For what purpose? The answer depends on one's sense of priorities. I believe that transit must do more than just keep automobiles off the streets. That is unquestionably important, but a more important mission for transit, it seems to me, is to provide an acceptable level of mobility for people who can't use automobiles. That is, transit must be kept alive and healthy to provide an essential social service. And this simply cannot be done without some form of subsidy.

Subsidy as such is hardly the question anymore. The real question is, How shall the subsidies be given? Given properly, they could be the lever for radically overhauling the nation's transit systems, first, to better serve those for whom public transportation is an essential service—the poor, the old, and the physically handicapped—then, to serve everybody.

The transit operators of this country—public and private—unquestionably need some kind of subsidy if they are to provide essential transportation services. The people who need these services simply can't afford to pay what it costs to provide them. And so, of course, the services are barely provided. I suggest that we abandon our niggardly approach to this twin problem. Instead of giving transit operators barely enough subsidy to keep them going, let's pay them a premium for carrying the particular groups that need service. That is, let's provide the transit operators with a kind of subsidy that has a built-in incentive to improve transportation for the people who can't use automobiles.

For example, suppose the aged and the physically handicapped were provided with tokens worth double or triple the usual fare *to the transit company*. You can be sure the transit company would "try harder" to earn those extra-value tokens. To begin with, it would try to provide frequent and courteous service in the off-peak hours when the premium riders need service most. If the tokens were worth enough money, the transit company might even try some innovative services—perhaps a door-to-door service, which is what the disadvantaged really need.

The basic principle I am advancing is simple. Create a lucrative new market for transit by transforming the disadvantaged into "premium passengers." Transit will then have to *earn* its subsidy by improving service for those who need it most. As service is improved, others will use it too.

I've used extra-value tokens in my example to illustrate the importance of creating a new market for transit companies. Tokens, however, do have certain drawbacks. Some are administrative: How should the tokens be given out? But the most important drawback may be psychological. For example, the aged and the handicapped might be willing to accept tokens that would identify them as premium passengers. But if the poor were to get such tokens to identify *them*, I'm afraid everybody would find the token system distasteful. Many people want to avoid the "stigma" of welfare if they can. In some model cities programs, for example, it was not unusual for the aged to refuse to ride free buses because "free" implied "welfare."

The welfare stigma could be completely avoided and much the same groups helped by paying the transit company a premium *for each passenger riding at off-peak times*. For each such passenger, the government would pay the operator a set figure, say 20 cents. A direct premium payment for all off-peak riders would be simple to administer. Most important, it would fit in with the travel patterns of the disadvantaged who very often are without jobs or work sporadically. Those without jobs generally prefer not to travel during rush hours. When they travel at all they prefer to travel during middays, evenings, and weekends. Right now they travel less than they would if fares were lower and service better. Their mobility is severely limited, even at rush hours, because public transportation service is barely adequate except on routes leading to the center of town. At other times the situation is worse. Public transit just doesn't go near where most people want to go. To make matters still worse, the disadvantaged can ill afford to pay ever-higher fares. The combination of irrelevant service and exorbitant fares discourages ridership and, without access to automobiles, virtually immobilizes the disadvantaged.

The existence of a large unmet need for public transportation at a low price has been demonstrated in Atlanta. When that city cut its transit fares from 40 to 15 cents, ridership went up across the board. Peak (commuter) ridership went up be only 10 percent, but midday and weekend ridership rose by 32 and 40 percent, respectively.

Low fares, however, mean high deficits. Atlanta's bus system used to break even. Now it loses $600,000 per month, though many more passengers are carried. Obviously, no transit company will understake such a program on its own no matter how socially desirable it is to increase ridership. Conclusion: A reduced fare program of this type is only possible with a large public subsidy.

Atlanta's subsidy needn't be so large if rush hour fares were kept at 40 cents for everybody except perhaps the poor. As a practical matter, a 10-percent ridership increase at the peak is relatively insignificant. Its effect on the region's total automobile ridership is virtually imperceptible. Its effect on the deficit, however, is substantial. The extra subsidy needed to make up that part of the deficit necessarily diverts money that could be used to help the people who ride at offpeak times. At these times, ridership will go up sharply as fares come down because most off-peak riders will respond to a financial inducement to ride.

Ridership would go up still more during off-peak times if services were radically improved. That's where a premium passenger system could offer a powerful incentive for change. For example, offering transit companies somewhat more than $1 for each premium passenger carried would probably generate a strong market for door-to-door bus systems—even in relatively low-density suburbs. Research indicates that door-to-door transit service would cost somewhat less than $1 per ride. While door-to-door systems might come into being in response to the lucrative new premium passenger market, once operating they would be available to everybody. This, in turn, would free everybody, poor and nonpoor alike, from being completely dependent on the automobile.

It should be emphasized that the problem of developing door-to-door transit systems is largely a problem of developing markets for them. The technology is practically in hand. But even if it were not, as technologist John Rubel once said, "If you want rockets to the moon, make a market for rockets to the moon and you will get rockets to the moon." So it is with transit systems. If the poor, the aged, and the physically handicapped could be transformed into a high-paying market for door-to-door systems, it is almost a certainty that companies would develop door-to-door systems to serve them.

Under current policy (such as it is) transit companies are asked to "do good" by offering discount fares to certain groups, principally the aged. In Washington, D.C., for example, those over 65 can ride during the off-peak hours and Sundays for 25 cents rather than the full fare of 40 cents. On an average day, some 8,000 to 9,000 oldsters take advantage of these discount fares. There is no public subsidy to make up the difference and nobody seems to know whether D.C. Transit is gaining or losing by this policy. What is clear, however, is that the unsubsidized discount fare arrangement offers D.C. Transit no incentive whatsoever to improve services for its aged passengers—or for anybody else. At the same time, D.C. Transit is experiencing a deficit of $4 to $5 million per year.

D.C. Transit might "earn" a subsidy big enough to cover its deficit if those over 65 were to become premium passengers. If each of the discount passengers paid his fare with a token worth $1.50 *to the transit company,* the company would net approximately $3 million more than it does today. While $1.50 may seem like a high premium, remember that somehow the money it adds up to has to be given to the company one way or another if it is to avoid bankruptcy. The policy question is how to give the money to spur desired change. The company would avoid bankruptcy and easily wipe out the rest of its deficit by doubling ridership among the elderly. Doubling the ridership of elderly passengers would surely require some extensive service improvements which, of course, would cost additional money. But a profit-minded transit company should be more than willing to invest this money if the net effect is to bring it out of the red—and into the black. In any event, a good potential market of premium passengers seems to exist in the Washington SMSA. Living there are 170,000 persons over 65, few of whom now ride D.C. Transit. To this potential market might also be added 136,000 handicapped adults who are not institutionalized.

Alternatively, if D.C. Transit received an extra 20 cents for every off-peak passenger it now carries, more than half its deficit would be met. Again, the transit company might erase its whole deficit by doubling its daily off-peak ridership. And again, this would require some investments in service improvement—which is precisely what we want to get.

The numbers I've used are, of course, illustrative. It would take a bit of systematic experimentation to set the premium at the right price. The natural tendency will be to set it too tight—a serious mistake. I would urge—at least for starters—that the premium be set on the generous side. We should take full advantage of the profit motive to help transit save itself. The transit company should be able to more than just cover its costs of providing service for the disadvantaged; it ought to be able to earn enough money serving these premium passengers so that it could afford to improve transit for all passengers—including peak passengers. Granted, this principle of generosity will be a difficult one to implement, especially because it calls for larger subsidies than are needed just to cover transit deficits.

The total amount of transit subsidy needed is fairly substantial. According to the American Transit Association, the total annual deficit for all transit companies is on the order of $400 million per year. Big as it is, however, if the whole transit deficit were to be financed through a gas tax, it would hardly be felt. It would add a third of a cent to the cost of each gallon. To be generous enough to improve the lot of commuters with fares "spent" by premium passengers would probably double the total subsidy required. Even so, this would only amount to two-thirds of a cent per gallon of gas. Such an amount could radically change public transportation—first on behalf of those who are dependent on it, but also on behalf of those who might prefer to use transit instead of their automobiles.

Subsidizing transit from a tax on gasoline is hardly a unique idea. But I think that the real argument for doing so is different from that usually put forward. The usual argument is that improving transit decreases congestion and thereby offsets the need for more highways. Curiously, the only people who seem to take this argument seriously nowadays belong to the highway lobby. In fact, highway lobbyists believe it so strongly that they fight transit subsidies tooth and nail. If a different kind of argument were presented—one that is not based on decreasing the "need" for highways—the highway lobby would have less reason to fight against the use of gas-tax money for transit subsidies. In any event, I would suggest that the thrust of the subsidy argument be for *compensatory transportation.*

Whether transit offers the need for highways or not, the argument for compensatory transportation is valid on its own terms. Transit dependents are dependent because they cannot drive automobiles. Public transit is the only way they can get about on their own. This would not have been too serious a matter, say, 30 or 40 years ago, before so many people had access to automobiles. In those days, transit provided virtually ubiquitous and frequent service at all times—peak, off-peak, and weekends. As automobiles became more and more popular, transit patronage, of course, fell off. Ridership fell off much less during the peak, however. (Buses and trains heading downtown are still crowded because parking space there is scarce and expensive.) At the same time, transit lost most of its riders during the rest of the day and on the weekends. That's when people travel for social, recreation, shopping, and medical reasons. Since nothing could beat the automobile's door-to-door service for these kinds of trips, people used automobiles, and transit ridership dropped precipitously. When and where transit ridership fell off, transit companies did what most businesses do: cut back on service in response to falling demand. This did not hurt those who could use automobiles, of course, but it practically immobilized those who couldn't and were dependent on transit.

The automobile damaged transit in still another, more pervasive way: It made transit's peak services more and more irrelevant. Transit can best serve downtowns where trip ends are reasonably concentrated. But the automobile spread out the city in such a way as to make it virtually impossible to get from home to work or anyplace else except by automobile. Transit continues to service the downtown areas, but only a small fraction of travel demand is to the downtown. This means that people who have no access to automobiles can go downtown at the peak, but as a practical matter they can barely go at any other time because service is so poor. Nor can they go anyplace else, because service is nonexistent. And so it is that people with automobiles enjoy their mobility at the expense of people who do not have automobiles. Surely, the latter group is entitled to compensatory transportation.

Their numbers are much larger than one would think. They are, in effect, a silent minority, comprising the uncomplaining old and physically handicapped, the young and the poor. In 1970, over 20 percent of the U.S. households did not own a car. Among the poor and the elderly, car ownership was even lower. 57.5 percent of all households with incomes under $3,000 did not own a car. For households headed by persons 65 years of age or older, 44.9 percent did not own a car. Those too young to drive but old enough to travel alone are also immobilized. Of the youths between 10 and 18 years of age, 80 percent are dependent on others, including public transit, for their mobility.

The physically disabled deserve special mention because they represent a large, unserved market for good public transportation. Mostly poor, they currently number about 6 million persons. Of these, about 5.7 million are potential riders of public transportation if the system could take them door-to-door. Again, such a system would probably come into being if the transit company were able to get approximately $1 per passenger trip as it might through the premium passenger system.

In some ways we are not too far from the concept of providing the subsidy through premium passengers. A House bill under consideration proposes to credit the transit company for each passenger carried, whether peak or off-peak. This concept should be refined to pay the transit company only for passengers carried during the off-peak hours. Unless it were a very high amount, a straight per-passenger subsidy would have little if any effect on transit service because it would not provide the incentive to improve off-peak service to attract more riders. As Atlanta has demonstrated, the only time when large numbers of additional people can be attracted is during the off-peak times.

Won't these people—most of whom are poor—cheat on the premium passenger system? Would they sell their tokens to unauthorized users? Perhaps, but the likely effect of a few individual abuses is negligible compared with the likely effect of the systematic abuse that would be possible if the transit companies were simply given a subsidy. The recent housing subsidy scandals have driven home the lesson that even red tape can't prevent large-scale abuse if subsidies go through producers before they get to consumers. Moreover, little subsidy actually gets to the consumers.

Of course we can't be sure that the pattern of abuse in housing would repeat itself in transit. We can be sure, however, that a transit subsidy not keyed to market performance will not reach the consumer. It will surely not improve transit service. At the same time, the premium passenger system is disciplined by the market. Assuming the premium is set generously enough, if the transit company makes money on it, we will know that the disadvantaged are fast being served. If not, we will know that the transit system really isn't essential after all. In that sense a premium passenger system is a "no lose" game.

THE 25TH ANNIVERSARY OF INDEPENDENCE OF INDIA

Mr. PERCY. Mr. President, on August 15, 1947, the people of India became independent of Great Britain. In the 25 years that have followed, India has made great technological, agricultural, medical, and social advances. India has become a great nation.

Recently, the Governments of the United States and the Republic of India have had their differences. But our countries share common goals and are devoted to common principles of justice and liberty, and I am confident that the friendship that has always marked the relationship of our two peoples will be renewed and strengthened in the years ahead.

I invite the attention of the Senate and the American people to the text of President Nixon's message of congratulations to the Government and people of India on the occasion of the 25th anniversary of India's independence. It is my profound hope that this message will serve to convey to the Government of India our determination that American-Indian relations will soon reflect the mutual respect and friendship of the two peoples and the desire of the U.S. Senate that the two governments may cooperate fully in the interests of world peace and stability.

President Nixon's message to President Giri of India reads as follows:

DEAR MR. PRESIDENT: I am pleased to extend my warm congratulations and those of the government and people of the United States to India on the twenty-fifth anniversary of its independence.

During its first twenty-five years, the Indian Republic, inspired by the traditions of the freedom struggle, has overcome adversity and taken its place among the world's democracies. Friends of India everywhere are impressed by the progress it is making in fulfilling its national commitments to improve the conditions of its people.

On this auspicious occasion, you have America's warm greetings for India's twenty-first birthday and our best wishes for the years to come.

Sincerely,

RICHARD NIXON.

Mr. President, on August 14, the New York Times published an article written by Robert Trumbull, reflecting on India's 25 years of independence. I ask unanimous consent that excerpts from this excellent article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDIA, STILL IN SHADOW OF POVERTY, SHOWS PRIDE AS A NATION NOW 25

(By Robert Trumbull)

NEW DELHI.—Prime Minister Indira Gandhi is about to open a subdued year-long celebration of the 25th anniversary of Indian independence in a country where much has changed, yet much remains the same, since her father, Jawaharlal Nehru, hailed the new nation's "tryst with destiny" as Britain handed over power in the first minutes of Aug. 15, 1947.

Physical improvements have brightened the face of this ancient and long-suffering land, though Mr. Nehru's comment that "we have achieved much" but "we must achieve much more" is as applicable today as when he made it on the first Independence Day.

The shining image of India in the emerging "third world" of former colonial countries has dulled in the years of shifting alliances and the declining relevance of neutralism, the basis of Indian foreign policy under Mr. Nehru, the first Prime Minister.

The internal political complexion of the country has also altered, with the power no longer in the hands of the old Congress party as Mr. Nehru had known it until his death in 1964. Indians say that Mrs. Gandhi's rule at the head of a reconstructed party, younger and more leftist, is firmer than her father's ever was.

Mrs. Gandhi has taken the economy, never strong, into uncharted socialist paths. With wages low, prices up, productivity down and unemployment growing, the success of the socialist experiment is yet to be established.

Meanwhile, uncontrollable natural factors of alternating floods and droughts, and the savage summer heat, are unchanging agonies in a disaster-prone country poorly served by nature.

Following a recurrence this summer of the droughts that periodically deprive struggling industry of needed electric power and threaten food shortages where many already are hungry, Mrs. Gandhi has decreed an austere observance of the 25th Independence Day in order to rebuild depleted reserves.

Such spectacular holiday displays as the outlining of public buildings with electric lights on the festive night have been barred and the public has been asked to forgo the customary ostentatious anniversary parties.

In the midst of India's modernization, some things remain unchanged. Despite a jagged new skyline of monolithic highrise buildings, the environs of the capital retain an ambiance of timeless antiquity through the spectacular old monuments of bygone eras, like the huge seventeenth-century Red Fort, once the seat of Mogul emperors.

With urban sprawl pushing New Delhi's boundaries ever outward to country that was semidesert, the quiet of the night in this once-compact capital is shattered by traffic sounds instead of the jackal's eerie wail. These noisy, skulking animals that once scavenged nightly in the city's outskirts shun the new suburbs.

But the twilight hour, when sunset cuts the heat like the closing of an oven door, is still made vivid by flocks of screeching parakeets darting above the city streets like streaks of green flame.

A MIXTURE OF SOUNDS

Besides the screams, chirps and caws of the many kinds of birds, the cacophony of Indian cities includes the chattering of untamed rhesus monkeys roaming the urban roofs, and the ululating tones of the snake charmer's flute.

In the country side around New Delhi a motorist may have to swerve to avoid hitting a wild peacock strutting on the highway. In the railway yards of eastern India elephants are preferred to engines for shifting boxcars.

The new mingles with the old.

Soviet-made tractors, driven by bearded, turbaned Sikhs, dodge around bullock carts and camels on the Grand Trunk Road, the great Punjab artery described in Rudyard Kipling's tales of British India.

Children of the untouchables, lowest of the low in the stratified Hindu social order, earn university degrees although their fathers may still live in hovels and follow inherited menial occupations that members of the higher castes hold in contempt.

In teeming cities like New Delhi, Calcutta, Bombay and Madras, new apartment houses are rising in vast slum-clearance projects. But in most cities the odorous colonies of tumbledown, makeshift huts also grow despite regulations against them. "You can enforce regulations only so far," said a municipal housing official in Madras.

A notable feature of the new India is the air of cheery pride exhibited in fields and factories where so many faces once were hangdog and discouraged.

"You know, we send technicians to other countries now," said an Indian irrigation expert in Himachal Pradesh, a mountain state whose melting Himalayan snows water the burning northern plain.

"Garibi Hatao"—"Banish poverty"—is the slogan adopted by the new Congress party built by Mrs. Gandhi after she had led the electorate in casting out the old guard.

The socialist approach has so far produced a mixed pattern of Government monopoly, official competition with private enterprises, Government and private partnerships and the purely private sector.

To its existing monopolies in communications and transportation, the Government has added banking, insurance and coal, and 80 per cent control of the steel industry.

"Actually, we have nationalized very little," a close adviser to Mrs. Gandhi said in a recent interview. "Mostly, we have merely taken over ailing businesses to put them on their feet."

In Punjab and other states, where the "green revolution" in grain production has enabled India to halt costly importing and even to think of exporting food soon, the successful farmers have been discouraged by the Government's imminent imposition of a ceiling of 10 to 12 acres on land holdings.

"I may as well sell my tractor and move to the city," said a Punjab farmer who had arrived as a destitute refugee from Pakistan 25 years ago and now owns 90 productive acres and employs several families.

"But think of the millions of landless cultivators who will become owners when the excess acreage is redistributed," a state official insisted, when told of the Punjab farmer's despair.

A proposal to limit urban property holdings is expected to be put before the parliament, where Mrs. Gandhi commands an overwhelming majority, as soon as a New Congress party committee has worked out the details.

The plan upset a New Delhi widow who has just built a four-bedroom house, modern in all respects, that she can rent to an embassy family for the equivalent of $400 a month.

"After expenses and taxes I'll have nothing left," said the widow, who lives in a small apartment, "and I don't even know if I will be allowed to leave the property to my children."

Concern for the myriad underfed, jobless poor has enabled Mrs. Gandhi to renege without a qualm on pledges by her father's Government, such as the payment of privy purses—in effect, pensions—to the former princely rulers in return for ceding their states to the Indian union. Her action in stopping the payments bothered the consciences of many Indians.

Mrs. Gandhi's tendency to act on significant matters without consulting Parliament has been criticized by Indians who feel that ignoring the forms of democracy can engender contempt for the substance.

A close associate of Mrs. Gandhi recently described her ideology as "centrist, or left of center." At the same time she keeps the support of the extreme left, including a new youth corps that has evolved from the wreckage of the Naxalites, a Maoist organization that had advocated violent revolution.

Mrs. Gandhi's luster at home has been enhanced by India's victory over Pakistan in the war last December, which resulted in the creation of Bangladesh in what was formerly East Pakistan.

Except for Hindu diehards, the country has acclaimed the accords worked out by Mrs. Gandhi and President Zulifikar Ali Bhutto, of Pakistan in Simla last month, beginning an effort to end 25 years of ill-will and four wars between the two countries.

While relations with Pakistan are improving at last, the suspicions of small states for giant neighbors has lessened India's popularity in Nepal, Bhutan, Bangladesh and Sikhim, the latter an Indian protectorate.

Nearby Ceylon has displeased New Delhi by moving closer to China. The border dispute with Peking, which resulted in an Indian military defeat in 1962, still poisons relations between the two Asian giants, once the warmest of friends.

India's confidence of her role as a leader among the neutralist states was shaken when many of these countries decided not to take sides in the conflict between New Delhi and Peking, and declined to support India in United Nations debates on the Bangladesh affair.

Except for the tiny Himalayan kingdom .of Bhutan, which is committed by treaty to be "guided" by India in foreign affairs, only the Soviet Union and her satellites supported New Delhi's opposition to a cease-fire in Bangladesh.

India's status as a nonaligned nation has been impugned since New Delhi and Moscow signed a treaty last year that has military overtones. Indian spokesmen, however, insist that no Soviet military aid has been accepted.

The increasing commitment to the Soviet Union, India's consistent supporter in international disputes, and the alienation from the United States since President Nixon's reported "tilt" toward Pakistan in the Bangladesh situation disturb many Indians.

"For God's sake," a high Government official begged an American journalist friend, "tell your people that we aren't in the Russians' pockets."

OFFENSIVE AGREEMENT SECURES OUR NATIONAL SECURITY

Mr. CHURCH. Mr. President, the State Department has issued an excellent summary of how the interim offensive agreement negotiated by the President in Moscow protects fully the security of the United States.

I ask unanimous consent that the August 1 release on "Peace, National Security, and the SALT Agreements" be printed in the RECORD.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

PEACE, NATIONAL SECURITY, AND THE SALT AGREEMENTS

Since World War II, the United States and the Soviet Union combined have produced nearly $20 trillion in gross national product—approximately $15 trillion in the United States and more than $4 trillion in the Soviet Union. Of this amount, more than $2 trillion has been spent on defense (approximately $1.3 trillion by the United States, and an estimated $1 trillion by the Soviet Union).

If the two societies continue to grow as projected to the end of the century, and if both continue to spend the same proportion of GNP on defense, the two countries together, by the year 2000 A.D., could spend another $5 trillion or more to maintain national security.

In both countries there are other pressing needs for capital, and both countries have long recognized a mutual advantage in first stabilizing the level of spending and ultimately moving to the stage where both countries can safely scale it down.

When President Nixon and General Secretary Brezhnev signed the SALT agreements in Moscow, May 26, 1972, the first stage was completed. Agreement was reached to limit ABMs to very low levels, including a commitment not to build a nationwide ABM defense or the base for such a defense. Both sides thus forgo a defense against retaliation, and, in effect, have agreed to maintain mutual deterrence.

Agreement was also reached to stabilize the level of strategic offensive missiles for five years, giving both sides an opportunity to proceed to the second stage of negotiations in which further limitations and controls will be pursued.

The freeze on strategic offensive missiles leaves the Soviet Union with more missile launchers and the United States with more warheads and bombers. (See Missile Balance Sheet below.) A great many factors were balanced off on both sides, but the most important consideration—probably the factor that made the Interim Agreement feasible—is the recognition (given concrete form in the ABM Treaty) that with any conceivable or current or future deployment of nuclear weapons, neither side can expect to attack the other without receiving a retaliatory strike that would destroy the attacker as a modern nation-state. Out of this fact grows the assurance of national security for both sides. This, in turn, now makes it possible to negotiate additional mutual limitations—hopefully including reductions of forces on both sides.

However, if the United States were to make unilaterally a substantial reduction in strategic strength, the other side might lose incentive to continue at the bargaining table. Similarly, if either side were somehow able to make a substantial jump in its strategic forces, we can only anticipate that the other side would undertake to redress the balance.

President Nixon said in his Foreign Policy Report of February 1971 that any Soviet attempt to obtain a large advantage "would spark an arms race which would, in the end, prove pointless." The President added that "both sides would almost surely commit the necessary resources to maintain a balance."

The Interim Agreement limits for up to five years the numbers of intercontinental ballistic missiles (ICBM), and submarine-launched ballistic missiles (SLBM) for the Soviet Union and the United States. Some might argue that the Soviet Union gained an advantage because it is permitted larger total numbers of ICBM launchers, SLBM launchers, and modern ballistic missile submarines.

However, it is also argued that the United States gained an advantage because no current U.S. offensive arms program is limited whereas limitations are placed on the three most active Soviet programs. Furthermore, although the Soviet Union will have more missile launchers, the United States has a considerable lead in numbers of warheads and intercontinental bombers, and in qualitative factors—including weapon dependability and general weapons sophistication—which are not limited by the agreements.

The central fact is that both sides find advantages in the limitations. We have reached levels where neither side can start a nuclear war without triggering its own destruction. There are simply too many launchers, too many warheads that would survive a surprise attack.

More importantly, both sides can benefit enormously from additional strategic arms limitations. An important process has, however, been started. Both the United States and the USSR are investing in this process, and we expect will want to preserve the investment and build upon it. It is not a question of "winning" or "losing". Both sides—and the world—gain from what has been achieved without compromising the basic security interests of any nation.

ECONOMICS

The long-range effect of the arms race on the economics of the United States and the Soviet Union is difficult to gauge precisely, but it is obviously enormous. The United States is currently spending about eight percent of GNP on defense—approximately $80 billion in FY 1972. The Soviet Union is spending in the range of 11–14 percent of GNP—some $45–60 billion in 1972, depending on the method of evaluating the cost. As noted above, if both countries were to continue to spend at these levels of GNP to the end of the century, the aggregate defense costs for the United States and the Soviet Union combined might total more than $5 trillion.

Both countries find defense spending a substantial burden on the economy, but the effect probably is more serious in the Soviet Union, because the high level of defense spending is believed to reduce substantially the available growth capital badly needed for expansion of the Soviet economy.

Efforts to compare the Soviet defense burden with that of the United States are difficult because neither the costs nor the distribution of GNP in the two countries are comparable. What is clear is that given the economic resources of the Soviet Union and its relatively lower level of economic development, the arms race places a comparatively greater burden upon the Soviet economy than the U.S. economy. Therefore, in economic terms the Soviet Union has even greater reason than the United States to develop meaningful weapons controls through negotiation.

The SALT agreements are an important step toward achievement of the kinds of controls that over time can substantially reduce expenditures on both sides, although the goal has not been reached in the initial stage. The agreements signed in Moscow do, however, provide the foundation for negotiations which will, hopefully, lead to important cuts in the level of defense spending on both sides.

Both the United States and the USSR could well continue to spend at approximately current levels while negotiating additional limitations, with the funds devoted chiefly to qualitative improvements. One of our goals will be to avoid this.

MISSILE BALANCE SHEET

ICBM launchers: Current strength: U.S. 1,054; USSR 1,618. The United States has no new ICBM construction program underway; the Soviet Union has been building new ICBMs. Without the agreement, if recent construction rates were continued for five years, the United States would still have 1,054 ICBMs and the Soviet Union, which has been building at a rate of up to 250 a year, could have more than 2,800 land-based ICBMs. Under SALT both sides are frozen at current levels.

SLBM launchers: The United States currently has 656 Polaris and Poseidon missile launchers; the Soviet Union has approximately 650–700 SLBMs. The United States has no missile submarines under construction; the Soviet Union has an on-going program of some eight new submarines a year. Without SALT, in five years the United States missile-launching submarines would not have increased, while the Soviet total could have risen to 80 or 90. With SALT, the United States has the right to increase to up to 44 submarines. The Soviet Union may add modern ballistic missile submarines up to the number of 62 operational, but only provided that they retire 209 older land-based missiles and 30 older SLBM launchers. This would leave the USSR with no more than 950 modern SLBM launchers.

Total ICBMs and SLBMs consistent with the terms of the agreement: United States, 1,710; USSR, 2,419. Warheads: The difference in numbers of missiles is offset by the kinds of warheads they can carry. Currently, with the new MIRV warheads, the U.S. strategic missiles and heavy bombers carry 5,900 nuclear warheads; the Soviet missiles and heavy bombers carry an estimated 2,200 warheads. The Interim Agreement sets no limit on the number of warheads for either side, and both of these figures could rise substantially in five years. The implications of the warhead figures are enormous. They mean that currently, in the event of a surprise nuclear attack, if half of the U.S. strategic capability was wiped out, the United States could still strike more than 2,500 separate targets in the Soviet Union. This reinforces the recognition on both sides that there can be no winner in a nuclear war. The U.S. expects to continue to hold a substantial warhead lead during the Interim Agreement, sufficient to more than compensate for the numerical edge the Soviet Union has in missile launchers. The number of U.S. independently targetable warheads is planned nearly to double in the next five years, and will remain far ahead of the Soviet total.

Megatonnage: The agreement does not limit megatonnage as such. Both sides are free to make warheads as large or as small as they wish. On the average, Soviet Missile warheads are larger than U.S. warheads. It should be noted, however, that the radius of damage does not increase proportionate to the increase in yield. If the explosive power is doubled, the radius of damage increases by approximately one-third. Moreover, accuracy is more important than yield.

SEARCH IS ON FOR HUNGRY OLD FOLKS

Mr. CHURCH. Mr. President, the editor of the Twin Falls, Idaho, Times-News, O. A. "Gus" Kelker, is a well-known writer whose feature stories are read with special interest by many Idahoans.

His story entitled "Search Is On for Hungry Old Folks" points out the poignant plight of many older Americans who lack adequate food and what the food stamp program can do to alleviate this lack. As chairman of the Senate Special Committee on Aging, I know well the problems he so effectively discusses. I ask unanimous consent that Mr. Kelker's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEARCH IS ON FOR HUNGRY OLD FOLKS

(By O. A. "Gus" Kelker)

The search is on to find all the hungry old folks!

And quite a few of them live in Twin Falls and other Magic Valley counties. They are those who, after a lifetime of service to their communities, find themselves isolated from the mainstream of American life. This isolation, coupled with lower income, often leads to hunger and malnutrition.

So last week—it was Thursday to be exact—every individual recipient of social security or medicare received a brochure explaining how it is possible to qualify under the new Federal Foods Assistance Program. They also received a franked post card permitting them to request personal assistance if required.

Nationwide there are 27 million men and women who received the notices. In Magic Valley the numbers were in the hundreds and it is expected that scores of these—not helped in the past—will now be able to receive food assistance.

In Twin Falls county such assistance would come through food stamps. In some counties it would come through commodity distribution. Right now, in Twin Falls county, there are between 750 and 800 individual cases where food stamps are being distributed. These, of course, include those of all age groups who are eligible and would number more than indicated because a family head, who might receive stamps for two or more family members, is still only counted as one.

When the Federal Food Assistance Program (FIND) takes hold issuance of food stamps will increase. How much is not known.

Four government agencies and the American Red Cross—including the chapter in Twin Falls—are joining hands in this program, an outgrowth of the White House Conference on Aging.

The Department of Agriculture will administer the food assistance through the stamp and commodity programs; the Social Security Administration will communicate the objective of Project FIND to all Social Security and Medicare participants; the Office of Economic Opportunity, through a $4.4 million contract, will be the funding agency for the volunteer activity; ACTION, the government citizen service corps, will provide the project management and public information, and the Red Cross will enroll, train and supervise up to 50,000 volunteers in an effort to reach all the older Americans who are eligible.

Statewide, Idaho is involved in both the food stamp and commodity programs.

In Idaho there are 44 counties. Food distribution programs reach a total of 18,851 in these counties and food stamps reach another 14,037 for a total of 32,888 being helped with food subsidies. Some local officials expect this number will hit a ceiling of nearly 50,000 when the elderly who are now eligible but are not receiving anything apply for aid.

The whole idea is to be sure old folks do not go hungry and also to be sure what they eat is beneficial to their health.

It is pointed out in Twin Falls that the Red Cross is not receiving any money other than to reimburse for direct out-of-pocket expenses such as the salaries of field supervisors, travel cost and reimbursement to volunteers for their direct out-of-pocket travel costs.

Want to volunteer in this program? Then drop into the local office of Social Security as a starter. Your volunteer help is needed and the Social Security officials can put you on the right track as to where to go and what to do.

And you old folks who do not have enough money to buy nourishing food? Why don't you send that card back—or go in and ask questions? The program is for you. All you have to do is to take advantage of it.

LACK OF FUNDS FOR RICHLAND HOUSE, COLUMBIA, S.C.

Mr. HOLLINGS. Mr. President, I ask unanimous consent that an article entitled "HEW Apparently Will Not Fund Boys' Home," published in the Columbia Record of August 9, 1972, be printed in its entirety at the conclusion of my remarks.

I should like to acquaint the Senate with a situation that is most unfortunate and it is hoped, not a frequent occurrence. The Department of Health, Education, and Welfare has funded for 3 years a boys' home in Columbia, S.C., called the Richland House. The home's board of directors was led to believe that funding from HEW would be available for 5 years before other funding sources would have to be found. However, the funds run out on September 1 of this year, and HEW has belatedly indicated that the grant will not be renewed. At this time, no alternative sources are lined up, and the home is faced with closing in September. I have asked HEW to fund the program for an additional year, to allow the board of directors time to secure other sources of funds.

The Richland House is operated in conjunction with the Richland County family court and is a home for boys of the age 13 through 16 who have gotten into trouble with the law. The family court judge now has the option of sending a boy to the Richland House or to a jail cell. In its 3 years of operation, the home has repeatedly demonstrated its success in rehabilitating these young boys and its closing would be to the detriment of the entire community.

What bothers me the most in this situation is HEW's apparent failure to adequately forewarn the grantee, the Richland House board, that the program definitely would not be funded another year. The board would then have had plenty of time to develop alternative funding sources and it would not be faced with probable closing in September. This program has been of significant benefit to the Columbia community for the past 3 years and HEW is to be commended for its support. However, it is clearly not good government for HEW or any Federal agency to place a grantee in such an untenable situation unnecessarily. Because HEW has placed the Richland House in this position, I feel they have a direct responsibility to keep this valuable community project in operation for an additional year. This will allow the board of directors adequate time to develop a permanent source of funding.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HEW APPARENTLY WON'T FUND BOYS' HOME

(By Margaret N. O'Shea)

The U.S. Department of Health, Education and Welfare has apparently decided some lives that are important to Richland County aren't worth a dime.

Lives at stake are those of the boys who live at Richland House, a group home for 13 and 16 year olds who have run afoul of the law or have the potential to do so if they remain in their home environments. Richland County Family Court, which refers youngsters to the home, believes it is meaning the difference between lives of crime and productivity for the boys who have lived there.

For the past three years, Richland House has received most of its operational funds from the HEW—$30,000 the first year, $35,000 the second and $53,000 the third. The board of directors had been led to believe that federal funding from HEW would be available for five years before other sources would have to be found, but their grants runs out Sept. 1, and HEW has shown no signs of renewing it.

"This year we began getting indications that HEW was undergoing a policy change in that Never-Never Land of Washington and there might be no funding for one-unit projects," said Jim Hale, chairman of the board of directors and Vocational Rehabilitation's Family Court specialist for the state.

In previous years, HEW has notified Richland House of grant approvals in July, he said. This year there has been no word at all, and the home cannot continue to function without the funds.

A telegram campaign got under way this week to "attempt to dislodge the logjam" in Washington, and the board and staff at Richland House are hoping it will result in renewal of HEW funding for the project.

They are asking citizens with an interest in continuation of Richland House operations to telegraph their concern to Sens. Ernest F. Hollings and Strom Thurmond and Rep. Floyd D. Spence.

"We don't have to convince them that we have something important that's worth keeping," Hale said. "They will turn the telegrams over to HEW to show that the community is concerned."

Meanwhile, other fund sources are being explored, but Hale said it is unlikely that any will come across for several months. "We just don't feel that we can close in the interim," Hale said.

Richland County Council is expected to act this month to provide $6,000 in county funds for the home—funds that are to be applied to this fiscal year's operations. And the fiscal year at Richland House ends Sept. 1, along with the HEW grant.

That $6,000 is a drop in the bucket. It takes about $4,000 a year to house one boy at Richland House—$3,000 less than it costs the state to keep a juvenile offender in a correctional institution—and the home is equipped to handle up to 12. Only eight now live there. Because funds are scarce, the staff has been cut to a skeleton crew, and the boys could not be offered stability.

Hale said the telegram campaign can be conducted for $1.25 per 15-word communication, but the cost to the community is incalculable if Richland House is abandoned.

He cited some of the results of the home's efforts in its three years of operation:

—Of 75 official residents—at least that many more have participated in some home activities without officially living there—all were school dropouts when they arrived. All returned to school, since that is a requirement to live at Richland House. Eight have graduated in the past three years.

—One youth now living at Richland House was failing in school. He is now a member of the National Honor Society.

—One of the school graduates is a National Merit finalist and plans to go to college on scholarships.

—Only seven of the 75 official residents have had to return to Family Court and sent to correctional institutions because of continuing delinquency.

—Hostile boys are handling responsibility at the home, as much of it as they can take on, according to John Kinchen, Richland House director. Some have progressed to the point where they live in the home's annex, work, pay rent and earn their own way, all with minimal supervision.

—Youngsters who were taking out their frustrations on others are now talking to counselors about goals for the future, ways they can help others and how they can contribute to society.

"This is an expensive program," Kinchen said, "but compared with the cost of incarceration and institutionalization, it runs low. Most of these boys are not born criminals. They come from homes where discipline was lacking or where there was no love. In many cases, they were seeking attention in the only way they seemed to be able to get it—by breaking the law.

"Here, we care, and that means a lot to them. They don't want to violate the trust we have in them," he said.

Richland House offers a healthy environment with responsibilities as well as benefits. The boys work at the home and are required to attend school regularly in order to stay there. They also have counseling and group activities that foster an ability to live and work with others.

The apparent failure of HEW to come through with operational funds is a specter at Richland House. "We're running a little scared," Hale admitted. "We feel that we have to survive or some of these kids won't have a chance at all."

THE PURCHASE OF CHROME ORE FROM RHODESIA

Mr. MOSS. Mr. President, twice the Senate has considered the question of abdicating our responsibility under the United Nations Charter by reestablishing our purchase of chrome ore from Rhodesia. Twice by a very narrow vote, we have elected to violate our solemn obligation to the United Nations and to purchase ore contrary to the resolution of the Security Council. This has distressed me very deeply, as I am sure it has many Members of the U.S. Senate. I have always felt that the matter has been presented in such a manner that many Senators did not understand the consequences of our action.

Mr. President, I was pleased to note that the American Bar Association meeting in San Francisco considered this problem and by resolution placed the American Bar on record as recommending that we keep our international agreements, and especially the one on the purchase of chrome ore. The House of Delegates of the American Bar recognized that we cannot hope to live in a world of law and order if we unilaterally choose to violate our own commitment.

ALLEN ELLENDER—A TRIBUTE

Mr. CHURCH. Mr. President, I wish to pay my tribute to Senator Allen Ellender, whose unexpected death has saddened us all.

Senator Ellender and I did not serve together on committees of the Senate, but during my 15 years here I have had numerous occasions to ask for his cooperation on behalf of appropriation measures, particularly those having to do with agriculture, that would benefit Idaho. I found him unchangingly courteous and cooperative. On those occasions when he could oblige, he would; when, in his judgment, he could not, I understood. His diligence, his "workhorse" energies, his candor, all these, and more, were great assets to the U.S. Senate which he loved so well during the 35 years he served here.

Senator Ellender traveled widely. And his extensive tours abroad resulted in a growing skepticism about the efficacy of our so-called foreign assistance programs, as well as the need for such profligate military spending. Allen Ellender sensed quite properly our overseas activities were becoming increasingly characterized by wastefulness and a blind reliance upon assumptions that, whatever their original validity, had been rendered invalid by world events. For this, we in the Senate owe Allen Ellender our appreciation for his insights, his counsel, and his independent judgment in this matter.

One observation of his, I would like to recall:

> It seems to me that we have as much to fear from ignorance, prejudice, selfishness and bias in our own Nation as we have from a similar condition on the part of the Russian leadership.

That is a bit of wisdom we would all do well to remember in this ever-changing world.

BALM FROM THE DRUG FIRMS

Mr. NELSON. Mr. President, the Washington Post of July 30 contains a story entitled "From Drug Firms, Balm for the Buyer." Written by the distinguished reporter Morton Mintz, the article discusses some happy results of the more than $100 million settlement of civil antitrust suits against five drug companies. This sum was awarded a number of States, municipalities, and consumers. An additional $32 million was awarded to private hospitals.

Of the $37 million set aside for consumers only a very small amount will actually be claimed. The remainder will provide a public health windfall in 43 States, 22 cities and counties, the District of Columbia, and Puerto Rico, which intend to spend the funds mainly on public health programs designed to benefit consumers as a class. According to Mr. Mintz' article, many of these programs are highly innovative and would otherwise go unfunded.

While the States and other political subdivisions are congratulating themselves on their good fortune, they should also remember that this would not have come about without the tireless efforts of the senior Senator from Louisiana, Russell B. Long.

The $132 million settlement by the drug firms is the result of private treble damage suits filed by the City of New York, Louisiana, Wisconsin and about 41 more States, 22 other political entities and a number of private institutions. These suits and counterclaims were directly dependent on the successful prosecution by the Department of Justice of the Federal Government's own criminal case. Although the drug companies had been indicted in 1961, by the end of 1965 the Department of Justice had done very little to develop the case.

In addition, intelligence gathered from trade source indicated that the Justice Department's criminal antitrust prosecution against the drug industry might be ended or otherwise disposed of by acceptance of a plea of nolo contendere. After careful and discreet staff inquiries had confirmed that the reports from trade sources were correct, Senator LONG, who was then Chairman of the Monopoly Subcommittee of the Small Business Committee, vigorously protested the proposed action by the Justice Department, and just a few days before Christmas of 1965 interrupted his vacation in Louisiana to return to Washington to insure that the public's interest in this matter was protected.

This was followed on February 10, 1966 by a memorable speech by Senator LONG on the floor of the Senate in which he revealed for the first time the international scope of the price fixing conspiracy by the manufacturers of life saving "wonder drugs," and made public a large number of supporting documents as well as the key to unlocking the codes used by the drug companies in their price fixing activities.

Because of Senator LONG's vigilance and dedication to the public interest, the Government's criminal antitrust prosecution proceeded. The results will soon benefit the public in a variety of ways as described in Mr. Mintz' article. But an immediate and visible benefit of Senator LONG's efforts is the price of the important antibiotic tetracycline, which fell from 50 cents per capsule to the consumer to the present price of less than 10 cents. This decrease of more than 80 percent will help reduce the cost of health care for the American people.

I ask unanimous consent that the correspondence between Senator LONG and the Department of Justice, as well as Mr. Mintz' Washington Post article, be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., December 21, 1965.
Re: United States v. Chas. Pfizer & Co., et al, U.S.D.C., SDNY (Crim.)
Hon. DONALD F. TURNER,
Assistant Attorney General, Antitrust Division, Department of Justice, Washington, D.C.

DEAR MR. TURNER: Seeking to determine the accuracy of a trade newsletter report that the criminal antitrust prosecution against the drug industry may be ended by acceptance of a plea of nolo contendere, my staff assistant, Benjamin Gordon, telephoned Paul Owens of your Special Litigation section. Mr. Owens stated that although the defendants had not yet offered a nolo contendere plea, the Antitrust Division may accept such a plea because, as Mr. Owens said, the case is considered weak. I strongly urge that this not be done.

I assume that in 1961, the year of indictment, the Government was at least able to prove a *prima facie* case. What has happened since 1961 to weaken it? Indeed, why haven't measures been taken to strengthen it? How many attorneys have been assigned to this effort and what have they been doing for four years?

Is it true that since August 17, 1961, there has been little or no investigation by the Antitrust Division or the Federal Bureau of Investigation and that little, if any, additional evidence, based on leads furnished by the record in the FTC proceedings, has been developed?

Is it true that since August 17, 1961, there have been few, if any, statements taken from prospective witnesses and that former employees of the defendants who might be able to furnish vital evidence have not even been contacted?

If the foregoing questions are answered in the affirmative, and I would appreciate answers to all of these questions promptly, it is apparent why the Government does not have a strong case. Accordingly, I would suggest that instead of accepting a nolo contendere plea, immediate steps be taken to prepare a strong case for trial. I am assured that evidence, in addition to that appearing in the FTC record is available and can be developed quickly if enough men, time and effort are put on the job.

Perhaps you are unaware that the cost of drugs, particularly the cost of broad-spectrum antibiotics, is a matter of grave and increasing concern to the Congress. Ten percent of the entire "Medicare" program as presently constituted is spent by institutions for the purchase of drugs and medicines. In addition, the average expenditure for drugs and medicines per person per year for those 65 and over is $54.00, whereas the average cost for hospitalization is $53.00 For such persons in the income bracket of $7,000 per annum and under, the percentage expenditure for drugs and medicines is considerably higher. Since it is possible that the Federal Trade Commission order may be reversed on some technical ground in the United States Court of Appeals for the Sixth Circuit, it is inconceivable that the Justice Department would consider removing the last road-block to this continued exploitation of the American public, particularly the poor and the aged.

You may also be unaware that there are a number of private treble damage suits already pending which would be adversely affected by the acceptance of any nolo contendere plea. These include suits and counterclaims totalling many millions of dollars filed by the City of New York, McKesson & Robins, Inc., and others. I am also informed that many state and local governments, private hospitals, and small drug manufacturers are awaiting the outcome of the Justice Department's case so that they, too, may institute suit.

I consider the drug price-fixing conspiracy to be one of the most vicious ever foisted upon the American public. It particularly victimizes the poor and the aged. I assure you that I did not give my considerable support to the passage of the Medicare and Poverty Bills in the expectation that more Federal funds would be added to the profits of the drug industry.

If the Department of Justice under a Republican Administration refused to agree to a nolo contendere plea by "conspirators" who were fixing the price of generators, how can you even consider acquiescing in such a plea when there is strong evidence that there is a conspiracy to fix the price of medicines?

If the Antitrust Division does not vigorously oppose attempts by the defendants to enter a plea of nolo contendere, I and certain of my colleagues who are becoming increasingly aware of the nature, scope and gravity of this conspiracy may feel compelled to take the Senate floor in order to bring this situation to the attention of the American people.

If you feel your case is weak, I am certain that I have the evidence you need to strengthen it.

I ask you not to accept a nolo contendere plea this week or at any time until I have an opportunity to discuss the matter with you fully. This will, of course, be after the Congress reconvenes in January.

I would appreciate a prompt reply.

With every good wish I am,

Sincerely yours,
RUSSELL B. LONG.

DECEMBER 22, 1965.
Hon. RUSSELL B. LONG,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: This is in response to your letter of December 21 concerning *United States v. Chas. Pfizer & Co., et al.*, U.S.D.C., SDNY.

Defendants have not yet made any proposal to us regarding nolo contendere pleas, but at their request I have agreed to a conference with them on January 7th, and we anticipate that they will make such an offer at that time. I have not yet had the opportunity to review this case in any detail, but I have discussed it generally with my staff. It is not my impression that the Division considers the case to be a weak one, and on the basis of my general information, neither do I. I believe Mr. Gordon must have misunderstood Mr. Owens in believing him to state the contrary. Mr. Owens assures me that he made no comments whatsoever on the merits of the case.

I have also been assured, although I have not personally gone into it in detail, that all customary steps have been taken to develop evidence since the case was filed in 1961. The long delay is attributable to the fact that despite several requests on the government's part, Chief Judge Ryan of the Southern District of New York has failed to assign a judge for trial on the ground of docket congestion. While we have not been happy with the delay, I am sure that Chief Judge Ryan has delayed the case in all good faith, as over the years he has given fair and sympathetic treatment to the Antitrust Division.

Needless to say, we would be anxious to obtain any further evidence that one may have, and my staff would be prepared at anytime convenient to you to talk with members of your staff and obtain whatever information in their possession.

The other considerations referred to in your letter, though not the only considerations involved, are of course highly relevant to the question of whether nolo contendere pleas should be acquiesced in or vigorously opposed.

I hope this letter clarifies at least to some extent the questions you raised. I would, of course, be happy to discuss the matter with you further for the purpose of obtaining any relevant information you think particularly significant.

Sincerely yours,
DONALD F. TURNER,
Assistant Attorney General, Antitrust Division.

JANUARY 17, 1966.
Re United States v. Chas. Pfizer & Co., et al., U.S.D.C. SDNY (Crim.).
Hon. DONALD F. TURNER,
Assistant Attorney General, Antitrust Division, Department of Justice, Washington, D.C.

DEAR MR. TURNER: Thank you for your letter of December 22 concerning the above case.

I was pleased to note that the Antitrust Division considers the case to be a strong one, and I naturally conclude that it would be inconceivable for the Division to acquiesce in a plea of nolo contendere if, and when, it is made.

Because of my great and continuing interest in this matter, I would appreciate it if you would furnish me the details of the information requested in my letter of December 21 regarding the precise steps which have been taken to develop the case on the basis of the leads furnished in the FTC proceedings.

In addition, I would appreciate it if you would advise me as to the nature and outcome of the conference you had with the attorneys for the drug companies on January 7, 1966.

Your kind cooperation in supplying the requested information would be appreciated.

Sincerely,

RUSSELL B. LONG.

DEPARTMENT OF JUSTICE,
Washington, D.C., January 18, 1966.

Re United States v. Chas. Pfizer & Co., et al., USDC, SDNY (Crim.).

Hon. RUSSELL B. LONG,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: This is in response to your letter of January 17 regarding the above case, and is in confirmation of our telephone conversation today.

Following a conference on January 7, 1966, and after careful reconsideration of the case, we have informed attorneys for the defendants that we will not dismiss the indictment, we will oppose nolo contendere pleas if and when they are made, and that we have every intention of prosecuting the case to a conclusion.

As a matter of policy, I do not consider it appropriate to disclose the details of preparations for trial in this or other cases, at least in the absence of exceptional circumstances. Nevertheless, I have been assured that the case has been and will be pursued with all due diligence.

Sincerely yours,

DONALD F. TURNER,
Assistant Attorney General,
Antitrust Division.

[From the Washington Post, July 30, 1972]

From Drug Firms, Balm for the Buyer

(By Morton Mintz)

One does not generally think of the drug industry as a philanthropic enterprise. But five pharmaceutical makers are about to be shoved into the role of great public benefactors, unwitting contributors of many millions of dollars to help combat drug abuse, rehabilitate delinquents, control gonorrhea, deliver medical aid in rural areas, train midwives and finance other social projects.

This unintentional goodwill stems from an unprecedented $100 million settlement of antitrust suits against the five drug companies, and from the unusual way in which the funds will be disbursed.

Of the total, $60 million was designated for reimbursement of states and political subdivisions for overcharges they paid for "wonder" antibiotics purchased during the 1960s for public institutions and programs. Most of the remainder—$37 million—was set aside for consumers, and if a complicated disbursement proposal wins court approval, $16 million in tax-free refunds soon will go to about 40,000 individuals who paid excessive prices for the same drugs.

Thousands of persons who might have had valid claims did not file for refunds, however, and their share of the settlement, estimated at $15 to $18 million, will provide a public health windfall in 43 states, 22 cities and counties, the District of Columbia and Puerto Rico.

Excluded from the payments will be individuals and governments of seven states, two counties and one city that rejected the settlement, preferring to sue instead.

Under a distribution plan awaiting approval by a U.S. district court in New York City, the individual refunds (less legal fees) will be distributed between October and the year's end. They will average $420 per claimant, but that figure does not reflect the real meaning of the settlement to many recipients.

Florence A. Aarnes of Denver, for example, stands to receive $15,820, or 70 percent of the $22,500 she spent from 1954 to 1966, when she lived in El Paso, Tex., for two of the anti-infection medicines, tetracycline and oxytetracycline. Hers is the largest individual claim.

Similarly, a Richmond, Va., truck driver, William Jordan, expects to receive $8,110, which is 70 percent of the approximately $55 a month he spent within that same period for antibiotics for each of three children with cystic fibrosis, an incurable disease that hardens lung fibers.

MIDWIVES IN WASHINGTON

But perhaps more unusual is what will happen to the money that will go to political subdivisions, acting as representatives of the individuals who did not file claims. These political units intend to spend the funds mainly on public health programs designed to benefit consumers as a class. Many of them are highly innovative efforts that otherwise would go unfunded.

The programs are so diverse that Virginia Attorney General Andrew P. Miller, chairman of the antitrust committee of the National Association of Attorneys General, says he is reminded of a Supreme Court opinion of 40 years ago in which the late Justice Louis D. Brandeis spoke of "one of the happy incidents of the federal system: that a single state may serve as a laboratory; and try novel social and economic experiments . . ."

The District of Columbia, for example, hoping to lower its "high and steadily rising infant mortality rate," intends to hire two certified nurse-widwives and a supervisory physician. Working with three universities, they would train 50 more nurse-midwives in two years, freeing doctors to handle difficult maternity cases at D.C. General Hospital.

Maryland proposes to meet a critical need: the care and treatment of cancer victims. It would use $260,000 from the drug makers' unintentional philanthropy to establish new professorships of clinical oncology (the study of tumors), one each at the medical schools of the University of Maryland and Johns Hopkins.

The American Cancer Society, saying that medical schools and their teaching hospitals are the best place to speed progress against cancer, is contributing $50,000 to the program. The universities have agreed to maintain the new professorships not only after the special fund is exhausted but, as the State of Maryland has told the district court, "so long as cancer is a major disease of man."

Wisconsin, "beset by an epidemic of gonorrhea which is clearly out of control," intends to spend 47 per cent of its funds to try to control the disease. And Missouri, dissatisfied with the "wholly inadequate" rehabilitation method available for aggressive delinquents at its State Training School for Boys, wants to try out an alternative: pilot community treatment centers in converted residences in the inner cities of St. Louis, Kansas City and Springfield.

RURAL MEDICAL AID

But the list does not end there. Kentucky plans to contract with a non-profit corporation to use college students and student nurses to improve health, nutritional and medical care in the rural eastern part of the state, where health facilities "are virtually non-existent and a large proportion of the population is indigent."

Oklahoma, which has a similar problem, would meet it by providing physicians, nurses, dietitians and medical social workers for a clinic, in Wakita, that now has no staff.

It also plans to finance additional facilities at its state university schools of nursing, dentistry and medicine, and provide scholarships "for disadvantaged and minority group students entering professional health training."

Mississippi has adequate kidney treatment facilities, including four kidney machines, but in most part of state is "wholly lacking . . . supplies necessary to sustain treatment." The unclaimed money would be used to buy the supplies, which cost about $3,000 per patient a year.

Iowa wants to divide its money seven ways: 20 per cent to improve public health nursing services; 15 per cent each to fight drug abuse, screen for sickle cell anemia, immunize against measles, treat VD and provide emergency health services, and 5 per cent to inspect waste-treatment plants.

In Louisiana, it was decided to split the money among 12 state institutions for disabled and crippled children. Texas would use 30 per cent of its share to expand a solid waste pollution control program. And Ohio has drafted an elaborate plan to find "those consumers who for one reason or another did not have an opportunity to file claims" the first time around.

DRUG ABUSE DRIVES

The majority of states, however, plan to spend all or part of the expected funds on programs of one kind or another to combat drug abuse.

In Virginia, for example, the Drug Abuse Control Council has been unable "to institute and continue valuable drug abuse treatment and rehabilitation programs" even though the federal government will put up $3 for each $1 put up by the state.

The council requested $739,935 for the 2-year period ending June 30, 1974, but the General Assembly approved only $350,540—too little, Attorney General Miller said to get enough federal "matching" funds to do the job.

His proposal is to turn over the excess consumer fund payment to the council, so that Virginia "would overcome her present financial inability" to pay for state and local drug programs with a total of $2 million in federal and state funds, in addition to the $350,540 appropriation.

Alabama, as part of a three-part effort at its state university, would be enabled to complete a research project that "is now close to synthesizing an anti-LSD drug."

Florida seeks to fund a scholarship program for needy students who agree that after graduation they will "participate in drug abuse control programs as trained professionals."

Texas would allocate money to community health centers, partly for "round-the-clock crisis assistance in drug emergencies, including telephone counseling, referral to appropriate help and pick-up service is needed."

"Minnesota would fund halfway houses, which play a vital role in the rehabilitation of drug-dependent individuals."

North Dakota and Vermont want to set up drug-abuse educational programs in their public school systems.

KEY FIGURE

In each of the 43 states that will share in the unclaimed consumer refund money the key figure has been the attorney general, the official who had sued the five antibiotics suppliers for antitrust damages. He, in turn, worked with health officials and others to develop a proposal tailored to the particular needs of the state. In Maryland, Deputy Attorney General Norman Polovoy worked with the Cancer Society and the president and medical school deans of the state university and Johns Hopkins to fashion what Polovoy calls a "very, very exciting" plan to teach medical students how to make life more comfortable for cancer victims.

In Kentucky, the decision to provide health care in parts of Appalachia where it now does not exist was made after consultation with specialists, including the deans of the state's two medical schools, according to Assistant Attorney General Laura Murell.

But while the attorneys general have led in the planning for use of the funds, it was a Washington lawyer—David L. Shapiro, of

Dickstein, Shapiro and Galligan—who developed the basic concept for enabling individual consumers to recover overcharges, and for making unclaimed consumer funds available for special public programs.

Shapiro's firm represents 20 states, including Virginia, that are involved in the litigation, plus the District of Columbia and two cities.

His grand design is about to be completed in multi-stage proceedings before Federal Judge Inzer B. Wyatt.

TWO HEARINGS

On Aug. 23 in New York, Wyatt will hold a hearing on the distribution of funds proposed for that city's 5,000 individual claimants. (Nothing would be left for a residual consumer fund for New York City.)

The next day, Wyatt will hold hearings on the distribution plans proposed for 10 other jurisdictions—Ohio, North Dakota, Vermont, Puerto Rico, Missouri, Pennsylvania, New Jersey, Maine, Texas and the City of Philadelphia.

If the judge finally approves plans for these 11 jurisdictions by early October, and if his rulings are not appealed, refund checks probably will go out by late fall.

Each refund will be reduced by a deduction for legal fees and services, in an amount to be determined by the court. Dickstein, Shapiro and Galligan has proposed that the deductions be 15 per cent of each share. Counsel for a number of jurisdictions, including Maryland, have proposed other arrangements.

Judge Wyatt will hold similar hearings for 35 other states, including Virginia, and more than 20 cities and counties in October, with refinds expected to be mailed by January.

LITIGATION SINCE 1963

The drugs involved in the hearings have been the subject of litigation since 1963, five years after Chas. Pfizer & Co. was awarded a patent for tetracycline. Of the three chemically related antibiotics then available to treat a broad spectrum of infections, tetracycline was acclaimed as generally the best. The others were Pfizer's Terramycin (oxytetracycline) and Lederle Laboratories' Aureomycin (chlortetracycline).

In the litigation, Pfizer, alleging infringement of the tetracycline patent, initially sued the Premo Pharmaceutical Corp., a small firm that was selling tetracycline by its generic name for much less than Pfizer was charging for its trade-named version.

Later in 1963, the Federal Trade Commission ruled tht Pfizer, with Lederle cooperating, had obtained the patent by committing fraud on the Patent Office—a bitterly contested charge that ultimately was upheld by the Court of Appeals in Cincinnati. The Supreme Court allowed the decision to stand.

The FTC ordered Pfizer and Lederle, a division of American Cyanamid Co. and originally the exclusive licensee for tetracycline, to stop fixing prices, exchanging price information and rigging bids. The order applied also to Bristol-Myers, which had won a license to produce and sell the antibiotic, and two firms licensed only to sell it, the Upjohn Co. and what was then E. R. Squibb & Sons, a division of Olin Mathieson Corp.

Encouraged by the commission order, Premo Pharmaceutical and principal customer, the City of New York, filed counterclaims in an effort to recover treble antitrust damages for overcharges from Pfizer and other licensees.

Premo settled in 1966. Eventually, however, all 50 states and almost 30 other jurisdictions either joined the City of New York antitrust action, in which David Shapiro's firm was counsel, retained other law firms to sue, or filed suit themselves.

While most of this litigation was pending, a federal court jury in New York convicted Pfizer, Cyanamid and Bristol of conspiring with two non-defendant co-conspirators, Olin Mathieson and Upjohn, to fix the prices of all three antibiotics and to monopolize a market from which all five firms grossed about $100 million a year, and of having achieved the desired monopoly.

The Justice Department showed at the trial that during the period covered by the indictment, 1953 to 1961, production costs for 100 capsules of tetracycline varied from $1.52 to $12. Yet, for eight years, all five suppliers charged pharmacists an unvarying $30.60, with the price for Aureomycin and Terramycin always being identical.

Fair prices, attorney Shapiro has suggesed, would have been $6 wholesale and $10 retail.

Each of the three defendant companies was fined $150,000, the maximum allowable.

The verdicts were important for another reason: they were potentially powerful evidence that the states and other plaintiffs could use in pressing their civil antitrust suits.

The verdicts were returned on Dec. 29, 1967. Within a matter of months, all five drug companies became deeply interested in the possibility of settling.

On Feb. 6, 1969, the companies formally agreed to the $100 million package settlement, the largest since the Sherman Act—the first antitrust law—was enacted in 1890. Aside from $3 million for antibiotic wholesalers and retailers, all of the money was for the political jurisdictions. Later, the companies agreed to pay an additional $32 million to non-government hospitals and to Blue Cross insurance plans.

The settlement offer was rejected, by seven states (California, Hawaii, Idaho, Kansas, North Carolina, Oregon and Utah) the Counties of Los Angeles and San Francisco, the City of Kansas City, Mo., on the theory that they could do better than the total of $17 million they were offered.

The rejection reflected, Judge Wyatt said later, "the exercise of questionable judgment" based on "a misplaced optimism about a highly problematical result."

He made that evaluation in an opinion in 1970, after the Court of Appeals in New York City had reversed the criminal conviction of Pfizer, Cyanamid and Bristol on grounds that District Judge Marvin E. Frankel had erred in instructing the jury. The Supreme Court, by a tie vote of 3–3 last Jan. 24, affirmed the appellate court.

"It is our present intention to re-try this case," the Justice Department's Antitrust Division told Judge Frankel in May. But years could go by before the case is tried and legal challenges disposed of, and the 10 political entities that rejected the settlement are deprived—possibly permanently—of the potent legal weapon of criminal convictions to use in their lawsuits, which are pending in Minneapolis before U.S. District Judge Miles W. Lord.

PLANS APPROVED

With relatively good purchase records available, the 67 jurisdictions that agreed to the settlement were able within a year or so to win court approval of a system to allocate awards from the $60 million set aside for overcharges of their hospitals and institutions and for overpayments for prescriptions filled by druggists for welfare patients.

As of last Dec. 16, $5,975,277, including interest, had been paid out for these purposes, including $250,900 to the District of Columbia, $499,755 to Boston, $347,236 to Baltimore, $71,988 to Chicago, $3,489,487 to New York City, $169,384 to Detroit, $236,091 to Erie County, N.Y., $448,868 to Philadelphia and $160,915 to Memphis. Still to be distributed is $46,133,597, also including interest as of last December.

The truly difficult problem—one that had not been solved in the 80 years that had passed since approval of the Sherman Act—was a practical one: how to enable individual consumers to recover overcharges that they had paid, directly or indirectly, to antitrust violators.

The breakthrough was lawyer Shapiro's idea for the states and their political subdivisions to serve as representatives of individual purchasers as a class and to use unclaimed monies for public health purposes.

The next step was to notify individual claimants. This was attempted, starting in July, 1969, with a quarter-page advertisement in every daily newspaper, and in Spanish- and Japanese-language newspapers in every participating jurisdiction. This process which cost $129,848, turned out to be far less successful, Shapiro has said, than news stories and "public service announcements" carried by radio and television stations.

Judge Wyatt authorized Shapiro's law firm to collect, collate and tabulate the claims and, where needed, to seek more information from claimants. This task, which included setting up an alphabetical card file to guard against possible fraudulent claims, took about a year and cost about $100,000.

CLAIMS VERIFIED

Meanwhile, in the 23 jurisdictions represented by Shapiro's firms, investigators, usually with personal interviews, sought verification of 2,321 claims filed by persons who asked $1,000 or more each. Only 29 were disallowed altogether, while 1,739 were verified, 320 were found to be overstated, and 158 were found to be understated. Similar verification was accomplished in the other jurisdictions.

One who claimed less than he was owed was the Richmond truck driver William Jordan.

Having insufficient records, and trying to recollect what he had spent over a 13-year period, he filed for $3,960.

Reine Kram, legal assistant to David Shapiro, went to Richmond to see if Jordan could verify his claim. Suspecting that he had inadvertently understated, she checked with four physicians who are experts in cystic fibrosis. She also learned that the Cystic Fibrosis Foundation of Houston had done a survey on the cost of antibiotics for victims of the disease. Her conclusion was that Jordan should claim $11,585, or triple what he had asked.

At another point, in Navasota, Tex., Miss Kram and an assistant attorney general were helped by the county sheriff to find several persons in remote rural sectors who needed aid in documenting refund claims. In other rural areas other local officials—even the mayor, in a few cases—gave similar help to investigators. Such "field audits" were not made for claims of less than $1,000 although lawyers tried to screen out obvious errors.

For years, antitrust activity by the states generally languished. Now, with the antibiotics cases—which Virginia Attorney General Miller calls "a very significant legal development"—it is beginning to increase.

Shapiro who says his firm put in 40,000 hours in 8½ years on the antibiotics litigation, is proud of his role in what he calls "the first antitrust cases in which individual consumers recovered anything." But he hopes that in future antitrust cases for which they will be a model, "there will be 400,000 claims, not 40,000."

States, principal cities and other political subdivisions will receive the amounts shown in the table (with interest computed to May 1, 1972) if the distribution plan wins judicial approval. Column A lists allocations of individual claims and consumer funds. Column B shows reimbursement for overpayment by institutions and for welfare.

	A	B
Alabama	$713,407.25	$1,460,524.71
Alaska	51,518.30	17,247.54
Arizona	285,361.97	285,636.96
Arkansas	388,405.85	538,932.78
Colorado	273,472.30	547,622.84
Connecticut	554,869.47	448,507.35
Delaware	99,086.05	71,142.23
Florida	1,022,546.57	2,347,306.18
Georgia	860,049.04	2,015,761.28
Idaho	146,641.46	247,905.76
Illinois	1,422.849.09	3,421,308.62
Indiana	1,018,586.25	1,712,857.78
Iowa	602,430.91	1,172,879.57

CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

MESSAGES FROM THE PRESIDENT—APPROVAL OF A JOINT RESOLUTION

Messages in writing from the President of the United States were communicated to the Senate by Mr. Leonard, one of his secretaries, and he announced that on August 16, 1972, the President had approved and signed the joint resolution (S.J. Res. 254) to authorize the printing and binding of a revised edition of Senate Procedure and providing the same shall be subject to copyright by the author.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer (Mr. STEVENSON) laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(The nominations received today are printed at the end of Senate proceedings.)

REVENUE SHARING ACT OF 1972

The ACTING PRESIDENT pro tempore. Under the previous order, the Chair lays before the Senate H.R. 14370, which will be stated by title.

The assistant legislative clerk read as follows:

A bill (H.R. 14370) to provide payments to localities for high-priority expenditures, to encourage the States to supplement their revenue sources, and to authorize Federal collection of State individual income taxes.

The Senate proceeded to consider the bill, which had been reported from the Committee on Finance with amendments.

The ACTING PRESIDENT pro tempore. Under the previous order, the unfinished business, Senate Joint Resolution 241, will be laid aside and will remain laid aside until the close of business today and until the close of business on September 5, 1972.

Mr. LONG. Mr. President, the basic problems we are dealing with in this bill are among the major problems in our economy today. Any close examination of the fiscal status of States and local governments indicates that they need fiscal assistance and need it now. It is hard to examine the financial situation of State and local governments without coming away with the conclusion that they are in serious financial trouble. Our State and local governments are daily confronted with urgent requests for more and more services; at the same time, the cost of providing these services is soaring.

Actually, State and local governments have tried valiantly to meet these problems. Between the fiscal years 1955 and 1970, State and local general expenditures rose from $33.7 billion to $131.3 billion. In terms of current dollars, this is virtually a tripling of their expenditures in this 15-year period. Actually, many of the larger governmental units have experienced still larger increases.

The State and local governments have tried to deal with this demand for more services in a fiscally responsible manner. General revenues of State and local governments from all sources in the same period, 1955 to 1970, have increased from $33.1 billion to $131.8 billion. This is a tripling of revenues in this period of time.

However, State and local governments are now finding it increasingly difficult to continue raising revenues, even though the demand for expenditures continues to rise unabated. In part, this is because their revenue systems—largely based on property taxes and sales taxes—have a limited capacity. This means they must seek rate increases to obtain new revenues, and rate increases—particularly in property taxes—are strongly resisted by taxpayers generally. Also because of their limited jurisdictions, localities, and even States, are finding that they dare not raise their taxes too much, because another local jurisdiction or even a nearby State may not make the same increase. As a resullt, if they do make the increase, they are encouraging taxpayers with large tax resources to move across the border, to locate themselves in adjoining States.

The cities, because of their still more limited jurisdictions, are facing especially several financial problems as middle-income and higher-income people rapidly move to the suburbs. In part, this is because of the high tax rates the cities have had to impose to meet the demand for more services. This, in turn, leaves the cities with the ever-increasing burden of providing services to large numbers of relatively low-income people who are able to pay only a relatively small share of the cost of these services. The more the city tries to meet these problems by raising taxes, the more rapid is the exodus of those with fiscal resources to the suburbs.

But the current financial problems are not confined to the cities. Small communities, especially in rural areas are also in financial distress, particularly where their inhabitants are poor and the tax base is limited. In their case, their citizenry virtually no government services at all.

The Federal Government has, of course, tried to help the State and local governments in their financial distress. In the period from 1955–70, for example, Federal grants in aid increased from a little over $3 billion to nearly $24 billion—about a sevenfold increase. Since 1970, this has increased to a level of $38.8 billion in 1973—still another 80-percent increase.

However, there has been a real problem with most of the aid we have provided up to now. The aid has been in the form of categorical aid and has been provided on a matching basis. The effect of this has been to encourage State and local governments to expand their expenditures in specified, narrowly defined program areas. This has been true because in these limited areas, for every dollar of their own money they spend, they can receive another dollar from the Federal Government. In some of these areas such as social services, for every dollar of their own money they have received $3 from the Federal Government. The distortions in expenditure patterns that this causes for the State and local governments is clearly illustrated by the direction of the social service expenditures of State and local governments in the past few years. We have seen expenditures in these areas blossom from practically nothing to totals almost as great as prior total government expenditures.

The matching categorical grant programs actually have in many cases intensified the problems of State and local governments. By always compelling the State and local governments to use their limited resources for categorical matching programs, the result is that these governmental units frequently cannot use their own funds for what they consider to be their most pressing needs. Ask any Governor or mayor, and he will tell you that if he could determine the purpose for which the Federal aid is spent, he could make far better use of these funds—and for more efficient use—than he does now.

The revenue-sharing measure which we have before us is designed to deal with the several facets of the problem which I have been outlining to you. First, it will help the State and local governments by providing them immediately with more funds—up to $7.5 billion a year by 4 years from now.

Second, by sharing with the State and local governments up to 7 percent of the Federal individual income tax revenues, we are sharing our most flexible tax source—one which is progressive in its impact and one which is built on the basis of ability to pay.

Third, and probably most important, these additional funds which are being made avaliable to the States and localities are not categorical grants and are not matching programs. These funds are a shared revenue being turned over to the States and localities for them to apply their own priorities, rather than our superimposing on them here in Washington our notion of local priorities. By giving the States and localities freedom to spend these moneys as they and their citizenry believe desirable, I believe that we will receive far more real results per dollar of aid than is true under the ham-strung categorical matching programs. Under revenue sharing, the localities can spend the money where the need is rather than where they can get the most dollars from Uncle Sam.

It is because this represents a new departure even more than because of which in my opinion makes this measure so important. It is a new intergovernmental fiscal device—it is a sharing of the Federal Government's most productive revenue source with the States and localities. Moreover, it is a sharing without this Nation's trying to tell them how to spend the money.

Let me turn now to the specifics of the bill.

The committee's bill, like the House measure, provides a 5-year program of aid to State and local governments starting January 1, 1972; $5.3 billion of revenue-sharing funds is to be distributed to the State and local governments in 1972. Beginning in January 1973 this is to be further increased by $1 billion a year in supplementary grants, which take the place of social service grants—other than those for child welfare and family planning—in the future. In addition, the revenue-sharing funds are increased by annual increments of $300 million in each of the 4 succeeding years, reaching a level of about $6.5 billion in the fifth year of the program. Taking the supplementary grants into account, this means that the total grants under this bill will be $7.5 billion a year by the end of the fifth year.

As in the House bill, the committee version of the bill has a starting date of January 1, 1972. We believe that this starting date is desirable because this program has been under consideration for a long time and, as a result, many State and local governments have already taken the aid into consideration in their budgets. Without this date there would be many crises in State and local finance throughout the country.

Let me turn now to the description of the revenue-sharing bill. The committee's bill allocates two-thirds of the total revenue-sharing payments to local governments and one-third to the States. We made this allocation because local governments generally are in a more precarious financial condition that State governments and also because local governments now account for about two-thirds of total State and local expenditures.

The House bill provides for a somewhat similar two-thirds—one-third allocation of the $5.3 billion initial level of payments.

The committee bill also provides that the $300 million of annual increase in the revenue-sharing payments after the first year also are to be divided between localities and States on a two-thirds—one-third basis. Similarly, the supplemental payments of $1 billion a year are also divided on this same basis. The House bill would have allocated all of the $300 million of annual increase in revenue-sharing funds to the States—a results which we thought was unfair to the localities in view of the expected increase in their financial burdens.

Certainly, one of our major departures from the House bill was in the formulas for the distribution of the revenue sharing funds to the States and localities. Here, we made a number of very substantial improvements. The committee bill is more effective than the House bill in "putting the money where the needs are."

Instead of having one formula for distribution to the States and another for distribution to local governments within the States as under the House bill, the committee bill provides a single formula to serve both purposes. This has the advantage of providing consistent treatment in allocating funds to State and local governments. This standard formula distributes the total revenue sharing funds to the States and their local governments on the basis of population weighted by "tax effort" and by relative poverty levels as they are measured by inverse relative income levels.

This formula recognizes that the need of a governmental unit for revenue-sharing increases with the size of its population and to the extent the income levels of its residents are lower than in other communities.

By taking tax effort into consideration in the distribution formula, the committee bill recognizes that the extent that State and local governments are willing to help themselves should also be used to measure the extent of Federal aid.

The formula in the committee bill also avoids a number of pitfalls of the House formulas. The House bill, for example, distributed funds to the States only on an incentive basis—that is, on the basis of general tax effort and income tax collections. This ignored the "need" factor in distributing funds and meant that the lower income States received less than their fair share.

Another defect of the House bill is that the distributions to the States were to be based in substantial part on their income tax collections. This would have meant that the Federal Government would be dictating to the State governments what taxes they should use. This discriminates markedly against States with either no income tax or low income taxes. It also would have the effect of distorting the choices of the States in determining what taxes they should impose or increase in the light of their particular needs. The committee bill by taking into consideration general tax effort from all sources avoids this deficiency.

The House formula for distributing funds to local governments also contained defects. This formula would have given equal weight to population, urbanization, and relative income levels. The House selected the urbanization factor, and to some extent the relative income factor, in order to give significant relief to the cities which are faced with especially serious financial problems. However, in practice, the House formula would distribute relatively large amounts of aid to well-to-do suburbs, reducing the amounts available for distribution to the cities and low income rural areas.

The reason for this defect in the House formula is the emphasis it places on urbanized areas, which include not only the cities but also the surrounding suburbs. The committee bill, by emphasizing both low-income levels and tax effort, channels more of the revenue-sharing funds, both to the cities and to the poorer rural areas. New York City, for example, will receive over $33 per capita under the committee bill as compared to $20 per capita under the House bill; Detroit will receive over $28 per capita instead of $17; and Gary, Ind., over $22 per capita instead of less than $14 per capita.

I realize that there has been some concern because the formula for revenue sharing in helping some of the poorer States has had the effect of decreasing to some extent the amount of funds which, under the House version, would go to our more populous States. This point of view was brought to the attention of the committee by the very able Senator from Connecticut (Mr. RIBICOFF) in his very articulate and effective manner. We were sympathetic with his concern. The fact that tax effort is one of the elements in our revenue-sharing distribution formula helps the urbanized areas. However, we took even more direct aim at this problem by the manner in which the supplementary grants are distributed. This $1 billion supplemental grant under the committee action is distributed to each State on the basis of its urbanized population, but with a floor providing that no less than 30 percent of the population of each State is to be considered as urbanized.

The effect of this action was to distribute this $1 billion in a manner which appreciably benefited the more urban and industrialized States. As a result, the combined effect of the revenue sharing and supplemental grant program is that all but four States, and the District of Columbia, receive more funds under the action taken by the committee than was the case in the House bill. This is shown in table 1 in the committee report which compares the distribution by States under the committee bill with the distribution provided by the original administration proposal and the House bill. Mr. President, I ask unanimous consent that the table showing this distribution be printed at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 1.—DISTRIBUTION OF FUNDS TO STATES UNDER ADMINISTRATION PROPOSAL, HOUSE AND FINANCE COMMITTEE VERSIONS OF H.R. 14370 AND DIFFERENCES IN THE AMOUNTS DISTRIBUTED UNDER THE THREE VERSIONS OF THE BILL

[Amounts in millions of dollars]

States	Administration proposal [1]	House bill [2]	Committee bill [3]	Differences between— House bill and administration proposal	Committee bill and administration proposal	Committee bill and House bill
United States, total	5,000.0	5,300.0	6,300.0	300.0	1,300.0	1,000.0

[1] The administration proposal would have distributed funds to the States on the basis of population weighted by general revenue effort. This is for fiscal year 1973.

[2] The House bill would have distributed $1,800,000,000 to the States based on general State and local tax effort, and State individual income tax receipts, and $3,500,000,000 to the local units of government within each State based on 3 factors: population, urbanizer population, and relative income. This is the amount for the last six months of the fiscal year 1972 placed on an annual basis.

[3] The committee formula for distributing revenue sharing funds to the States is based on State population multiplied by the inverse of the State relative per capita income (the lower the per capita income the higher the weight of the factor) multipled by tax effort (State and local tax collections as a percentage of total personal income in the State). The amounts shown also include the supplemental sharing grants. These are distributed on the basis of urbanized population (with a 30-percent floor). The revenue sharing distribution is the amount for the last six months of fiscal 1972, placed on an annual basis. The supplemental sharing grants shown are those which first become applicable on January 1, 1973.

Note: Details may not add to totals because of rounding.

Mr. LONG. Mr. President, Senators will note, in the last column of this table that, as I indicated, all but four of the States, and the District of Columbia, do better under the committee bill than under the House bill. Even in these States the extent to which the funds are decreased from the House level is quite small.

The committee's bill also gives each State considerable flexibility in revising the formula for distributing the funds to its local governments. For the first 12 months of the program the funds must be distributed to the local governments on the basis of the standard formula—namely, population weighted by both tax effort and relative income. After the first 12 months of the program, however, each State may continue to have the funds distributed to its local governments on the basis of the standard formula, or it may by law choose to have the distribution made on the basis of two alternative factors. These alternative factors are population weighted by relative income and population weighted by tax effort. The State may use any combination of the two factors it desires. This is in accord with the principle we have tried to follow in this bill of leaving with the State and local governments the maximum discretionary powers.

Besides the improvement in the distribution formulas, the committee amended the House bill in a number of other respects.

Probably the most important of these amendments is the one deleting the House provision which requires local governments to spend the aid funds only for specified high-priority items. In the opinion of the committee, forcing local governments to spend the revenue-sharing funds for certain specified items would be inconsistent with the broad objective of this bill—to give the State and local governments maximum discretion in making the most efficient use of these funds. We are convinced that local governments know better than we do in the Senate as to what their needs are. Dictation by the Federal Government as to how they should use the revenue-sharing funds runs contrary to our whole understanding of the purpose of the bill. We also believe that to do so would deprive them of the right to make the most efficient use of these funds.

For similar reasons, we deleted the House provision which requires laborers and mechanics employed by contractors and subcontractors on construction financed in whole or in part from revenue-sharing funds to be paid wages at rates complying with the Davis-Bacon Act. The committee believes that it is no more appropriate to specify the wage rates to be paid from funds in such cases than to specify how the local governments are to spend the funds in the first instance.

Although, as I have indicated, we do not believe in deciding the question of priorities for the local governments, we do believe that the local governments should take their citizens' views into account in determining expenditure priorities. As a result, the committee adopted an amendment to require State and local governments to make reports to their residents indicating how they plan to spend these funds. These reports must be published in newspapers of local circulation and must also be made available to all communications media within their geographic area.

I also want to call the Senator's attention to the fact that the committee bill generally accepted the House provision authorizing the Federal Government to administer and collect State income taxes for those States which agree on a voluntary basis to have the Federal Government perform this function for them. States which wish to enter into such agreements will, of course, have to conform their income taxes to the Federal income tax. Otherwise, it would be impractical for the Federal Government to collect State taxes. However, the fact that a significant number of States have already adopted income taxes that conform substantially with the Federal income tax suggests that this may not be too much of an obstacle.

While the committee accepted most of the House provisions in regard to Federal collection of State income taxes, it did make a few changes. Probably the most important of these is the effective date change providing that the piggyback program will go into effect after January 1, 1974, when any number of States accounting for at least 5 percent of the taxpayers in the United States agree to have the Federal Government collect their income taxes. The House bill would also have required five States to request Federal collection of their taxes for the program to be instituted.

Let me turn now from revenue sharing to the important provisions the committee has adopted in regard to social services. Before 1962, social services provided to welfare recipients were subject to the same 50 percent Federal matching as was available for administrative expenses. In order to encourage States to prevent and reduce dependency on welfare, the Congress in 1962 increased Federal matching for social services to 75 percent. For 7 years, Federal appropriations for social services increased gradually, more or less consistent with congressional intent, reaching a level of about $350 million in fiscal year 1969. Two years later, however, the amount had more than doubled to about $750 million, and it doubled again in 1 year, exceeding $1.5 billion in 1972. It is now estimated that the social services provisions of the Social Security Act will be exploited to the tune of almost $5 billion in the current fiscal year unless we do something.

The committee bill deals with this problem by continuing 75 percent Federal matching for child care and family planning services—the two basic kinds of social services the committee had in mind when it set up the program. Beginning January 1, 1973, however, there is to be no more Federal matching for other social services under the welfare titles of the Social Security Act. Instead, as I have already indicated, the committee bill establishes a new billion-dollar grant program—with no State or local matching required. No strings are imposed as to how these funds are to be spent. One-third of the amounts are to go directly to State governments, while the remaining two-thirds are to go to local governments. As I have indicated, distribution of the funds among the States are to be on the basis of urbanized population, while within the State the distributions are to be made on the same basis as the revenue-sharing grants.

The committee bill allows for a 6-month transitional period, from July 1 to December 31, 1972, during which States will still receive 75 percent Federal matching for continuing services at the level they were provided before August 9, 1972, the date of the committee's decision.

I believe that what I have said fairly summarizes the bill and describes the more important changes we have made in the House provisions. Before I conclude, however, I want to discuss two further points.

The first of these relates to the problem of where the funds for the revenue-sharing program are to come from in view of the Federal Government's present deficit position. I certainly am well aware of the Federal Government's fiscal problems at the present time. No one can be a member of the Finance Committee and have the responsibility which we have for raising necessary revenue and for action on the debt limitation without being acutely aware of the present fiscal problems of the Nation.

I certainly would agree that the deficits we have run in the fiscal years 1971 and 1972 of $23 billion in each year plus the significantly greater deficit which we undoubtedly will run in the fiscal year 1973 present us with serious financial problems. I certainly can also agree that steps need to be taken to improve the Federal budget position. I cannot agree, however, that the presence of these large deficits in the Federal budget should in themselves preclude revenue sharing with the State and local governments in view of their very real need for fiscal assistance. To permit Federal deficits to forestall revenue sharing implies that State and local fiscal assistance had a lower priority in terms of expenditures than all other present expenditure programs. This is certainly a position I, for one, cannot accept. I believe that the revenue sharing represents one of the Nation's most vital needs, and I am unwilling to forego this program because of our present deficit position on other Federal spending programs.

Much of our fiscal problems can, of course, be overcome by again restoring full employment in this country. However, to the extent this does not achieve the desired end, I believe that it is other expenditure programs, and not revenue sharing, which should be eliminated or reduced.

Finally, let me deal with the problem that some of my friends on the Appropriations Committee apparently have with this bill. They have expressed concern because this bill contains a permament appropriation. They have indicated the intent of asking that this bill be amended to appropriate funds only for the first year and a half and then leave to the Appropriations Committee, for annual consideration, the question of appropriations for the subsequent years.

I can understand their concern with this matter, but I do not believe that they understand the basic nature of this program. As the name of the bill implies, this is a program for the "sharing" of revenues. This in itself implies that it should be a continuing and ongoing program and not subject to annual appropriations. In this respect, we have modeled the fund after the old age and survivors insurance trust fund as well as other Social Security Act trust funds. In this bill, we have provided that 7 percent of Federal individual income taxes annually are to be set aside or permanently appropriated to a trust fund for State and local governments. I note that this is precisely how the social security benefit payments have been handled since 1936 without any question being raised as to the exclusive jurisdiction over this matter by the Finance Committee.

More important, however, to subject this program to the vicissitudes of annual appropriations is to destroy at least half of the value of the revenue sharing program. The very essence of revenue sharing is that here are funds which the local government can definitely plan upon and take into account in their budgetary considerations. We all know the problems of the categorical grant programs at the present time and how the local governments often do not have these funds available to them until the year is partially or sometimes largely past. They cannot plan for efficient and economical use of the money on this basis and in fact would not be able to count on revenue sharing funds if they were subject to annual appropriations.

We, in this revenue-sharing program, are expressing our trust in the State and local governments. We are expressing our belief that, given assurance that they will have these funds, they will spend them economically and in the public interest. If we are not willing to accept this thesis we are in reality not willing to accept a real revenue sharing program. This is the problem which I fear some of my friends on the Appropriations Committee failed to recognize. This is one of the very features of the bill which makes this landmark legislation. To destroy the concept of sharing revenue with the States and localities through the use of the trust fund destroys much of the originality and value of this concept of the sharing of revenue.

In conclusion, I want to again emphasize the importance of this legislation and to urge my colleagues to consider it carefully during the recess which we are about to begin. I hope it will be possible for us to complete action on this shortly after our return. It is important that we do so. Time is running out on us to act on this problem of the fiscal needs of our States and local governments. We must not fail them if our federal system is to survive.

Mr. President, I ask unanimous consent that the committee amendments be considered and agreed to en bloc, and that the bill as thus amended be regarded as original text for purpose of further amendment.

The **PRESIDING OFFICER**. Is there objection? The Chair hears none, and it is so ordered.

The amendments agreed to en bloc are as follows:

On page 1, following the enacting clause, strike out all through line 17 on page 34, and insert the following new language:

TITLE I—SHARING OF INDIVIDUAL INCOME TAX REVENUES WITH STATE AND LOCAL GOVERNMENTS

Subtitle A—ALLOCATION AND PAYMENT OF FUNDS

SEC. 101. SHORT TITLE.

This title may be cited as the "Revenue Sharing Act of 1972".

SEC. 102. CREATION OF TRUST FUND.

(a) IN GENERAL.—There is created on the books of the Treasury of the United States a

Trust Fund to be known as the Revenue Sharing Trust Fund (referred to in this subtitle as the "Trust Fund"). The Trust Fund shall consist of the amounts appropriated to it as provided in this section. There are hereby appropriated to the Trust Fund, out of any moneys in the Treasury not otherwise appropriated, amounts equivalent to—

(1) for the fiscal year ending June 30, 1972, 3½ percent of the Federal individual income taxes received in the Treasury during such fiscal year;

(2) for the fiscal years ending June 30, 1973, June 30, 1974, June 30, 1975, and June 30, 1976, 7 percent of the Federal individual income taxes received in the Treasury during each such fiscal year; and

(3) for the fiscal year ending June 30, 1977, 3½ percent of the Federal individual income taxes received in the Treasury during such fiscal year.

The amounts appropriated by paragraphs (1), (2), and (3) shall be transferred from time to time from the general fund of the Treasury to the Trust Fund on the basis of estimates made by the Secretary of the amounts referred to in such paragraphs.

(b) Federal Individual Income Taxes.—For purposes of subsection (a), the term "Federal individual income taxes" means the tax imposed by chapter 1 of the Internal Revenue Code of 1954 on the income of individuals and the tax deducted and withheld at source on wages under chapter 24 of such Code.

(c) Trustee; Reports to Congress.—The Secretary of the Treasury shall be the trustee of the Trust Fund, and shall report to the Congress not later than March 1 of each year on the operation and status of the Trust Fund during the preceding fiscal year.

(d) Expenditures From Trust Fund.—Except as provided in this subtitle, amounts in the Trust Fund shall be available for, and may be used only for, payments by the Secretary to State governments and units of local government under this subtitle. Such amounts shall remain available without fiscal year limitation.

(e) Transfers From Trust Fund to General Fund.—The Secretary shall from time to time transfer from the Trust Fund to the general fund of the Treasury any moneys in the Trust Fund which he determines will not be needed to make payments to State governments and units of local government under this subtitle.

Sec. 103. Payments to State and Local Governments

Except as otherwise provided in this subtitle, the Secretary shall, for each entitlement period, pay out of the Trust Fund to—

(1) each State government a total amount equal to the entitlement of such State government for the period (determined under section 104(c)), and

(2) each unit of local government a total amount equal to the entitlement of such unit for the period (determined under section 105).

Such payments shall be made in installments during the entitlement period but not less often than once each quarter. Such payments for any entitlement period may be initially made on the basis of estimates. Proper adjustment shall be made in the amount of any payment to a State government or a unit of local government, to the extent that the payments previously made to such government under this subtitle were in excess of or less than the amounts required to be paid.

Sec. 104. Allocation Among States

(a) In General.—The Secretary shall, for each entitlement period, allocate among the States so much of the moneys appropriated to the Trust Fund for the fiscal year which includes such entitlement periods as does not exceed—

(1) $2,650,000,000, in the case of the entitlement period beginning January 1, 1972,

(2) $5,450,000,000, in the case of the entitlement period beginning July 1, 1972,

(3) $5,750,000,000, in the case of the entitlement period beginning July 1, 1973,

(4) $6,050,000,000, in the case of the entitlement period beginning July 1, 1974,

(5) $6,350,000,000, in the case of the entitlement period beginning July 1, 1975, and

(6) $3,325,000,000, in the case of the entitlement period beginning July 1, 1976.

(b) Allocation Among States.—There shall be allocated to each State for each entitlement period an amount which bears the same ratio to the total amount to be allocated for such period under subsection (a) as—

(1) the population of that State, multiplied by the general tax effort factor of that State, multiplied by the relative income factor of that State, bears to

(2) the sum of the products determined under paragraph (1) for all States.

(c) Division Between State and Local Governments.—The State government shall be entitled to receive one-third of the amount allocated to that State for each entitlement period. The remaining portion of each State's allocation shall be allocated among the units of local government of that State as provided in section 105.

(d) State Must Maintain Transfers to Local Governments.—

(1) General rule.—The entitlement of any State government for any entitlement period beginning on or after July 1, 1973, shall be reduced by the amount (if any) by which—

(A) the average of the aggregate amounts transferred by the State government (out of its own sources) during such period and the preceding entitlement period to all units of local government in such State, is less than,

(B) the similar aggregate amount for the one-year period beginning July 1, 1971.

For purposes of subparagraph (A), the amount of any reduction in the entitlement of a State government under this subsection for any entitlement period shall, for subsequent entitlement periods, be treated as an amount transferred by the State government (out of its own sources) during such period to units of local government in such State.

(2) Adjustment where state assumes responsibility for category of expenditures.—If the State government establishes to the satisfaction of the Secretary that since June 30, 1972, it has assumed responsibility for a category of expenditures which (before July 1, 1972) was the responsibility of local governments located in such State, then, under regulations prescribed by the Secretary, the aggregate amount taken into account under paragraph (1)(B) shall be reduced to the extent that increased State government spending (out of its own sources) for such category has replaced corresponding amounts which for the one-year period beginning July 1, 1971, it transferred to units of local government.

(3) Special rule for period beginning July 1, 1976.—In the case of the entitlement period beginning July 1, 1976, and ending December 31, 1976, the aggregate amount taken into account under paragraph (1)(A) for the preceding entitlement period and the aggregate amount taken into account under subparagraph (A) shall be allocated to the amounts which (but for this paragraph) would be taken into account.

(4) Reduction in entitlement.—If the Secretary has reason to believe that paragraph (1) requires the reduction of such titlement of any State government for any entitlement period, he shall give reasonable notice and opportunity for hearing to the State. If, thereafter, he determines that paragraph (1) requires a reduction in the entitlement, he shall also determine the amount of such reduction and shall notify the Governor of such State of such determinations and shall withhold from subsequent payments to such State government under this substitle an amount equal to such reduction.

(5) Transfer to general fund.—An amount equal to the reduction in the entitlement of any State government which results from the application of this subsection (after any judicial review under section 143) shall be transferred from the Trust Fund to the general fund of the Treasury on the day on which such reduction becomes final.

Sec. 105. Allocations to Local Governments Within a State

(a) Allocation among county areas.—The amount to be allocated to the units of local government within a State for any entitlement period shall be allocated among the county areas located in that State so that each county area will receive an amount which bears the same ratio to the total amount to be allocated to the units of local government within that State as—

(1) the population of that county area, multiplied by the general tax effort factor of that county area, multiplied by the relative income factor of that county area, bears to

(2) the sum of the products determined under paragraph (1) for all county areas within that State.

(b) Allocation to County Governments, Municipalities, Townships, Etc.—

(1) County governments.—The county government shall be allocated that portion of the amount allocated to the county area for the entitlement period under subsection (a) which bears the same ratio to such amount as the adjusted taxes of the county government bear to the adjusted taxes of the county government and all other units of local government located in the county area.

(2) Other units of local government.—The amount remaining for allocation within a county area after the application of paragraph (1) shall be allocated among the units of local government (other than the county government and other than township governments) located in that county area so that each unit of local government will receive an amount which bears the same ratio to the total amount to be allocated to the units of local government within that county area as—

(A) the population of that local government, multiplied by the general tax effort factor of that local government, multiplied by the relative income factor of that local government, bears to

(B) that portion of each amount set aside under subparagraph (A) for all units of local government within the county area (other than the county government and other than township governments).

(3) Township governments.—If the county area includes one or more township governments, then before applying paragraph (2)—

(A) there shall be set aside for allocation under subparagraph (B) to such township governments that portion of each amount allocated to the county area for the entitlement period which bears the same ratio to such amount as the sum of the adjusted taxes of all such township governments bears to the aggregate taxes of the county government, such township governments, and all other units of local government located in the county area, and

(B) the sum of the products determined under paragraph (1)(B) shall be one-half of each township government on the same basis as amounts are allocated to units of local government under paragraph (2).

If this paragraph applies with respect to any county area for any entitlement period, the remaining portion allocated under paragraph

(2) to the units of local government located in the county area (other than the county government and the township governments) shall be appropriately reduced to reflect the amounts set aside under subparagraph (A).

(4) Entitlement.—

(A) In general.—Except as otherwise provided in this paragraph, the entitlement of any unit of local government for any entitlement period shall be the amount allocated to such unit under this subsection (after taking into account any applicable modification under subsection (c)).

(B) Maximum and minimum per capita entitlement.—Subject to the provisions of subparagraphs (C) and (D), the per capita amount allocated to any county area or any unit of local government (other than a county government) within a State under this section for any entitlement period shall not be less than 20 percent, nor more than 145 percent, of two-thirds of the amount allocated to the State under section 104(a), divided by the population of that State.

(C) Limitation.—The amount allocated to any unit of local government under this section for any entitlement period shall not exceed 50 percent of the sum of (i) such government's adjusted taxes, and (ii) the intergovernmental transfers of revenue to such government (other than transfers to such government under this subtitle).

(D) Entitlement less than $200, or governing body waives entitlement.—If (but for this subparagraph) the entitlement of any unit of local government below the level of the county government—

(i) would be less than $200 for any entitlement period ($100 for an entitlement period of 6 months), or

(ii) is waived for any entitlement period by the governing body of such unit,

then the amount of such entitlement for such period shall (in lieu of being paid to such unit) be added to, and shall become a part of, the entitlement for such period of the county government of the county area in which such unit is located.

(5) Adjustment of entitlement.—

(A) In general.—In adjusting the allocation of any county area or unit of local government, the Secretary shall make any adjustment required under paragraph (4)(B) first, any adjustment required under paragraph (4)(C) next, and any adjusted required under paragraph (4)(D) last.

(B) Adjustment for application of maximum or minimum per capita entitlement.—The Secretary shall adjust the allocations made under this section to county areas or to units of local government in any State in order to bring those allocations into compliance with the provisions of paragraph (4)(B). In making such adjustments he shall make any necessary adjustments with respect to county areas before making any necessary adjustments with respect to units of local government.

(C) Adjustment for application of limitation.—In any case in which the amount allocated to a county government or to a unit of local government within a county area is reduced under paragraph (4)(C) by the Secretary, the amount of that reduction—

(i) in the case of a unit of local government (other than a county government), shall be added to and increase the allocation of the government of the county in which it is located, unless (on account of the application of paragraph (4)) that county government may not receive it, in which case the amount of the reduction shall be added to and increase the allocation of the government of the State in which that unit of local government is located; and

(ii) in the case of a county government, shall be added to and increase the allocation of the government of the State in which it is located.

(D) Adjustment for application of minimal allocation or waiver.—In any case in which the amount of the allocation to a unit of local government is reduced under paragraph (4) (D), the Secretary shall allocate that amount in accordance with the provisions of that paragraph.

(c) Special Allocation Rules.—

(1) Optional formula.—A State may by law provide for the allocation of funds among county areas, or among units of local government (other than county governments), on the basis of the population multiplied by the general tax effort factors of such areas or units of local government, on the basis of the population multiplied by the relative income factors of such areas or units of local government, or on the basis of a combination of those two factors. Any State which provides by law for such a variation in the distribution formula provided by subsection (a), or by paragraphs (2) and (3) of subsection (b), shall notify the Secretary of such law not later than 30 days before the beginning of the first entitlement period to which such law is to apply. Any such law shall—

(A) provide for allocating 100 percent of the aggregate amount to be allocated under subsection (a), or by paragraphs (2) and (3) of subsection (b);

(B) apply uniformly throughout the State; and

(C) apply during the period beginning on the first day of the first entitlement period to which it applies and ending on December 31, 1976.

(2) Certification.—Paragraph (1) shall apply within a State only if the Secretary certifies that the State law complies with the requirements of such paragraph. The Secretary shall not certify any such law with respect to which he receives notification later than 30 days prior to the entitlement period during which it is to apply.

(3) Special rule for six-month period beginning January 1, 1973.—For purposes of this subsection, the period beginning January 1, 1973, and ending June 30, 1973, shall be treated as a separate entitlement period with respect to any State law which meets the requirements of paragraph (1) and provides for the allocation during that period of one-half of the funds otherwise allocated under subsection (a), or paragraphs (2) and (3) of subsection (b), for the entitlement period beginning July 1, 1972.

(d) Governmental Definitions and Related Rules.—For purposes of this section—

(1) Units of local government.—The term "unit of local government" means the government of a county, municipality, township, or other unit of government below the State which is a unit of general government (determined on the basis of the same principles as are used by the Bureau of the Census for general statistical purposes).

(2) Certain areas treated as counties.—In any State where, for part or all of its geographic area, the next unit of local government below the State government is a city or other unit, the geographic area of such unit shall be treated as a county area (and such unit shall be treated as a county government) with respect to that portion of the State's geographic area.

(3) Townships.—The term "township" includes equivalent subdivisions of government having different designations (such as "towns"), and shall be determined on the basis of the same principles as are used by the Bureau of the Census for general statistical purposes.

(4) Units of local government located in larger entity.—A unit of local government shall be treated as located in a larger entity if part or all of its geographic area is located in the larger entity.

(5) Only part of unit located in larger entity.—If only part of a unit of local government is located in a larger entity, such part shall be treated for allocation purposes as a separate unit of local government, and all computations shall, except as otherwise provided in regulations, be made on the basis of the ratio which the estimated population of such part bears to the population of the entirety of such unit.

(6) Boundary changes, governmental reorganization, etc.—If, by reason of boundary line changes, by reason of State statutory or constitutional changes, by reason of annexations or other governmental reorganizations, or by reason of other circumstances, the application of any provision of this section to units of local government does not carry out the purposes of this subtitle, the application of such provision shall be made, under regulations, in a manner which is consistent with such purposes.

Sec. 106. Definitions and Special Rules For Application of Allocation Formulas.

(a) In General.—For purposes of this subtitle—

(1) Population.—Population shall be determined on the same basis as resident population is determined by the Bureau of the Census for general statistical purposes.

(2) Income.—Income means total money income received from all sources, as determined by the Bureau of the Census for general statistical purposes.

(3) Personal income.—Personal income means the income of individuals, as determined by the Department of Commerce for national income accounts purposes.

(4) Dates for determining allocations and entitlements.—Except as provided in regulations, the determination of allocations and entitlements for any entitlement period shall be made as of the April 1 immediately preceding the beginning of such period.

(5) Intergovernmental transfers.—The intergovernmental transfers of revenue to any government are the amounts of revenue received by that government from other governments as a share in financing (or as reimbursement for) the performance of governmental functions, as determined by the Bureau of the Census for general statistical purposes.

(6) Data used; uniformity of data.—

(A) General rule.—Except as provided in subparagraph (B), the data used shall be the most recently available data provided by the Bureau of the Census or the Department of Commerce, as the case may be.

(B) Use of estimates, etc.—Where the Secretary determines that the data referred to in subparagraph (A) are not current enough or are not comprehensive enough to provide for equitable allocations, he may use such additional data (including data based on estimates) as may be provided for in regulations.

(b) General Tax Effort Factor of States.—For purposes of this subtitle—

(1) In general.—The general tax effort factor of any State for any entitlement period is (A) the net amount collected from the State and local taxes of such State during the most recent reporting year, divided by (B) the aggregate personal income (as defined in paragraph (3) of subsection (a)) attributed to such State for the same period.

(2) State and local taxes.—

(A) Taxes taken into account.—The State and local taxes taken into account under paragraph (1) are the compulsory contributions exacted by the State (or by any political subdivision of the State) for public purposes (other than employee and employer assessments and contributions to finance retirement and social insurance systems, and other than special assessments for capital outlay), as such contributions are determined by the Bureau of the Census for general statistical purposes.

(B) Most recent reporting year.—The most recent reporting year with respect to any entitlement period consists of the years taken into account by the Bureau of the Census in its most recent general determination of State and local taxes made before the close of such period.

(c) General Tax Effort Factor of County Area.—For purposes of this subtitle, the general tax effort factor of any county area for any entitlement period is—

(1) the adjusted taxes of the county government plus the adjusted taxes of each unit of local government within that county area, divided by

(2) the aggregate income (as defined in paragraph (2) of subsection (a)) attributed to that county area.

(d) General Tax Effort of Unit of Local Government.—For purposes of this subtitle—

(1) In general.—The general tax effort factor of any unit of local government for any entitlement period is—

(A) the adjusted taxes of that unit of local government, divided by

(B) the aggregate income (as defined in paragraph (2) of subsection (a)) attributed to that unit of local government.

(2) Adjusted taxes.—

(A) In general.—The adjusted taxes of any unit of government are—

(i) the compulsory contributions exacted by such government for public purposes (other than employee and employer assessments and contributions to finance retirement and social insurance systems, and other than special assessments for capital outlay) as such contributions are determined by the Bureau of the Census for general statistical purposes,

(ii) adjusted (under regulations prescribed by the Secretary) by excluding an amount equal to that portion of such compulsory contributions which is properly allocable to expenses for education.

(B) Certain sales taxes collected by counties.—In any case where—

(i) a county government exacts sales taxes within a unit of local government and transfers part of all of such taxes to such unit without specifying the purposes for which such unit may spend the revenues, and

(ii) the Governor of the State notifies the Secretary that the requirements of this subparagraph have been met with respect to such taxes,

then the taxes so transferred shall be treated as the taxes of the unit of local government (and not the taxes of the county government).

(e) Relative Income Factor.—For purposes of this subtitle, the relative income factor is a fraction—

(1) in the case of a State, the numerator of which is the per capita income of the United States and the denominator of which is the per capita income of that State;

(2) in the case of a ciunty area, the numerator of which is the per capita income of the State in which it is located and the denominator of which is the per capita income of that county area; and

(3) in the case of a unit of local government, the numerator of which is the per capita income of the county area in which it is located and the denominator of which is the per capita income of the geographic area of that unit of local government.

For purposes of this subsection, per capita income shall be determined on the basis of income as defined in paragraph (2) of subsection (a).

Sec. 107. Reports to Secretary; Publication.

(a) Reports on Use of Funds.—Each State government and unit of local government which receives funds under this subtitle shall, after the close of each entitlement period, submit a report to the Secretary setting forth the amounts and purposes for which funds received during such period have been spent or obligated. Such reports shall be in such form and detail and shall be submitted at such time as the Secretary may prescribe.

(b) Reports on Planned Use of Funds.—Each State government and unit of local government which expects to receive funds under this subtitle for any entitlement period beginning on or after July 1, 1972, shall submit a report to the Secretary setting forth the amounts and purposes for which it plans to spend or obligate the funds which it expects to receive during such period. Such reports shall be in such form and detail as the Secretary may prescribe and shall be submitted at such time before the beginning of the entitlement period as the Secretary may prescribe (except that in the case of the entitlement period beginning July 1, 1972, such report shall be submitted at such time before January 1, 1973, as the Secretary may prescribe).

(c) Publication and Publicity of Reports.—Each State government and unit of local government shall have a copy of each report submitted by it under subsection (a) or (b) published in a newspaper which is published within the State and has general circulation within the geographic area of that government. Each State government and unit of local government shall advise the news media of the publication of its reports pursuant to this subsection.

Sec. 108. Nondiscrimination Provision.

(a) In General.—No person in the United States shall on the ground of race, color, national origin, or sex be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity funded in whole or in part with funds made available under this subtitle.

(b) Authority of Secretary.—Whenever the Secretary determines that a State government or unit of local government has failed to comply with subsection (a) or an applicable regulation, he shall notify the Governor of the State (or, in the case of a unit of local government, the Governor of the State in which such unit is located) of the noncompliance and shall request the Governor to secure compliance. If within a reasonable period of time the Governor fails or refuses to secure compliance, the Secretary is authorized (1) to refer the matter to the Attorney General with a recommendation that an appropriate civil action be instituted; (2) to exercise the powers and functions provided by title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d); or (3) to take such other action as may be provided by law.

(c) Authority of Attorney General.—When a matter is referred to the Attorney General pursuant to subsection (b), or whenever he has reason to believe that a State government or unit of local government is engaged in a pattern or practice in violation of the provisions of this section, the Attorney General may bring a civil action in any appropriate United States district court for such relief as may be appropriate, including injunctive relief.

Sec. 109. Prohibition on Use as a Matching Funds.

(a) In General.—No State government or unit of local government may use, directly or indirectly, any part of the funds it receives under this subtitle as a contribution for the purpose of obtaining Federal funds under any law of the United States which requires such government to make a contribution in order to receive Federal funds.

(b) Determinations by Secretary of the Treasury.—If the Secretary has reason to believe that a State government or unit of local government has used funds received under this subtitle in violation of subsection (a), he shall give reasonable notice and opportunity for hearing to such government. If, thereafter, the Secretary of the Treasury determines that such government has used funds in violation of subsection (a), he shall notify such government of his determination and shall request repayment to the United States of an amount equal to the funds so used. To the extent that such government fails to repay such amount, the Secretary shall withhold from subsequent payments to such government under this subtitle an amount equal to the funds so used.

(c) Increased State or Local Government Revenues.—No State government or unit of local government shall be determined to have used funds in violation of subsection (a) with respect to any funds received for any entitlement period to the extent that the net revenues received by it from its own sources during such period exceed the net revenues received by it from its own sources during the one-year period beginning July 1, 1971 (or one-half of such net revenues, in the case of an entitlement period of 6 months).

(d) Deposits and Transfers to General Fund.—Any amount repaid by a State government or unit of local government under subsection (b) shall be deposited in the general fund of the Treasury. An amount equal to the reduction in payments to any State government or unit of local government which results from the application of this section (after any judicial review under section 143) shall be transferred from the Trust Fund to the general fund of the Treasury on the day on which such reduction becomes final.

Sec. 110. Miscellaneous Provisions.

(a) Assurances to the Secretary.—In order to qualify for any payment under this subtitle for any entitlement period beginning on or after July 1, 1973, a State government or unit of local government must establish (in accordance with regulations prescribed by the Secretary, and, with respect to a unit of local government, after an opportunity for review and comment by the Governor of the State in which such unit is located) to the satisfaction of the Secretary that—

(1) it will establish a trust fund in which it will deposit all payments it receives under this subtitle;

(2) it will use amounts in such trust fund (including any interest earned thereon while in such trust fund) during such reasonable period or periods as may be provided in such regulations;

(3) it will provide for the expenditure of amounts received under this subtitle only in accordance with the laws and procedures applicable to the expenditures of its own revenues;

(4) it will—

(A) use fiscal, accounting, and audit procedures which conform to guidelines established therefor by the Secretary (after consultation with the Comptroller General of the United States),

(B) provide to the Secretary (and to the Comptroller General of the United States), on reasonable notice, access to, and the right to examine, such books, documents, papers, or records as the Secretary may reasonably require for purposes of reviewing compliance with this subtitle (or, in the case of the Comptroller General, as the Comptroller General may reasonably require for purposes of reviewing compliance and operations under subsection (c)(2)), and

(C) make such annual and interim reports (other than reports required by section 107) to the Secretary as he may reasonably require; and

(5) in the case of a unit of local government, persons employed in jobs financed in whole or in part out of its trust fund established under paragraph (1) will be paid wages which are not lower than the prevailing rates of pay for persons employed in similar jobs by such unit of local government.

In order to qualify for any payment under this subtitle for the entitlement period beginning on July 1, 1972, a State government or unit of local government must establish to the satisfaction of the Secretary that it will comply as soon as possible before July 1, 1973, with the requirements of the preceding paragraphs.

(b) Withholding of Payments.—If the Secretary determines that a State government or unit of local government has failed to comply substantially with any provision of subsection (a) or any regulations prescribed thereunder, after giving reasonable notice and opportunity for a hearing to the Governor of the State or the chief executive officer of the unit of local government, he shall notify the State government or unit of local government that if it fails to take corrective action within 60 days from the date of receipt of such notification further payments to it shall be withheld for the remainder of the entitlement period and for any subsequent entitlement period until such time as the Secretary is satisfied that appropriate corrective action has been taken and that there will no longer be any failure to comply. Until he is satisfied, the Secretary shall make no further payments of such amounts.

(c) Accounting, Auditing, and Evaluation.—

(1) In General.—The Secretary shall provide for such accounting and auditing procedures, evaluations, and reviews as may be necessary to insure that the expenditures of funds by State governments and units of local governments comply fully with the requirements of this subtitle. The Secretary is authorized to accept an audit by a State of the expenditures of a State government or unit of local government under this subtitle if he determines that such audit and the audit procedures of that State are sufficiently reliable to enable him to carry out his duties under this subtitle.

(2) Comptroller general shall review compliance.—The Comptroller General of the United States shall make such reviews of the work as done by the Secretary, the State governments, and the units of local governments as may be necessary for the Congress to evaluate compliance and operations under this subtitle.

Subtitle B—SUPPLEMENTARY GRANTS TO STATE AND LOCAL GOVERNMENTS

Sec. 121. Authorization of Appropriations.

(a) In General.—For the purpose of enabling the Secretary to make the grants authorized by this subtitle, there are authorized to be appropriated such sums as may be necessary to assure the availability, for the making of grants under this subtitle, of the sum of $500,000,000 for the entitlement period beginning January 1, 1973, $1,000,000,000 for each of the entitlement periods beginning on July 1 of 1973, 1974, and 1975, and $500,000,000 for the entitlement period beginning July 1, 1976.

(b) Additional Amounts.—Any appropriated Federal funds, which are available after December 31, 1972, for the purposes of making payments to States for services under title I, X, XIV, or XVI, or part A of title IV, of the Social Security Act and which are not utilized for such purposes, shall be available for the purpose of making the grants authorized by this subtitle for the entitlement period beginning January 1, 1973.

Sec. 122. Payments.

(a) In General.—The Secretary shall allocate to each State, for each entitlement period beginning on or after January 1, 1973, an amount which bears the same ratio to the total amount available for making grants for the period (but not exceeding $500,000,000, in the case of the entitlement period beginning January 1, 1973) as the urbanized population of that State bears to the urbanized population of all the States.

(b) Division Between State and Local Governments.—

(1) Payment to state government.—Of the sum allocated under subsection (a) to any State for any entitlement period, an amount equal to one-third of such sum shall be paid to the government of that State, and an amount equal to two-thirds of such sum shall be paid to the units of local government in that State.

(2) Payments to units of local government.—The amount payable to any unit of local government in any State for any entitlement period is an amount (A) which bears the same ratio to the total amount payable for such entitlement period to all such units in such State as (B) the amount payable to such unit for the same entitlement period under subtitle A bears to the total amount payable for such entitlement period to all such units in such State under such subtitle.

(c) Application of Subtitle A.—The provisions of sections 107, 108, 109, and 110 of subtitle A shall apply to the making of payments under this subtitle.

(d) Coordination of Payments.—To the maximum extent feasible payments of grants under this subtitle shall be made at the same time and in the same manner as payments are made to State governments and units of local government under subtitle A.

(e) Entitlement Period Beginning January 1, 1973.—For purposes of this subtitle, the term "entitlement period" includes the period beginning January 1, 1973, and ending June 30, 1973. For purposes of making payments under subsection (b)(2) for such entitlement period, the entitlement period under substitute A is the entitlement period beginning July 1, 1972.

Sec. 123. Definition of Urbanized Pouplation.

For purposes of this subtitle, the term "urbanized population", when used in reference to any State, means (A) the population of each area, within such State, which consists of a central city or cities of 50,000 or more inhabitants (and of the surrounding closely settled territory for such city or cities) which is treated as an urbanized area by the Bureau of the Census for general statistical purposes, or, if greater, (B) 30 percent of the population of such State (determined on the same basis as resident population is determined by the Bureau of the Census for general statistical purposes). The data used for determining population and urbanized population under this section shall be the most recently available data provided by the Bureau of the Census, except that where the Secretary determines that the data so provided are not current enough or are not comprehensive enough to provide for equitable allocations, he may use such additional data (including data based on estimates) as may be provided for in regulations.

On page 67, beginning at line 15, strike out:

(c) District of Columbia.—

(1) Treated as state.—For purposes of this title, the District of Columbia shall be treated as a State, and any reference to the Governor of a State shall, in the case of the District of Columbia, be treated as a reference to the Commissioner of the District of Columbia.

(2) Treated as local government.—For purposes of subtitle A, the District of Columbia shall be treated as a county which has no units of local government (other than itself) within its geographic area; except that it shall be treated as a State for purposes of the allocation under section 103(a), and the amount allocated to it under section 103(a) for any entitlement period shall be the entitlement of the District of Columbia under subtitle A for such period.

(3) Reduction in case of income tax on nonresident individuals.—If there is hereafter enacted a law imposing a tax on income earned in the District of Columbia by individuals who are not residents of the District of Columbia, then an amount equal to the net collections from such tax during any entitlement period attributable to individuals who are not residents of the District of Columbia shall be applied—

(A) first to reduce the income tax share of the District of Columbia under subtitle B for such period (to the extent thereof),

(B) then to reduce the combined tax effort share of the District of Columbia under subtitle B for such period (to the extent thereof), and

(C) then to reduce the entitlement of the District of Columbia under subtitle A for such period.

And in lieu thereof insert:

(c) District of Columbia.—For purposes of this title, the District of Columbia shall be treated both—

(1) as a State (and any reference to the Governor of a State shall in the case of the District of Columbia, be treated as a reference to the Commissioner of the District of Columbia), and

(2) as a county area which has no units of local government (other than itself) within its geographic area.

On page 69, in line 17, strike out "Any local government which receives a 60-day notice under section 105(b), and any State which receives a notice of a reduction in its entitlement under section 122 (c)(4), may, within 60 days after receiving such notice, file with the United States court of appeals for the circuit in which such State or local government is located a petition for review of the action of the Secretary." and insert in lieu thereof "Any State which receives a notice of reduction in entitlement under section 104(d), and any State or unit of local government which receives a notice of withholding of payments under section 109(b) or 110(b), may, within 60 days after receiving such notice, file with the United States court of appeals for the circuit in which such State or unit of local government is located a petition for review of the action of the Secretary.

On page 72, beginning with line 9, strike out:

"(a) Civil Penalty.—If any person who is required by regulations prescribed under section 6017A to include on any return information with respect to his place of residence fails to comply with such requirement at the time prescribed by such regulations, such person shall pay a penalty of $5 for each such failure, unless it is shown that such failure is due to reasonable cause.

And insert in lieu thereof:

"(a) Civil Penalty.—If any person fails to include on his return any information required under section 6017A with respect to his place of residence, he shall pay a penalty of $5 for each such failure, unless it is shown that such failure is due to reasonable cause.

On page 79, starting with line 11, strike out:

"(B) A nonrefundable credit is allowed against such tax, on the basis of a specified number of dollars per capita, with respect to a general sales tax imposed by the State.

At the beginning of line 15, strike out "(C)" and insert in lieu thereof "(B)";

At the end of line 17, after the word "State", insert "or a political subdivision thereof."; beginning with line 19, strike out:

"(3) Definitions.—For purposes of this subsection and subsection (e)—

"(A) Net tax-exempt income.—The term 'net tax-exempt income' means the excess (if any) of the interest on obligations excluded from gross income under section 103 (a)(1) (relating to interest on certain State and local obligations), over the sum of (i) the amount of deductions allocable to such interest which is disallowed by application of section 265, and (ii) the amount of the proper adjustment to basis allocable to such obligations which is required to be made for the taxable year under section 1016(a) (5) or (6).

"(B) NET STATE INCOME TAX DEDUCTION.—The term 'net State income tax deduction' means the excess (if any) of (i) the amount deducted from income under section 164(a) (3) as taxes paid to a State or a political subdivision thereof, over (ii) amounts included in income as recoveries of prior income taxes paid to a State or a political subdivision thereof which had been deducted under section 164(a)(3).

And, in lieu thereof insert:

"(3) NET STATE INCOME TAX DEDUCTION.—For purposes of this subsection and subsection (c), the term 'net State income tax deduction' means the excess (if any) of (A) the amount deducted from income under section 164(a)(3) as taxes paid to a State or a political subdivision thereof, over (B) amounts included in income as recoveries of prior income taxes paid to a State or a political subdivision thereof which had been deducted under section 164(a)(3).

"(4) NET TAX-EXEMPT INCOME.—For purposes of this subsection and subsection (c), the term 'net tax-exempt income' means the excess (if any) of—

"(A) the interest on obligations described in section 103(a)(1) other than obligations of the State and its political subdivisions, and

"(B) the interest on obligations described in such section of the State and its political subdivision which under the law of the State is subject to the individual income tax imposed by the State, over the sum of the amount of deductions allocable to such interest which is disallowed by application of section 265, and the amount of the proper adjustment to basis allocable to such obligations which is required to be made for the taxable year under section 1016(a) (5) or (6).

On page 82, beginning at line 20, strike out:

"(4) FURTHER PERMITTED ADJUSTMENTS.—A tax which otherwise meets the requirements of paragraphs (1) and (2) shall not be deemed to fail to meet such requirements solely because it provides for one or both of the following adjustments:

"(A) A nonrefundable credit is allowed against such tax, on the basis of a specified number of dollars per capita, with respect to a general sales tax imposed by the State.

"(B) A credit determined under rules prescribed by the Secretary or his delegate is allowed against such tax for income tax paid to another State.

And insert in lieu thereof:

"(4) FURTHER PERMITTED ADJUSTMENT.—A tax which otherwise meets the requirements of paragraphs (1) and (2) shall not be deemed to fail to meet such requirements solely because a credit determined under rules prescribed by the Secretary or his delegate is allowed against such tax for income tax paid to another State or a political subdivision thereof.

On page 89, in line 21, strike out "September 1" and insert in lieu thereof "November 1".

On page 92, in line 1, strike out "Public Law 91–569 (and the amendments made thereby) with respect to the withholding of compensation to which such Public Law applies" and insert "section 26, 226A, or 324 of the Interstate Commerce Act or of section 1112 of the Federal Aviation Act of 1958 with respect to the withholding of compensation to which such sections apply"; on page 93, in line 5, after the word "apply", strike out "after" and insert "on or after"; in line 22, after the word "agreement", strike out "made" and insert "received"; on page 99, in line 10, after "January 1", strike out "beginning more than one year after the first date on which at least 5 States (having residents who in the aggregate filed 5 percent or more of the Federal individual income tax returns filed during 1972) and insert "which is more than one year after the first date on which one or more States having residents who in the aggregate filed 5 percent or more of the Federal individual income tax returns filed during 1972"; and, at the top of page 100, insert a new title, as follows:

TITLE III—LIMITATION ON GRANTS FOR SOCIAL SERVICES UNDER PUBLIC ASSISTANCE PROGRAMS

INTERIM PROVISIONS

SEC. 301. (a) Notwithstanding sections 3 (a) (4) and (5), 403(a) (3) and (5), 1003 (a) (3) and (4), 1403(a) (3) and (4), and 1603(a) (4) and (5) of the Social Security Act, no payment shall be made to any State with respect to services (other than child care services (as defined in subsection (b) (3)), family planning services, and services provided pursuant to section 402(a)(19)(G) of such Act) provided under any of its plans approved under titles I, X, XIV, or XVI or part A of title IV of such Act for the period commencing July 1, 1972 and ending with the close of December 31, 1972. In lieu of payments for such period pursuant to the above enumerated sections the Secretary of Health, Education, and Welfare shall pay to each State an amount equal to whichever of the following is the greater—

(1) an amount which bears the same ratio to $500,000,000 as the urbanized population (as defined in section 123 of the Revenue Sharing Act of 1972) of such State bears to the urbanized population of all the States, or

(2) the total of the Federal payments which it would (except for the provisions of this section) have received with respect to expenditures for such services for such period under the above enumerated sections, but not counting, for purposes of determining the amount of such Federal payments, any expenditure by such State which is attributable to the provision of such services (A) after December 31, 1972, or (B) under a new project (as defined in subsection (b)(2)).

(b) For purposes of this section—

(1) The term "State" means the fifty States and the District of Columbia.

(2) The term "new project", when used in reference to the provision of social services, means any project for the provision of such services (whether operated directly by the State agency authorizing the project or by any other person) under which social services are initially provided after August 9, 1972. Social services provided after August 9, 1972, under a project, under which such services were initially provided on or before such date, shall be regarded as being provided under a new project, if such services would not have been provided thereunder except for a modification, expansion, renewal, or extension, of such project.

(3) The term "child care services" means services provided to meet the needs of a child for personal care, protection, and supervision, but only in the case of a child where the provision of such services is needed (A) in order to enable a member of such child's family to accept or continue in employment or to participate in training to prepare such member for employment, or (B) because of the death, continued absence from the home, or incapacity of the child's mother and the inability of any member of such child's family to provide adequate care and supervision for such child.

(c) Any appropriated Federal funds which are available after June 30, 1972, for the purpose of making payments to States for services under title I, X, XIV, or XVI, or part A of title IV of the Social Security Act, shall be available for the purpose of making grants authorized by this section.

AMENDMENTS TO PART A OF TITLE IV OF THE SOCIAL SECURITY ACT

SEC. 302. Part A of title IV of the Social Security Act is amended—

(1)(A) by striking out "and rehabilitation and other services" in the first sentence of section 401, and

(B) by striking out "and services" in the second sentence thereof;

(2) by striking out "and Services" in the heading immediately preceding section 402;

(3)(A) by striking out "and services" in the matter preceding clause (1) of section 402(a),

(B) by striking out ", with particular emphasis" and all that follows down to the semicolon in clause (5)(B) of such section and inserting in lieu thereof "in the administration of the plan",

(C) by striking out clause (13) of such section,

(D) by striking out "such family services, as defined in section 406(d), and child welfare services, as defined in section 425" in clause (14) of such section and inserting in lieu thereof "such child care services, as defined in section 406(d), family planning services, and child welfare services available under the State plan approved under part B";

(4) by inserting "subject to subsection (e)," immediately before "75 per centum" in section 403(a)(3)(A);

(5)(A) by striking out "any of the services described in clauses (14) and (15) of section 402(a)" in subparagraphs (A) (i) and (ii) of section 403(a)(3) and inserting in lieu thereof "child care services as defined in section 406(d) and family planning services",

(B) by striking ": Provided" and all that follows down through "if provided by such staff" in subparagraph (C) of such section,

(C)(i) by striking out "subject to limitations" in subparagraph (D) of such section and inserting in lieu thereof "under conditions", and

(ii) by striking out "by the State health authority" and all that follows in such subparagraph down through "under the Vocational Rehabilitation Act or",

(D)(i) by striking out "except that services described in clause (ii)" and all that follows down through "vocational rehabilitation services so approved;" in the matter following subparagraph (D) of section 403 (a)(3), and

(ii) by striking out "child welfare services, family planning services, and family services" in such matter and inserting in lieu thereof "child care services (as defined in section 406(d)) and family planning services"; and

(6) by striking out section 403(a)(5) and inserting in lieu thereof the following:

"(5) in the case of any State, an amount equal to 50 per centum of the total amount expended under the State plan during such quarter as emergency assistance to needy families with children."

(7) by amending section 403(d)(1) to read as follows:

"(d)(1) In addition to amounts paid under subsection (a)(3)(A), the Secretary shall pay to each State with a plan approved under this part an amount equal to 90 per centum of the total amounts expended during any quarter as are found necessary for the proper and efficient administration of the plan and as are for social and supportive services provided pursuant to section 402(a)(19)(G)";

(8) by adding at the end of section 403 the following new subsection:

"(e) Notwithstanding subsection (a)(3)(A) (i) and (ii), the amount of the payment made thereunder to any State for any quarter shall not exceed 12½ per centum of the total of such amounts paid thereunder for such quarter to all the States.";

(9) by striking out "and services" in the matter preceding clause (1) of section 404(a);

(10) by amending section 406(d) to read as follows:

"(d) The term 'child care services' means services provided to meet the needs of a child for personal care, protection, and supervision, but only in the case of a child where the provision of such services is needed (1) in order to enable a member of such child's family to accept or continue in employment or to participate in training to prepare such member for employment, or (2) because of the death, continued absence from the home, or incapacity of such child's mother and the inability of any member of such child's family to provide adequate care and supervision for such child.".

(b) The amendments made by this section shall become effective January 1, 1973.

CONFORMING AMENDMENTS TO TITLES I, X, XIV, AND XVI OF THE SOCIAL SECURITY ACT

SEC. 303. (a)(1) Section 1(c) of the Social Security Act is amended by striking out "to furnish rehabilitation and other services".

(2) Section 2(a)(5)(B) of such Act is amended by striking out ", with particular emphasis on the full-time or part-time employment of recipients and other persons of low income, as community service aides, in the administration of the plan and for the use of nonpaid or partially paid volunteers in a social service volunteer program in providing services to applicants and recipients and in assisting any advisory committees established by the State agency", and inserting in lieu thereof "in the administration of the plan".

(3) Section 2(a)(10) of such Act is amended—

(A) by inserting "and" after the semicolon at the end of subparagraph (A) thereof; and

(B) by striking out subparagraph (C) thereof.

(4) Section 3(a)(4) of such Act is amended to read as follows:

"(4) in the case of any State, an amount equal to the sum of the following proportions of the total amounts expended during such quarter as found necessary by the Secretary of Health, Education, and Welfare for the proper and efficient administration of the State plan—

"(A) 75 per centum of so much of such expenditures as are for the training of personnel employed or preparing for employment by the State agency or by the local agency administering the plan in the political subdivision; plus

"(B) one-half of the remainder of such expenditures."

(5) Section 3(a) of such Act is further amended by striking out paragraph (5) thereof.

(6) Section 3 of such Act is further amended by striking out subsection (c) thereof.

(7) Section 2(a)(12)(C) of such Act is amended by striking out "for services referred to in section 3(a)(4)(A) (i) and (ii) which are appropriate for such recipients and for such patients;".

(b)(1) Section 1001 of the Social Security Act is amended by striking out "to furnish rehabilitation and other services".

(2) Section 1002(a)(5)(B) of such Act is amended by striking out ", with particular emphasis on the full-time or part-time employment of recipients and other persons of low income, as community service aides, in the administration of the plan and for the use of nonpaid or partially paid volunteers in a social service volunteer program in providing services to applicants and recipients and in assisting any advisory committee established by the State agency" and inserting in lieu thereof "in the administration of the plan."

(3) Section 1002(a) of such Act is amended—

(A) by inserting "and" immediately after the semicolon at the end of clause (11) thereof; and

(B) by striking out the semicolon at the end of clause (12) thereof and all the matter following such clause up to, but not including the period at the end of such section 1002(a).

(4) Section 1003(a)(3) of such Act is amended to read as follows:

"(3) in the case of any State an amount equal to the sum of the following proportions of the total amounts expended during such quarter as found necessary by the Secretary of Health, Education, and Welfare for the proper and efficient administration of the State plan—

"(A) 75 per centum of so much of such expenditures as are for the training of personnel employed or preparing for employment by the State agency or by the local agency administering the plan in the political subdivision; plus

"(B) one-half of the remainder of such expenditures."

(5) Section 1003(a) of such Act is further amended by striking out paragraph (4) thereof.

(6) Section 1003 of such Act is further amended by striking out subsection (c) thereof.

(c)(1) Section 1401 of the Social Security Act is amended by striking out "to furnish rehabilitation and other services".

(2) Section 1402(a)(5)(B) of such Act is amended by striking out ", with particular emphasis on the full-time or part-time employment of recipients and other persons of low income, as community service aides, in the administration of the plan and for the use of nonpaid or partially paid volunteers in a social service volunteer program in providing services to applicants and receipients and in assisting any advisory committees established by the State agency" and inserting in lieu thereof "in the administration of the plan".

(3) Section 1402(a) of such Act is amended—

(A) by inserting "and" immediately after the semicolon at the end of clause (10); and

(B) by striking out the semicolon at the end of clause (11) thereof and all the matter following such clause up to, but not including, the period at the end of such section 1402(a).

(4) Section 1403(a)(3) of such Act is amended to read as follows:

"(3) in the case of any State, an amount equal to the sum of the following proportions of the total amounts expended during such quarters as found necessary by the Secretary of Health, Education, and Welfare for the proper and efficient administration of the State plan—

"(A) 75 per centum of so much of such expenditures as are for the training of personnel employed or preparing for employment by the State agency or by the local agency administering the plan in the political subdivision; plus

"(B) one-half of the remainder of such expenditures."

(5) Section 1403(a) of such Act is further amended by striking out paragraph (4) thereof.

(6) Section 1403 of such Act is further amended by striking out subsection (c) thereof.

(d)(1) Section 1601(c) of the Social Security Act is amended by striking out "to furnish rehabilitation and other services".

(2) Section 1602(a)(5)(B) of such Act is amended by striking out ", with particular emphasis on the full-time or part-time employment of recipients and other persons of low income, as community service aides, in the administration of the plan and for the use of nonpaid or partially paid volunteers in a social service volunteer program in providing services to applicants and recipients and in assisting any advisory committees established by the State agency" and inserting in lieu thereof "in the administration of the plan".

(3) Section 1602(a) of such Act is further amended by striking out paragraph (10) thereof.

(4) Section 1603(a)(4) of such Act is amended to read as follows:

"(4) in the case of any State, an amount equal to the sum of the following proportions of the total amounts expended during such quarter as found necessary by the Secretary of Health, Education, and Welfare for the proper and efficient administration of the State plan—

"(A) 75 per centum of so much of such expenditures as are for the training of personnel employed or preparing for employing by the State agency or by the local agency administering the plan in the political subdivision; plus

"(B) one-half of the remainder of such expenditures."

(5) Section 1603(a) of such Act is further amended by striking out paragraph (5) thereof.

(6) Section 1603 of such Act is further amended by striking out subsection (c) thereof.

(7) Section 1602(a)(16)(C) of such Act is amended by striking out for services referred to in section 1603(a)(4)(A) (i) and (ii) which are appropriate for such recipients and for such patients;".

(e) The amendments made by this section shall take effect January 1, 1973.

PUERTO RICO, THE VIRGIN ISLANDS, AND GUAM

SEC. 304. The amendments made by sections 302 and 303 of this title shall not be applicable in the case of the Commonwealth of Puerto Rico, the Virgin Islands, and Guam.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. LONG. I yield.

Mr. SPARKMAN. Mr. President, I commend and congratulate the distinguished Senator from Louisiana, the chairman of the Committee on Finance, upon this presentation today, and upon the excellent job his committee has done in working out this legislation and getting it to the floor of the Senate. I know it has been a difficult job. The Senator and his committee have stayed right with it.

I believe in the revenue-sharing program. If I had had the privilege of putting something into effect I would have done some things differently, things I have advocated for a good many years. But it became apparent that what I had in mind would not work. I think what the President came up with and what the Committee on Finance worked out is the next best thing and probably the most practical approach. I will not elaborate on what my opinion was, but it had to do with taxation, and receipts in certain areas. But it became apparent that was not going to be worked out, so I think this is the next best thing.

I call attention to the fact that my colleague from Alabama and I were joint sponsors of the original resolution introduced on behalf of general revenue sharing. As we all know, it has two parts—general revenue sharing and special revenue sharing. Some of the special revenue sharing came to the committee of which I am chairman; we included it in the housing bill which passed the Senate on March 2. That legislation had to do with community development.

I am hopeful that before Congress adjourns the House will have acted on the housing bill of 1972 and that we will get community development in as part of the revenue sharing bill.

My colleague from Alabama had the privilege of steering legislation through the Committee on Agriculture and Forestry which likewise included some of the revenue sharing, and that bill was passed and now has gone to the President.

Mr. ALLEN. That is correct.

Mr. SPARKMAN. That bill has gone to the President in the last few days for his signature. So revenue sharing is moving along regardless of some of the comments that have been made that we are dragging our feet in connection with revenue sharing.

We have two pieces of revenue sharing legislation that have passed the Senate already in the special field. Now, the Senator comes up with this legislation. I wish we could have completed it before taking the adjournment, but I feel confident that soon after we come back it will become law and it will mean a great deal to the local governments throughout the country.

I commend the committee for working out the formula that I think makes a much fairer distribution. I know, for instance, that in the case of our own State we get better treatment, I think, than we could have gotten under the House bill or under the President's original proposal.

I express my thanks, gratitude, and commendation to the Senator and his committee for that action.

Mr. LONG. I thank the distinguished Senator. I agree with him that many of us have thought there might be a better approach. I, for example, explored the approach of a Federal credit for income taxes paid to the States. I explored this approach, as did others—and while it might help, and in the long run might prove to be a better answer—I was compelled to conclude that the States would not get fiscal relief from it unless at the same time they increased their taxes. Only by levying an income tax or increasing an existing tax, at the same time the credit is allowed—so that it would cost their citizens nothing—would a tax credit mean additional funds for the State government. For instance, a State like Connecticut—which receives part of the overflow from the New York metropolitan area, people who are fortunate enough to live some distance from New York and are able to go back and forth from that major metropolis—would be benefited by this proposal if they imposed an income tax to a much greater extent than a low income State like Louisiana or Alabama, which already has an income tax.

Mr. SPARKMAN. I assure the Senate we have one in Alabama and have for many years.

Mr. LONG. Yes; so while this would be desirable to encourage States to have an income tax, at least in its initial impact it would not place the help where the help is needed. It would give more help to the richer States, and less help to the poorer States where more help is needed most.

In Louisiana we have a revenue-sharing program, from the State to the cities, to help cities get on with their job. We also have something that amounts to a revenue-sharing program at the State level to help counties, which we call parishes in Louisiana as a result of our French background. There is no doubt that the Committee on Finance was able to work out a better formula than the House because we took need and tax effort into account to a greater extent than does the House bill. We concluded that the greatest need is where the people are the poorest.

The people tend to be the poorest in the central cities of the major cities in America and also in the rural areas which are losing population. I know we have rural areas in Louisiana where they have either nothing to tax except pine trees in north Louisiana and nutria in south Louisiana, which has become more of a menace to people trying to earn a living than an asset.

If one looks at the problems that exist and uses a need factor and then couples that to a tax effort factor, it tends to promote justice and equity, to help those who are poor and to help those who help themselves.

The formula spelled out in the bill in county after county will demonstrate that, applied across the Nation, the people who have the greatest need and who are trying to help themselves do get the greatest help under the committee bill. The formula demonstrates that often where the greatest need exists, they are generally making the greatest effort. They are poor and they have a hard time raising revenues.

The reason why the House was not able to arrive at such a formula is that the large States, such as New York and California—and I have nothing but praise for their delegations—have more votes in the House than in the Senate, so that when one advances a "need" formula, he will find delegations from those States tending to resist it.

We will undoubtedly have to compromise this matter with the House, but I am sure the House will see our point and that what will emerge from conference we will be able to vote for, I am sure, in the Senate.

Mr. SPARKMAN. Let me say that I recognize the difficulties of working out a tax situation, as I said a few minutes ago. I think the committee did an excellent job. I do hope when the bill goes to conference, insofar as we can we will sustain the formula that has been worked out by the Senate committee.

Mr. LONG. I thank the distinguished Senator.

Mr. ALLEN. Mr. President, will the Senator yield to me for two purposes, first to comment on the bill, and second, to make an unanimous-consent request?

Mr. LONG. I yield.

Mr. ALLEN. Mr. President, I want to commend the Senator from Louisiana, chairman of the Finance Committee, and to commend the Senator from Utah (Mr. BENNETT), for the fine work of that committee and the diligence and dedication and hard work that they have manifested and given toward bringing this bill to the floor at this time.

Certainly, I approve the concept of revenue sharing. The Federal Government has preempted nearly all of the fields of taxation, and it is only right that some of the revenue that is collected by the Federal Government be turned back, without any strings attached, to local governments. I believe that local governments know better what the needs of their people are than bureaucrats here in Washington. So on that theory I certainly approve of revenue sharing.

I noted the remarks of the able Senator from Louisiana with respect to the theory of this bill—that it helps those who help themselves. I note that that is the same theory the distinguished Senator has with respect to H.R. 1—to help those who try to help themselves. So the Senator is certainly trying to be consistent.

His committee and the members of the committee have put in long hours, days, weeks, and months on these bills. They certainly have been the workhorse of the Senate in the revenue-sharing bill and in the committee's action on H.R. 1.

I certainly want to commend the distinguished Senator from Louisiana, the distinguished Senator from Utah, and all the members of the committee on the great job they have done.

Mr. LONG. I thank the Senator.

ORDER OF PROCEDURE ON H.R. 13915

Mr. ALLEN. Now, Mr. President, I wish to ask unanimous consent that if the House message with respect to H.R. 13915 does not reach the Senate today, it not be referred during the recess, but that it remain at the desk for action by the Senate on September 5.

The PRESIDING OFFICER (Mr. STEVENSON). Is there objection? The occupant of the Chair, as a Senator from Illinois, does object. The unanimous-consent request is not agreed to.

Mr. ALLEN. Mr. President, may I inquire of the Chair to state again what he has just said?

The PRESIDING OFFICER. The occupant of the Chair, as a Senator from Illinois, objected. The Chair ruled that the unanimous-consent request of the Senator from Alabama was not agreed to.

Mr. ALLEN. I thank the distinguished occupant of the chair, the distinguished Senator from Illinois, for his statement.

REVENUE SHARING ACT OF 1972

The Senate continued with the consideration of the bill (H.R. 14370) to provide payments to localities for high-priority expenditures, to encourage the States to supplement their revenue sources, and to authorize Federal collection of State individual income taxes.

Mr. BENNETT. Mr. President, this bill—the Revenue Sharing Act of 1972—is an important step toward renewing our reliance on the federal system and should begin the reversal of the centralizing trend of the past several decades.

This bill will realize the President's objective when he sent his general revenue sharing message to the Congress. His basic objective was to restore the responsibility for making many of the important government decisions to the governmental bodies that are closest to the people affected by the programs. These are obviously the State and local governments, and this bill provides them with the funds to implement the programs which their constituents tell them are needed but which because of their limited financial resources they are unable to finance.

Financial difficulties are not new problems to State and local governments, but they have become acute in the past 7 years. Changes in our society in recent years have greatly increased the demand for services our States and especially our local governments traditionally provide. Coupled with this, rapidly rising prices have greatly increased the costs of providing these services.

By redirecting the flow of tax payments back to the local government level, this legislation begins the effective decentralization of the federal system. This was the intent, of course, in the categorical grant programs. They too were designed to implement local programs through the matching with local funds. However, the Federal Government retained the right to set standards and to approve the nature of the local program before Federal funds were made available. As a result, these programs have become far less effective assistance than initially had been hoped for. The paperwork and bureaucratic decisionmaking interfered with true exercise of local initiative.

This bill starts the reversal of directions because it provides that the Federal Government will distribute $6.3 billion of Federal individual income tax receipts to State and local governments without requiring these governments to prepare an application or submit detailed plans for spending the money in a limited category.

These funds will go to the local governments and to the States according to a formula which is designed to redistribute Federal tax moneys on the basis of the relative need of the residents of the communities and a measure of local efforts to use local tax resources for governmental purposes. The requirement for detailed plans and bureaucratic approval of the program in Washington is absent from this bill. Local governments and the States will decide through their normal budgetary decisionmaking processes upon how they will spend these funds to meet local and State requirements. The decision is theirs alone.

I would like to follow this line of thinking, showing how the Finance Committee bill applies the principle of decentralization throughout the bill. I do not intend to describe and explain the bill in detail because the able chairman of the Committee on Finance has already done so in his customary, masterful way.

The Treasury Department will distribute the revenue sharing funds from a new revenue sharing trust fund which will receive, each full fiscal year, 7 percent of the collections from individual income tax. By financing the program in this fashion, the committee has given the State and local governments a share of that highly productive revenue raising machine which the Federal Government seems to have preempted. This important revenue resource now is being rechanneled back to the State and local governments and the Federal Government thereby is easing the strain on the overburdened revenue sources available to local governments.

As they receive these funds, State and local governments will be able to use them after going through their normal procedures for authorizing and appropriating funds to meet the government budget. The Finance Committee struck from the House bill the provisions that established several high-priority categories upon which the revenue sharing funds were to be spent. The committee's thinking was that the States and the local governments know their needs and problems far better than does the Federal Government. It is our belief that the purpose of decentralization will be carried out most effectively by leaving the important decisions about spending to State and local executives and legislatures. Independent decisionmaking of this sort is the essence of a decentralized Federal process.

One of the factors in the formula that governs the distribution of funds—general tax effort—extends the theme of decentralized Federal responsibility by allocating a part of the funds in terms of how much these governments are willing to draw upon their own tax sources. In this case, the revenue sharing allocations will be relatively greater where the tax effort—total tax collections relative to income—is highest. The two other factors in the formula—population and relative income per capita—measure size and need.

Reports are required from the State and local governments that describe how the revenue-sharing funds were used and by next year these governments will have to prepare reports that describe how they plan to use revenue-sharing funds. These reports will be filed with the Secretary of the Treasury who will use them to examine the program and assess how well the intent of Congress is being carried out. The State and local governments also are required to publish these reports in local newspapers with general circulation in their respective jurisdictions, and they must inform other news media in their communities that the reports have been filed and published. The purpose of requiring local publication and dissemination of the identical report filed with the Secretary of the Treasury is to assure that the citizens of the State and local governments also are given an opportunity to evaluate the plans for spending revenue sharing funds and the efficiency of their governments in carrying out their plans.

Another aspect of the encouragement for the decentralization contained in this bill is designed to make sure that the State and local governments continue their efforts in providing the existing level of matching funds for the various Federal categorical aid programs. Under the committee bill, State and local governments are not to use revenue-sharing funds, either directly or indirectly to obtain Federal matching grants. The objective is to prevent the use of revenue-sharing funds from becoming another method of reliance upon the Federal Treasury. The Secretary of the Treasury is given the responsibility to make sure that the State and local governments comply with this provision.

The Finance Committee retained a provision from the House bill which is designed to assure that the State governments continue to provide the same amount of revenue-sharing funds to their local governments as they did before the availability of Federal revenue sharing.

In other words, there are ongoing programs in most if not all States under which the States share their tax collections with the local communities. We want to make sure that the States continue to do that, that they do not take Federal funds for that purpose, and thus withhold from the local governments the help that has been given in the past.

States are required to continue to distribute to their local governments the same amount of money from their own sources as they did in fiscal year 1972. This provision was placed in the bill to make sure that the State governments did not envision Federal revenue sharing to local governments as a vehicle that would permit them to reduce the degree of their own responsibility. In this provision, the Congress is making sure that decentralization of Government decisionmaking does not mean only that State and local governments will decide how to spend the Federal revenues that are allocated to them. They also are required to continue their own self-support activities on the same scale as before.

Although the formula governing the allocation of Federal revenue sharing funds that has been selected by the Finance Committee is a fair and effective means for distributing moneys according to need and effort, it is recognized that a State and its local governments may believe that there may be a better way of allocating the funds within the State. The committee believed that the general principle has merit, but it believed some limits in this flexibility needed to be set. Accordingly, the committee has provided an alternative formula which States may enact to allocate the funds among county areas and among local governments within counties. The factors in the new formula are derived from the basic formula in the committee bill. They are population weighted by general tax effort and population weighted by relative income per capita. The States may select any combination of weights for these two variables that appears to satisfy the requirements of their local governments. Selection of an alternative formula, however, may be made only once during the 5-year entitlement period of this bill.

Title II of the bill provides that the Federal Government will collect State individual income taxes when the State tax program conforms very closely to the Federal tax.

This provision was in the House bill, and the committee accepted it because this provision may be the most valuable of all provisions in this bill, in the long run. It may well be the way the decentralized federal system of government will retain its vitality.

The Federal individual income tax is generally acknowledged as the most efficient of all taxes used in this country by any level of the Government. Provision for Federal collection of State taxes when there is substantial identity between the State and Federal individual income tax systems will enable the State governments to share effectively in the revenue raising capacity of the Federal Government, and incidentally will greatly reduce their cost of collecting the income taxes. The Federal Government will do it for them without charge, and simply pass the money back to them. Of the 41 States which presently have an individual income tax, most of them have designed their taxes with the model of the Federal income tax in mind. In fact, most of the State income tax systems conform reasonably close to the Federal tax systems. Four of the State income taxes presently are actually levied as a percentage of the Federal income tax liability. The provision in the bill provides that a State government may voluntarily ask the Treasury to collect its individual income taxes so long as it adjusts the State taxes to conform either with the Federal concept of taxable income or that they levy its tax as a percentage of the Federal tax liability.

I wish to emphasize the voluntary aspect of this provision. There is no requirement that any State enact an individual income tax if it has so far chosen not to do so. No State is under any compulsion to change its existing income tax to conform in any way with the Federal tax if it does not choose to do so. This provision only makes it possible for those States that choose to conform their individual income tax structure to the Federal structure to take advantage of the existing Federal method for collecting the tax.

Some of the critics of the bill maintain that the revenue sharing program should be deferred until the Federal budget is closer to a balance between receipts and outlays. They question whether the revenue sharing assistance to State and local governments is as vital at this time as has been claimed because of the sequence of Federal deficits. These have been greater than $20 billion a year in 3 successive fiscal years, which indicates that the Federal Government raises the danger of renewed inflation at the present time and that the only prudent fiscal policy is to delay new programs until a budget balance has been restored. The committee gave great attention to this problem and believes, however, that this form of fiscal assistance to State and local governments has such a high priority that it should be considered in connection with all other Federal expenditures which help to create the deficit and that revenue sharing should certainly be supplied at this time.

The committee believes that relief to the State and local governments, in view of their present stringent financial situation, is of the utmost importance. The fact that the Federal Government has a large deficit is no greater justification for denying enactment of this program than it would be for deferring or cutting back a large number of current Federal programs. Revenue sharing will not increase the estimated deficit in the Federal budget for the fiscal year 1973, because the budget estimates sent by the President to Congress last January have included the proposed expenditure of Federal funds for revenue sharing with State and local governments. Therefore, the bill will not increase the budget deficit for this fiscal year; and I hope that in the fiscal years ahead, including this, as a part of our overall program, we in Congress will be able to tailor our expenditures so that the burden of this revenue sharing will not be unbearable.

Mr. LONG. Mr. President, will the Senator yield?

Mr. BENNETT. I am happy to yield.

Mr. LONG. Mr. President, I believe it is impossible for anyone to commend too highly the Senator from Utah for the statesmanship he has displayed, both in connection with this measure and in connection with H.R. 1. As the ranking Republican member of the Committee on Finance, the Senator, throughout this year, as well as last year, has been the best friend that the President of the United States has had on that committee, even in the entire Senate, and he has been the President's friend in the tradition of a best friend. He has not only supported the President when he agreed with him, but also, when the administration program left something to be desired, he has had the intellectual honesty and the forthrightness to both suggest to the President what the changes ought to be and to vote to change something, if he felt the national interest would suggest that.

In this case, the Senator from Utah was the prime mover; in fact, he was the person who suggested the formula which the committee had agreed upon.

I think that this formula will be applauded by all those who understand it; particularly, it will be applauded because it not only takes into account the relative income of each community and multipiles the population by a relative income factor, but also, the result is then multiplied by the tax effort factor.

This is a novel way of arriving at a figure; but when applied across the entire Nation to the 39,000 communities, it does more justice than any suggestion that was recommended or any other formula that was devised by anyone else.

The ingenious nature of this formula, and the equity and merit of it, are demonstrated by the fact that when applied to any community that receives a small amount of money, it will be found that it is so because those people have not made much effort to help themselves, or, to some measure, because they are relatively wealthy to begin with. But any community can receive a large amount of assistance from this bill, if its citizens should desire to make the effort to tax themselves in order to provide services that they deem essential.

So we have a very fine formula which we have reviewed with regard to a great number of States, and before this matter has been fully developed on the Senate floor, every Senator will have reviewed it with regard to his own State.

I am satisfied that the committee has done a good job. We have brought the Senate a better bill than the House sent to us, as we pride ourselves in thinking we are capable of doing. I am satisfied that the bill as recommended by the committee would advance the national interest.

The Senator is aware of the fact that we now have $38½ billion annually in Federal grants to States and to local governments. I would ask the Senator if it is not his experience in studying this matter that in many cases we find that much of this $38½ billion is being inefficiently spent, because the States, in order to obtain the money, are being required to spend it on items which both they and we, on examination, find have low priority, compared to something else which deserves greater consideration that the money could be spent for.

Mr. BENNETT. I think it was the realization of this fact that encouraged President Nixon to recommend general revenue sharing, with no strings attached.

I am sure that far and wide over this country there have been communities and States that, looking at the categorical grants available, decided that rather than not sharing in anything, they would try to develop a program—that they may not have needed—to match the specifications of a particular grant just in order to get the money for something they might not need for 10 or 20 years more.

This is the weakness of the categorical grant. It did not show up so much in the beginning, because it was limited to a fairly small number of operations, but over the last few years, every time a new idea has come up in the Senate, somebody has said, "That is a fine idea. We will develop a matching grant program for the States."

As the Senator says, they have been built up to where there is now $38½ billion involved in that. So the States and local governments are in the position of the shopper who goes into the store and buys something he does not need, just because it is cheap or because he can get it for half price.

The bill we have been working on so

long in the committee should begin to eliminate that unwise and unnecessary use of Federal funds.

Mr. LONG. Mr. President, I would like to pursue this point with the Senator. The argument will be made that this matter should be treated as other Federal grant in aid programs are treated and made subject to annual appropriations.

All of us are aware of situations in which a Federal grant program results in a great amount of waste, compared to the way the money would be spent if the State or locality had the money as its own to spend according to its best judgment.

For example, I can demonstrate this with respect to the social service grant program in Louisiana. The State should take the money and spend it on hospital outpatient care where mothers with sick babies are required to wait as long as 3 or more hours to see a doctor, and money is unavailable to be spent in the hospital to provide care for the child and to provide more doctors, more hospital rooms, and more expeditious service for the child. The social service program, however, has made money available to send a social worker to sweep out the house and cook a meal for the father who might be left at home, or to provide someone to baby sit with the healthy child that remains in the home while the mother is waiting in line. The program serves to deny that services be made more readily available to an aged sick person awaiting health treatment in the hospital, although the money would be available to send someone to cook a meal for the spouse who remains at home to make the beds, sweep out the house—a lower priority need than the health care of a sick, aged person in the hospital. Those distortions, in order to obtain Federal matching, would be eliminated by the proposal of this committee, where instead of a categorical grant program we proceed with a program where money would be in the budget as one of the most reliable sources of community or State income and then accounted for under the same budgetary proceeding as is used for the tax money taken from the citizens.

I would ask the Senator if it is not likely that in time, after the program is accepted, the people will look on the money as they look on their own tax money, as taxes they have paid which went to the local government, the only difference being that some went via Washington to get back to the local government.

Mr. BENNETT. Yes. Actually, this is money that people have paid. It has this variation or this difference, however. As the chairman knows, we have poor States and rich States. The Senator and I come from States which are relatively poor. The rich States in part are rich because they house many manufacturing plants or their distributing units. If, as someone suggested, all this bill did was to send back to my State or to the Senator's State the percentage of the income tax our State paid, it would not help to solve the problem so effectively as the system which sends back the percentage of the total tax effort made.

So this, is in effect, a tax equalization program of the same type, in general nature, that exists particularly for school districts in many States, where the States collect the money and distribute it to the local school boards or to the school districts in order to equalize the amount of money available and to equalize the quality of education.

I think this is important for that reason. The chairman mentioned earlier the question of annual appropriations. On the surface, this may seem to be a desirable thing. Here we have $6.3 billion which is going to be divided up among the States. I am sure there are some States—we know that already from our experience in committee—not satisfied with their share. I am sure they would like to be able to come before the Appropriations Committee and say, "Upset the formula. Take some of this money that is going to the other States and give it to us."

Well, the first problem that would be created would arise from eliminating the assurance that each State or local community has under this bill that it would get a specific amount of money. There are 50 States in the Union, and presumably the Appropriations Committee could hear only 50 witnesses, but there are between 38,000 and 39,000 governmental units that will get a share of this program.

Can the Senator imagine the chaos and the confusion, can the Senator imagine the burden we would add to the Appropriations Committee if 39,000 units came up here and said, "We are not satisfied with what we have. We need more." The Appropriations Committee members say, "Well, we do not mean that. We mean that we are either going to appropriate more or less and let it be distributed under your formula."

Even that destroys the assurance that the local government people have under the Finance Committee's bill. The Appropriations Committee members say that they would reserve to themselves the right to decide what States or cities should be paid. They would write into the appropriations that no money may go to a State or no more than *x* amount is legal for a city or a State. All of that destroys the effectiveness of the formula program.

Mr. LONG. Does it not lend itself to one further thing, which is unintended by those of us who sponsor the bill, that the annual appropriation approach lends itself to the Federal Government's and then to the Treasury's auditing the books of every State and every locality. So that one could then, on the eve of an election, call on his Senator or his Congressman to demand that they audit the books of the city or the county, or even the State, to see if the revenues-sharing money has been properly spent. That would be contrary to what is intended by this proposal. It would be like going out to audit someone's income tax the day he had announced he was a candidate for office. That kind of thing, perhaps would result from the annual appropriation proposal.

Is it not true that the committee does not feel that that approach should be used at all; that the committee believes that responsibility should be primarily left to the people in the communities, that if a public official should do a poor job, or even become corrupt in the use of certain funds, the answer would be for the people to vote that fellow out of office, rather than to punish everyone in the country to prevent a future recurrence of the mischief made by one person in one State.

Mr. BENNETT. We have built into the bill sufficient protection in the requirement that a report must be made and it must be published in the local newspapers. It would not be the Treasury, it would be the GAO, would it not, that would be charged with the auditing of all these books?

Mr. LONG. The Treasury Department would do the auditing, but the GAO would review the auditing. It would bring both into the picture.

Mr. BENNETT. That is right.

Mr. LONG. Actually, the theory of this bill is that, of course, there will be cases where governments—it is customary in this form of government—make mistakes. Of course, there will be cases where some mayor or Governor or some county commissioner will be guilty of an indiscretion, but that does not mean that we have to punish everyone in the country for that. We feel that the answer is for the people to vote such a man out of office and replace him with someone who will make fewer mistakes.

Mr. BENNETT. It would seem to me that, as the bill requires, before a county or a State or a city can use it, the revenue-sharing funds have to go through the regular appropriations process that any other local tax revenue goes through. It would seem to me, then, that that process would make the revenue-sharing funds subject to the auditor of that unit of government.

Mr. LONG. I agree with the distinguished Senator and again I congratulate him for the major and—I am satisfied—the beneficial contribution he has made to this legislation.

Mr. BENNETT. Those are sweet words to the Senator from Utah.

I should like to say, Mr. President, that the Finance Committee is a good team. We respect our chairman. We work for him. We work with him. He is not an autocrat. He is willing to listen to the ideas that members of the committee suggest, and he gives them very careful consideration. I believe that this bill is the result of a combination of many ideas. I am glad that I have had some part in them, but that is true of all the other members of the committee.

Now, Mr. President, there are some differences between this bill and the bill initially recommended by the President. I think that this bill represents a significant improvement over the draft bill that was sent to the Congress. The formula for distributing revenue-sharing funds among the States and the local governments that are in this bill performs the allocation role with greater equity and effectiveness. Nevertheless, the fundamental objective of the President which was to increase the vitality of the State and local governments in the Federal system will be achieved with this bill. I recommend that my colleagues in the Senate pass this bill.

In conclusion, let me urge that you give favorable consideration to this legislation. The House has referred to it as "landmark" legislation and I believe that truly it meets this description. It is the best way available to us to return some of the important aspects of self-government to our State and local governments.

Mr. HANSEN. Mr. President, will the Senator yield?

Mr. BENNETT. Mr. President, I would be happy to yield to the distinguished Senator from Wyoming.

Mr. HANSEN. Mr. President, I would like to express my very real appreciation, both to the distinguished chairman of the Finance Committee and to the distinguished ranking minority member, who has just concluded some very perceptive observations on the pending legislation, and to the other members who serve with me on that committee.

I agree wholeheartedly with what the distinguished Senator from Utah has said. We do have an outstanding chairman of this committee. It has been my privilege to serve on it for a little while. He is the antithesis of autocracy. We can express an opinion. We can ask for a vote on any issue at any time. If we choose, each of us is permitted to project for the full consideration of the committee any ideas that we may have.

Mr. President, if I may go into more detail, I would like to say that this legislation culminates an idea that has been kicking around for a long time, as the distinguished Senators who have already spoken know so well. I do not think that anyone deserves exclusive credit for the idea. Much that has been presented for the consideration of the full Senate today reflects the exhaustive hearings that have afforded Governors and mayors and county officials and other distinguished citizens throughout the length and breadth of the country an opportunity to be heard on some of the very pressing fiscal problems that are recognized today.

I think it also should be noted that one of the arguments made by the Appropriations Committee when we met jointly with that very important committee 3 days ago reflected the feeling of members of the Appropriations Committee that indeed the appropriations to revenue sharing ought to be made annually in order that that committee might exercise an oversight function.

I think what they were saying in effect was that they would like to pass upon the demonstrated wisdom of the State and local governments. And while in many respects it is my feeling that Congress has not exercised its oversight function as openly or as incisively as it should have with regard to this particular type of activity, it occurs to me that there are no established guidelines. I know of no perfect way of meeting the needs of people through a governmental agency. And I should think it would be extremely difficult for any committee of the Senate to examine what one State has done as compared with what another State has done or with what one city has done as compared with what another city did—and then to say that this is the way it ought to be done.

As a matter of fact, it occurs to me, Mr. President, that basically the whole concept embodied in revenue sharing is the idea that local people and States who have firsthand experience and an opportunity to observe firsthand what the local and State problems are, ought to know better than anyone else how to solve those problems.

In effect, among other things, we are saying here this morning: "Let's strip away this redtape that for too long has cluttered up the expenditures in the administration of government by State and local governments and give them an opportunity to demonstrate their unique and different ideas in solving problems that they ought to understand better than anyone else."

I have heard the distinguished chairman of the committee express that view, and I have heard the distinguished ranking minority member of the committee express the same view. And having served as a Governor of Wyoming, I could not agree more with the distinguished Senators that we have seen too often in the past money spent by State and local units of government for one program that did not address itself to the number one problem in that State or local community Money was spent simply because the Federal participation for program A may have been 3 Federal dollars for each local dollar, or 3 Federal dollars for each State dollar, as contrasted with a program that might address itself to the major problem, for which only one Federal dollar was contributed for each State or local dollar. And that is the reason that I think revenue sharing does make good sense.

I have misgivings, as I know others in the Congress do, about a program that contemplates an allocation of funds to the States when the charge is made that the Federal budget is out of balance. But I think that question has been put to rest by those members of the Finance Committee who have already spoken.

May I say in conclusion that I believe there is much merit in the pending bill presented by the Finance Committee. I think it is fair. I think the tests that are applied by the action of the Senate Finance Committee as a substitution for those recommended by the House are sound. They recognize, first of all, that we shall consider population as a major factor and, second, then shall be motivated by their tax effort to recognize the willingness of the people of a State to do the best job they can do or that the State can do to solve its own problems.

Third, we take an inverse proportion of the per capita income as a true measure of need.

On that basis it is interesting to note that the final results embodied in the pending legislation coincide quite closely with what the President recommended when he made the proposal to Congress in the first place.

Mr. President, I ask unanimous consent that a press release which has been prepared by the staff of the Finance Committee be printed at this point in the RECORD.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

[Committee on Finance Press Release, Aug. 16, 1972]

COMMITTEE OF FINANCE ORDERS REVENUE SHARING BILL REPORTED TO THE SENATE

The Honorable Russell B. Long (D., La.) Chairman of the Committee on Finance, announced today that the Committee, by a vote of 12 to 4, ordered favorably reported to the Senate H.R. 14370, the Revenue Sharing Act of 1972. The major features of the bill as reported by the Committee on Finance are described below:

1. DISTRIBUTION OF FUNDS TO THE STATES

The Committee approved a formula which would distribute in 1972 $5.3 billion in revenue sharing funds (both State and local) among the States on the basis of State population, State and local tax effort, and the inverse per capita income of each State. Under this formula, each State's share is determined by its population multiplied by its tax effort, and further multiplied by its inverse per capita income. The tax effort of each State is measured by the ratio of its total net tax collections to total personal income in the State. Relative per capita income is measured by the ratio of U.S. per capita income to that State's per capita income. Unlike the House bill, the Committee formula does not favor any particular type of tax system for the States such as personal income taxes, but does recognize that general tax effort is a factor which should be considered in any distribution formula for revenue sharing funds.

The Committee bill would distribute an additional $1 billion of revenue sharing funds to the States and localities annually, beginning January 1, 1973, on the basis of "urbanized population." "Urbanized population" is defined by the Bureau of Census generally to mean a central city or cities of 50,000 or more inhabitants (including closely surrounding territories).

The Committee formula differs from the House formula mainly by excluding the income tax factor from the formula for distribution of funds to the States. The Committee believed that it was undesirable to attempt to dictate to the States the structure of their tax laws.

Under the House bill, $1.8 billion would have been distributed to the States in the first year, one-half on the basis of State individual income tax collections and one-half on the basis of the State's general tax effort. The House bill would have distributed $3.5 billion to local units of government based on three equally weighted factors: population, urbanized population, and relative income.

The Committee retained that feature of the House bill which would begin the entitlements to each unit of general government as of January 1, 1972. Since the entitlements are to be made on a fiscal year basis (paid out at least quarterly) and since fiscal year 1973 has already begun, payments of $8.1 billion would be made during the initial fiscal year 1973 while payments in subsequent years would be as follows: $5.750 billion in fiscal year 1974, $6.050 billion in fiscal year 1975, $6.350 billion in fiscal year 1976, and $3.325 billion during the first half of fiscal year 1977. This excludes the $1 billion which would be distributed to the States beginning in fiscal year 1973 on the basis of "urbanized population." The following table compares the distribution by States provided in the Committee bill with the distributions provided by the original Administration proposal and the House bill:

DISTRIBUTION OF FUNDS TO STATES UNDER ADMINISTRATION PROPOSAL, HOUSE AND FINANCE COMMITTEE VERSIONS OF H.R. 14370 AND DIFFERENCES IN THE AMOUNTS DISTRIBUTED UNDER THE 3 VERSIONS OF THE BILL

[Amounts in millions of dollars]

States	Administration proposal [1]	House bill [2]	Committee bill [3]	Differences between— House bill and administration proposal	Committee bill and administration proposal	Committee bill and House bill

[1] The administration proposal would have distributed funds to the States on the basis of population weighted by general revenue effort. This is for fiscal year 1972.

[2] The House bill would have distributed $1,800,000,000 to the States based on general State and local tax effort, and State individual income tax receipts, and $3,500,000,000 to the local units of government within each State based on 3 factors: population, urbanized population, and relative income. This is the amount for the last 6 months of the fiscal year 1972 placed on an annual basis.

[3] The committee formula for distributing revenue sharing funds to the States is based on State population multiplied by the inverse of the State relative per capita income (the lower the per capita income the higher the weight of factor) multiplied by tax effort (State and local tax collections as a percentage of total personal income in the State). This also includes the supplemental sharing grants. These are distributed on the basis of urbanized population (with a 30-percent floor). The revenue sharing distribution is the amount for the last 6 months of fiscal 1972, placed on an annual basis. The supplemental sharing grants shown are those which first become applicable on Jan. 1, 1973.

Note: Details may not add to totals because of rounding.

II. DISTRIBUTION OF FUNDS TO LOCALITIES

A. Retain the basic two-thirds localities/one-third State distribution of House bill

The Committee agreed with the House bill on the basic distribution of the total amount of shared revenues between the States and all units of local governments. However, the Committee bill, unlike the House bill, would allocate one-third of *each* State's share to the State government, and two-thirds to its local governments. Under the House bill's two-formula approach, the one-third State and the two-thirds local distribution would have been achieved for the nation as a whole, but not necessarily for each State.

B. Limitation on grants to local governments

The Committee also retained the feature of the House bill which provides that the revenue sharing payment to any local government is not to exceed 50 percent of the sum of that government's adjusted taxes and intergovernmental transfers of revenue during the immediately preceding fiscal year.

Funds remaining available because of the reduced entitlement of a county government under this rule are to go to the government of the State within which that county is situated. Funds remaining available because of the reduced entitlement of any other local government under this rule are to go to the government of the county within which that locality is situated, unless these funds are in excess of that county government's entitlement, in which case these funds go to the State government.

C. Incremental allocations

The House bill would have increased the annual amount distributed to the State governments after the first full year by as much as $300 million a year. The Committee bill would distribute the additional funds to the States *and* localities in the same way in which the basic distribution is made under the Committee bill: i.e., one-third to the State Government and two-thirds to the localities:

D. Distributions to local units of government

The House bill would have distributed $3.5 billion annually to the localities for a 5-year period, based on three equally weighted factors: population, urbanized population, and inverse per capita income. The Committee bill would distribute roughly the same amount $3.5 billion) to the localities in the first year, but would increase the allocation to local units of government by $200 million in each subsequent year, based on essentially the same formula that is used for the distribution of funds to State Governments—population, total tax effort, and inverse per capita income. For the first nine months of the program; i.e., from January 1, 1972, through October 1, 1972, the distribution to both State and local units of government would be based on these factors multiplied together; thereafter the Committee bill would allow the State legislatures the flexibility to adopt a distribution formula which essentially is based on two factors:

(1) population multiplied by tax effort and (2) population multiplied by the inverse ratio of per capita income. The State legislature may choose to weight each of these two factors between zero and 100 percent. Each State would be limited to only one change in the formula for the within State distribution during the full 5-year period. The Committee provided that in no event can any unit of government within each State receive an amount, on a per capita basis, which is less than 20 percent of the average per capita allocation to the State as a whole, and that no unit of government within a State can receive more than 145 percent of the average per capita allocation to the State as a whole.

III. SOCIAL SERVICE

The Committee bill replaces the provisions of present law under which 75 percent Federal matching is available on an open-ended basis for social services to welfare recipients and persons likely to become dependent on welfare. Beginning January 1, 1973, open-ended 75 percent Federal matching are to continue to be available only for child care and family planning services; moreover not more than 12½ percent of all Federal funds for these two services can go to any one State. Child care services covered by this provision are those needed to enable a member of the family to work (or to take job training) or to provide necessary supervision for a child whose mother is dead or incapacitated. Although the bill does not limit the type of child care which the States can make available or purchase for such children, it does not authorize the States to simply establish or underwrite massive child care or pre-kindergarten programs in low-income neighborhoods (as some States have done under interpretation of existing law) and claim 75 percent Federal matching.

Beginning January 1, 1973, the Committee bill replaces grants for social services (other than that for child care and family planning referred to above) by the supplementary revenue sharing grants of $1 billion annually, beginning in fiscal year 1973. These grants are to be allocated among the States on the basis of urbanized population.

For the period between July and December, 1972, the Committee adopted a special transitional provision which will benefit those States which now have somewhat larger social service programs by permitting them to maintain their programs at the present level until the end of December, 1972. Specifically, for the last six months of calendar year 1972, the State government is to receive (other than for child care and family planning services) the higher of (a) its share of $500 million distributed among States on the basis of urbanized population, or (b) 75 percent of the cost of providing social services between July and December, 1972, excluding the cost of any new social services provided after August 9, 1972, and also excluding the cost of any expansion of on-going programs after August 9, 1972.

IV. OTHER ISSUES

The Committee also made several significant changes in the House bill which are described below:

A. High priority categories by local governments

The House bill would have provided that local governments may spend their grants only for activities that fall within a limited group of categories such as operating and maintenance expenditures for public safety: environmental protection, and public transportation. The Committee deleted these "high priority" categories on the grounds that the localities can determine for themselves which priorities the money should be spent for and that Federal restrictions were at best cumbersome and ineffective and at worst, counterproductive. The Committee also noted that the "high priority" categories in the House bill would not have prevented localities from substituting funds saved in these categories by virtue of revenue sharing for other programs not in the high priority list.

To avoid this, the Committee would have had to adopt maintenance of effort requirements on existing local expenditures which would have been contrary to the "no Federal strings" revenue sharing philosophy. The Committee, however, did adopt a provision which would prevent States and local governments from using the funds received under general revenue sharing directly or indirectly for matching purposes under categorical grant-in-aid programs. This was felt necessary in order to avoid a situation in which revenue sharing monies could have a multiplier effect on categorical grant-in-aid programs.

B. Accountability

The Committee adopted a provision under which each unit of government will file a report with the Secretary of the Treasury annually on how it intends to spend its revenue sharing funds and how it has actually spent the revenue sharing funds received in the last year. Each unit of government must cause this report to be published in a newspaper. In this way the people located in each community will know how the communities and the States are spending the revenue sharing funds allocated to them by the Federal Government.

C. Areawide purposes

Under the House bill a State is permitted to require each local government in an area directly affected by one or more areawide, high priority projects to spend up to 10 percent of the local government's entitlements for those specific areawide projects, to the extent that the local government's entitlements are matched on a current basis by the State's spending out of its own resources for those projects. The Committee considered this provision to be unnecessary and deleted it.

D. Trust funds

The House bill requires local governments to establish trust funds and deposit their revenue sharing receipts in such funds. However, it does not require State governments to establish trust funds for their revenue sharing funds. The Committee approved a provision which would also require each State government to establish a trust fund.

E. Davis-Bacon Act

The Committee deleted the provision in the House bill (Sec. 105(a)(6)) which would have required localities which employ laborers and mechanics for construction financed in whole or in part out of its revenue sharing allocation to pay wages at rates not less than those prevailing on similar construction in the locality as determined by the Secretary of Labor in accordance with the Davis Bacon Act, as amended.

F. District of Columbia commuter tax

The Committee deleted the provision in the House bill (Sec. 141(c)(3)) which would have reduced the entitlements of the District of Columbia by an amount equal to the net collections of any tax imposed by the District of Columbia on income of nonresidents.

G. "Piggyback" provision

The Committee approved, with minor modification, the "piggyback" provision of the House bill which provides for Federal administration and collection of State individual income taxes in those cases where the States requested the service. The Committee eliminated a permitted adjustment, under the House bill, for a credit allowed against the State income tax, on the basis of a specified number of dollars per capita, with respect to a general sales tax. The Committee also modified the rule in the bill to permit a variation in the State income tax with respect to the taxation of interest on bonds issued by the taxing State. The Committee voted to permit changes in the qualified State tax before November 1 of a calendar year (vice September 1 in House bill) to be eligible for the Federal collection procedure. Finally, the Committee voted to modify the effective date for the Federal collection procedure by eliminating the requirement that five States must have notified the Treasury Department of their intention to seek Federal collection. Hence, the only requirement under the bill as amended is that there must be an election by one or more States, having residents who in the aggregate filed 5 percent or more of the Federal individual income tax returns filed during 1972.

H. Funds subject to State law

The Committee agreed to a provision which would explicitly recognize that the funds must be used by the States and localities subject to their laws and budgetary procedures.

Mr. HANSEN. Mr. President, I think the press release does a good job of summarizing in capsule form what many provisions of the legislation are. Once more I pay my respects to the distinguished chairman of the committee and the distinguished ranking minority member of the committee for having worked side by side along with the other members of the committee in trying first to understand what the problems are in the financing of State and local governments and, second, devising a formula and a bill that I think addresses itself to a specific resolution of those most vexatious problems.

I thank the Senators.

DISRUPTION IN CALIFORNIA FROM SOCIAL SERVICES PROPOSALS

Mr. TUNNEY. Mr. President, I wish to draw the attention of my distinguished colleagues in the Senate, and particularly those who are members of the Finance Committee, to some very serious and disturbing implications of the method the committee has proposed for limiting Federal matching expenditures on social services through the revenue-sharing legislation.

Under the provisions of the committee amendments, the amount allocated to each State from the extra $1 billion a year of the so-called supplementary sharing grants, which would replace social services matching funds, would be divided within the State in the same way as the general revenue-sharing funds.

About a third would go to the State government, and the other two-thirds would be divided between the cities and counties on the basis of population, tax effort, and inverse per capita income.

Leaving aside any question about the absolute amount of funds which would be provided, if this method of intrastate distribution is followed, the consequences in the State of California at least will be totally disruptive, wasteful, and quite contrary both to the intent of the Social Security Act and to the effective provision of basic social services at an adequate and responsible level.

In California, as in other States, the Federal matching moneys are paid to the State.

The State of California itself retains a small proportion of the funds for the provision of services, and provides a small amount of the local matching funds.

The rest of it passes on to the counties. The counties handle some 70 percent of all the social services funds expended in the State. They provide 70 percent of the services. And they also pay from their own resources 70 percent of all matching funds.

Thus, of the total expenditure, the State contributes some 7.5 percent, the Federal Government 75 percent, and the counties 17.5 percent.

In Los Angeles, the county provides some 20.1 percent of the funding, the State 7.3 percent, and the Federal Government 72.6 percent.

In San Diego, the county provides 21 percent, the State 4 percent, and the Federal Government 75 percent.

It is the counties which have the responsibility, and the developed capacity and experience, for providing social services in accordance with the intent of the Social Security Act.

The committee bill, however, would direct one-third of the Federal money to the State, which presumably would still want to delegate the responsibility and pass through part of its share to the counties.

But very substantial funds—and a very substantial proportion of all the funds for any State—are directed to the cities—the cities which now have no responsibility in California for the provisions of services.

What are they to do with the funds? Move into social services? Take up what the counties would be forced to abandon because the existing financial and organizational structure was abandoned? Indeed, is there any compulsion on them to spend the money on these services at all?

I feel sure that the implications of this attempt to use a formula devised to achieve certain ends in the field of revenue sharing for the detailed distribution of funds for social services were not realized when this action was taken.

There is no positive aspect to this change in intrastate distribution of funds at all. Its effect would simply be disruptive of an apparatus which has been found to work satisfactorily.

To avoid this disruption, these provisions must be amended to approach more closely to the status quo. Whatever funds are allocated should be allocated to the States, as at present, and it should be left to the States and their local governments to provide the services in whatever way has been found to be most appropriate with their needs and circumstances.

Mr. President, I am not now seeking to offer an amendment to this effect. I know that there is considerable attention being given to much more comprehensive amendments dealing with social services which would be able to accommodate this serious objection to the committee version.

It is my hope that during the time of the recess it will be possible to reach some agreement on the best approach to the solution of this potentially very disruptive provision.

AMENDMENT OF INTERNAL REVENUE CODE OF 1954 WITH REGARD TO THE EXEMPT STATUS OF VETERANS' ORGANIZATIONS

Mr. BENNETT. Mr. President, I ask unanimous consent that the pending business be temporarily laid aside and that the Senate proceed to the immediate consideration of H.R. 11185.

The PRESIDING OFFICER. The clerk will report the bill by title.

The assistant legislative clerk read as follows:

H.R. 11185, a bill to amend the Internal Revenue Code of 1954 with regard to the exempt status of veterans' organization.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Utah?

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on Finance with an amendment to strike out all after the enacting clause and insert:

That (a) section 501(c) of the Internal Revenue Code of 1954 (relating to list of exempt organizations) is amended by adding at the end thereof the following new paragraph:

"(19) A post or organization of war veterans, or an auxiliary unit or society of, or a trust or foundation for, any such post or organization—

"(A) organized in the United States or any of its possessions,

"(B) at least 75 percent of the members of which are war veterans and substantially all of the other members of which are individuals who are veterans (but not war veterans), or are cadets, or are spouses, widows, or widowers of war veterans or such individuals, and

"(C) no part of the net earnings of which inures to the benefit of any private shareholder or individual.".

(b) Section 512(a) of such Code (relating to definition of unrelated business taxable income) is amended by adding at the end thereof the following new paragraph:

"(4) SPECIAL RULE APPLICABLE TO ORGANIZATIONS DESCRIBED IN SECTION 501(c)(19).—In the case of an organization described in section 501(c)(19), the term 'unrelated business taxable income' does not include any amount attributable to payments for life, sick, accident, or health insurance with respect to members of such organizations or their dependents which is set aside for the purpose of providing for the payment of insurance benefits or for a purpose specified in section 170(c)(4). If an amount set aside under the preceding sentence is used during the taxable year for a purpose other than a purpose described in the preceding sentence, such amount shall be included, under paragraph (1), in unrelated business taxable income for the taxable year."

(c) The amendments made by this section shall apply to taxable years beginning after December 31, 1969.

SEC. 2. (a) Section 165(h) of the Internal Revenue Code of 1954 (relating to disaster losses) is amended by—

(1) striking out the first sentence and inserting in lieu thereof the following: "Notwithstanding the provisions of subsection (a), any loss attributable to a disaster occurring in an area subsequently determined by the President of the United States to warrant assistance by the Federal Government under the Disaster Relief Act of 1970 may, at the election of the taxpayer, be deducted for the taxable year immediately preceding the taxable year in which the disaster occurred."; and

(2) inserting before the period in the second sentence a comma and the following: "based on facts existing at the date the taxpayer claims the loss".

(b) Section 6405 of such Code (relating to reports of refunds and credits to the Joint Committee on Internal Revenue Taxation) is amended by adding at the end thereof the following new subsection:

"(d) REFUNDS ATTRIBUTABLE TO CERTAIN DISASTER LOSSES.—If any refund or credit of income taxes is attributable to the taxpayer's election under section 165(h) to deduct a disaster loss for the taxable year immediately preceding the taxable year in which the disaster occurred, the Secretary or his delegate is authorized in his discretion to make the refund or credit, to the extent attributable to such election, without regard to the provisions of subsection (a) of this section. If such refund or credit is made without regard to subsection (a), there shall thereafter be submitted to such Joint Committee a report containing the matter specified in subsection (a) as soon as the Secretary or his delegate shall determine the correct amount of the tax for the taxable year for which the refund or credit is made."

(c) The amendment made by subsection (a) shall apply to disasters occurring after December 31, 1971, in taxable years ending after such date. The amendment made by subsection (b) shall apply with respect to refunds or credits made after July 1, 1972.

Mr. BENNETT. Mr. President, I have reported the bill under instructions from the Finance Committee and have asked the Senate to proceed to its consultation for the purpose of getting through a very important amendment which the Finance Committee attached to the bill.

H.R. 11185, as passed by the House, deals with the tax-exempt status of veterans' organizations and the treatment of their insurance activities under the tax laws. Under present law veterans' organizations have been exempt from tax as social clubs, or as social welfare organizations. The House bill creates a separate exemption category for war veterans' organizations. It also provides that income a war veterans' organization receives from insuring its members and their dependents is not to be subject to the unrelated business income tax, to the extent the income is used or set aside for the insurance benfits or for religious, charitable, educational, and so forth.

The committee accepted this House-passed provision with two modifications. First, it extended the new exempt category and the exemption of the organizations' insurance income from the unrelated business income tax to any veterans' organization whose membership consists of at least 75 percent of war veterans as long as substantially all of the other members are veterans—other than war veterans—cadets, or are spouses, widows or widowers of war veterans or such other individuals. In addition, since the unrelated business income tax was extended to these organizations in 1969 by the Tax Reform Act, the committee made the effective date of this bill as of the date of enactment of the Tax Reform Act.

The committee has also added two amendments to the bill with respect to disaster losses. The first amendment allows a taxpayer, at his option, to deduct a disaster loss—in a Presidentially declared disaster area—occurring at any time during a taxable year for the immediately preceding year. This extends the recently enacted provision—in Public Law 92-336—which allows this treatment if the disaster occurred within the first 6 months of the taxable year to cover taxpayers without regard to when during the taxable year the loss occurred. The 6 months' rule of the recent legislation, for example, denies many fiscal year taxpayers the right to use this provision even for flood losses arising from Hurricane Agnes merely because this storm did not occur in the first 6 months of their taxable years. The second amendment speeds the processing of refund claims resulting from Hurricane Agnes, other recent disasters and similar future disasters by authorizing the Internal Revenue Service to make credits or refunds in excess of $100,000 before submitting a report to the Joint Committee on Internal Revenue Taxation. A report will be submitted to the joint committee after the refund is made.

This bill has been reported unanimously by the committee and the Treasury Department does not object to the bill's enactment.

Mr. President, one or two very large companies have suffered almost fatal damage as a result of the damage done by Hurricane Agnes, which literally will cause them to go out of business if this relief is not immediately available. Therefore, I ask that the Senate approve this legislation.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment in the nature of a substitute.

The committee amendment was agreed to.

The question is on the engrossment of the amendment and third reading of the bill.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

The title was amended, so as to read: "An Act to amend the Internal Revenue Code of 1954 with regard to the exempt status of veterans' organizations, and for other purposes."

REMOVAL OF INJUNCTION OF SECRECY FROM CONVENTION BETWEEN UNITED STATES AND JAPAN ON PROTECTION OF MIGRATORY BIRDS (EXECUTIVE R, 92D CONG. SECOND SESS.)

Mr. MANSFIELD. Mr. President, as in executive session, I ask unanimous consent that the injunction of secrecy be removed from the Convention between the Government of the United States of America and the Government of Japan for the Protection of Migratory Birds and Birds in Danger of Extinction, and their Environment, signed at Tokyo on March 4, 1972 (Executive R, 92d Congress, 2d session), which was transmitted to the Senate today by the President of the United States, and that the convention with accompanying papers be referred to the Committee on Foreign Relations and ordered to be printed, and that the President's message be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The message from the President is as follows:

To the Senate of the United States:

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith the Convention Between the Government of the United States of America and the Government of Japan for the Protection of Migratory Birds and Birds in Danger of Extinction, and their Environment, signed at Tokyo on March 4, 1972, I transmit also, for the information of the Senate, the report from the Department of State regarding the Convention.

This Convention, which marks the culmination of several years of intensive study and consultations between experts of both countries, is designed to provide for the protection of species of birds which are common to both countries or which migrate between them. Recognizing the importance of the preservation of the environment of birds and recognizing that island environments are particularly susceptible to disturbance, the Convention provides that each country will develop programs to preserve and enhance the environment of the birds which are protected under the Convention.

I believe that the Convention establishes an effective basis for cooperation in taking measures for the management and protection of the birds included under the Convention.

I recommend that the Senate give early and favorable consideration to the Convention and give its advice and consent to ratification.

RICHARD NIXON.

THE WHITE HOUSE, *August 18, 1972.*

PENDING BUSINESS (H.R. 14370) TEMPORARILY LAID ASIDE

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the pending business (H.R. 14370) be temporarily laid aside.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate turn to the consideration of Calendar No. 1024, and the remainder of the calendar in sequence, except for Calendar No. 1027.

The PRESIDING OFFICER. Without objection, it is so ordered.

SEAL BEACH NATIONAL WILDLIFE REFUGE

The bill (H.R. 10310) to establish the Seal Beach National Wildlife Refuge was considered, ordered to a third reading, read the third time, and passed.

ADMINISTRATIVE CONFERENCE ACT

The bill (S. 3671) to amend the Administrative Conference Act was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 3671

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. Section 575 of title 5, United States Code, is amended—

(a) by amending paragraph (10) of subsection (c) to read as follows:

"(10) organize and direct studies ordered by the Assembly or the Council, to contract for the performance of such studies with any public or private persons, firm, association, corporation, or institution under title III of the Federal Property and Administrative Services Act of 1949, as amended (41 U.S.C. 251–260), and to use from time to time, as appropriate, experts and consultants who may be employed in accordance with section 3109 of this title at rates not in excess of the maximum rate of pay for grade GS–18 as provided in section 5332 of this title;";

(b) by redesignating paragraphs (11) and (12) of subsection (c) as paragraphs (14) and (15) respectively and by adding the following new paragraphs:

"(11) utilize, with their consent, the services and facilities of Federal agencies and of State and private agencies and instrumentalities with or without reimbursement;

"(12) accept, hold, administer, and utilize gifts, devises, and bequests of property, both real and personal, for the purpose of aiding and facilitating the work of the Conference. Gifts and bequests of money and proceeds from sales of other property received as gifts, devises, or bequests shall be deposited in the Treasury and shall be disbursed upon the order of the Chairman. Property accepted pursuant to this section, and the proceeds thereof, shall be used as nearly as possible in accordance with the terms of the gifts, devises, or bequests. For purposes of Federal income, estate, or gift taxes, property accepted under this section shall be considered as a gift, devise, or bequest to the United States;

"(13) accept voluntary and uncompensated services, notwithstanding the provisions of section 3679(b) of the Revised Statutes (31 U.S.C. 665(b));".

SEC. 2. Section 576 of title 5, United States Code, is amended to read as follows:

"§ 576. Appropriations

"There are authorized to be appropriated sums necessary to carry out the purposes of this subchapter.".

DR. DAVID G. SIMONS, LIEUTENANT COLONEL, U.S. AIR FORCE, RETIRED

The bill (H.R. 3413) for the relief of Dr. David G. Simons, lieutenant colonel, U.S. Air Force, retired, was considered, ordered to a third reading, read the third time, and passed.

SETTLEMENT OF CERTAIN ADMIRALTY CLAIMS

The bill (H.R. 8549) to amend title 10, United States Code, to broaden the authority of the Secretaries of the military departments to settle certain admiralty claims administratively, and for other purposes was considered, ordered to a third reading, read the third time, and passed.

WHITE HOUSE CONFERENCE ON THE HANDICAPPED

The Senate proceeded to consider the joint resolution (S.J. Res. 202) to express the sense of Congress that a White House Conference on the Handicapped be called by the President of the United States which had been reported from the Committee on Labor and Public Welfare with amendments on page 5, line 16, after the word "such", insert "handicapped persons"; and, at the beginning of line 23, insert "In carrying out his functions under this joint resolution, the Secretary shall employ handicapped persons."

The amendments were agreed to.

The joint resolution was ordered to be engrossed for a third reading, read the third time, and passed.

The preamble was agreed to.

The joint resolution, with its preamble, reads as follows:

Whereas this Nation has achieved great and satisfying success in making possible a better quality of life for a large and increasing percentage of our population; and

Whereas the great benefits and fundamental rights of our society are often denied those who are mentally and physically handicapped; and

Whereas there are seven million handicapped children and countless numbers of handicapped adults; and

Whereas equality of opportunity, equal access to all aspects of society and equal rights of the handicapped is of critical importance to this Nation; and

Whereas the primary responsibility for meeting the challenge and problems of the handicapped has been that of the States and communities; and

Whereas all levels of government must necessarily share responsibility for developing opportunities for the handicapped; and it is therefore the policy of the Congress that the Federal Government shall work jointly with the States and their citizens, to develop recommendations and plans for action, consistent with the objectives of this resolution, which will serve the purposes of—

(1) providing educational, health, and diagnostic services for all children early in life so that handicapped conditions may be discovered and treated early;

(2) assuring that every handicapped person receives appropriately designed benefits of our educational system;

(3) assuring that the handicapped have available to them all special services and

assistance they need to live a full and productive life;

(4) enabling handicapped persons to have equal and adequate access to all forms of communication and transportation services and devices, especially in time of emergency;

(5) examining changes that technological innovation will make in the problems facing the handicapped;

(6) assuring handicapped persons equal opportunity with others to engage in gainful employment;

(7) enabling handicapped persons to have incomes sufficient for health and for participation in family and community life as self-respecting citizens;

(8) increasing research relating to all aspects of handicapping conditions;

(9) assuring close attention and evaluation to all aspects of diagnosis, evaluation, and classification of handicapped persons;

(10) assuring review and evaluation of all Federal programs in the area of the handicapped, and a close examination of the Federal role in order to plan for the future;

(11) promoting other related matters for the handicapped; and

Whereas, it is essential that recommendations be made to assure that all handicapped persons are able to live their lives in a manner as independent and self-reliant as possible, and that the complete integration of all the handicapped into normal community living, working, and service patterns be held as the final objective: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the President of the United States is authorized and requested to call a White House Conference on the Handicapped within two years of the date of enactment of this joint resolution in order to develop recommendations for further research and action in the field of the handicapped, and to further the policies set forth in the preamble of this joint resolution. Such conference shall be planned and conducted under the direction of the Secretary of Health, Education, and Welfare (hereinafter referred to as the "Secretary") with the cooperation and assistance of such other Federal departments and agencies, including the assignment of personnel, as may be appropriate.

(b) For the purpose of arriving at facts and recommendations concerning the utilization of skills, experience, and energies and the improvement of the conditions of the handicapped, the conference shall bring together representatives of Federal, State, and local governments, professional and lay people who are working in the fields of the handicapped, and of the general public, including handicapped persons and parents of handicapped persons.

(c) A final report of the White House Conference on the Handicapped shall be submitted to the President not later than one hundred and twenty days following the date on which the conference is called and the findings and recommendations included therein shall be immediately made available to the public. The Secretary shall, within ninety days after the submission of such final report, transmit to the President and the Congress his recommendations for the administrative action and the legislation necessary to implement the recommendations contained in such report.

SEC. 2. In administering this joint resolution, the Secretary shall—

(a) request the cooperation and assistance of such other Federal departments and agencies as may be appropriate;

(b) render all reasonable assistance, including financial assistance, to the States in enabling them to organize and conduct conferences on the handicapped prior to the White House Conference on the Handicapped;

(c) prepare and make available background material for the use of delegates to the White House Conference on the Handicapped as he may deem necessary;

(d) prepare and distribute interim reports of the White House Conference on the Handicapped as may be exigent; and

(e) engage such handicapped persons and additional personnel as may be necessary without regard to the provisions of title 5, United States Code, governing appointments in the competitive civil service, and without regard to chapter 57 and subchapter 111 of chapter 53 of such title relating to classification and General Schedule pay rates. In carrying out his functions under this joint resolution, the Secretary shall employ handicapped persons.

SEC. 3. For the purpose of this joint resolution the term "State" includes the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the Virgin Islands, and the Trust Territory of the Pacific Islands.

SEC. 4. (a) The Secretary is authorized and directed to establish an Advisory Committee to the White House Conference on the Handicapped composed of twenty-eight members of whom not less than ten shall be handicapped or parents of handicapped persons.

(b)(1) Any members of the Advisory Committee who is otherwise employed by the Federal Government shall serve without compensation in addition to that received in his regular employment, but shall be entitled to reimbursement for travel, subsistence, and other necessary expenses incurred by him in the performance of his duties.

(2) Members of the Advisory Committee, other than those referred to in paragraph (1), shall receive compensation at rates not to exceed $75 per day, for each day they are engaged in the performance of their duties as members of the Advisory Committee including traveltime and, while so engaged away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as the expenses authorized by section 5703 of title 5, United States Code, for persons in Government service employed intermittently.

(c) Such Advisory Committee shall cease to exist ninety days after the submission of the final report required by section (1)(c).

SEC. 5. There is authorized to be appropriated to carry out this joint resolution $2,000,000.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I am looking for the distinguished Senator from Alabama (Mr. ALLEN) because it is my intention to call up the adjournment resolution at this time.

Mr. HUMPHREY. Mr. President, will the Senator withhold?

Mr. MANSFIELD. We are not going out now, which I understand is privileged and not debatable. What it does is to call for an adjournment from the conclusion of business today until 10 o'clock Tuesday morning, September 5.

Mr. ALLEN. Mr. President, I suggest the absence of a quorum.

Mr. MANSFIELD. I have not yielded the floor, and I call up the resolution.

Mr. ALLEN. Very well, I suggest the absence of a quorum.

The PRESIDING OFFICER. The call for the quorum takes precedence.

The assistant legislative clerk proceeded to read the resolution.

Mr. MANSFIELD. I withdraw my request.

The PRESIDING OFFICER. The request is withdrawn.

Mr. ALLEN. I withdraw my request.

The PRESIDING OFFICER. The call for the quorum is withdrawn.

The Senator from Alabama is recognized.

Mr. ALLEN. Mr. President——

Mr. WILLIAMS. Mr. President, will the Senator yield so that I may get a couple of staff people on the floor? Mr. President, I ask unanimous consent that two members of the staff of the Committee on Labor and Public Welfare, Stephen Wexler and Mik Edes, be permitted on the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. ALLEN. Mr. President, having obtained the floor, I ask unanimous consent that I may yield the floor for the purpose of receiving at least two messages from the House, one dealing with the student loan and the other dealing with the antibusing legislation, and that after those messages have been acted upon by the Senate I be allowed to obtain the floor again.

The PRESIDING OFFICER. Is there objection? The Chair hears none and it is so ordered.

The Senate will receive a message from the House.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Berry, one of its reading clerks, announced that the House had passed, without amendment, the joint resolution (S.J. Res. 182) authorizing the President to invite the States of the Union and foreign nations to participate in Farmfest—U.S.A. and the World Ploughing Contest in September 1972.

The message also announced that the House had passed the joint resolution (S.J. Res. 260) to delay the effectiveness of certain amendments to the interest subsidy provisions of the guaranteed student loan program in the case of certain students, with amendments, in which it requested the concurrence of the Senate.

The message further announced that the House had passed a bill (H.R. 13915) to further the achievement of equal educational opportunities, in which it requested the concurrence of the Senate.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills and joint resolution:

S. 2166. An act to authorize the establishment of the Grant-Kohrs National Historic Site in the State of Montana, and for other purposes;

S. 3159. An act to authorize the Secretary of the Interior to establish the John D. Rockefeller, Junior, Memorial Parkway, and for other purposes;

H.R. 12931. An act to provide for improving the economy and living conditions in rural America; and

H.J. Res. 1278. Joint resolution making further continuing appropriations for the fiscal year 1973, and for other purposes.

Mr. ALLEN. Now, Mr. President——

The PRESIDING OFFICER. The Senator from Alabama is recognized.

Mr. ALLEN. On the last legislative day unanimous consent was given to the junior Senator from Alabama that when the House message with respect to this bill——

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. ALLEN. Yes, sir.

Mr. MANSFIELD. The Senator may recall a conversation which I had and in which I thought we agreed that Senate Joint Resolution 260, having to do with student loans could be called up at this time.

Mr. ALLEN. I have no objection. I understood the other one was ready.

Mr. MANSFIELD. I understand the other matter was with it.

Mr. ALLEN. Are both of them here?

The PRESIDING OFFICER. Is the request that they be laid before the Senate?

Mr. MANSFIELD. Yes, the Senate joint resolution.

Mr. ALLEN. Are both measures here?

The PRESIDING OFFICER. Both measures are here.

Mr. ALLEN. Does the Senator request that the student loan message come up first?

Mr. MANSFIELD. Yes.

Mr. ALLEN. To be followed immediately by the message with respect to H.R. 13915?

The PRESIDING OFFICER. Does the Senator yield for that purpose?

Mr. ALLEN. I yield, but not on my time for that purpose for which I was to be recognized.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the first matter is disposed of the Senator from Alabama (Mr. Allen) be recognized.

Mr. ALLEN. For the full 10 minutes allotted to me.

The PRESIDING OFFICER. Is there objection? Without objection it is so ordered.

INTEREST SUBSIDY PROVISIONS OF THE GUARANTEED STUDENT LOAN PROGRAM

The PRESIDING OFFICER laid before the Senate the amendments of the House of Representatives to the joint resolution (S.J. Res. 260) to delay the effectiveness of certain amendments to the interest subsidy provisions of the guaranteed student loan program in the case of certain students, which were to strike out all after the resolving clause, and insert:

That the effectiveness of the amendments made by sections 132A, 132B, 132C, 132D, 132E, and 132F of the Education Amendments of 1972 is hereby suspended for the period beginning with the date of enactment of this joint resolution and ending March 1, 1973, and the provisions of part B of title IV of the Higher Education Act of 1965, as in effect immediately prior to the enactment of such amendments, shall be effective during such period, except that (1) nothing in this joint resolution shall be deemed to affect the validity of any action taken or obligation undertaken under such part prior to the enactment of this joint resolution, and (2) section 438(b) of the Higher Education Act of 1965 shall continue to be in effect during such period. Section 431(b) of the General Education Provisions Act and section 495 of the Higher Education Act of 1965 shall not be applicable in the case of administrative action taken to effectuate this joint resolution.

And amend the title so as to read: "Joint resolution to suspend until March 1, 1973, the effectiveness of certain amendments made by the Education Amendments of 1972 to the guaranteed student loan program."

Mr. WILLIAMS. Mr. President, this action originated here. The Senate passed legislation to deal with a crisis in the granting of loans to students for the college semester about to begin. There was confusion, and out of the administrative confusion loans were not being processed to conclusion.

I shall not delay the Senate with a description of why there was this administrative confusion. It did exist. The Senate passed a joint resolution to deal with it and let the finance office get on with the business of seeing through the completion of student loans. The House acted differently, and the Senate resolution, as amended, by the House, is before us.

I should like to read a brief statement that indicates the view of the Senator from Rhode Island (Mr. Pell), the chairman of the subcommittee that handles this legislation for the Senate.

On this matter, I have spoken to Senator Pell, who informed me that during House debate on Senate Joint Resolution 260, he was advised that the nature of the House amendment would, in effect, threaten the new provisions of the education amendments of 1972 pertaining to student assistance programs. At that point, he let it be known that if the House amendment did, in fact, have such an effect, he intended to object to immediate Senate action.

The Senator has now been informed of the text of the House-amended Senate Joint Resolution 260. The amendment added on the House floor does not threaten the new student aid provisions. Therefore, the Senator from Rhode Island does not object to immediate Senate action.

I am in agreement with the Senator from Rhode Island. I believe that the essentials of the Senate-passed measure that is now law have been preserved in this temporary suspension of the title of the program.

I yield to the Senator from Colorado to see if that is clear.

Mr. DOMINICK. Mr. President, I thank my colleague from New Jersey. We have been over this matter very carefully. What it does is suspend the new law insofar as guaranteed loans are concerned and go back to the old law that both students and financial officers understand. This suspension will go only until the first of March, so that we can have hearings to see what needs to be done either in change of regulations or change of the new law, in order to make it easier to process student loans.

This also has what we generally call a grandfather clause. It provides that those who have already taken action or gotten a commitment under the new law will be preserved in their rights. So we have not jeopardized anybody's rights, but we have made it far easier, in the intervening time between now and March, to get loans, which many of them desperately need. It is my sincere hope that we will pass it rapidly.

I have authority to say that the Senator from New York (Mr. Javits) agrees with this position. Everybody I have contacted feels this is the way to proceed.

Mr. WILLIAMS. Mr. President, I move that the Senate concur in the House amendments.

The PRESIDING OFFICER. The motion is agreed to.

Mr. DOMINICK. Mr. President, a procedural question. I did not hear the announcement of the Chair. Did he say the joint resolution had passed?

The PRESIDING OFFICER. The announcement that the amendments were concurred in clears the bill.

EQUAL EDUCATIONAL OPPORTUNITIES ACT OF 1972

The PRESIDING OFFICER. The clerk will read the next bill by title.

The assistant legislative clerk read as follows:

H.R. 13915, a bill to further the achievement of equal educational opportunities.

Mr. ALLEN. Mr. President, I call for the first reading of that bill.

The PRESIDING OFFICER. That was the first reading of the bill by the clerk.

Mr. ALLEN. Very well. It was the understanding of the junior Senator from Alabama that there are Senators who object to the bill's getting its second reading at this time, so, in order to accommodate their wishes, without any prejudice whatsoever to the bill except to delay it 1 day, even if such request were granted, I now object, Mr. President, to further proceedings today under this bill.

The PRESIDING OFFICER. Does the Senator from Alabama object to the second reading of the bill?

Mr. ALLEN. I object to further proceedings in order to accede to the request of some Senators who do not wish the bill to get a second reading. Then I would like to get my time.

The PRESIDING OFFICER. Without objection, second reading will go over until the next legislative day.

Mr. ALLEN. I yield myself 5 minutes.

Mr. President, after midnight last night, the House passed H.R. 13915, a most important piece of legislation. I ask unanimous consent that a copy of that bill be printed in the Record at this point, together with an article entitled "Ban on Busing Up to Senate, written by Ron Sarro and published in today's Washington Star.

There being no objection, the bill and the article were ordered to be printed in the Record, as follows:

H.R. 13915

An act to further the achievement of equal educational opportunities

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Equal Educational Opportunities Act of 1972".

POLICY AND PURPOSE

SEC. 2. (a) The Congress declares it to be the policy of the United States that—

(1) all children enrolled in public schools are entitled to equal educational opportunity without regard to race, color, sex, or national origin; and

(2) the neighborhood is the appropriate basis for determining public school assignments.

(b) In order to carry out this policy, it is the purpose of this Act to authorize concentration of resources under the Emergency School Aid Act on educationally deprived students and to specify appropriate remedies for the orderly removal of the vestiges of the dual school system.

SEC. 3. (a) The Congress finds that—

(1) the maintenance of dual school systems in which students are assigned to schools solely on the basis of race, color, sex, or national origin, denies to those students the equal protection of the laws guaranteed by the fourteenth amendment;

(2) for the purpose of abolishing dual school systems and eliminating the vestiges thereof, many local educational agencies have been required to reorganize their school systems, to reassign students, and to engage in the extensive transportation of students;

(3) the implementation of desegregation plans that require extensive student transportation has, in many cases, required local educational agencies to expend large amount of funds, thereby depleting their financial resources available for the maintenance or improvement of the quality of educational facilities and instruction provided;

(4) transportation of students which creates serious risks to their health and safety, disrupts the educational process carried out with respect to such students, and impinges significantly on their educational opportunity, is excessive;

(5) the risks and harms created by excessive transportation are particularly great for children enrolled in the first six grades; and

(6) the guidelines provided by the courts for fashioning remedies to dismantle dual school systems have been, as the Supreme Court of the United States has said, "incomplete and imperfect," and have not established, a clear, rational, and uniform standard for determining the extent to which a local educational agency is required to reassign and transport its students in order to eliminate the vestiges of a dual school system.

(b) For the foregoing reasons, it is necessary and proper that the Congress, pursuant to the powers granted to it by the Constitution of the United States, specify appropriate remedies for the elimination of the vestiges of dual school systems.

TITLE I—ASSISTANCE

AMENDMENTS TO THE EMERGENCY SCHOOL AID ACT TO PERMIT CONCENTRATION OF RESOURCES ON EDUCATIONALLY DEPRIVED STUDENTS ATTENDING SCHOOLS ENROLLING HIGH CONCENTRATIONS OF STUDENTS FROM LOW-INCOME FAMILIES

SEC. 101. (a) Section 702(b) of the Emergency School Aid Act is amended by striking out "and" at the end of clause (2), striking out the period at the end of clause (3) and inserting "; and" in lieu thereof, and adding at the end of such section the following new clause:

"(4) to aid educationally deprived students enrolled in schools enrolling a high proportion of students from low-income families (or transferring from such schools to schools enrolling a lower proportion of students from low-income families) in overcoming their educational deprivation."

(b) Section 706(a)(1) of such Act is amended by—

(1) inserting "(or, in the case of a local educational agency described by clause (E) of this paragraph, the appropriate State educational agency)" after "Assistant Secretary";

(2) striking out the period at the end of clause (D) and inserting "; or" in lieu thereof, and

(3) adding at the end of such section the following:

"(E) which has adopted and is implementing, or will, if assistance is made available to it under this title, adopt and implement a plan (either as a part of any plan described in clause (A), (B), (C), or (D) of this paragraph or otherwise) to concentrate (consistent with such criteria as the Assistant Secretary may prescribe) funds available to it under this title on the provision of basic instructional services and basic supportive services for educationally deprived students enrolled in schools of such agency enrolling a high proportion (as determined by the Assistant Secretary) of their students from low-income families and on the provision of such services for educationally deprived students who, pursuant to such plan, transfer from such schools to other schools in which a lower proportion of the students enrolled are from low-income families."

(c) Section 706(c) of such Act is amended by—

(1) inserting "(or, in the case of a local educational agency described by clause (E) of subsection (a), the appropriate State edutary"; and

(2) inserting "prescribed by the Assistant Secretary" after "regulations".

(d) Section 710(a) of such Act is amended by inserting "(or, in the case of a local educational agency described by section 706(a) (1) (E), the appropriate State educational agency)" after "Assistant Secretary" each time it occurs in so much of such section as precedes clause (1).

(e) Section 710(b) of such Act is amended by inserting "(or, in the case of a local educational agency described by section 706(a) (1) (E), the appropriate State educational agency)" after "Assistant Secretary".

(f) (1) Section 710(c) of such Act is amended by—

(A) inserting "(or, in the case of a local educational agency described by section 706 (a) (1) (E), the appropriate State educational agency)" after "Assistant Secretary",

(B) striking out "and" at the end of clause (1) (C),

(C) striking out the semicolon at the end of clause (1) (D) and inserting in lieu thereof ", and", and

(D) adding at the end of clause (1) of such section the following:

"(E) the extent to which educationally deprived students are enrolled in schools of a local educational agency enrolling a high proportion (as determined by the Assistant Secretary) of their students from low-income families;"

(2) Such section 710(c) is further amended by inserting before the semicolon at the end of clause (2) the following: ", or in the case of applications by local educational agencies implementing plans described in section 706 (a) (1) (E), the degree to which the plan and the program or project are likely to meet the special educational needs of educationally deprived students enrolled in schools enrolling a high proportion (as determined by the Assistant Secretary) of their students from low-income families and of educationally deprived students who, pursuant to such plan, transfer to schools in which a lower proportion of the students enrolled are from low-income families".

(3) Such section is further amended by inserting before the semicolon at the end of clause (3) the following: ", or in the case of a plan described by section 706(a) (1) (E), constitutes a comprehensive approach to meeting the special educational needs of educationally deprived students enrolled in schools of a local educational agency enrolling a higher proportion (as determined by the Assistant Secretary) of their students from low-income families and of educationally deprived students who, pursuant to such plan, transfer to schools in which a lower proportion of the students enrolled are from low-income families".

(4) Such section is further amended by striking out "and" at the end of clause (5), striking out the period at the end of clause (6) and inserting "; and" in lieu thereof and adding at the end thereof the following:

"(7) such criteria as the Assistant Secretary may prescribe for the purpose of assuring that funds made available under this title to a local educational agency implementing a plan described by section 706(a) (1) (E) will, to the extent determined by the Assistant Secretary after consultation with the appropriate State educational agency, be used by such local educational agency for carrying out programs or projects for the provision of basic instructional services and basic supportive services for educationally deprived students enrolled in the schools of such agency enrolling a high proportion (as determined by the Assistant Secretary) of their students from low-income families and for educationally deprived students who, pursuant to such plan, transfer to schools in which a lower proportion of the students enrolled are from low-income families.

Criteria prescribed by the Assistant Secretary pursuant to clause (7) of the preceding sentence shall be designed to insure that—

"(1) in the approval by State educational agencies of applications for funds under this title from local educational agencies to assist them in implementing plans described in section 706(a) (1), priority will be given to those local educational agencies which are implementing, or will implement, if assistance is made available to them under this title, a plan described in clause (A), (B), (C), or (D) of such section and a plan described in clause (E) of such section.

"(2) the amount of funds available under this title to a local educational agency implementing a plan described by section 706 (a) (1) (E) for the provision of basic instructional services and basic supportive services for educationally deprived students enrolled in the schools of such agency enrolling a high proportion (as determined by the Assistant Secretary) of their students from low-income families will be adequate to meet the needs of such students for such services, and

"(3) there will be adequate provision for meeting the needs of such students who transfer from schools in which a high proportion (as determined by the Assistant Secretary) of the number of students enrolled are from low-income families to schools in which a lower proportion of the number of students enrolled are from such families,

except that nothing in this title shall be construed to authorize the provision of assistance under this title in such a manner as to encourage or reward the transfer of a student from a school in which students of his race are in a minority to a school in which students of his race are in the majority or the transfer of a student which would increase the degree of racial or economic isolation in the schools of any local educational agency."

(g) Section 710(d) (2) of such Act is amended by inserting "(or, in the case of an application by a local educational agency described by section 706(a) (1) (E), the appropriate State educational agency)" after "Assistant Secretary".

(h) Section 710(e) of such Act is amended by inserting "(or, in the case of applications by local educational agencies described by section 706(a) (1) (E), the appropriate State educational agency)" after "Assistant Secretary".

(i) Section 720 of such Act is amended by inserting at the end thereof the following:

"(16) The term 'basic instructional services' means instructional services in the field of mathematics or language skills which meet such standards as the Assistant Secretary may prescribe.

"(17) The term 'basic supportive services' means noninstructional services, including health or nutritional services, as prescribed by the Assistant Secretary.

"(18) The term 'low-income families' means families having an annual income of less than the low-income factor.

"(19) The term 'low-income factor' means the low-income factor as defined by section 103(c) of the Elementary and Secondary Education Act of 1965."

(j) Such Act is further amended by inserting at the ending thereof the following new sections:

"TITLE I OF THE ELEMENTARY AND SECONDARY EDUCATION ACT OF 1965 NOT AFFECTED

"SEC. 721. Nothing in this title shall be construed to alter the amount of a grant which any local educational agency is eligible to receive for a fiscal year under title I of the Elementary and Secondary Education Act of 1965 or otherwise modify any provision of such title.

"STATE PLANS

"SEC. 722. (a) Applications by local educational agencies for assistance in carrying out plans described by section 706(a) (1) (E) shall be submitted to the appropriate State educational agency for approval by such agency.

"(b) (1) A State may receive payments for any fiscal year for the purpose of assisting local educational agencies to carry out plans described by section 706(a) (1) (E) if it submits to the Assistant Secretary, through its State educational agency, a State plan which—

"(A) recommends to the Assistant Secretary the amount of funds apportioned to such State under section 705 which shall be reserved within such State for applications under subsection (a);

"(B) sets forth criteria for establishing an order of priorities for the approval of applications of local educational agencies submitted under subsection (a) which such State educational agency determines will most effectively carry out the purposes of this title;

"(C) provides that such fiscal control and fund accounting procedures will be adopted as may be necessary, in the judgment of the Assistant Secretary, to assure proper disbursement of and accounting for Federal funds paid to the State (including such funds paid by the State to local educational agencies) under this section;

"(D) provides assurances satisfactory to the Assistant Secretary that such State educational agency will evaluate the effectiveness of assistance made available under this title for carrying out plans described by section 706(a) (1) (E) and make such periodic reports to the Assistant Secretary as he may determine to be reasonably necessary for him to perform his duties under this title.

"(2) The Assistant Secretary shall—

"(A) determine the amount of the funds apportioned to each State under section 705 which shall be reserved for applications under subsection (a),

"(B) approve a State plan which meets the requirements of this section, and

"(C) not determine the amount of such funds which are to be reserved for applications under subsection (a) or finally disapprove a State plan without first giving reasonable notice and opportunity for a hearing to the State educational agency.

"(3) The aggregate amount of funds reserved, from funds apportioned to States under section 705, by the Assistant Secretary for making payments to States under subsection (d) shall be $500,000,000 for each fiscal year.

"(c) (1) If any State is dissatisfied with the Assistant Secretary's final action with respect to the approval of its plan submitted under this section, such State may, within sixty days after notice of such action, file with the United States court of appeals for the circuit in which such State is located a petition for review of that action. A copy of the petition shall be forthwith transmitted by the clerk of the court to the Assistant Secretary. The Assistant Secretary thereupon shall file in the court the record of the proceedings on which he based his action, as provided in section 2112 of title 28, United States Code.

"(2) The findings of fact by the Assistant Secretary, if supported by substantial evidence, shall be conclusive; but the court, for good cause shown, may remand the case to the Assistant Secretary to take further evidence, shall be conclusive; but the court, thereupon make new or modified findings of fact and may modify his previous action, and shall file in the court the record of further proceedings. Such new or modified findings of fact shall likewise be conclusive if supported by substantial evidence.

"(3) Upon the filing of such petition, the court shall have jurisdiction to affirm the action of the Assistant Secretary or to set it aside, in whole or in part. The judgment of the court shall be subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code.

"(d) (1) The Assistant Secretary shall make payments to any State educational agency which has a State plan approved under this section for carrying out its State plan (including the cost of administration of such plan, but not to exceed 5 per centum of the amount reserved for such State for any fiscal year pursuant to subsection (b) (2) (A)) and for making payments to local educational agencies.

"(2) For the purposes of this subsection and section 712, a State educational agency shall be deemed an applicant for assistance."

TITLE II—UNLAWFUL PRACTICES

DENIAL OF EQUAL EDUCATIONAL OPPORTUNITY PROHIBITED

SEC. 201. No State shall deny equal educational opportunity to an individual on account of his or her race, color, sex, or national origin, by—

(a) the deliberate segregation by an educational agency of students on the basis of race, color, or national origin among or within schools;

(b) the failure of an educational agency which has formerly practiced such deliberate segregation to take affirmative steps, consistent with title IV of this Act, to remove the vestiges of a dual school system;

(c) the assignment by an educational agency of a student to a school, other than the one closest to his or her place of residence within the school district in which he or she resides, if the assignment results in a greater degree of segregation of students on the basis of race, color, sex, or national origin among the schools of such agency than would result if such student were assigned to the school closest to his or her place of residence within the school district of such agency providing the appropriate grade level and type of education for such student;

(d) discrimination by an educational agency on the basis of race, color, or national origin in the employment, employment conditions, or assignment to schools of its faculty or staff, except to fulfill the purposes of subsection (f) below;

(e) the transfer by an educational agency, whether voluntary or otherwise, of a student from one school to another if the purpose and effect of such transfer is to increase segregation of students on the basis of race, color, or national origin among the schools of such agency; or

(f) the failure by an educational agency to take appropriate action to overcome language barriers that impede equal participation by its students in its instructional programs.

BALANCE NOT REQUIRED

SEC. 202. The failure of an educational agency to attain a balance, on the basis of race, color, sex, or national origin, of students among its schools shall not constitute a denial of equal educational opportunity, or equal protection of the laws.

ASSIGNMENT OF NEIGHBORHOOD BASIS NOT A DENIAL OF EQUAL EDUCATIONAL OPPORTUNITY

SEC. 203. Subject to the other provisions of this title, the assignment by an educational agency of a student to the school nearest his place of residence which provides the appropriate grade level and type of education for such student is not a denial of equal educational opportunity or of equal protection of the laws unless such assignment is for the purpose of segregating students on the basis of race, color, sex, or national origin, or the school to which such student is assigned was located on its site for the purpose of segregating students on such basis.

TITLE III—ENFORCEMENT

CIVIL ACTIONS

SEC. 301. An individual denied an equal educational opportunity, as defined by this Act, may institute a civil action in an appropriate district court of the United States against such parties, and for such relief, as may be appropriate. The Attorney General of the United States (hereinafter in this Act referred to as the "Attorney General"), for or in the name of the United States, may also institute such a civil action on behalf of such an individual.

SEC. 302. When a court of competent jurisdiction determines that a school system is desegregated, or that it meets the constitutional requirements, or that it is a unitary system, or that it has no vestiges of a dual system, and thereafter residential shifts in population occur which result in school population changes in any school within such a desegregated school system, such school population changes so occurring shall not, per se, constitute a cause for civil action for a new plan of desegregation or for modification of the court approved plan.

JURISDICTION OF DISTRICT COURTS

SEC. 303. The appropriate district court of the United States shall have and exercise jurisdiction of proceedings instituted under section 301.

INTERVENTION BY ATTORNEY GENERAL

SEC. 304. Whenever a civil action is instituted under section 301 by an individual, the Attorney General may intervene in such action upon timely application.

SUITS BY THE ATTORNEY GENERAL

SEC. 305. The Attorney General shall not institute a civil action under section 301 before he—

(a) gives to the appropriate educational agency notice of the condition or conditions which, in his judgment, constitute a violation of title II of this Act; and

(b) certifies to the appropriate district court of the United States that he is satisfied that such educational agency has not, within a reasonable time after such notice, undertaken appropriate remedial action.

ATTORNEYS' FEES

Sec. 306. In any civil action instituted under this Act, the court, in its discretion, may allow the prevailing party, other than the United States, a reasonable attorneys' fee as part of the costs, and the United States shall be liable for costs to the same extent as a private person.

TITLE IV—REMEDIES

FORMULATING REMEDIES; APPLICABILITY

Sec. 401. In formulating a remedy for a denial of equal educational opportunity or a denial of the equal protection of the laws, a court, department, or agency of the United States shall seek or impose only such remedies as are essential to correct particular denials of equal educational opportunity or equal protection of the laws.

Sec. 402. In formulating a remedy for a denial of equal educational opportunity or a denial of the equal protection of the laws, which may involve directly or indirectly the transportation of students, a court, department, or agency of the United States shall consider and make specific findings on the efficacy in correcting such denial of the following remedies and shall require implementation of the first of the remedies set out below, or on the first combination thereof which would remedy such denial:

(a) assigning students to the schools closest to their places of residence which provide the appropriate grade level and type of education for such students, taking into account school capacities and natural physical barriers;

(b) assigning students to the schools closest to their places of residence which provide the appropriate grade level and type of education for such students, taking into account only school capacities;

(c) permitting students to transfer from a school in which a majority of the students are of their race, color, or national origin to a school in which a minority of the students are of their race, color, or national origin;

(d) the creation or revision of attendance zones or grade structures without requiring transportation beyond that described in section 403;

(e) the construction of new schools or the closing of inferior schools;

(f) the construction or establishment of magnet schools; or

(g) the development and implementation of any other plan which is educationally sound and administratively feasible, subject to the provisions of sections 403 and 404 of this Act.

TRANSPORTATION OF STUDENTS

Sec. 403. (a) No court, department, or agency of the United States shall, pursuant to section 402, order the implementation of a plan that would require the transportation of any student to a school other than the school closest or next closest to his place of residence which provides the appropriate grade level and type of education for such student.

(b) No court, department, or agency of the United States shall require directly or indirectly the transportation of any student if such transportation poses a risk to the health of such student or constitutes a significant impingement on the educational process with respect to such student.

(c) When a court of competent jurisdiction determines that a school system is desegregated, or that it meets the constitutional requirements, or that it is a unitary system, or that it has no vestiges of a dual system, and thereafter residential shifts in population occur which results in school population changes in any school within such a desegregated school system, no educational agency because of such shifts shall be required by any court, department, or agency of the United States to formulate, or implement any new desegregation plan, or modify or implement any modification of the court approved desegregation plan, which would require transportation of students to compensate wholly or in part for such shifts in school population so occurring.

DISTRICT LINES

Sec. 404. In the formulation of remedies under section 401 or 402 of this Act, the lines drawn by a State, subdividing its territory into separate school districts, shall not be ignored or altered except where it is established that the lines were drawn for the purpose, and had the effect, of segregating children among public schools on the basis of race, color, sex, or national origin.

VOLUNTARY ADOPTION OF REMEDIES

Sec. 405. Nothing in this Act prohibits an educational agency from proposing, adopting, requiring, or implementing any plan of desegregation, otherwise lawful, that is at variance with the standards set out in this title, nor shall any court, department, or agency of the United States be prohibited from approving implementation of a plan which goes beyond what can be required under this title, if such plan is voluntarily proposed by the appropriate educational agency.

REOPENING PROCEEDINGS

Sec. 406. On the application of an educational agency, court orders, or desegregation plans under title VI of the Civil Rights Act of 1964 in effect on the date of enactment of this Act and intended to end segregation of students on the basis of race, color, or national origin, shall be reopened and modified to comply with the provisions of this Act. The Attorney General shall assist such educational agency in such reopening proceedings and modifications.

LIMITATION ON ORDERS

Sec. 407. Any court order requiring, directly or indirectly, the transportation of students for the purpose of remedying a denial of the equal protection of the laws shall, to the extent of such transportation, be terminated if the court finds the defendant educational agency is not effectively excluding any person from any school because of race, color, or national origin, and this shall be so, whether or not the schools of such agency were in the past segregated de jure or de facto. No additional order requiring such educational agency to transport students for such purpose shall be entered unless such agency is found to be effectively excluding any person from any school because of race, color, or national origin, and this shall be so, whether or not the schools of such agency were in the past segregated de jure or de facto.

Sec. 408. Any court order requiring the desegregation of a school system shall be terminated, if the court finds the schools of the defendant educational agency are a unitary school system, one within which no person is to be effectively excluded from any school because of race, color, or national origin, and this shall be so, whether or not such school system was in the past segregated de jure or de facto. No additional order shall be entered against such agency for such purpose unless the schools of such agency are no longer a unitary school system.

TITLE V—DEFINITIONS

Sec. 501. For the purposes of this Act—

(a) The term "educational agency" means a local educational agency or a "State educational agency" as defined by section 801(k) of the Elementary and Secondary Education Act of 1965.

(b) The term "local educational agency" means a local educational agency as defined by section 801(f) of the Elementary and Secondary Education Act of 1965.

(c) The term "segregation" means the operation of a school system in which students are wholly or substantially separated among the schools of an educational agency on the basis of race, color, sex, or national origin or within a school on the basis of race, color, or national origin.

(d) The term "desegregation" means desegregation as defined by section 401(b) of the Civil Rights Act of 1964.

(e) An educational agency shall be deemed to transport a student if any part of the cost of such student's transportation is paid by such agency.

TITLE VI—MISCELLANEOUS PROVISIONS

Sec. 601. Section 709(a)(3) of the Emergency School Aid Act is hereby repealed.

SEPARABILITY OF PROVISIONS

Sec. 602. If any provision of this Act or of any amendment made by this Act, or the application of any such provision to any person or circumstance, **is held invalid**, the remainder of the provisions of this Act and of the amendments made by this Act and the application of such provision to other persons or circumstances shall not be affected thereby.

Tough Bill Clears House—Ban on Busing Up to Senate

(By Ron Sarro)

Civil rights leaders are looking to the Senate to kill a strong anti-busing measure passed by the House early today which could lead to a rollback of many school desegregation orders now in effect.

The measure would prohibit new crosstown busing of children to achieve racial balance and would allow re-opening of long-settled desegregation cases to bring them in line with the bill's guidelines.

The bill would allow busing only as a last resort for providing equal educational opportunity, and even then would limit busing of any student to the school "closest or next closest to his place of residence."

Atty. Gen. Richard Kleindienst has said all school desegregation orders could be reconsidered—not just those involving busing.

STIFF OPPOSITION

Senate southerners, led by Sen. James Allen, D-Ala., are hoping to force the House measure onto the Senate floor by attaching it to other legislation. But civil rights forces expect stiff opposition in the Senate.

The bill will probably be watered down, as the Senate has never passed restrictive busing legislation, though each time it has considered the issue this year the vote has been close.

Senate sources say that one of the bill's political aims is finally to smoke out Sen. George McGovern on his position on the issue.

Final passage of the measure by a 282-102 vote came after 12 hours of debate punctuated with charges that its provisions are unconstitutional and accusations of racism and bigotry.

The bill went beyond President Nixon's call for limiting busing to the "next closest" school for elementary students.

Although the Nixon proposal was adopted earlier by the Education and Labor Committee, the House adopted, 178–88, a more limiting amendment offered by Rep. Edith Green, D-Ore.

REOPENINGS APPROVED

Mrs. Green and the southern bloc also won House approval, 242–142, of the Nixon-backed provision which would allow reopening of court orders and desegregation plans. Officials estimate about 100 school districts now being desegregated could use the provision to cut back busing. Most are in the South.

After the limit was adopted, the chief Republican sponsor of the committee bill, Rep. Albert Quie, R-Minn., said he felt the bill was now unconstitutional and would not vote for it. He tried to send it back to committee, but was defeated.

Mrs. Green scoffed at assertions the bill was unconstitutional.

"Waving the Constitution is the last refuge for those who have lost their case," she said.

SUPPORT BY LIBERALS

Several longtime northern liberals who usually support civil rights legislation backed the anti-busing measure.

Mr. ALLEN. Mr. President, for the RECORD, so that the RECORD will show the purpose of the request of the Senator from Alabama with respect to this bill, I make the following statement.

The bill has come over from the House of Representatives with a message. On the last legislative day, the Senator from Alabama obtained unanimous consent that, when the message came to the Senate, he would have the opportunity to make such objections and motions as he might care to make with respect to this bill. Had I not done so, the bill would have gone to a committee, and it is so late in the session that the bill, in all likelihood, would have been reposing in that committee when this Congress adjourned sine die.

So it was the plan of the junior Senator from Alabama—and I pay tribute to my distinguished senior colleague (Mr. SPARKMAN) and to the distinguished junior Senator from Michigan (Mr. GRIFFIN) for advising with me on the procedures to use in that connection. Ordinarily a bill is recited as having been read twice in the Senate and referred to a committee, although actually it does not necessarily get those readings. By calling for the first reading and then objecting to the second reading, the bill will remain at the desk and be taken up for its second reading on the next legislative day, which will be September 5. At that time it will receive its second reading, and then the junior Senator from Alabama will object to further proceedings, and it will go on the calendar, in that way avoiding gradual but certain death in the committee.

So this bill now will, on the 6th of September, be on the calendar for consideration by the Senate. This is a bill that is far reaching in its impact. It is commonly called the antibusing bill; and it means a great deal, Mr. President, to the schoolchildren, the parents of schoolchildren, and the school systems of our country. It is a part of the President's recommendation to Congress, though I believe it went far beyond the President's request; but it is legislation that we should enact in the Senate prior to our adjournment.

By going on the calendar on September 6, it will give the majority leader an opportunity to schedule the bill for action by the Senate.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. ALLEN. I am glad to yield to my distinguished senior colleague.

Mr. SPARKMAN. I certainly have been happy to join with the junior Senator from my State in this move, and I agree with the statement that he has made.

Let me ask him this question: The Senator said that it went beyond the President's proposal. As a matter of fact, it is a decided improvement over the President's proposal, is it not?

Mr. ALLEN. Yes, it is a great improvement, and that is the meaning I meant to convey.

Mr. SPARKMAN. But as a matter of fact it may still need some amending?

Mr. ALLEN. That is correct.

Mr. SPARKMAN. To make its application uniform throughout the country?

Mr. ALLEN. Yes.

Mr. SPARKMAN. To make any one part of the country just like the others?

Mr. ALLEN. That is right. That is the objective I have been driving at. The people of the South will abide by any uniform rule with regard to the desegregation of our schools that the other sections of the country abide by.

Mr. SPARKMAN. And most of our districts are now operating under court orders that have already been entered?

Mr. ALLEN. That is correct. And while desegregation has now been pretty well accomplished in the South, many districts outside the South are more segregated today than they were 5 years ago. And they hope to continue that way, I might add.

Mr. President, this legislation, H.R. 13915, will be on the Calendar on September 6 for further consideration, and it is the hope and wish of the junior Senator from Alabama, and also the wish of his senior colleague (Mr. SPARKMAN), and of the Senator from Michigan (Mr. GRIFFIN), that the legislation embodied in this bill will be given a chance to be considered by the U.S. Senate.

During the recent political campaigns in connection with the primary elections all over the country, it was shown conclusively that the people of this country are opposed to forced busing of schoolchildren in order to create an artificial racial balance in our schools. This legislation would go farther toward eliminating forced busing than any other measure, I believe, that has come before the United States Senate. That is the reason, Mr. President, that it is so very, very important that it not go to a committee and meet a slow death there, but that it come out in the open, to give Senators an opportunity to take a stand on this legislation. I believe when the legislation is put to a vote of the Senate, it wil be enacted by a majority of the Senate.

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator yield?

Mr. ALLEN. I am delighted to yield to the Senator from Virginia (Mr. HARRY F. BYRD, JR.).

Mr. HARRY F. BYRD, JR. Mr. President, I commend the distinguished junior Senator from Alabama——

Mr. ALLEN. I might add before yielding, Mr. President, that I have been in consultation this very morning with the distinguished Senator from Virginia (Mr. HARRY F. BYRD, JR.) with respect to strategy wth regard to getting this bill on the calendar, and the advice he has given, with the benefit of the experience he has had in this body, has been most helpful to the junior Senator from Alabama, and I commend him. He is one of the pioneers in fighting forced busing, which I know is of great importance to the people of his State.

Mr. HARRY F. BYRD, JR. Mr. President, if the Senator will yield——

Mr. ALLEN. Yes.

Mr. HARRY F. BYRD, JR. The distinguished junior Senator from Alabama (Mr. ALLEN) has, I feel, today rendered a great service to the people of this Nation and the schoolchildren of this Nation. I commend most highly his initiative, his alertness, his ability, and his knowledge of parliamentary law in standing on the Senate floor today and making sure, by his parliamentary motions, that this legislation does not go to a committee, but will, because of the action of the junior Senator from Alabama, come before the Senate for a vote.

This is a vitally important piece of legislation. It affects schoolchildren all over America. It affects their parents.

The PRESIDING OFFICER. The 10 minutes allotted to the Senator from Alabama have expired.

Mr. ALLEN. I ask unanimous consent that I may have 2 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HARRY F. BYRD, JR. The measure passed by the House last night, by a very significant vote, is one on which the Senate should have an opportunity to express itself. Were it not for the alertness of the distinguished Senator from Alabama, were it not for his knowledge of parliamentary law and the rules of the Senate, it is very possible that the Senate would not have an opportunity to vote on this important measure.

But because of what he did today in stopping this bill at the desk and making objections to the second reading of the bill, he has assured that this bill can be considered by the Senate. The bill can go on the calendar 2 days after the Senate returns from the Labor Day recess. The Senate subsequently will have an opportunity to express its views.

I commend highly the very distinguished and able Senator from Alabama.

Mr. ALLEN. I thank the distinguished senior Senator from Virginia (Mr. HARRY F. BYRD, JR.).

Mr. President, I commend the Government Printing Office on the tremendous job they did in getting this bill ready for consideration by the Senate, ready to be sent over in the message. There was considerable talk that the bill might not get here during the day. The junior Senator from Alabama was prepared to talk here until midnight, to give it plenty of opportunity to get here, and he was going to be joined by several Senators.

I thank the personnel of the House, of the House Members, and the staff of the Clerk's office for setting to and seeing that this bill got over here today. The President may not realize it, but it is quite an accomplishment that this bill did reach the Senate.

I yield the floor.

CONCURRENT RESOLUTION (S. CON. RES. 94) PROVIDING FOR ADJOURNMENT OF THE SENATE UNTIL 10 A.M., TUESDAY, SEPTEMBER 5, 1972

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the immediate consideration of the concurrent resolution which is at the desk.

The PRESIDING OFFICER (Mr. BENTSEN). Is there objection to the present consideration of the concurrent resolution?

There being no objection, the concurrent resolution (S. Con. Res. 94) was considered and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That when the Senate adjourns on Friday, August 18, 1972, it stand adjourned until 10:00 o'clock ante meridian on Tuesday, September 5, 1972.

EXECUTIVE SESSION

Mr. BENNETT. Mr. President, I ask unanimous consent that the Senate go into executive session to consider nominations which were reported earlier today.

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The nominations will be stated.

U.S. TAX COURT

The assistant legislative clerk read the nomination of Cynthia Holcomb Hall, of California, to be a judge of the U.S. Tax Court.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

DEPARTMENT OF THE TREASURY

The assistant legislative clerk read the nomination of James E. Smith, of Virginia, to be a Deputy Under Secretary of the Treasury.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

Mr. BENNETT. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nominations.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

INNOCENT VICTIMS OF CRIME

Mr. MANSFIELD. Mr. President, I must say that the Senate on day before yesterday demonstrated its capacity to go two different ways at the same time.

For the innocent victim of flood disaster, the Senate voted over $1½ billion in relief. For the innocent victim of violent crime, the Senate lost an opportunity to provide expeditious relief in any shape or form when on Wednesday it reported out six crime bills but not the one which would give some relief and some consideration to the innocent victim of violent crime.

It is too bad that we pay so much attention to the rights of the criminals, alleged or otherwise—and that is the way it should be, under the Constitution—but so little attention to the raped, the mugged, and the disabled who are the innocent victims of violent crime.

It is tragic, indeed, that the Senate has been precluded from acting in behalf of the criminal victim promptly and efficiently. I understand that every Senator is entitled to employ any means at his disposal to delay and to obstruct legislation and that such a device was employed day before yesterday with regard to the crime-victim proposal now pending before the Committee on the Judiciary. That is a Senator's right. It is the right of any Senator. But it is unfortunate, indeed, that such a device is used at the expense of the innocent victim of crime; the victim of rape, of muggings—the secretary molested as she sits behind her desk right here in the Capitol, and the secretary raped on the Capitol grounds.

I cannot imagine that such delay tactics would occur when the Senate addresses other similar concerns. Relief for the innocent victim of flood disaster was provided promptly and efficiently—and deservedly so. Not so in the case of the innocent victims of crime. Their rights continue to go ignored by the Senate. We talk about the rights of the criminal, and I detect no lack of commitment when defending those rights. We talk about rights of individual privacy and lose no time in clearing legislation on that issue.

Indeed, it was just a few days ago that the Senate adopted the measure that seeks to protect the privacy rights of individuals employed in the executive agencies downtown. There was no effort to obstruct action on that proposal. No delay. Not so in the case of the rights of the innocent victim of crime. Concern for him and his rights has been postponed; and, frankly, I deplore these backdoor slowdown devices. I deplore them, yet I know they are within the rules.

Nor will I permit this setback to diminish my determination to see that the victim-of-crime proposal becomes law. I would urge the Committee on the Judiciary to hold another meeting on this measure at the earliest time possible in order to get this measure reported. The delay for the victim of violent crime has been long enough. If a Senator objects to defending the victim's rights, let him do so out in public, on the floor of the Senate, and let the Senate work its will.

QUORUM CALL

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HARRY F. BYRD, JR. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, will the distinguished Senator from Virginia yield to me for a unanimous-consent request?

Mr. HARRY F. BYRD, JR. I am happy to yield to the Senator from West Virginia for that purpose.

UNANIMOUS-CONSENT AGREEMENT ON VOTES ON FIVE BILLS ON SEPTEMBER 5, 1972

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent, with reference to the five bills scheduled for votes on September 5, 1972, that, as each of the first four bills reaches third reading and all time thereon has expired or has been yielded back, the vote—which is to be a yea-and-nay vote on each of the bills—be delayed until the fifth bill, H.R. 9222, has advanced to third reading and all time thereon has expired or has been yielded back; at which time the five votes then occur, beginning with the vote on S. 2087, followed with the vote on S. 16, followed with the vote on H.R. 9323, followed by the vote on S. 2567, and then followed by the vote on H.R. 9222, the votes occurring back to back so that all votes will come at the same time and in the sequence ordered.

Mr. BENNETT. Mr. President, reserving the right to object, I should like to ask the distinguished assistant majority leader about what time in the afternoon he estimates the votes might come.

Mr. ROBERT C. BYRD. I really cannot estimate, except to say that the purpose of this request is to allow Senators—who are coming from the Far West, the Middle West, or the New England States, and so forth—time to get here before the first vote occurs; otherwise the first vote on the first bill, S. 2087, could occur perhaps at 11:30 a.m., or earlier if time were to be yielded back.

Mr. BENNETT. I agree with the objective of the proposal. I was wondering whether the Senator had a chance to look at the times allocated for debate on each bill and was able to arrive at some kind of estimate as to when the votes might occur.

Mr. ROBERT C. BYRD. If no amendments are offered to any of the bills, and I do not know of any controversy involved in connection with any one of them, I would assume that the first vote could occur circa 2 p.m., give or take a little.

Mr. BENNETT. I thank the distinguished Senator and I withdraw my objection.

The PRESIDING OFFICER (Mr. ALLEN). Is there objection to the request of the Senator from West Virginia? The Chair hears none, and it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished senior Senator from Virginia (Mr. HARRY F. BYRD, JR.) for his usual patience and courtesy in yielding.

Mr. HARRY F. BYRD, JR. It is always a pleasure to cooperate with my splendid friend from West Virginia.

GOVERNMENT SPENDING

Mr. HARRY F. BYRD, JR. Mr. President, on June 28, 1972, the Honorable

George P. Shultz, Secretary of the Treasury, accompanied by Mr. Paul Volcker, Under Secretary of the Treasury, appeared before the Finance Committee. At the same time, the Honorable Caspar W. Weinberger, Director of the Office of Management and Budget, accompanied by S. M. Cohn, Assistant Director of the Office of Management and Budget, also appeared before the Finance Committee.

Mr. President, I put to these witnesses a number of questions in regard to the Nation's finances. The hearings of the meeting were printed and are available to the Senate.

At this point, however, I want to read into the record a few of the questions which I put to Mr. Weinberger in his capacity as Director of the Office of Management and Budget.

At one point I asked this question:

Mr. Weinberger, in your statement yesterday that Congress is going to force a huge tax increase by creating new programs without eliminating old ones, I certainly agree with that.

I predicted 18 months ago that whoever comes in here next January on behalf of whatever administration it might be, is going to ask this committee and the Congress for a substantial increase in taxes or new taxes, or both, and I think what you say here today bears out that view.

Now, Mr. President, at this point I ask unanimous consent to have printed in the Record Mr. Weinberger's reply which is printed on page 55 of the committee hearings, all the rest of that page plus page 56 down to the last paragraph.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

Mr. Weinberger. Senator, it doesn't bear out that view if the President is reelected.

Senator Byrd. Well, the financial condition of the country is not going to—deficits are not going to change between now and January, regardless of who is reelected.

ow, if you assume that this country can spend itself rich, if you assume that the people can get something for nothing, if you assume that we can keep on spending more money, creating more deficits, and no one has to pay for them, then I guess you are right, but I don't proceed on that assumption.

Mr. Weinberger. If the deficits exceed the full-employment revenues on a regular basis, there is no question that they are highly inflationary and can't continue, but the simple fact is that the President thus far and his future plans insofar as I know them, are to conduct the national affairs in such a way that additional taxation will not be needed.

Senator Byrd. Let's get to your deficits right now. I hadn't intended to go into this.

In 4 years, you will have $113 billion in Federal funds deficit: $13 billion in 1970, $30 billion in 1971, $32 billion in 1972, and a minimum of $38 billion, by your own figures, in 1973.

I think those figures alone—and from what we have brought out here today, they are bound to be low—if you are not alarmed about $113 billion, $113 billion accumulated deficit in a 4-year period of time, then I don't know what you would be alarmed about.

I, for one, feel no obligation to support a tax increase. I voted against a bill last night after they loaded down this HEW bill; $6 billion more than we spent last year. I voted to reduce many other appropriations. I voted against that foolish tax reduction that was passed last December which added more to the deficit yet really helped no one, so I feel no obligation to support a tax increase. I will keep an open mind on it because I think you will be around here asking for it. I make the prediction that an increase in taxes or new types will be sought.

Mr. Weinberger. No, sir.

Senator Byrd. But, in my judgment, the No. 1 problem facing the United States today is the deplorable and tragic, in my judgment, financial situation of the Government, and we are not making any headway on it. As a matter of fact, we are going backward. Every year the deficit gets more.

And one final thing I must say. I am a minority, a minority in the Senate, a minority in Congress. Nor am I in agreement with the majority of those in the administration in regard to this matter. But I think it is a tragic thing that the people of the United States, the individual citizens, are the ones to be hurt the most by this fantastic Government spending which was stimulated last year by going to a Keynesian concept and by saying we want more deficits, we want an expansionist budget. You sure got it, and Congress is helping you do it. You are not doing it with my help but doing it with the help of the majority of Congress, and you are in tune with the majority of the Congress. They want to spend, and that is what they are doing, and that is what they are going to do.

I just think the people are going to suffer by this a great deal. It might even be likely it is not a very wise political thing to do to be advocating all this spending and all these programs. I don't know.

I admit that I am a very unorthodox politician, voting against tax reduction. That is very unorthodox. Everybody likes to vote for logical to me when you are running these smashing deficits to reduce the Government's revenue.

I asked you earlier about new programs that you would recommend deleting. I went through that with Secretary Shultz in the last meeting that we had here on—not the last meeting, but on February 15, 1972. One question I asked was this:

"Senator Byrd. Have you recommended or do you now recommend the elimination of any programs?"

"Mr. Shultz. We had quite a list, I believe, in some of our past budgets of programs that we thought should be eliminated or changed drastically to save substantial sums of money. These reductions have been distributed through the program categories. I don't happen to have the list. I don't think we have accumulated it in that fashion this year."

Then another question:

"Senator Byrd. What I want to get from you as Director of the Office of Management and Budget is what programs, in your judgment, can be eliminated. Are there 10, 15, one, zero?"

"Mr. Shultz. Well, we don't have an independent judgment. The President's judgment is reflected in his budget, and that is the judgment that we have before the Congress and before the Appropriations Committee."

Mr. HARRY F. BYRD, JR. Mr. President, to sum up that colloquy it was this, that I asked Mr. Weinberger what programs, if any, he would recommend be discontinued so that we might get the Government's financial house in better order.

In that colloquy I quoted a similar question which I put to Secretary Shultz when he held the position of Director of the Office of Management and Budget. The gist of Mr. Shultz' reply was that he could cite no program but that he would submit for the record certain suggestions.

When I received from him, which is a part of the committee report, his suggestions as to what reductions might be made in Government spending, and when I added up the figures, it showed he recommended a decrease of $454 million, of which some $215 million was in the sale of stockpile commodities.

The sale of a stockpile commodity is an asset, so there is no saving to the Government on the sale of an asset.

As a practical matter, what Mr. Shultz' recommendation amounted to was a suggested reduction of some $300 million out of a total budget of $211 billion.

Then I said:

I would like to ask you, sir, if you, Mr. Weinberger, the new Director of the Office of Management and Budget, if you would submit for the Record what programs you feel should be eliminated. I want to help you with it.

Mr. President, I ask unanimous consent to have printed in the Record Mr. Weinberger's reply beginning on page 59 of the committee report and continuing through page 60.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

Mr. Weinberger. I understand that and I appreciate it, Senator. We will submit it in connection with the 1974 budget. I don't see any possibility for the 1973 budget.

Senator Byrd. But we are with the 1973 budget now.

Mr. Weinberger. I understand that, sir, but what we would submit would be recommendations of the President, and I think that the recommendations we would make would be recommendations that would be worked on in the course of the next few weeks that he would agree to, that he would wish to submit. Since the Congress is going to be out of session such as it is, the most appropriate time at this point seems to be in connection with the 1974 budget, but we may very well have some reductions that we would want to make in the 1973 total. In that event, they would be submitted as soon as they are ready.

Senator Byrd. I understood from your previous testimony that you already had recommendations——

Mr. Weinberger. No, sir. I meant to say that we were working on lists of proposed reductions and eliminations to present to the President for his action. As soon as those are ready and as soon as he wishes them presented, we would obviously present them, but we are working on the problem because we agree with you that this is a very necessary thing to be doing now.

Senator Byrd. But that does not deal with 1973.

Mr. Weinberger. Well, it might very well because the submission we make might have some application to the 1973 budget. Some of those are on their way through the Congress now.

Some of the President's feelings about them may be indicated by action that he takes in connection with the individual bills as they reach his desk.

I just don't want to promise you that I am going to deliver a list of recommended reductions tomorrow because I can't do that. It has to go through too many hands.

Senator Byrd. Well, I might say that I would hope to get such a list, but I must say that I wasn't 100-percent certain I would get such a list. I tried to get a list last time. I did get something, a list, which, as I say, adds up to $545 million out of a $211 billion budget.

Mr. Weinberger. We will hope to do better.

Senator Byrd. No one seems to want to eliminate any programs.

The only reason I brought it up, you mentioned in this interview published today—I am not defending the Congress. I condemned the Congress on the floor last night for what it is doing in these expenses.

As an independent, I am not going to get mixed up with a Republican administration on one hand and a Democratic Congress on the other, as to who plans to do the most spending and the most taxing. I think neither is exactly in tune with my way of doing things.

Mr. HARRY F. BYRD, JR. Mr. President, what this colloquy shows is that no one in a position of responsibility concerning the Government's finances is willing to recommend the elimination of any program of the Government.

What we are doing, Mr. President, is piling more and more spending programs on top of already heavy spending programs.

It is very discouraging when the top budget people in our Government come before the Finance Committee and, upon questioning, admit that the Government is in serious financial difficulty. Yet, when one asks them for suggestions and says that he wants to help reduce some of the spending programs, no one will make any suggestions or recommendations as to what programs can be reduced or eliminated. Instead, the whole endeavor is to add new programs.

I am persuaded to make these remarks today, Mr. President, because it was today that the distinguished chairman of the Finance Committee, the senior Senator from Louisiana (Mr. LONG), submitted to the Senate on behalf of the Finance Committee the so-called revenue-sharing legislation.

This is another program, a new spending program. It is in addition to all the other programs.

Mr. President, I have kept an open mind on the revenue sharing program. I had hoped to support it. It has been advocated by President Nixon. It has the support of virtually every Governor of the 50 States. It has the support of most of the mayors of the 39,000 communities.

So naturally I would like to be able to support such a plan.

However, what disturbs me about it, Mr. President, is that when we talk about revenue sharing, where is the revenue to share?

Where is there any revenue to share? No Member of the Senate has answered that question or attempted to answer that question because there is no revenue to share, only deficits. The $30 billion of so-called revenue sharing money will be added to the national debt.

For the current fiscal year the Federal funds deficit is estimated by the administration to be $38 billion. In my judgment it will be much more. However, let us take the administration's own figures of $38 billion. That is a huge, smashing deficit and when we add that to the deficit for the fiscal year which ended this past June and the fiscal year just prior to that, in those 3 fiscal years the total Federal funds deficit will equal or exceed $100 billion.

So, it is fine to say, "Let us share the revenue." However, the Federal Government has no revenue to share. It is deeply in debt.

The interest on the debt alone, just the interest charges, total $22.7 billion. Another way of stating that is that of every personal and corporate income tax dollar paid into the Federal Treasury, 17 cents goes to pay the interest on the national debt.

Mr. President, if the revenue sharing proposal were to take the place of other programs, then I would prefer the revenue sharing legislation over the other programs because it is a more flexible one. I think it will be of greater benefit to the localities and to the States than many of the categorical programs. However, it will not take the place of other programs. The proposal is to add this $6 billion a year, totaling $30 billion over the 5-year period which the bill provides for, on top of all the other programs.

Mr. President, I have deep anxiety about the Government's financial situation. I think it is the most pressing problem, the most important problem, the most serious problem of a domestic nature facing the U.S. Government today.

How we can go on and on piling on new spending programs, running up yet more and more deficit spending, I do not see. It is bound to end in either more and more taxes or new taxes or more inflation, which in itself is a hidden tax. Unless one believes that we can get something for nothing, that we can continually spend and no one has to pay for it, unless we believe that—which I do not believe—then the day of reckoning will most certainly come.

And when it comes, who is going to be hit the hardest?

It will be those in the middle-income group and those in the lower middle-income group. That is where the bulk of the money comes from to pay the taxes, from the people who work, from the wage earners, because taxes are paid from the sweat of those who labor.

I must say, frankly, I am not at all impressed with the way Congress and the administration handles the money of the people. I think we have a sacred obligation to handle tax funds as a sacred public trust. I do not find that being done around Washington, D.C. I find money being squandered in every direction, with more and more spending programs pyramiding on top of other programs.

So I find it necessary to file minority views in regard to the revenue-sharing proposal. I dislike differing with my colleagues on the Committee on Finance. I dislike being in the minority. But I just could not find it logical to start a new $30 billion program at a time when there is this huge deficit spending.

This is not the only time I have found myself in the minority. This past December I found it necessary to vote against the tax reduction bill. The administration and Congress working together reduced taxes by $10 billion at a time when we were running a deficit of $30 billion.

That did not seem very logical to me and especially it did not seem very logical when the average citizen was getting very little from the tax reduction. It took a vast amount of revenue away from the Government and further increased the deficit and further increased the inflation, without helping the individual citizen to any real degree.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the minority views that I filed to the Revenue Sharing Act of 1972, as incorporated in the report from the Committee on Finance.

There being no objection, the minority views were ordered to be printed in the RECORD, as follows:

IX. MINORITY VIEWS OF SENATOR HARRY F. BYRD, JR.

I have given a great deal of thought during the past several months to the Revenue Sharing Act. I have kept an open mind.

This proposal, H.R. 14370, has been endorsed by President Nixon and has the support of most, if not all, of the governors of the 50 states and most of the mayors throughout the nation.

Under its provisions, the federal government, over a five-year period, would distribute $30 billion in additional federal funds to the 50 states and to 39,000 units of local government. Distribution in the current fiscal year would total $8.1 billion. (This is separate and apart from the supplementary grants of $1 billion a year.)

This, of course, would be helpful to state and local governments. The governors and mayors have told the Congress that they need additional assistance over and above the vast sums which already are being returned to the states in a multitude of federal programs. The legislation assumes all states and localities have a fiscal crisis common in nature and magnitude with which they are equally unable to cope.

I realize it would be more popular to support than to oppose the Revenue Sharing Act.

But in considering this matter there are at least three issues of major concern. The first and foremost is this: Where is the revenue to share?

The federal funds deficit for fiscal year 1971 was $30 billion; for fiscal year 1972, the deficit was $29 billion; the administration estimates that the deficit for the current fiscal year will be at least $38 billion.

So in three fiscal years the federal funds deficit will near or exceed $100 billion.

This means that more than 20 percent of the total national debt will have been incurred during this three-year period.

Never before in any other three-year period in the history of the American Government have there been such deficits, except during World War II, when we were fighting in both Europe and the Pacific and when we had 12 million Americans under arms.

When 12 of the nation's governors testified before the Senate Finance Committee, I made this assertion: No state in the Union is in as bad shape financially as is the federal government. No governor disputed this statement.

The annual interest on the national debt is $22.7 billion.

Of every personal and corporate income tax dollar paid into the federal Treasury, 17 cents goes to pay the interest charges.

As I view it, the dominant domestic problem facing our nation is the desperately bad condition of our federal finances. As a result of increased deficit spending, the purchasing power of the American dollar has declined. Deficit spending by the federal government is the major cause of inflation, which is a hidden tax on the earnings of the working people.

What the Congress is considering in the revenue sharing legislation, is an additional program—over and above the present programs—with an average cost of approximately $6 billion per year for each of 5 years, beginning now. In addition, there is the $1 billion a year cost of the supplementary grant program.

The second issue of major concern is the division of public accountability. State and local governmental units would expend public funds which they have no responsibility for raising.

Under the House-passed legislation, 40 percent of the funds will be distributed to five states—New York, California, Illinois, Michigan and Pennsylvania.[1] These states have gone into expensive programs which they find difficult to maintain. Now they are seeking assistance from the federal government.

Is it wise to separate the responsibility for collecting taxes from the authority to spend revenues? The 50 states and the 39,000 localities dispensing tax funds will be relieved of the obligation to weigh carefully the benefits of increased public expenditures against the burdens imposed on their community through increased taxation.

The third area of major concern is that the House-passed legislation seeks to dictate to the states the tax structure each state should have. It also requires each local government, as a condition of receiving funds under the bill, to obtain approval from the Secretary of the Treasury as to its wage rates on construction financed in whole or in part by revenue sharing funds. Thus, from its inception, this new revenue sharing program incorporates dictation from the Congress to the states and to the localities, even though the Finance Committee has removed this provision from its bill.

Through the years, federal grants-in-aid and shared revenues to the various states have increased tremendously.

To give a dramatic example of just how far out of hand some of these federal programs have gotten, I cite the following:

A few years ago, legislation was enacted providing 75 percent Federal financing of "social services." The States have discovered that, by expanding or changing programs that they were already paying for themselves, they can collect from Washington 75 cents out of every dollar spent.

When this proposal was enacted, it was estimated by its sponsor and by H.E.W. that it would cost the Federal Government $40 million annually. It has soared to such an extent that the cost for the current fiscal year is now estimated to be $4.7 billion—more than 100 times the original estimate.

In the first year of this program, New York State received $57 million in matching grants. This year, New York is asking for $850 million in Federal matching grants for this one program.

The State of Mississippi, which 2 years ago applied for $1 million of Federal funds to finance "social services," this year is asking for $464 million—about the size of the state's entire budget last year.

If the revenue-sharing proposal now under consideration were being recommended as a replacement for other, less flexible programs, I would greatly prefer the flexibility of the new program.

But the legislation now under consideration is in addition to all the other programs.

The federal government obtains its funds from the same sources as do state and local governments, from working men and women. Costly federal programs must be paid for by more taxes, or by more inflation, or both.

I feel I cannot vote for costly new programs at a time of unreasonably high deficit spending.

Last November, I felt compelled to take another unpopular stand, namely in opposition to a tax reduction which lowered revenues at a time of large federal deficits.

Similarly, this year, I must vote against the revenue sharing proposal, which calls for a large increase in federal spending.

Mr. HARRY F. BYRD, JR. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. Chiles). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. PERCY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONSUMER PROTECTION AGENCY

Mr. PERCY. Mr. President, I should like to comment very briefly on just two aspects of legislation with which we will be dealing. First, I would like to comment on the Consumer Protection Agency legislation, reported out of the Government Operations Committee. This would not have been possible without the complete cooperation of the members of that committee on both sides of the aisle, and both our former chairman, Senator John McClellan, and the present new chairman, Senator Sam Ervin. The committee has met over a period of months, in many, many long sessions.

There are sharp differences of opinion as to what will be the policy for the country in this regard. There are sharp differences of opinion among consumer advocates as well as among representatives of business, but I believe the action of the Government Operations Committee yesterday, which was taken after thorough and careful study, endless hours of negotiations, and listening to witnesses, as well as conferring with experts in the field, represents the best kind of program, on balance, that we could develop to protect the consumer interest. I certainly commend all my colleagues on the committee, regardless of their particular position or feelings in the matter, for the good will with which they worked to finally report the bill to the Senate.

It would be my hope that the committee staff would finish the report, as directed by the chairman, and have it available for reporting to the Senate on next Friday, a week from today, and that the Senate could give early consideration to this legislation on the floor.

I commend the Senator from Connecticut (Mr. Ribicoff) and the Senator from New York (Mr. Javits) for their brilliant leadership in connection with this legislation.

CONSUMER PROTECTION AGENCY OVERWHELMINGLY APPROVED BY GOVERNMENT OPERATIONS COMMITTEE

Mr. President, yesterday afternoon, after 2 months of intensive consideration, the Government Operations Committee by a 14 to 2 vote reported a landmark consumer protection bill to the Senate. This action should be taken as a signal to government and industry that the day of the consumer is finally at hand.

As ranking Republican on the committee and a principal consponsor of the measure, I want to extend special tribute to Senator Abraham A. Ribicoff, of Connecticut, and Senator Jacob K. Javits, of New York, whose outstanding advocacy—and persistence—enabled the measure to win the support of so many members of the committee.

Yesterday's action practically assures that a consumer protection bill will emerge from this Congress. This is a precise and balanced measure which provides the authority and resources needed to assure effective representation of consumer interests.

The bill, similar to an administration-backed version approved 344 to 44 by the House last October, creates a Consumer Protection Agency which would be authorized to:

Represent consumer interests as an equal party before Federal agencies and courts in formal and informal proceedings, including those where fines, penalties of forfeitures are involved.

Represent consumer interests in proceedings before State or local courts or agencies, when requested to do so by the agency or court involved.

Conduct independent surveys and research concerning consumer interests and needs, and assure action of legitimate consumer complaints.

Make grants to States, localities, and nonprofit private groups to encourage and assist their consumer programs and activities.

The head of the CPA would be appointed by the President, with Senate confirmation, for a 4-year term, and be removable only for cause.

The agency chief would have authority to name his own general counsel and other key administrative assistants. The Administrator would be Chairman of a three-member Commission which would be responsible for general policy determination.

Under the House-passed version, the CPA head would serve at the pleasure of the President, who also would appoint the agency's general counsel and other top officials.

The committee rejected a crippling amendment that would have weakened the role of the agency in regulatory proceedings from that of a full participant to an "amicus" with no standing to question witnesses or appeal decisions.

Consistent with truth in packaging principles, the amicus amendment should more properly be termed the "inimicus" or "enemy of the consumer" amendment because it is a sham, and many responsible members of the business community have confided as much to me.

This legislation does not tip the scales for the consumer or against business. It is needed because the regulatory agencies Congress has set up to protect the consumer have simply not been doing the job. Too often in the past, agencies established as watchdogs for the public interest have become lapdogs for private interests.

The Senate bill also establishes a three-member Council of Consumer Advisers in the Executive Office of the President, which would replace the present Office of Consumer Affairs.

Patterned after the Council of Economic Advisers and the Council on Environmental Quality, it would directly advise and assist the President on consumer policies and priorities and the management of consumer protection programs. The Council will develop new legislation, evaluate current programs and help prepare an annual consumer report for the President.

---

[1] Under the Finance Committee proposal 35 percent will go to the above 5 states.

The Council would not be involved in daily operations, such as handling consumer complaints or publishing consumer education material. Those functions, now performed by the Office of Consumer Affairs, would be taken over by the Consumer Protection Agency.

Mr. President, in a letter to Chairman Sam Ervin, of the Government Operations Committee, dated August 3, 1972, our distinguished majority leader, Senator Mike Mansfield, properly termed the Consumer Protection Agency legislation "one of the major items for floor consideration prior to the close of this Congress."

I am hopeful, and I urge that the Senate leadership promptly schedule this measure for floor action, since so many Senators have indicated their approval. The Senate passed similar legislation in December 1970, by 74 to 4 margin, and I trust the upcoming vote will be at least as overwhelming.

LIMITATION OF IMPORTS

Mr. PERCY. Mr. President, I would also like to mention one other aspect of consumer protection. There is a piece of legislation that we will be dealing with at some point in the future on the floor called the Burke-Hartke bill. This is a bill that places absolute limitations on imports coming into this country from abroad.

I think it would be a very disastrous piece of legislation for this country to adopt, and I was reaffirmed in this view by a statement of the Board of Directors of the Illinois Agricultural Association. To a man, these men felt that no more serious blow could be struck at the farmer than the passage of this kind of restrictive legislation.

I do believe we need to look with concern and a compassionate feeling toward any community or any country or any industry adversely affected by imports.

We all want to protect in the right way the worker in America. So, for that reason, earlier today I introduced, together with the cosponsorship of my able colleague from Ohio (Mr. Taft), a piece of legislation that I think will deal effectively with trade adjustments that are necessary when imports come in.

As the legislation now exists, adjustments can only be made when it is definitely proven that tariff action adversely affects American workers. We cannot deal with a community as a whole. The legislation that I introduced today, the complete explanation of which is available in the Record, would allow us for the first time to simply determine that imports have adversely affected workers and for the first time would enable us to deal with an entire community and provide adequate adjustment assistance that would enable us to move out of industries which are so adversely affected into trades and industries where we can more effectively compete. To do it any other way would be to strike a blow at the consumer.

Mr. President, I believe this is a consumer economy. All my business life I have believed the purpose of our economy was not just to protect the producer, but the consumer. The standard of living in this Nation depends upon wages that are paid and depends also on what we can buy with those wages. For that reason we need to take a good, hard look at what affects costs in the marketplace.

I believe it would be wrong for us to move away from the policy that has been advocated and supported by five Presidents in a row and overwhelmingly supported by Congress. I believe this is a propitious moment for the Senate to move ahead with the most completely thought-out piece of legislation that we have had yet to deal with the problem.

DATE FOR EULOGIES TO THE LATE SENATOR ELLENDER TO BE FIXED AFTER FIRST OF NEXT YEAR

Mr. ROBERT C. BYRD. Mr. President, at the request of the distinguished majority leader, I wish to announce that a period for the delivery of eulogies with regard to our late departed colleague, Senator Ellender, will be established and set aside at some time during the early days of the first session of the next Congress. It is felt that the schedule will be so busy during the days following the return of the Congress after the Labor Day holiday that it would be best to go over until the first of the year for those eulogies. Senators will be appropriately notified when that date has been set.

RECESS UNTIL 2 P.M.

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate stand in recess until 2 o'clock p.m. today.

The motion was agreed to; and at 1:36 p.m. the Senate took a recess until 2 p.m.; whereupon the Senate assembled at 2 p.m., when called to order by the Presiding Officer (Mr. Buckley).

RECESS SUBJECT TO THE CALL OF THE CHAIR

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate stand in recess, subject to the call of the Chair.

The motion was agreed to; and at 2 p.m. the Senate took a recess, subject to the call of the Chair.

The Senate reassembled at 2:05 p.m. when called to order by the Presiding Officer (Mr. Buckley).

AUTHORIZATION OF CERTAIN AIRCRAFT LOAN GUARANTEES

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the immediate consideration of S. 2741, a bill at the desk, which was reported today, and which has been cleared on both sides; and with respect to which there is some kind of emergency situation attached.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows:

S. 2741. A bill to amend the Act of September 7, 1957, authorizing aircraft loan guarantees, in order to expand the program pursuant to such Act.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Commerce with amendments on page 1, after line 8, strike out:

(1) in the second sentence of the first section by inserting "(1)" after "to enable them to", and by inserting before the period at the end thereof a comma and the following: "and (2) refinance aircraft financed at a higher rate of interest, or on terms otherwise less favorable;"

(2) in section 3 by inserting after "any aircraft purchase loan" a comma and the following: "or other loan or commitment in connection therewith made for the purpose described in clause (2) of the first section.";

(3) in section 4(b) by inserting before the period at the end thereof the following: "or refinanced therewith";

On page 2, at the beginning of line 12, strike out "(4)" and insert "(1)"; in line 13, after "$30,000,000", strike out "and"; after line 13, strike out:

(5) in section 4(e) by inserting after "Secretary finds" the following: "in the case of an aircraft purchase loan";

(6) by striking out section 4(f) and inserting in lieu thereof the following:

"(f) Unless the Secretary finds that the guaranteed loan is needed to continue or improve the service and efficiency of operation of the air carrier.";

(7) by striking out section 6(a) and inserting in lieu thereof the following:

"(a) The Secretary shall have the responsibility of administering this Act and shall make the findings required by section 4 (e) and (f): *Provided, however,* That he may make use of the advice of other agencies and instrumentalities of the Federal Government to the extent that he regards such advice desirable: *And provided further,* That such use shall not unduly delay the guaranties of loans and their administration in accordance with the policy of this Act."; and

On page 3, at the beginning of line 8, strike out "(8)" and insert "(2)"; in the same line, after the word "out", strike out "15" and insert "fifteen"; in line 9, after the word "thereof", strike out "20" and insert "twenty"; and, after line 9, strike out:

By deleting the last sentence of section 1380 of this title (49 U.S.C. 1380) and inserting in lieu thereof the following: "The provisions of this section shall not be applicable to the guaranty of loans by the Secretary of Transportation under the provisions of such Act of September 7, 1957, as amended, but the Secretary of Transportation may consult with and consider the views of the Board in making such guaranties."

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act entitled "An Act to provide for Government guaranty of private loans to certain air carriers for purchase of modern aircraft and equipment, to foster the development and use of modern transport aircraft by such carriers, and for other purposes", approved September 7, 1957 (49 U.S.C. 1324 note), is amended—

(1) in section 4(d) by striking out "$10,000,000" and inserting in lieu thereof "$30,000,000"; and

(2) in section 8 by striking out "fifteen" and inserting in lieu thereof "twenty".

Mr. ROBERT C. BYRD. Mr. President, on behalf of the distinguished Senator from Nevada (Mr. CANNON), I ask unanimous consent that the amendments be considered and agreed to en bloc.

The PRESIDING OFFICER. Without objection, the amendments are considered and agreed to en bloc.

The bill is open to further amendment. If there be no further amendments to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

ORDER FOR RECOGNITION OF SENATOR BAKER ON TUESDAY, SEPTEMBER 5, 1972

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that, on the morning of Tuesday, September 5, 1972, immediately following the remarks of the two leaders under the standing order, the distinguished Senator from Tennessee (Mr. BAKER) be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL 3:30 P.M.

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate stand in recess until 3:30 p.m. today.

The motion was agreed to; and, at 2:08 p.m. the Senate took a recess until 3:30 p.m.; whereupon the Senate reassembled when called to order by the Presiding Officer (Mr. ALLEN).

RECESS SUBJECT TO THE CALL OF THE CHAIR

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate stand in recess awaiting the call of the Chair.

The PRESIDING OFFICER. The question is on agreeing to the motion.

The motion was agreed to; and, at 3:30 p.m., the Senate took a recess subject to the call of the Chair.

At 3:31 p.m. the Senate reassembled, when called to order by the Presiding Officer (Mr. ALLEN).

RECESS UNTIL 4 P.M.

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate stand in recess until the hour of 4 o'clock p.m. today.

The motion was agreed to; and at 3:32 p.m. the Senate took a recess until 4 p.m.; whereupon the Senate reassembled when called to order by the Presiding Officer (Mr. ALLEN).

RECESS TO 4:45 P.M.

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate stand in recess until 4:45 p.m. today.

The motion was agreed to; and at 4:01 p.m. the Senate took a recess until 4:45 p.m.; whereupon the Senate reassembled when called to order by the Presiding Officer (Mr. ALLEN).

ORDERS FOR ADJOURNMENT FROM SEPTEMBER 5, SEPTEMBER 6, AND SEPTEMBER 7, 1972, UNTIL 9 A.M. ON EACH OF THE FOLLOWING DAYS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business on September 5, September 6, and September 7, it stand in adjournment, respectively, until 9 a.m. on September 6, September 7, and September 8, 1972.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Berry, one of its reading clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 3726) to extend and amend the Export Administration Act of 1969 to afford more equal export opportunity, to establish a Council on International Economic Policy, and for other purposes.

The message also announced that the House had agreed to the amendments of the Senate to the bill (H.R. 755) to amend the Shipping Act, 1916, and the Intercoastal Shipping Act, 1933, to convert criminal penalties to civil penalties in certain instances, and for other purposes.

The message further announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 15580) to amend the District of Columbia Police and Firemen's Salary Act of 1958 to increase salaries, and for other purposes.

The message also announced that the House had passed without amendment the joint resolution (S.J. Res. 213) to authorize and request the President to issue a proclamation designating October 6, 1972, as "National Coaches Day."

The message also announced that the House had agreed to the amendments of the Senate to the bill (H.R. 11185) to amend the Internal Revenue Code of 1954 with regard to the exempt status of veterans' organizations.

The message further announced that the House had agreed to the concurrent resolution (S. Con. Res. 94) providing for an adjournment of the two Houses from August 18, 1972, to September 5, 1972, with an amendment in which it requests the concurrence of the Senate.

ENROLLED BILLS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills:

H.R. 755. An act to amend the Shipping Act 1916, and the Intercoastal Shipping Act, 1933, to convert criminal penalties to civil penalties in certain instances, and for other purposes;

H.R. 2394. An act for the relief of Antonio Benavides;

H.R. 2703. An act for the relief of Mrs. Concepcion Garcia Balauro;

H.R. 5158. An act for the relief of Maria Rosa Martins;

H.R. 5814. An act to amend section 2735 of title 10, United States Code, to provide for the finality of settlement effected under section 2733, 2734, 2734a, 2734b, or 2737; and

H.R. 12392. An act to amend title 28, United States Code, section 1491, to authorize the Court of Claims to implement its judgments for compensation.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that today, August 18, 1972, he presented to the President of the United States the following enrolled bills:

S. 2166. An act to authorize the establishment of the Grant Kohrs National Historic Site in the State of Montana, and for other purposes; and

S. 3159. An act to authorize the Secretary of the Interior to establish the John D. Rockefeller, Junior, Memorial Parkway, and for other purposes.

ADJOURNMENT OF THE TWO HOUSES TO SEPTEMBER 5, 1972

Mr. ROBERT C. BYRD. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on Senate Concurrent Resolution 94.

The PRESIDING OFFICER (Mr. ALLEN) laid before the Senate the amendment of the House of Representatives to the concurrent resolution (S. Con. Res. 94) entitled "Concurrent resolution providing for an adjournment of the two Houses from August 18, 1972, to September 5, 1972", which was on page 1, line 4, strike out "1972.", and insert: "1972, and that when the House adjourns on Friday, August 18, 1972, it stands adjourned until 12 noon on Tuesday, September 5, 1972."

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate concur in the House amendment.

The PRESIDING OFFICER. The question is an agreeing to the motion of the Senate from West Virginia.

The motion was agreed to.

The concurrent resolution, as amended, reads as follows:

Resolved by the Senate (the House of Representatives concurring), That when the Senate adjourns on Friday, August 18, 1972, it stand adjourned until 10:00 o'clock ante meridian on Tuesday, September 5, 1972, and that when the House adjourns on Friday, August 18, 1972, it stands adjourned until 12 noon on Tuesday, September 5, 1972.

ORDER LIMITING TIME FOR YEA-AND-NAY VOTES ON SEPTEMBER 5

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that following the first rollcall vote on September 5, the remaining rollcall votes which will occur in consecution be limited to 10 minutes each, with the warning bell to be sounded after the first 2½ minutes have expired.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the Senate will convene again, following the close of business today, at 10 a.m. on Tuesday, September 5.

After the two leaders have been recognized under the standing order, the distinguished Senator from Tennessee (Mr. BAKER) will be recognized for not to exceed 15 minutes, after which there will be a period for the transaction of routine morning business of not to exceed 30 minutes, at the conclusion of which the Senate will proceed to the consideration of the following bills, in the order stated:

S. 2087, benefits to survivors of police officers.

S. 16, civil remedies to victims of certain activities.

H.R. 9323, amending the Narcotics Addicts Rehabilitation Act of 1966.

S. 2567, prosecutions for crimes committed aboard aircraft.

H.R. 9222, correcting certain deficiencies in the law relating to counterfeiting and forgery.

There is a time limitation on each of the five bills, and yea-and-nay votes have previously been ordered on the five bills. Under the order, the yea-and-nay votes will not occur on the first four bills until the fifth of the aforementioned measures has reached the third reading stage and all time thereon has been used or yielded back. At that time, the yea-and-nay votes will occur, back to back, the first one on S. 2087, then on S. 16, H.R. 9323, S. 2567, and H.R. 9222, in that order. The first of the five votes will probably occur at around 2 p.m., give or take a little.

Following the yea-and-nay votes on the five bills that have been enumerated, the Senate will proceed to the second track item for the rest of that day, which is H.R. 14370, the Revenue-Sharing Act. Amendments will be in order, and yea-and-nay votes may occur thereon.

So, repeating, there will be several yea-and-nay votes on Tuesday, September 5, the first day of the session following the Labor Day holiday.

The interim agreement with the U.S.S.R. remains the unfinished business, and consequently the main track item, for the days following Tuesday, September 5; and the revenue-sharing bill, H.R. 14370, will be the second track item daily upon our return until that bill is disposed of.

The leadership may, of course, from time to time call up other items, and the Senate may operate on a third track or a multiple track system beyond the two tracks. Conference reports may be called up at any time, they being privileged matters, and yea-and-nay votes may occur thereon.

Obviously, if Congress is to adjourn sine die by September 30—and that is a hopeful and optimistic target date, though not one entirely out of our reach—committee work on H.R. 1 will have to be done during the days between the close of the Republican Convention and the Labor Day Holiday, even though the Senate will not be in session. The Senator from Louisiana (Mr. LONG), as chairman of the Committee on Finance, has indicated his willingness and his desire to continue to work during that period and the leadership on both sides of the aisle in urging full cooperation on the part of members of the Committee on Finance.

It is, of course, important that, if possible, conferences on bills authorizing appropriations be completed promptly so that the remaining appropriation bills can be acted upon by the other body and transmitted to the Senate for action here as early after September 5 as the situation will permit.

The various subcommittees on appropriations of the Senate Committee on Appropriations have completed their hearings on the regular appropriation bills and stand ready to mark up the bills promptly on their receipt from the other body.

It may be necessary to hold some Saturday sessions in order to complete the work before final adjournment.

At this time, Mr. President, I wish on behalf of the majority leader, to compliment the Senate—Senators on both sides of the aisle—on the work that has been done following the Democratic Convention. Since the Senate reconvened following the Democratic Convention, several major, important, and often controversial measures have been disposed of in one way or another, such as the Foreign Assistance Authorization Act, the minimum wage bill, the maritime bill, the marine mammals bill, the bill extending the life of the Civil Rights Commission, the military procurement authorization, the military construction authorization, the agriculture appropriation bill, the freight car bill, the Securities and Exchange Act, the export control bill, the SALT treaty, the SBA disaster loan bill, the gun control bill, the no-fault insurance bill, the Airport and Airways Development Act, the continuing resolution, the Hurricane Agnes disaster relief appropriation, the national school lunch legislation, the National Science Foundation research bill, several conference reports—some of which required rollcall votes—and various other bills.

The following major pieces of legislation remain to be acted upon—again I say, one way or another—before sine die adjournment: The interim agreement on offensive weapons, which I understand was acted upon by the other body today; the revenue-sharing bill, which is presently the second-track item before the Senate; the military construction appropriation bill; the military procurement appropriation bill; foreign aid, the supplemental appropriation bill; the debt limit revision and extension; H.R. 1, the welfare bill; and various conference reports. Perhaps, hopefully, some other measures can be sandwiched in from time to time as the situation permits—for example, H.R. 10729, the Federal Insecticide, Fungicide, and Rodenticide Act.

Mr. President, I again compliment the Senate. I express appreciation, on behalf of the distinguished majority leader, for the splendid cooperation that has been accorded to the leadership in its efforts to work out time agreements and thus to expedite the business of the Senate and the business of the people.

I know that the majority leader would want me to add that we hope to continue receiving—and we expect that we will continue to receive—the same high degree of patience and cooperation from all Senators on both sides of the aisle in our efforts to expedite the remaining business and give Senators a chance, once the work of the Senate is done, to get back home and touch hands with the people and see what the people are saying and thinking, and then come back with batteries recharged and with a better understanding of what the attitudes of the people are with respect to the major issues facing the Nation, and be ready with vigor to go into the new session when it gets under way next year.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT UNTIL 10 A.M. TUESDAY, SEPTEMBER 5, 1972

Mr. ROBERT C. BYRD. Mr. President, with every good wish to every Senator that he might receive a good rest during the ensuing days, and with good wishes to the officers of the Senate, the people at the front desk, Senate attaches and pages, and Senators' staffs, I move, if there be no further business to come before the Senate, that the Senate, in accordance with the provisions of Senate Concurrent Resolution 94, stand in adjournment until 10 a.m., on Tuesday, September 5, 1972.

The motion was agreed to; and at 4:56 p.m. the Senate adjourned until Tuesday, September 5, 1972, at 10 a.m.

NOMINATIONS

Executive nominations received by the Senate August 18, 1972:

DIPLOMATIC AND FOREIGN SERVICE

Joseph A. Mendenhall, of Virginia, a Foreign Service Officer of class one, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Malagasy Republic.

Talcott W. Seelye, of Maryland, a Foreign Service Officer of class one, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Tunisia.

UNITED NATIONS

The following-named persons to be Representatives of the United States of America to the Twenty-seventh Session of the General Assembly of the United Nations:

GALE W. MCGEE, U.S. Senator from the State of Wyoming.

JAMES B. PEARSON, U.S. Senator from the State of Kansas.

U.S. ARMY

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. John Russell Deane, Jr., [redacted], U.S. Army.

CONFIRMATIONS

Executive nominations confirmed by the Senate August 18, 1972:

District of Columbia Court of Appeals

Stanley S. Harris, of Maryland, to be Associate Judge of the District of Columbia Court of Appeals for the term of fifteen years.

Superior Court of the District of Columbia

H. Carl Moultrie, of the District of Columbia, to be an associate judge, Superior Court of the District of Columbia, for the term of years prescribed by Public Law 91–358, approved July 29, 1970.

Department of the Treasury

James E. Smith, of Virginia, to be a Deputy Under Secretary of the Treasury.

U.S. Tax Court

Cynthia Holcomb Hall, of California to be a judge of the U.S. Tax Court for a term expiring 15 years after she takes office.

HOUSE OF REPRESENTATIVES—*Friday, August 18, 1972*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Acquaint thyself with God and be at peace: Thereby good shall come unto thee.—Job 22: 21.

Eternal God our Father we are grateful for life and for the opportunity of serving our Nation in these Halls of Congress. Grant that we may be strong enough and patient enough to be equal to every experience, ready for every responsibility and adequate for every activity. Bestow upon us all the spirit of devotion which proves that it is just and good to obey Thy Commandments as taught in Thy Word.

Now we pray that we may walk in Thy way and live by Thy laws until the shadows lengthen and the evening comes and the busy world is hushed and the fever of life is over and our work is done. Then, of Thy great mercy, grant us a safe lodging, a holy rest, and peace at the last: through Jesus Christ our Lord. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment bills and a joint resolution of the House of the following titles:

H.R. 2394. An act for the relief of Antonio Benavides;

H.R. 2703. An act for the relief of Mrs. Concepcion Garcia Balauro;

H.R. 5158. An act for the relief of Maria Rosa Martins;

H.R. 5814. An act to amend section 2735 of title 10, United States Code, to provide for the finality of settlement effected under section 2733, 2734, 2734a, 2734b, or 2737;

H.R. 9256. An act for the relief of Kyong Ok Goodwin (Nee Won);

H.R. 10713. An act for the relief of Wilma Busto Koch;

H.R. 12392. An act to amend title 28, United States Code, section 1491, to authorize the Court of Claims to implement its judgments for compensation; and

H.J. Res. 1278. Joint resolution making further continuing appropriations for the fiscal year 1973, and for other purposes.

The message also announced that the Senate had passed with amendments in which the concurrence of the House is requested, a bill and a concurrent resolution of the House of the following titles:

H.R. 14896. An act to amend the National School Lunch Act, as amended, to assure that adequate funds are available for the conduct of summer food service programs for children from areas in which poor economic conditions exist and from areas in which there are high concentrations of working mothers, and for other purposes related to expanding and strengthening the child nutrition programs; and

H. Con. Res. 553. Concurrent resolution authorizing certain printing for the Committee on Veterans' Affairs.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 14896) entitled "An act to amend the National School Lunch Act, as amended, to assure that adequate funds are available for the conduct of summer food service programs for children from areas in which poor economic conditions exist and from areas in which there are high concentrations of working mothers, and for other purposes related to expanding and strengthening the child nutrition programs," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. Talmadge, Mr. Allen, Mr. Humphrey, Mr. Miller, and Mr. Aiken to be the conferees on the part of the Senate.

The message also announced that the Senate disagrees to the amendments of the House to the bill (S. 2956) entitled "An act to make rules governing the use of the Armed Forces of the United States in the absence of a declaration of war by the Congress," agree to a conference requested by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. Fulbright, Mr. Church, Mr. Spong, Mr. Case, and Mr. Javits to be the conferees on the part of the Senate.

The message also announced that the Senate agrees to the amendments of the House to bills of the Senate of the following titles:

S. 2166. An act to authorize the establishment of the Grant-Kohrs Ranch National Historic Site in the State of Montana, and for other purposes; and

S. 3159. An act to authorize the Secretary of the Interior to establish the John D. Rockefeller, Jr., Memorial Parkway, and for other purposes.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 12931) entitled "An act to provide for improving the economy and living conditions in rural America."

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 3490. An act to authorize and request the President to issue annually a proclamation designating August 26 of each year as "Women's Rights Day";

S. 3594. An act providing for Federal purchase of the remaining Klamath Indian Forest;

S. 3762. An act to extend the program for health services for domestic agricultural migrant workers; and

S. 3811. An act to amend the act entitled "An act to provide for the establishment of the Indiana Dunes National Lakeshore, and for other purposes", approved November 5, 1966.

AMENDING SHIPPING ACT, 1916, AND INTERCOASTAL SHIPPING ACT, 1933

Mr. GARMATZ. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 755) to amend the Shipping Act, 1916, and the Intercoastal Shipping Act, 1933, to convert criminal penalties to civil penalties in certain instances, and for other purposes, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 2, after line 14, insert:

"(d) By amending the first paragraph of section 23 to read as follows:

" 'Orders of the Commission relating to any violation of this Act or to any violation of any rule or regulation issued pursuant to this Act shall be made only after full hearing, and upon a sworn complaint or in proceedings instituted of its own motion.' ".

Page 2, line 15, strike out "d" and insert "(e)".

Page 3, lines 3 and 4, strike out "to be assessed by the Federal Maritime Commission".

Page 3, strike out lines 6 to 10, inclusive.

Page 3, lines 15 and 16, strike out "to be assessed by the Federal Maritime Commission".

Page 3, after line 17, insert:

"Sec. 3. Any civil penalty provided herein may be compromised by the Federal Maritime Commission, or may be recovered by the United States in a civil action."

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

Mr. HALL. Mr. Speaker, reserving the right to object, may I ask the distinguished gentleman, our colleague from Maryland, the chairman of the Committee on Merchant Marine and Fisheries, to explain briefly to us the purport of the Senate amendments that we are concurring in and the need for concurrence and if there is an increase in cost and if the Senate amendments are germane.

I yield to the gentleman for that purpose.

Mr. GARMATZ. I thank the gentleman for yielding.

Mr. Speaker, the purpose of the bill is to assist the Federal Maritime Commission in carrying out its regulatory functions under the Shipping Act, 1916, and the Intercoastal Shipping Act, 1933. The bill would do this by: First, changing the penalty provisions of the Shipping Act, 1916, from criminal to civil in those three areas that give the Commission most of its enforcement problems in day-to-day operations; second, providing a civil penalty for violations of any order, rule, or regulation of the Commission; and third, authorizing the Commission to compromise all civil penalties provided for violations of those sections of the Shipping Act, 1916, and the Intercoastal Shipping Act, 1933, which are subject to its jurisdiction.

I might tell the gentleman two amendments are germane. The House-passed bill would amend the Shipping Act of 1916, to generally provide that whoever violates any order, rule, or regulation of the Federal Maritime Commission shall be subject to a civil penalty of not more than $1,000. The first Senate amendment would amend section 23 of the Shipping Act of 1916, so that the hearing procedure required for violations of that act would apply to violations of any such rule or regulation of the Federal Maritime Commission.

The second amendment is a technical amendment.

Third, the House-passed bill would generally have permitted the Federal Maritime Commission to assess civil penalties provided by the Shipping Act of 1916 and the Intercoastal Shipping Act of 1933. The remaining Senate amendments Nos. 3, 4, 5, and 6, would delete this authority, and in lieu thereof provides that the FMC may compromise any such civil penalty, or take civil action in the courts.

Mr. HALL. Mr. Speaker, I thank the gentleman. As I understand it, they are germane and apparently the main purpose is to change from criminal penalties to civil penalties. I deduce that there is no increase in cost by virtue of the Senate-added amendments.

Mr. GARMATZ. The gentleman is correct.

Mr. HALL. Mr. Speaker, I also ask if the gentleman has cleared with the minority the concurrence in the Senate amendments?

Mr. GARMATZ. Yes, I have.

Mr. HALL. Mr. Speaker, I appreciate the explanation for the benefit of all the Members, and I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

There was no objection.

The Senate amendments were concurred in.

A motion to reconsider was laid on the table.

FARMFEST—U.S.A.

Mr. FRASER. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate joint resolution (S.J. Res. 182) authorizing the President to invite the States of the Union and foreign nations to participate in Farmfest—U.S.A. and the World Ploughing Contest in September 1972.

The Clerk read the title of the Senate joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

Mr. GROSS. Mr. Speaker, reserving the right to object, may I ask the gentleman from Minnesota if it is anticipated that this will require any expenditure of Federal funds?

Mr. FRASER. Mr. Speaker, if the gentleman will yield, I can assure the gentleman from Iowa (Mr. GROSS) that the purposes of this resolution will involve no commitment of any funds by the Federal Government.

Mr. GROSS. Mr. Speaker, I thank the gentleman.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

The Clerk read the Senate joint resolution as follows:

S.J. RES. 182

Whereas the United States will host the Nineteenth Annual World Ploughing Contest in September 1972 in Blue Earth County, Minnesota, and

Whereas up to twenty-two nations can be expected to participate in this contest on September 15 and 16 as part of a weeklong Farmfest—U.S.A., and

Whereas the 1972 National Ploughing Contest and the 1972 Grand National Tractor-Pull Contest are included in the scheduled events of Farmfest—U.S.A., and

Whereas Farmfest—U.S.A. will feature exhibitions of machinery, equipment, supplies, services, and other products used in the production and marketing of agricultural products; promote foreign and domestic trade and commerce in such products; and salute worldwide agriculture: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States is authorized and requested to invite by proclamation or in such other manner as he may deem proper the States of the Union and foreign nations to participate in Farmfest—U.S.A. to be held in Blue Earth County, Minnesota, from September 11, 1972, through September 17, 1972.

Mr. FRASER. Mr. Speaker, it is my privilege to offer this resolution on behalf of the entire House delegation from Minnesota.

Next month the State of Minnesota will host two related events; namely, Farmfest—U.S.A. and the 1972 World Ploughing Contest.

Farmfest—U.S.A. is an exposition that has an appeal not only for farmers but also for those interested in agriculture. The exhibits, both educational and commercial, are related to modern agricultural and conservation practices.

For only the second time the United States will serve as host country for the world ploughing matches. It is expected that about 40 contestants from 22 nations will compete in this colorful demonstration of agricultural skill. In addition about a dozen contestants will participate in the national competition.

As the committee report notes, no expenditure of public funds is involved. The joint resolution simply asks the President to invite by proclamation or other appropriate means the States of the Union and for nations to participate in the week-long tribute to those who derive their livelihood from agriculture.

I urge Members of the House to support the passage of Senate Joint Resolution 182.

The Senate joint resolution was ordered to be read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. FRASER. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the subject of the Senate joint resolution (S. J. Res. 182) just passed.

The SPEAKER. Is there objection to the request from the gentleman from Minnesota?

There was no objection.

A CASE OF MISTAKEN IDENTITY

(Mr. BOW asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. BOW. Mr. Speaker, I was quite surprised this morning when my attention was called to a Washington Post story showing a number of Members of Congress appearing before the Soviet Embassy in some kind of a protest.

Now, in looking over the story I find that my name is used as one of those appearing before the Soviet Embassy. Also in the picture printed by the Washington Post I am identified as being one of those appearing in the picture.

Mr. Speaker, I wish to say here and now that I was not in front of the Soviet Embassy, and I am not the one who is identified in the picture.

I hope the Washington Post will retract.

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman yield?

Mr. BOW. I am delighted to yield to the gentleman.

Mr. GERALD R. FORD. Mr. Speaker, I got up a little later this morning than I usually do. I picked up the Washington Post and saw the picture and read the story. I must admit that the headline shocked me a little bit and I will be darned if I could find the picture of the gentleman from Ohio in the photograph. I am glad that the gentleman denies that he was present.

Mr. BOW. I was not there. It has been suggested by several people that they would like to have me autograph the picture. If they will get it for me, I will be glad to autograph it.

CORRECTION OF VOTE

Mr. DUNCAN. Mr. Speaker, on rollcall No. 304 I am recorded as voting "yea." I voted "nay." I ask unanimous consent that the permanent RECORD and Journal be corrected accordingly.

The **SPEAKER.** Is there objection to the request of the gentleman from Tennessee?

There was no objection.

CORRECTION OF VOTE

Mr. COLLINS of Texas. Mr. Speaker, on rollcall No. 330 I am recorded as not voting. I was present and voted "yea." I ask unanimous consent that the permanent RECORD and Journal be corrected accordingly.

The **SPEAKER.** Is there objection to the request of the gentleman from Texas?

There was no objection.

AGREEMENT ON LIMITATION OF STRATEGIC OFFENSIVE WEAPONS

Mr. PEPPER. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1097 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1097

Resolved, That upon the adoption of this resolution it shall be in order to move, clause 7, rule XIII, to the contrary notwithstanding, that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the joint resolution (H.J. Res. 1227) approving the acceptance by the President for the United States of the interim agreement between the United States of America and the Union of Soviet Socialist Republics on certain measures with respect to the limitation of strategic offensive arms. After general debate, which shall be confined to the joint resolution and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Foreign Affairs, the joint resolution shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the joint resolution for amendment, the Committee shall rise and report the joint resolution to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the joint resolution or to the amendment in the nature of a substitute recommended by the Committee on Foreign Affairs now printed in the joint resolution. The previous question shall be considered as ordered on the joint resolution and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions.

Mr. GROSS. Mr. Speaker, I wonder if the gentleman would yield for a brief observation.

Mr. PEPPER. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I think it is fitting that PEPPER should launch a discussion of "SALT."

Mr. PEPPER. Mr. Speaker, I appreciate my able friend from Iowa recognizing the propriety of PEPPER speaking for SALT.

Mr. PEPPER. Mr. Speaker, House Joint Resolution 1097 provides an open rule with 1 hour of general debate for consideration of House Joint Resolution 1227, the Agreement on Limitation of Strategic Offensive Weapons. The report does not contain a cost estimate; therefore, points of order are waived for failure to comply with the provisions of clause 7, rule XIII.

House Joint Resolution 1227—surely one of the most important matters that could possibly come before this Congress—approves and authorizes the President to accept the interim agreement on the limitation of strategic offensive arms, signed by President Nixon and the General Secretary of the Central Committee of the Communist Party at Moscow, May 26, 1972.

The agreement is the result of negotiations which started more than 10 years ago. SALT resulted in a treaty limiting antiballistic missile systems and a 5-year interim agreement freezing the overall levels of strategic offensive missile pending further negotiations which are to begin in October.

The treaty was transmitted to the Senate for "advice and consent." The interim agreement was sent to both Houses for approval.

Mr. Speaker, I want to add that I commend the President and all who have had a part in bringing this interim agreement to be approved by the Congress, that is by the Senate and the House of Representatives, whose Members are elected by the people of the United States.

I should have preferred to see the treaty which deals with the matter of the location and the number of antiballistic missiles each nation may have also submitted for approval of the Congress, because a matter so vital to the security of the country, it would seem to me, should be duly considered by the Congress of the United States, the people's elected representatives, in both Houses.

Mr. Speaker, I commend the President for his efforts to restrain the violence of the cold war and bring this Nation into a closer accord with the Soviet Union.

I did what I could to induce our country and the Soviet Union to adopt such a policy immediately after World War II. As a member of the Foreign Relations Committee of the Senate, and fearful about the seeds of World War III being sown in the aftermath of World War II, I visited 19 countries. In the course of that trip I conferred with Sir Winston Churchill, Prime Minister Attlee, General de Gaulle, General Eisenhower, Premier Stalin, and all the principal leaders of the 19 countries I visited.

On March 20, 1946, I made an extensive speech on the floor of the Senate in which I discussed the dangerous tensions which had already developed among the nations which had fought together in the war, the increasing conflict, suspicion, and fear arising among them. I also pointed out the frightening prospect of a nuclear arms race, still in its infancy but portending a growth of nuclear power on the part of the Soviet Union and the United States in the foreseeable future endangering not only both of those countries but the entire human race.

At that time the United States had a very limited number of bombs, and, so far as we knew, Russia had none, but was working frantically to develop her capacity to produce them. Whatever my plea and whatever seemed to me to be the answerable logic behind my belief that Russia would, on a day not too distant from then, challenge us as a nuclear power, I could persuade none in authority to see the necessity of acting then to stop the nuclear arms race.

On the contrary, I was severely criticized by many for proposing that Russia could ever challenge us as a nuclear power. Some even implied that my recognition of that possibility suggested that I preferred Russia to my own country.

Now, 26 years later, we have before this House for approval an agreement entered into between President Nixon and the Soviet authorities proposing an interim freeze upon offensive strategic nuclear weapons of both the United States and the Soviet Union.

In this agreement it is specifically recognized, as is set out on page 3 of the report of the distinguished Committee on Foreign Affairs of the House, that on July 1, 1972, the United States had 1,054 fixed, land-based ICBM launchers and the Soviet Union had 1,618. In many other categories of offensive nuclear weapons the Soviet Union now has superiority over the United States, although we hope our authorities are right in holding that, overall, taking into account all of our weapons capable of offensive nuclear action, we are of equal strength. I am disturbed, from the testimony we have heard from Admiral Rickover, that the Russians have the capability to build nuclear submarines three times in excess of ours.

I do not understand why our country has allowed Russia to gain superiority over us in any critical area related to our defense and security. There is no use now to go back and cry over our failure to do what some of us thought we should have done in the earliest days of nuclear weapons, to try to find a limiting agreement on such weapons then. We must, of course, consistent with our own carefully preserved security, do everything we can to spare our country and mankind from the terrible potential of nuclear destruction which today, like a damoclean sword, hangs over the human race.

I hope, therefore, that what the President has done will lead to a diminution not only in the nuclear arms race but in the armaments race between the United States and the Soviet Union.

As I urged upon Stalin when I saw him in Moscow in September, 1945, Russia and the United States should have taken the lead after World War II in international action which would have prevented all the other nations of the world from rearming again, and especially

Germany and Japan; and then the Soviet Union and the United States should have reduced their own armed forces down to a moderate level and discontinued the kind of arms race which has so long been the maker of wars and the curse of peace.

Let us hope that these agreements which the President has negotiated will lead to a new spirit of genuine and sincere cooperation between the United States and Russia to respect the integrity and security of each other and of all people, and to spend their substance, always too little, upon the things that make life better for our people and for all people.

Mr. Speaker, the measure which this rule would authorize may make the difference between war and peace. It may indicate the opening up of a new day for our nation and for all nations. So this is a day pregnant with hope as well as awesome responsibility on the part of this body.

But since we must move forward with faith, I urge the adoption of the rule, Mr. Speaker, so that this meaningful measure may receive what I hope will be the hearty approval of this House.

Mr. Speaker, I yield 30 minutes to the able gentleman from California (Mr. SMITH).

Mr. SMITH of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, House Resolution 1097 provides an open rule with 1 hour of general debate for consideration of House Joint Resolution 1227, the Agreement on Limitation of Strategic Offensive Weapons. We waivtd points of order so far as failure to comply with the provisions of clause 7, rule XIII, because it was impossible to make a cost estimate on House Joint Resolution 1227.

Mr. Speaker, the purpose of House Joint Resolution 1227 is to provide congressional approval of the interim agreement between the United States and the U.S.S.R. dealing with the limitation of strategic offensive arms and the related protocol which was signed by President Nixon in Moscow on May 26, 1972.

The strategic arms limitation talks—SALT—began on November 17, 1969, and resulted in two separate accords. The first is a treaty limiting anti-ballistic missile systems. The second is a 5-year interim agreement which provides a freeze on the levels of strategic offensive missile forces pending further negotiations.

The treaty was sent to the Senate for its advice and consent, while the interim agreement has been submitted to both the Houses of Congress for approval. While the House will act only on the interim agreement, the treaty and the interim agreement are so closely related that some mention should be made of each.

The treaty provides generally that each side will limit ABM systems to two sites: One to defend its national capital, and one to defend an ICBM site.

The interim agreement which requires the approval of both Houses, limits ICBM's, ballistic-missile submarines and submarine-launched ballistic missiles. No limitations are placed on strategic bombers. The limitations in the interim agreement are binding for 5 years, unless superceded by a comprehensive agreement. Major provisions in the interim agreement include the following: No additional fixed, land based, ICBM launchers may be started during the freeze, beyond the numbers in place and under construction on July 1, 1972. This allows 1,054 ICBM launchers for the United States and 1,618 for the U.S.S.R. Silos may not be relocated. The United States is allowed up to 44 nuclear-powered ballistic-missile submarines, while the U.S.S.R. is allowed up to 62 similar submarines.

There are no departmental letters or minority views in the committee report. However, the committee report does make the following points in support of the agreements. First, the U.S.S.R. had embarked on a large-scale expansion of its strategic forces, which would likely have carried Soviet forces well beyond the level planned for U.S. forces in the mid or late 1970's. Therefore, the effect of this agreement is to limit current Soviet offensive programs, but not current U.S. programs. Second, the limitations on ABM deployment have prevented an expensive new competition in the arms race.

The Committee on Foreign Affairs reported this joint resolution by a vote of 23 to 1.

Mr. Speaker, I urge adoption of the rule.

Mr. Speaker, I yield 2 minutes to the gentleman from Illinois (Mr. ANDERSON).

(By unanimous consent, Mr. ANDERSON of Illinois was allowed to speak out of order.)

HON. RICHARD H. POFF

Mr. ANDERSON of Illinois. Mr. Speaker, it has just been brought to my attention that today is the last day that one of our most distinguished colleagues will be with us in the House of Representatives, at least in his present capacity as a Member of Congress. I refer to the distinguished gentleman from Virginia (Mr. POFF), the ranking Republican member of the House Judiciary Committee, with whom I have also had the pleasure of serving on the House Republican Conference where he has very efficiently and with great dedication served as secretary for a number of years.

I know that many Members of Congress will join me—all Members will join me—this afternoon in paying tribute to one of the most devoted public servants that we have ever known. In his knowledge of the Constitution, in his respect for the office which he holds, he has no peers. We will sorely miss his wise and judicious counsel although we will continue to cherish his friendship and unfailing courtesies down through the years.

I know that all of us will want to wish him well as he leaves this body to become a member of the Virginia Supreme Court, where I am sure he will carve out for himself an equally distinguished career. The people of the Commonwealth of Virginia are fortunate indeed that they will continue to enjoy the benefits of the public service of a truly able and distinguished American.

I am pleased to yield to the distinguished minority leader.

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the distinguished minority leader.

Mr. GERALD R. FORD. Mr. Speaker, I am deeply grateful that the gentleman from Illinois has brought this to the attention of the House. I am especially grateful that he has yielded so that I may express my comments about the gentleman from Virginia (Mr. POFF). Although the House has many superb lawyers, I have long felt that there was no better legal mind in the House than the gentleman from Virginia, DICK POFF. I did all I could to see to it that his great legal capacity could be further utilized in the highest Court of our land, but for circumstances which were personal to the gentleman from Virginia he decided to withdraw his name from consideration.

I would simply conclude by saying that in my capacity I have known him to be loyal, constructive, and a great adviser. I am positive his contribution to the Commonwealth of Virginia in his new assignment will be just as great as it has been in the Congress of the United States.

Mr. ANDERSON of Illinois. I thank the gentleman from Michigan.

Mr. DENNIS. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Indiana.

Mr. DENNIS. Mr. Speaker, there are others here senior to myself who could speak better to this subject than I but I see no one from our committee on the floor at the moment and I am a member of the Judiciary Committee, with the gentleman from Virginia (Mr. POFF), so it seems to me it is appropriate for me also to pay a tribute to him at this time.

Mr. Speaker, it is a tribute I am very glad to pay because the gentleman from Virginia (Mr. POFF) is a very fine gentleman, a fine individual, and he is an excellent lawyer. I am somewhat junior still in this honorable body here but I am not quite so junior at the bar. One thing I do claim to be able to do is to recognize a good lawyer when I see one. It was not very long after I had been here and I had been on the Committee on the Judiciary before I was able to recognize that the gentleman from Virginia (Mr. POFF) was indeed a very able lawyer.

Along with the minority leader, I regret that the gentleman from Virginia did not go to the Supreme Court of the United States, to which post I was happy to recommend him, but I am sure he will grace the Supreme Court of the Commonwealth of Virginia and that he will be an honorable and appropriate addition to a long line of distinguished Virginia lawyers running back to George Wythe, Chief Justice Marshall, Patrick Henry, Thomas Jefferson, and other gentlemen we read about in the history books.

I am sure the gentleman from Virginia (Mr. POFF) will live up to the traditions of the very proud bar of his native

State. As a colleague and a member of the Judiciary Committee I am very happy to have this opportunity to join in this tribute.

Mr. ABBITT. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Virginia.

Mr. ABBITT. Mr. Speaker, I am in wholehearted agreement with all the sentiments expressed here. I would like to point out by way of explanation that several weeks ago we had a special order on this matter when all Members of the Virginia delegation paid their respect to the gentleman from Virginia (Mr. Poff). We commended the Governor for the splendid appointment he made.

I am confident the gentleman from Virginia (Mr. Poff) will serve for many years on the Supreme Court of Virginia as ably as he has here in this body. However, Virginia's gain is a loss to this Congress. I did want the gentleman here to know the Virginia delegation and others have had a special order on this matter. I do wholeheartedly subscribe to everything that has been said.

Mr. DOWNING. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Virginia.

Mr. DOWNING. Mr. Speaker, even though the gentleman from Virginia, Mr. Dick Poff, is a member of the opposition, I was one of his earliest backers for a seat on the highest Court in the land because I recognize his great ability in the legal field. He is a longtime personal friend of mine. We went to law school together and had many happy years together. I am grateful that the Governor of Virginia has appointed him to the Supreme Court of Virginia where he will continue to serve his State with great distinction.

Mr. WYLIE. Mr. Speaker, it is with a spirit of congratulatory admiration that I rise to make a few remarks concerning my colleague from the Commonwealth of Virginia, the Honorable Richard H. Poff.

Today will be the last time that Dick Poff participates in the proceedings of the House of Representatives as a Member representing Virginia's Sixth District. He has held that seat and continued his office with distinction since being first elected to serve in the 83d Congress. Since that time he has earned the respect of his colleagues and the public as a hard working, conscientious, skillful legislator and a dedicated public servant. Like so many of us who are members of this august body, he is an attorney by profession, and this has been his special forte. Richard Poff is indeed most learned in the law and an acknowledged expert in the field of constitutional jurisprudence and related legislative matters. This special expertise is, in fact, the very reason for his departure from the seat he holds in the House of Representatives.

He is going to Richmond where he will assume the mantle of another high office of public trust. The Congressman has been appointed a justice of the Supreme Court of Virginia, and in my humble opinion the Commonwealth could not have chosen a more capable attorney to disperse justice in Virginia's highest judicial tribunal.

Dick Poff is my close friend, a sage counsel, and a Christian gentleman. We will all miss Mr. Justice Poff.

Mr. JONAS. Mr. Speaker, I would like to associate myself with the remarks that have been made concerning the forthcoming retirement of our colleague, Richard Poff. It is a pleasure for me to have this opportunity to join them in paying tribute to him today.

Dick Poff and I came to Congress the same year, 1953. We soon formed a close association—not only because we came from neighboring States, but because it became apparent that we entertained similar views and political philosophies. Out of that association grew a warm friendship which has continued and grown during the intervening 20 years.

Dick has announced that he will resign from Congress before the end of August to take a seat on Virginia's highest court. While the country and his congressional district will thus lose an able and dedicated servant, I must say that the State of Virginia will be gaining a highly qualified judicial officer and the cause of justice in that State will thereby be promoted.

I, too, am leaving Congress voluntarily at the end of this term. So I cannot say that I will be missing Dick Poff here next year; but I can say that I will miss the companionship and friendship I have enjoyed with him over a period of two decades. And I must add that as I go my way in private life down home in North Carolina and Dick Poff goes his way on the bench in Virginia, I expect that I will occasionally reflect upon the events that have transpired during my 20 years in Congress and one of those associates whose image will frequently pass across my memory will be that of Dick Poff.

I am pleased to have an opportunity today to pay my personal tribute of respect to him; to congratulate him upon a career of dedicated service in Congress; and to wish him continued success as he assumes the high responsibilities as a justice of Virginia's highest court. I predict that he will serve in this high judicial position with the same ability and devotion to duty as he has always displayed in the Congress.

Mr. CONABLE. Mr. Speaker, I want to salute our fine colleague, Dick Poff, as he leaves us for a judicial post in the highest court of the Commonwealth of Virginia. He has always been, in my experience, one of our most judicious Members, a man of learning and the law. He has been an adornment to the Judiciary Committee. As one of the elected leaders of the Republican Party in the House he has been a valued adviser to the President of the United States, as I can attest from having observed the respect with which his opinion is sought at leadership meetings at the White House.

But these views relate to his abilities and his judgment. However preeminent these qualities have made Dick Poff among legislators, of even greater importance to those of us who have been associated with him are his character and his personality. He is a fine human being, kind and thoughtful friend, and a pillar of personal integrity. He will be as good a judge as he has been a Representative and friend. I hope he will visit us often, here, because his counsel will be missed even though we are all proud in the recognition that has been accorded him.

GENERAL LEAVE

Mr. ANDERSON of Illinois. Mr. Speaker, I ask unanimous consent that all Members may be permitted to extend their remarks at this point in the Record on the distinguished service rendered to our country and this body by the gentleman from Virginia (Mr. Poff).

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. PEPPER. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. MORGAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the joint resolution (H.J. Res. 1227) approving the acceptance by the President for the United States of the Interim Agreement Between the United States of America and the Union of Soviet Socialist Republics on Certain Measures With Respect to the Limitation of Strategic Offensive Arms.

The SPEAKER. The question is on the motion offered by the gentleman from Pennsylvania.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the joint resolution House Joint Resolution 1227, with Mr. Daniels of New Jersey in the chair.

The Clerk read the title of the joint resolution.

By unanimous consent, the first reading of the joint resolution was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Pennsylvania (Mr. Morgan) will be recognized for 30 minutes, and the gentleman from California (Mr. Mailliard) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Pennsylvania.

Mr. MORGAN. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, today the House will have its opportunity to express its support of the interim agreement on offensive arms which was concluded between the United States and the Soviet Union and signed by the President in Moscow last May.

This agreement is one of two accords to have been reached as a result of the strategic arms limitation talks—better known as SALT—which began in November 1969.

The other agreement limits the deployment of defensive missile systems. Since it is to be a permanent—rather than interim—agreement, it was submitted to the Senate as a treaty.

The Senate on August 3 gave its advice and consent to the treaty by a vote of 88 to 2.

The interim agreement on offensive arms was submitted to both Houses by the President. He has asked for an expression of support from the Congress through passage of a joint resolution.

This action by the President is in accord with section 33 of the Arms Control and Disarmament Act which requires that all arms control agreements entered into by the United States must be approved by Congress either by treaty or authorization through further affirmative legislation.

After several weeks of hearings on the subject, the committee by a vote of 23 to 1 voted to report the amended resolution which is before us today—House Joint Resolution 1227.

The committee approval of this very important arms limitation agreement was not a decision lightly taken.

A subcommittee of the committee had followed the progress of the talks for almost 3 years. During that period it was briefed by U.S. SALT negotiators nine times.

Other briefings on SALT-related subjects were held with officials of the Department of Defense and Central Intelligence Agency during that period.

We were informed and consulted virtually every step of the way on these agreements.

In addition, once the SALT accords had been signed and the interim agreement had been submitted to us for approval, the committee took testimony from high-ranking executive branch officials, including the Secretary of State, the Secretary of Defense, the Chairman of the Joint Chiefs of Staff, the Director of the Central Intelligence Agency, and our chief negotiators at SALT—Gerard Smith, Director of the Arms Control and Disarmament Agency.

As a result of our deliberations, the committee was convinced that the SALT accords are a significant step toward arms limitation fully consistent with the national security interests of the United States.

SUMMARY OF MAJOR PROVISIONS

At this point let me summarize the major provisions of the documents as signed.

Although the ABM treaty is not before this body today for approval, it is so closely related to the interim agreement on offensive arms that the latter cannot be understood completely with some understanding of the treaty.

The ABM treaty allows each side to have one ABM site for the defense of its capital and another site for defense of intercontinental ballistic missiles—ICBM's.

The two sites must be at least 800 miles apart in order to prevent the development of a territorial defense. Each ABM site can have 100 missiles, for a total of 200 for each side.

The treaty contains additional provisions which prohibit either the establishment of a radar base for the defense of populated areas or the capability to intercept ballistic missiles by conversion of air defense missiles to antiballistic missiles.

The treaty also bans sea-based, space-based or land-mobile ABM systems.

Each party will use its own national technical means of verification—such as observation satellites—to monitor compliance with the accords. There is no on-site inspection involved.

A standing consultative commission will be established to promote implementation of the agreements and handle questions which arise in their implementation—including questions of compliance.

The treaty provides for withdrawal by either party on 6 month's notice if "supreme national interests" are judged to have been jeopardized by developments.

The interim agreement on offensive arms is to run for 5 years, unless replaced earlier by a comprehensive permanent agreement. Negotiations on a permanent agreement are to begin in October.

The interim agreement essentially freezes the numbers of strategic offensive missiles on both sides at approximately the levels currently operational or under construction.

For ICBM's, the number is 1,054 for the United States and 1,618 for the Soviet Union. Within this overall limitation, the Soviet Union has accepted a freeze of its heavy ICBM launchers at the current level of those in operation or under construction—a total of 313.

There is a prohibition on conversion of light ICBM's into heavy missiles, including a ban on any significant enlargement of missile silos.

The submarine limitations are more complicated.

Briefly, the Soviets are frozen to their claimed current level, operational and under construction, or about 740 submarine-launched missiles—some of them on an older type nuclear sub.

They are permitted to build to a ceiling of 62 boats and 950 missiles but only if they dismantle older ICBM's or submarine-launched missiles to offset the new construction. This would mean dismantling 210 ICBM's and some 30 missiles on about nine older nuclear submarines.

The United States, by exercising similar options, could increase its SLBM launchers from 656 to 710, and its modern nuclear submarines from 41 to 44.

The agreement does not affect bombers and other aircraft. Nor does it affect our forward-based systems in Europe or the strategic weapons of our NATO allies.

In sum, the interim offensive agreement will keep the overall number of strategic ballistic missile launchers both on land and sea within an agreed ceiling. That ceiling essentially is the current level of weapons, operational or under construction.

The agreement will stop the momentum of the Soviet strategic arms buildup and prevent any further increase in the numerical gap in missile launchers between the United States and Russia.

At the same time it will not affect any on-going American programs.

For example, it will not prevent the continuation of the U.S. program to convert its ICBM's and SLBM's to multiple warheads.

Nor is the B-1 bomber or the Trident submarine system within the purview of the freeze.

THE INTERPRETIVE STATEMENTS

In addition to the agreements themselves, there were a number of interpretive statements. Those interpretations have been provided to the Congress, along with the agreements.

The interpretations are in several forms:

Agreed statements initialed by the delegations;

Agreed interpretations or common understandings which were not set down formally and initialed; and

Unilateral interpretations to make our position clear in instances where it was not possible to get agreement.

The most important of these unilateral statements by the United States involve—

The right of the United States to withdraw from the ABM treaty if an agreement for a more complete strategic offensive arms pact is not achieved within 5 years;

The definition of a "heavy" ICBM from the viewpoint of the United States; and

The inconsistency with the objectives of the interim agreement which would be involved in any deployment of land-mobile ICBM launchers by the Soviet Union.

Dr. Henry Kissinger pointed out during his briefing to Members of Congress on the SALT agreements that in any negotiation of such complexity there will inevitably be details upon which the parties cannot agree. The United States made certain unilateral statements in order to insure that its position on those details was included in the negotiating record and understood by the Russians.

The committee believed that the several matters covered in the unilateral declarations by the United States are important enough to warrant special attention from the Congress.

Consequently, in the report on this resolution, it expressed the viewpoint that actions inconsistent with U.S. interpretations would be considered grave matters affecting the national security interests of the United States.

Our objective was to express congressional support for our SALT negotiators on those important points.

BENEFITS OF THE INTERIM AGREEMENT

Mr. Chairman, this agreement is very complex. It is also an interim agreement, meant to last only until a more permanent, more perfect instrument can be agreed.

Some critics have found it possible to criticize details of the agreement to find fault and raise questions.

In such a frame of mind, there is the danger of seeing the trees and not the forest—for the benefits to the United States in the agreement are evident if certain facts are kept in mind:

The Soviets had embarked on a large-scale expansion of its strategic forces. The momentum of that buildup would have carried their forces well beyond the level planned for our forces during the mid or late 1970's.

Our country had ceased quantitative increases in its strategic forces in favor of qualitative changes like MIRVed warheads. If the Soviet momentum had not been stopped, however, we also would have been forced to keep pace quantitatively.

That effort could well have cost our Nation $2 billion annually during the next 5 years—for a total of $10 billion.

When the money was spent and the additional land- and sea-based missiles deployed, our people would be no safer than they are today from the threat of a nuclear holocaust. In fact, they would be less secure because the results would undermine mutual deterrence and render difficult any stable international strategic balance.

This agreement is a first step toward checking the arms race. It enhances the security of both sides, while promising relief from costly weapons programs.

Furthermore, it provides us with time and a favorable basis for follow-on negotiations to bring under control elements in Soviet strategic forces which could eventually threaten our security.

The Secretary of State and the Secretary of Defense were emphatic in their belief that the agreements are in the national security interests of the United States.

Admiral Moorer, chairman of the Joint Chiefs of Staff, assured us that the Joint Chiefs and the American Military Establishment fully support the accords.

The director of the Central Intelligence Agency, Richard Helms, asserted that his Agency can successfully monitor Soviet compliance with the agreements through the use of national technical means of verification.

While offering the prospect of a more secure and peaceful world, the SALT agreements will permit the United States to take those steps necessary to maintain a strategic posture which protects our vital national interests and guarantees our continued security.

For those reasons, the interim agreement deserves the support of the Congress—support which can be expressed here today by a favorable vote for House Joint Resolution 1227, as amended.

THE FORM OF THE RESOLUTION

Before I conclude, a word of explanation is necessary on the form of the resolution.

When the committee met to consider the several resolutions of approval which had been introduced, it was keenly aware that the President had asked that final congressional action come before the recess, in order that the second round of SALT negotiations with the Russians could begin in October.

For that reason, the committee believed it wise to strike the "whereas" clauses of the resolution originally sent down by the administration and report a resolution of acceptance without any preamble.

In this way we believe it may be possible to avoid a conference with the Senate, delays which could put off final passage until after Labor Day and thereby force postponement of the second, very vital round of SALT talks.

Mr. Chairman, the issue before the House is whether or not it in the best interest of the United States to approve this interim agreement on nuclear offensive weapons. It imposes limits on the Soviet Union and it imposes limits on us. It lasts for a 5-year period unless a formal agreement concerning limiting offensive weapons can be reached sooner.

If this interim agreement is approved, the Soviet buildup of its ICBM's and its submarine launched ballistic missiles will be held during the next 5 years below the level that we can anticipate if there is no agreement.

Each of our countries, the United States and the Soviet Union, has a different defense strategy and a different mix of weapons to implement its differences. It is a mistake to focus attention too closely on any one type of weapon system and say that unless we have equality with the Soviet Union with respect to this weapon our national security is endangered.

The United States has important elements of military strength that are not covered by this interim agreement or by the ABM treaty. These include our forward bases, our advanced and broadly based technology and our fleet of bombers.

The issue we have to face this afternoon is whether or not we will be better off 5 years from now if we approve the agreement before us than if we do not. I believe the answer is clear. We should approve this resolution so that we can begin negotiations in October to work out a better and more permanent limitation.

The agreements should not, however, engender euphoria that an end to the arms race is in sight. As the President himself has said:

> The agreements are an important step in checking the arms race, but only a first step; they do not close off all avenues of strategic competition.

The negotiations of SALT I required 2½ years to come to fruition. Because it must deal with issues of qualitative limitations as well as quantitative limitations on weapons, SALT II can be expected to pose considerably more difficult problems and be even more protracted in time.

While never abandoning the hope that comprehensive nuclear offensive arms limitation is possible, the United States must continue to maintain a strong strategic posture. As Secretary Laird pointed out to our committee, only by bargaining from a position of sufficient strength can the United States expect success in the attempt to achieve an effective, lasting agreement limiting offensive strategic systems.

While offering the prospect of a more secure and peaceful world, the SALT agreements will permit the United States to take those steps necessary to maintain a strategic posture which both protects our vital national interests and guarantees our continued security.

For those reasons, the interim agreement and protocol deserve the support and approval of the House of Representatives.

Mr. FRASER. Mr. Chairman, will the gentleman yield?

Mr. MORGAN. I yield to the gentleman.

Mr. FRASER. Mr. Chairman, I rise in support of House Joint Resolution 1227, authorizing the President to accept on behalf of the United States the interim agreement on offensive strategic nuclear weapons signed in Moscow last May.

Perhaps the most important effect of this agreement, and the related ABM treaty, is to break the action-reaction cycle of strategic arms deployments which have marked the relationship between the United States and the Soviet Union since the end of World War II.

The action-reaction cycle which has fueled the arms race results from the fact that what one side does in weapons development, forces the other side to react, both politically and technologically.

It has been a costly race.

Since the end of World War II, the United States has spent approximately $1,300 billion on defense. For their part the Soviets have spent an estimated $1,000 billion.

If the two countries continue to grow as projected to the end of the century, and if both continue to spend the same proportion of their gross national product on defense, by the year 2000 each could spend another $2,500 billion or more in order to maintain national security.

Because of the cyclical nature of the arms race, however, after spending billions of dollars, neither the United States nor the Soviet Union would have bought safety for its people.

The arms control agreements negotiated during the 30 months of the Strategic Arms Limitation Talks—SALT—provide some hope that the next arms spiral can be avoided.

For the next spiral will, indeed, be a costly one. Two technological advances on weaponry would assure that.

One of those developments is the anti-ballistic-missile system—ABM. The other is the multiple independently targetable reentry vehicle—MIRV.

Since each of those weapons developments tends to cancel the other out in strategic calculations, the deployment of both ABM and MIRV would have entailed constantly escalating expenditures on both sides, while at the same time rendering the international strategic balance less stable.

We need not be reminded of the pressing requirements in our own country for financial resources and the substantial burden which defense spending places on our economy.

In the Soviet Union, which has a considerably lower level of economic development, the arms race clearly is an even heavier financial burden.

Both sides, therefore, have pressing economic reasons for developing mutual arms restraint through negotiations.

The most important outcome of the first set of SALT negotiations has been the treaty limiting deployment of ABM's. By setting a limit to ABM defenses the treaty eliminates one area of costly and potentially dangerous defensive competition.

Secretary Laird has testified that the total ABM savings through 1981 as a result of SALT would be $9.9 billion, figured in 1968 prices. If the deployment of an ABM around Washington, D.C., ultimately is not authorized by Congress, an additional $4.8 billion could be saved.

Moreover, the limit on ABM deployment reduces the incentive for continuing deployment of offensive systems. The interim agreement on offensive arms is, in effect, recognition of that fact by both sides.

The freeze on ICBM's, submarine-launched missiles, and modern nuclear submarines will result in savings for the Soviets since they have ongoing programs in these areas.

Since the United States does not have current programs of building additional new missile launchers or nuclear submarines, there will be no comparable savings for our side.

However, if the United States had been forced ultimately—because of the action-reaction cycle of the arms race—to match the Soviets missile for missile, the additional costs would have been substantial.

In his testimony before the Committee on Foreign Affairs, Dr. Edward Teller estimated that cost at an additional $2 billion annually for at least the next 5 years, for a total of $10 billion.

Because of the interim freeze, it will not be necessary to divert that money from pressing domestic needs to putting more missile launchers in the ground and under the sea.

More important than any immediate savings which may result from the SALT agreements, however, are prospects that further controls can be agreed on which will allow substantial reductions in weapons expenditures on both sides.

Although that goal has not been reached, the Moscow agreements provide a basis for future negotiations which will—hopefully—lead to important cuts in the level of defense spending by both the United States and the Soviet Union.

Mr. Chairman, for too many years we have spent money for weapons in a fruitless search for safety in a very dangerous world. We have not found safety and our weapons—and the counterweapons of the Soviets—have only added to the dangers.

Now, at last, we have a chance to end that dangerous cycle in favor of mutual restraint and an eventual reduction in the amount of nuclear firepower we have aimed at each other.

Critics of this agreement are adept at playing "number's games" with quantities of launchers, numbers of warheads, amount of megatonnage, throw weights, accuracies, hardness of silos, and other factors in the strategic equation.

Although they can—through "worst possible case" analysis—cause apprehension, their arguments are specious.

Such calculations of marginal advantage at the end of 5 years—whether it be in warheads, launchers or megatonnage—overlook one important point:

Both nations have the ability to destroy the other several times over, and this will remain the case during the 5 years covered by this interim agreement.

In our era of mutually assured destruction, that chilling fact—ironically—should reassure us of the wisdom of the interim agreement.

It should also serve to remind us of the doomsday game we are playing and spur us on to greater efforts at controlling and reducing nuclear armaments.

The interim agreement before us today is an important step in that direction and I urge that it be given approval of the House of Representatives through passage of House Joint Resolution 1227.

Mr. MAILLIARD. Mr. Chairman, I yield myself 5 minutes.

Mr. MONAGAN. Mr. Chairman, will the gentleman yield?

Mr. MAILLIARD. I yield to the gentleman.

Mr. MONAGAN. Mr. Chairman, I wish to record my support of the interim agreement between the United States and the U.S.S.R. on the limitation of strategic offensive arms.

Clearly, the overriding problem of the great powers today is the creation of a plan through which they can proceed to a gradual reduction of the armaments which they have amassed over the years.

The benefits of such a reduction are obvious. To begin with, the security of the world would be increased and the danger of a holocaust would be decreased with the cutting down of the volume of destructive weapons.

In the second place, very substantial benefits could accrue to the people of the principal nations when the resources presently committed to arms production were diverted to nonmilitary objectives. Clearly, both countries have urgent needs in the domestic civilian sector and it is tragic that so great a portion of the national wealth has been diverted to nonproductive uses.

So far as the merits of the agreement are concerned, it is true that the situation created is not one that is ideal for the United States. The Russians are still free to move ahead in the areas which are not specifically excluded by the agreement. For example, their preponderance in submarines can be increased by 50 percent and this expands that already fearsome military arm. In addition, the sophistication of their warheads can be enhanced while mobile launching sites are not covered.

It is thus obvious that much of the future effect of this agreement rests with the parties. It is significant in this connection that the second stage of the SALT talks is scheduled to begin immediately after the approval of the treaty and interim agreement. It is in this area of reduction of weaponry that the most difficulty lies, but also the greatest hope for meaningful progress.

In questioning Ambassador Smith during the hearings before the Foreign Affairs Committee held on this agreement, I ask him whether or not he believed that the Russians honestly and sincerely desired to achieve significant progress in the limitation of weapons, and I pointed to the recent expansion of the Soviet naval and military presence in so many new areas of the world, a development which Admiral Moorer stated had great significance. Ambassador Smith responded that he had concluded from his long negotiations that the Russians did have such a desire and he believed that we could rely upon this desire in reaching a decision for action on the joint resolution.

Accordingly, I have concluded that the interest of the country required that the joint resolution be approved. It is clearly an interim step and one whose implementation is not at all certain. In this critical time, however, I believe that we should take a step based upon faith in the common desire of all people for peace, a belief that self-interest on both sides will be served by movement in this direction and hope that the future will bring not only the implementation of this agreement but the prompt initiation and successful conclusion of the vitally important phase II of the Strategic Arms Limitation Agreements.

Mr. MAILLIARD. Mr. Chairman, I rise in support of House Joint Resolution 1227.

The chairman, the gentleman from Pennsylvania (Mr. MORGAN) has explained, and the committee report explains, in some detail the contents of the agreement and its companion treaty, which has already been approved by the U.S. Senate.

This historic resolution simply approves of and authorizes the President to accept on behalf of the United States the interim agreement between the United States and the Soviet Union with regard to limitations on strategic offensive arms.

For the first time in the nuclear age, the two superpowers have reached an agreement to put a brake on the nuclear arms race. This agreement, which was signed by President Nixon and Secretary General Breshnev in Moscow on May 26, covered two areas—one, the treaty, as I have said, already approved by the Senate, limiting ABM systems to two designated areas and at a low level; and, two, the interim agreement limiting the overall level of strategic offensive missile systems, which we are asking the House to approve by this joint resolution today.

We are considering the second agreement which would stabilize the level of strategic offensive missiles for 5 years while we proceed with the second stage of the negotiations.

I realize there has been considerable controversy regarding the limitation on strategic offensive weapons. Admittedly, this freeze leaves the Soviet Union with more missile launchers than the United States, although we have more warheads and bombers.

We could debate all day here the relative strength of the United States and the Soviet Union if we want to play the numbers game with this extremely complicated issue. However, we need to remember that a great many factors were balanced off on both sides. As was pointed out in testimony before our committee, the agreement will freeze the total number of strategic missiles at about our present level for 5 years.

This accomplishes a major useful objective in breaking the momentum of the Soviet offensive missile launcher program. Without this agreement, the Soviets could have had and probably would have had by mid-1977 over 2,000 antiballistic missiles on launchers. This would have compared with our level of just over 1,000.

Actually, both sides could find advantage in the limitations which were agreed to. Each one possesses so much destructive power that neither could start a nuclear war without causing its own destruction. This creates a certain assurance of security for both, and indeed I may say that had this not been the case, surely there would have been no agreement. Both sides had to see advantage in it.

Finally, I think the SALT agreements may provide a foundation on which future agreements can be built that will lead to meaningful reductions in expenditures while still maintaining national security. The resolution itself, is straightforward and uncomplicated and goes directly to the heart of the issues: Do we approve of the agreement that the President his signed? In my opinion, it deserves your support.

Mr. Chairman, I yield 3 minutes to the gentleman from Indiana.

Mr. DENNIS. Mr. Chairman, I take this time to say that I support the resolution before us, which I regard as a highly important resolution, one of the most important which we have had to consider here.

I think it is regrettable that there are not more Members present on an occasion of this type. I believe that the measure is a step toward a more orderly and peaceful world, which is probably the single most important thing to which anyone in public life can direct himself at the present time.

I think it is also appropriate to note, as a matter of legislative record at this point, although I intended to offer nothing this morning, that there is pending in the other body, as the Members know, amendatory language which would specifically recognize in the resolution the principle, to which I think most of us subscribe and which we are intending here to accomplish, of equality in international strategic forces between our government and the Soviet Union. I think that principle is a sound principle. I trust that in the course of the legislative process, after we have passed the measure in this House, that the language enunciating that principle, which is now being offered in the Senate, or some similar language, will be given serious consideration in the conference and thereafter.

Mr. Chairman, I yield back the balance of my time.

Mr. SPENCE. Mr. Chairman, will the gentleman yield?

Mr. DENNIS. I yield to the gentleman from South Carolina.

Mr. SPENCE. Mr. Chairman, we will soon take one of the most significant votes in the history of this country. We are asked to endorse an interim agreement on offensive arms, which the President concluded as a result of talks with the Russians in Moscow earlier this year.

We are told that we must approve this agreement because it is necessary to stop "Soviet momentum." In other words, the Russians have been engaged in such an intensive arms buildup during the past 10 years, that they threaten to leave us hopelessly behind in weapons strength. For example, in 5 years they would have had 90 "Y-class" submarines, as compared to our 41. By this agreement we manage to hold them to "only" 62. This gives us the chance to catch up in payload capacity—though not numbers—by building Trident.

Here is my question, Mr. Chairman: Why did we let ourselves get in this position? Why did we let an enemy power get so far ahead in certain key areas that we were compelled to enter into a generally unfavorable agreement to stop them? Why does our country—long considered the most powerful on earth—find itself dealing from a position of weakness? In my judgment, it all boils down to this and we should see it for what it is—a lack of reasonable alternative.

Because of an awesome Soviet capacity to produce weapons, we fear that the situation could be even worse next year—and perhaps, in the next few years, unthinkable. Furthermore, we worry that, given the present compulsion of many leaders in Congress and elsewhere to cut back drastically on anything military, we may not do any better at keeping up in the future. Mr. Chairman, because of these factors, and because I feel that we have little choice in the matter, I intend to support this resolution.

I am going to vote for this resolution in hopes that we have learned a valuable lesson. Unquestionably, we could have done much better at SALT for ourselves and for our allies had we been stronger and better prepared. We were forced to accept an inferior status in many cases, and our President could do no better because of our state of relative unpreparedness. We let the Communists get the upper hand, and this is the very result many of us have been warning about for years. Hopefully, we can salvage something from this experience, and our warnings will now be better received.

We can still maintain some degree of world leadership and self-respect under this agreement. Thanks to our ingenuity and technology, we can withstand some inferiority in numbers for a few years. But we must look to the future. We must rekindle the traditional American determination to be "No. 1." Unless we have something to bargain with in the next round of talks, there will be no incentive for the Russians to come to reasonable terms.

Should the Soviets continue their unprecedented buildup of nuclear power, with no competition from the United States, they would have little difficulty showing the rest of the world "who's boss." Whether by threat, or from the natural tendency of the weak to ally themselves on the side of strength, the Soviets would be in a position to control the fortunes of most presently nonalined nations.

As a world power, the United States has solemn duties and weighty responsibilities. She owes freedom and protection to her own people, as everyone knows, but also important is her obligation to help every citizen of the free world remain free. Reasonable men may differ on the advisability of our being a self-appointed guardian of the free world, but few will deny that the obligation is there. Some see it as a moral duty, a humanitarian effort. Others realize that we insure our own future freedom by helping others to remain free. Whatever the motive, no matter how we justify our military presence in the world, we must remain strong and powerful in order to meet our obligations.

With God's help and with the fresh support of those who have now seen the consequences of weak resolve, I am optimistic that our country can discharge our responsibilities with integrity and pride.

Mr. CRANE. Mr. Chairman, will the gentleman yield?

Mr. DENNIS. I yield to the gentleman from Illinois.

Mr. CRANE. Mr. Chairman, I rise in opposition to House Joint Resolution 1227.

On May 26, 1972, President Nixon and Soviet Communist Party General Secretary Leonid I. Brezhnev signed two agreements: the first is in the form of an executive agreement—Interim Offensive Agreement—limiting the deployment of intercontinental—ICBM—and submarine-launched—SLBM—ballistic missiles. The second is a formal treaty restricting to nominal levels, the deployment of antiballistic missiles systems—ABM—which is of primary concern to the other body.

The purpose of the interim agreement on offensive arms is to "freeze," for 5 years, the deployment of ICBM's and SLBM's at specified limits. During the term of the interim agreement, both sides are to seek a permanent set of limitations on strategic offensive arms including elements not included in the interim agreement such as strategic intercontinental bombers and U.S. aircraft based in Europe as well as U.S. aircraft carriers with aircraft capable of delivering nuclear weapons on Soviet territory—known as forward based systems. If no permanent agreement is reached, or both sides do not renew the agreement at the end of 5 years, both sides may resume their deployment of strategic offensive systems.

THE BALANCE OF FORCES UNDER THE SALT ACCORDS

The interim agreement on offensive forces provides for limitations on offensive weapons deployment for ICBM's and SLBM's only. The agreement does not impose limitation on bombers, number of warheads—of the "MIRV" or multiple warhead type—missile accuracy, or other characteristics of strategic nuclear forces. Since 1966, the Soviet Union has focused its strategic buildup on ICBM's and SLBM's. With regard to ICBM's only two properties are restricted: the total number of ICBM's—limited to those in operation or under construction as of July 1, 1972—and the approximate size of the missile silos, the underground housing for the ICBM. The latter restriction places a ceiling on the most important characteristic of ballistic missiles in the long run its payload capacity—or "throw-weight"—by limiting the size of the missile which can be placed in a silo. The significance of this characteristic is that the payload capacity determines the maximum number of individual warheads that can be placed upon a single missile. For example, if one missile has twice the payload capacity of another missile, the larger missile can carry twice the number of warheads carried by the smaller.

The terms of the interim agreement permit the Soviet Union to have a greater number of ICBM's, as well as a greater payload capacity in its entire strategic force. The effect of the agreement with regard to ICBM's is as follows:

	United States	Soviet Union
Modern heavy ICBM's	0	[1] 313
Modern light ICBM's	[2] 1,000	[3] 1,100
Obsolete ICBM's	[4] 54	[5] 209

[1] SS-9, or a new larger missile about to be tested.
[2] Minuteman.
[3] SS-11 and SS-13.
[4] Titan.
[5] SS-7 and SS-13.

The United States has no counterpart to the heavy Soviet ICBM's. The current SS-9 missile has a payload capacity five times that of the Minuteman III missile, our largest and most modern ICBM, and an even larger Soviet missile with a payload capacity eight times that of the Minuteman III could be used to replace the SS-9, further augmenting the Soviet advantage in payload capacity. The Soviets may not convert their "light" ICBM's into "heavy" ICBM's, nor may the United States do so. Both sides may convert their obsolete ICBM's into an equivalent number of SLBM's. The payload capacity of the Soviet "heavy" ICBM's exceed the entire U.S. ICBM payload by a factor of three.

The United States has 41 modern submarines capable of launching SLBM's. Each carries 16 SLMB's; ultimately 31 will be equipped with Poseidon multiple warhead—MIRV—missiles, the remaining 10 submarines will be equipped with the older Polaris missile with a single warhead. Near the end of the decade, the 10 Polaris firing submarines will be replaced by a larger submarine known as Trident—formerly called ULMS.

The Soviet Union has 26 modern submarines of the "Y" class in operation, and 17 more under construction. These are each equipped with 16 SLBM's each with single warheads. The terms of the SALT accords will permit the Soviets to build 62 modern—Polaris-equivalent—submarines. In addition, the Soviets may retain 22 older "G" class submarines firing three SLBM's each. The Protocol restricts the United States to a maximum of 44 modern submarines with no more than 710 SLBM's. The Soviet Union may have no more 950 SLBM's on no more than 62 modern submarines for a total of 84 submarines and 1,016 SLBM's.

MAXIMUM PERMISSIBLE BALLISTIC MISSILE FIRING SUBMARINES

	United States		Soviet Union	
	Submarines	Missiles	Submarines	Missiles
Modern (U.S. Polaris/Poseidon and Soviet "Y" class)	44	710	62	950
Older types (diesel) (Soviet "G" class)	20	0	22	66
Total	44	710	84	1,016

The terms of the interim agreement permit the Soviet Union to dismantle their 209 obsolete SS-7 and SS-8 ICBM's as well as some of their older diesel-powered ballistic missile launching submarines into modern nuclear-powered submarines similar to the U.S. Polaris/Poseidon-type—the Soviet Y class. The United States only has 54 older ballistic missiles—the Titan II—which it may dismantle to add three additional submarines to those already deployed—41—for a total of 44. Unaffected by the agreement are manned strategic intercontinental bombers and qualitative improvements to the existing forces such as multiple warheads, improved accuracy, and other improvements. Neither the United States nor the Soviet Union may increase the number of their ICBM force. However, the Soviet Union will be able to modernize their heavy missiles, 313 SS-9's with a new missile—noted above—with nearly twice the payload capacity of the existing SS-9's. Since the United States is not permitted any heavy missiles under the agreement, the payload capacity of the U.S. ICBM force cannot be significantly increased.

The United States is free to develop and deploy the Trident—ULMS—submarine. The Soviet Union is free to develop its modified Y class submarine to accommodate a recently developed new SLBM.

The United States is free to develop and deploy the B-1 bomber, the proposed new intercontinental bomber. The Soviet Union is free to develop and deploy its new intercontinental bomber, the Backfire.

The United States is free to make further qualitative improvements to its forces, including multiple warheads—MIRV—improved accuracy, and others. The Soviet Union is also free to make qualitative improvements of the same kind. However, because of the advantage conferred on the Soviet Union by the SALT accords in payload capacity of ICBM's—a 5-to-1 advantage—and numbers of SLBM's—a 3-to-2 advantage—their potential for qualitative improvement is vastly greater than for U.S. forces. Thus, the strategic balance could be as below if the Soviets make only modest qualitative improvements in their forces permitted under the agreements.

HYPOTHESIZED STRATEGIC BALANCE 1978

NUMBER OF WARHEADS

United States		*Soviet Union*	
Minuteman III (550 missiles @ 3 warheads)	1,650	SS-9 (modified) (313 missiles @ 20 warheads)	6,260
Minuteman II (450 missiles @ 1 warhead)	450	SS-11 (1,000 missiles @ 2 warheads)	2,000
Titan II (54 missiles @ 1 warhead)	54	SS-13 (100 missiles @ 2 warheads)	200
Polaris A3 (10 boats, 16 missiles @ 1 warhead)	160	TU-20 and MYA-4 heavy bombers (140 aircraft @ 10 missiles and/or bombs)	1,400
Poseidon (31 boats, 16 missiles @ 10 warheads)	4,960	TU-16 and TU-22 medium bombers (700 aircraft @ 5 missiles and/or bombs)	3,500
B-52 heavy bombers (400 aircraft @ 10 missiles and/or bombs)	4,000	"Y" class submarine (62 boats, 16 missiles @ 1 warhead)	950
FB-111 medium bombers (100 aircraft @ 5 missiles and/or bombs)	500	"G" class submarine (22 boats, 3 missiles @ 1 warhead)	66
Total	11,774	Total	14,376

These estimates are conservative because they assume that the Soviet Union will not be capable of matching the U.S. engineering ability in multiple warhead technology within the next 5 years. If the Soviet Union were able to do so, they have sufficient payload capacity in their ICBM force alone to mount 35,000 of our Poseidon-type warheads.

POLICY ISSUES IN THE SALT ACCORDS

The details of the SALT accords are exceedingly complex because the explicit interim agreement on offensive arms, and the treaty on ABM systems have their associated "unilateral statements" and "agreed interpretations" dealing with specific technical and engineering aspects of the offensive and defensive arms held by each side. Nevertheless, some crucial public policy issues emerge from the broad outlines of the agreements.

First, the United States has accepted an inferior position in every area which was the subject of the interim agreement on offensive arms. That is, the United States accepted a position of inferiority in the number of ICBM's, inferiority in the total payload capacity of ICBM's, inferiority in the number of ballistic missile firing submarines, and inferiority in the number of submarine-launched ballistic missiles. In short, the United States has accepted a "freeze" on its own forces, but have merely imposed a "ceiling" on Soviet forces; a ceiling which is substantially higher than the United States. If the United States is willing to accept inferiority in ICBM's and SLBM's in the first round of SALT, will the United States be willing to accept inferiority of this kind in other strategic systems which will be the subject of negotiations in the second round of SALT?

Second, most scientists close to multiple warhead technology maintain that the Soviet Union can be expected to develop multiple warheads—MIRV—within the 5-year term of the agreement—the United States developed MIRV warheads in 3 years. If the Soviet Union did this and thereby, exploiting their vast ICBM payload capacity, their potential superiority in warheads would become real, Can U.S. security be maintained with manifest strategic inferiority?

Third, the Safeguard ABM system was justified on the grounds that if the Soviets put sufficient numbers of accurate multiple warheads—a serious possibility, should they choose to do so within the 5-year term of the interim agreement on offensive arms—on their "heavy"—SS-9 type—ICBM's, they could destroy 95 percent of the unprotected U.S. Minuteman ICBM's on a first strike. The ABM treaty reduced the number of ABM interceptors at Minuteman bases to a nominal—100 interceptor missiles—and militarily ineffective level, but the offensive threat—that is, SS-9 missiles or larger—was not reduced. Thus, our Minuteman ICBM's are still in danger. How were the interests of reducing the incentive of the Soviet Union to strike first—a criteria of "strategic sufficiency" in President Nixon's 1972 foreign policy message to Congress—enhanced by the terms of the SALT accords?

Fourth, great emphasis among U.S. allies is placed upon the credibility of U.S. strategic forces to provide a "nuclear shield" against Soviet conventional or nuclear attack. The terms of the SALT accords place the United States in a position of at least apparent—based upon the agreed-upon disparity in the size of strategic forces in favor of the Soviet Union—if not real U.S. strategic inferiority. Based on the credibility of the U.S. nuclear umbrella, we have persuaded allied nations such as Japan and Germany to forgo the development of strategic nuclear forces. How can our alliance policy be supported in the future in the face of the SALT accords?

Fifth, the role of photographic satellite observation—national technical means of verification—to police the terms of the agreement is crucial. There have been major failures of photo reconnaissance in the past, such as the failure in 1964 to determine that the Chinese Communists' first nuclear test was going to be a uranium bomb—which required a huge factory for the production of the nuclear material—it was incorrectly predicted that the Chinese would test an unsophisticated plutonium bomb. The SALT accords require a much higher degree of reconnaissance sophistication, and the consequences of successful Soviet evasion are much more serious for the United States. Is it prudent to place our entire confidence in the integrity of the agreements in satellite observation, when on-site inspection is the only truly reliable inspection technique?

The prefatory language contained in the House joint resolution, as reported, fails to contain any language which is sensitive to the concerns expressed by numerous experts before the committees responsible for studying this agreement in both the House and the Senate.

Failure to include such language is likely to result in a misinterpretation of the determination of the Congress to support a prudent strategic posture. Absence of such congressional support could gravely weaken the chances for successful and truly effective arms limitation accords in the forthcoming round of strategic arms limitations negotiations. Moreover, to the extent that the resolve of the Congress is misinterpreted in Moscow, the chances for a stable and enduring world peace are jeopardized.

I therefore urge that the House reject the resolution.

Should the resolution be passed, I urge my colleagues from the Foreign Affairs Committee who will meet with their Senate counterparts to insist in the conference on the inclusion of the language of the so-called Jackson amendment in the final resolution which will be transmitted to the President.

Mr. HOSMER. Mr. Chairman, will the gentleman yield?

Mr. MAILLIARD. I yield to the gentleman from California.

Mr. HOSMER. Mr. Chairman, I rise in support of the Offensive Weapons Interim Agreement and urge passage of House Joint Resolution 1227.

It is generally conceded that America and Russia cannot risk attacking each other because their nuclear arsenals are sufficient to withstand surprise attack and still have enough undamaged retaliatory hardware left over to pulverize the aggressor.

President Nixon and Premier Brezhnev believe it is in the self-interest of their respective countries to perpetuate this condition of mutual deterrence based on nuclear sufficiency. The proposed SALT Treaty limiting defensive anti-ballistic-missile systems and its accompanying interim agreement limiting certain offensive weapons was designed for this purpose.

The rationale of the ABM limitation is obvious. Each new ABM built by one side can be nullified by the other's new offensive installation. It is in nobody's security interest to spend money for that kind of an arms race only to end up poorer, but no safer than before.

The logic of allowing the Soviets a lopsided number of offensive missiles and submarines is obscure if quantity alone is considered. It emerges clearly, however, when other factors relevant to assessing the kill power of these two Nation's strategic nuclear arsenals are taken into account. These include the following:

The actual number of nuclear warheads in the U.S. deterrent package considerably exceeds those of the Soviets because of our many multiple, independently guided reentry vehicles—MIRV's.

The greater accuracy of the U.S. warheads gives them a proportionately large kill capability, ample for nuclear sufficiency.

The U.S. allies and near allies possess substantial strategic deterrent forces which augment the free world's overall deterrent posture.

The arrangements impose no limitations at all on certain U.S. systems contributing to our deterrent strength, such as SAC bombers and U.S. aircraft based overseas on land and on aircraft carriers.

Sufficiency to deter is something in the mind of the beholder and when one side fields a mix of bombers, ICBM's, and SLBM's with which it is satisfied, the other side would need to assume very large and unknown risks of miscalculation in order to assess it as insufficient.

What are inside the strategic systems, how good they are now, and how they may be qualitatively improved are not covered by the arrangements, leaving the parties in exactly the same circumstances, whatever they are, as before.

Provision for verification by each party's own intelligence apparatus involves minimal risk, since the arrangements are cast in terms of items which reasonably can be monitored by satellite photography and similar means.

The foregoing and many additional calculations undoubtedly influenced President Nixon's determination that the agreements are worthwhile and that their terms involve neither undue risks to U.S. security nor disproportionate advantage to the Soviet Union.

In making his decision the President also must have totaled the quite large costs of the superpowers taking no steps at all toward arms control against those involved in the limited agreements he made in Moscow. No person better knows these costs than he and his judgment deserves great respect.

To assure that the arrangements do not grow lopsided by the passage of time, Congress must support the President's R. & D. requests for the Trident submarine program, the B-1 bomber, and other improved strategic systems.

Mr. MORGAN. Mr. Chairman, I yield 5 minutes to the gentleman from Wisconsin (Mr. ZABLOCKI).

Mr. ZABLOCKI. Mr. Chairman, I rise in support of the historic resolution approving the interim agreement and related protocol on offensive strategic arms signed in Moscow last May.

In doing so, I want to emphasize that during the process of negotiations which led up to this agreement, Members of the Congress have consistently been kept abreast of developments.

When the SALT talks began about 2½ years ago, the chairman of the Committee on Foreign Affairs assigned the Subcommittee on National Security Policy and Scientific Developments, of which I am chairman, to monitor the progress of the talks.

As a result, the subcommittee was briefed nine times during the 30-month negotiating period. In addition, SALT-related briefings were held with officials of the Department of Defense and the Central Intelligence Agency.

All of these briefings were open to the entire membership of the committee and many members availed themselves of the opportunity to be brought up to date on progress at the talks. Several committee members visited the sites of the talks for additional briefings.

Other committees of this and the other body have similarly availed themselves of the opportunity regularly to be informed about, and consulted on, the negotiations.

Mr. Chairman, I can attest to the candid and forthright discussion which was given to the issues.

No one who attended those meetings failed to be impressed by the serious, professional attitudes of the U.S. SALT negotiating team.

Their work has been of such quality as to require that we give them individual recognition:

The head of the delegation was the Honorable Gerard Smith, Director of the Arms Control and Disarmament Agency, a man noted for his intelligence and judgment.

Representing the Department of Defense on the team was the Honorable Paul Nitze, former Secretary of the Navy.

Representing the Joint Chiefs of Staff was Lt. Gen. Royal Allison of the U.S. Air Force.

And representing the Department of State was the Honorable Graham Parsons, former U.S. Ambassador to Sweden and Laos and a high-ranking Foreign Service officer.

This is the team that hammered out the details of the agreements which President Nixon and Secretary Brezhnev signed in Moscow last May 26.

Since that time their work has received the endorsement of the highest officials of our Government.

In testimony before the committee on the agreements, the Secretary of State, the Secretary of Defense, and the Chairman of the Joint Chiefs of Staff all expressed their support of the agreements.

As one who has followed the progress of the talks from the beginning, let me—at this point—add my endorsement.

The treaty on ABM's and the interim agreement on offensive strategic weapons offer the first tangible evidence that the momentum of the arms race between our Nation and the Soviet Union can be successfully halted and that we can move ultimately to mutual arms reductions.

Several points about these agreements deserve particular attention:

First the negotiating dialog between the United States and the Soviet Union has in itself been useful.

Today, we have a much better understanding of Soviet interests and concerns in the strategic area—certainly the most sensitive area of national life.

And the Russians have a better understanding of our interests and concerns.

Second, the bargaining process was one of give and take on both sides.

Some critics have charged that the Soviets got the best of the bargaining. Such charges are not well founded.

Anyone who was knowledgeable of the bargaining positions of both sides as the negotiations progressed should be well aware that there was give and take on both sides—and that our negotiators took as well as they gave.

In that connection let me quote from the President's statement to Members of Congress on June 15 in which he said:

> I have noted a great deal of speculation about who won and who lost in these negotiations. I have said, that neither side won and neither side lost. As a matter of fact, if we were to really look at it very, very fairly, both sides won, and the whole world won.
>
> Let me tell you why I think that it is important. Where negotiations between great powers are involved, if one side wins, and the other loses clearly, then you have a built-in tendency or incentive for the side that loses to break the agreement and to do everything that it can to regain the advantage.
>
> This is an agreement which was very toughly negotiated on both sides. There are advantages in it for both sides. For that reason, each side has a vested interest, we believe, in keeping the agreement rather than breaking it.

I think that statement by the President is a sound one.

A third point which should be made is that nothing in this interim agreement on offensive nuclear weapons—or the treaty on ballistic missile defense systems—was or will be taken on faith.

There is an old belief in this country about not trusting the Russians. It is wise advice—and thus this agreement is not based on trust.

Rather, it is based on quantitative factors which can be verified by national technical means—that is, our observation satellites.

The director of the Central Intelligence Agency, Richard Helms, has assured the committee that these means are fully adequate to monitor successfully Soviet compliance with the agreements.

Moreover, the agreements themselves call for the creation of a Standing Consultative Commission which will be a forum for ironing out any questions or disputes which may arise from the application of the agreements.

In his testimony before the committee, Dr. Edward Teller, the outstanding nuclear scientist, cited the creation of the Commission as a significant advance in dealing with nuclear weapons issues.

My fourth and final point is that the interim agreement on offensive arms is exactly that—an interim agreement.

Its maximum life is 5 years, during which time both sides will be attempting to work out a comprehensive agreement on offensive strategic arms.

There is no pretense that this is a perfect agreement meant for the ages.

Some critics of the agreement have tended to see it in just that light. Their charges appear to be based on the mistaken idea that the agreement is a permanent one.

The agreement is not permanent in any sense. If it should be possible to reach a comprehensive agreement with the Soviets next month—albeit unlikely—the useful life of the agreement will have been 1 month.

The value of the agreement is to give both sides 5 additional years to see if comprehensive controls are possible. For the sake of ending the costly arms race, let us hope that they are.

In the meantime, this body should indicate to the American people and the people of the world that the Congress supports careful, reasonable steps toward strategic arms limitation by giving its overwhelming support to the joint resolution before us today.

Mr. DOW. Mr. Chairman, will the gentleman yield?

Mr. ZABLOCKI. I yield to the gentleman from New York (Mr. Dow).

Mr. DOW. Mr. Chairman, this Congressman heartily supports the resolution, House Joint Resolution 1227, to accept the interim agreement for limiting strategic offensive arms.

Some days ago, I was curious as to why this particular agreement was not handled as a treaty, but instead, comes as an agreement to be accepted by both Houses of Congress. The Library of Congress has given me some good reasons, and I want to share them with my colleagues.

This agreement relates to offensive weapons, and is interim in nature. Accordingly it does not seem to have the permanence that would be expected in the treaty form.

Further, the Arms Control and Disarmament Act of 1961, which establishes the U.S. Arms Control and Disarmament Agency, states that any agreement which limits U.S. arms must have congressional approval.

We should be pleased that the monumental consequence of this landmark agreement is signified by its submittal to both Houses of Congress. We should be pleased that we, as Members of Congress, can participate in the consummation of the first major limitation upon the principal nuclear weapons.

The implied threats by the Secretary of Defense and by some Members of the other body to qualify this agreement in some fashion, should be opposed. It is certainly ironic when worldwide appeals for strategic arms limitation have been prevalent for years and years, that anyone in his right mind would want to water down the monumental achievement represented in this agreement by armament strategies that would in any way nullify the accomplishments of the agreement. To observe that some American leaders would join in this agreement, yet promptly thereafter seek means to "get around it," is certainly disheartening.

The United States ought certainly to continue its observations of Soviet arming, but the United States should not be the first in nullifying what has been agreed to. I am more than a little surprised and disappointed that the United States might follow this course. Some of us will oppose any watering down of the SALT agreement, or any devices to destroy its effect.

Mr. MORGAN. Mr. Chairman, I yield 2 minutes to the gentleman from New York (Mr. BINGHAM).

Mr. BINGHAM. Mr. Chairman, I thank the gentleman for yielding.

I should like to make two points.

First, I have often stood here in the well and criticized the present administration, and on this occasion I am happy to rise and pay tribute to what this administration has done. As the other speakers have pointed out, this has been a remarkable negotiating team. I believe Ambassador Gerard Smith, whom I have had the pleasure of knowing as a friend for many years, has done an outstanding job.

We have had the collaboration of the various agencies of the U.S. Government, and we have established a new means of communication without polemics with the Soviet Union, which can be extraordinarily valuable for years to come.

These agreements, of course, are limited in scope, and I certainly hope further negotiations will proceed to complete the job that has been commenced.

The other point I want to make is this: The strange thing which strikes me about what is going on in the other body, and the objections that have been raised to the interim agreement, is that the interim agreement—the one before us—is the one in which the United States gained something and the Soviets gave up something. It was the treaty on the ABM in which we made the sacrifice and the Soviets got what they wanted. Yet the administration witnesses pointed this out. So if by chance the treaty, which has now been ratified, were to be in force, and the agreement were not to be approved, we would be producing an absurdity: we would be saying, "OK, we have agreed to the treaty in which the United States gives up something, but we are not going to approve the agreement in which the Soviet Union gives up something."

Mr. MAILLIARD. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from Michigan (Mr. GERALD R. FORD).

Mr. GERALD R. FORD. Mr. Chairman, I rise at this point to endorse the proposal that is on the floor of the House that would call upon the House of Representatives to approve the interim agreement reached by the President and the representatives of the Soviet Union in the recent SALT talk negotiations.

The gentleman from Louisiana, the distinguished majority leader, and I introduced the basic proposal. It was referred to the Committee on Foreign Affairs. That committee worked its will and made some changes in the text, changes which in my judgment in no way whatsoever harm or injure the proposal that was originally submitted. As a matter of fact, I think the committee probably to some extent, if that is the right word, cleaned up the proposal as it was originally drafted.

It seems to me, however, a comment or two might be appropriate at this time as to the attitude of the Congress.

I believe this agreement will be overwhelmingly approved by the House of Representatives, and properly so. However, I do think it wise to say that both in the other body and here many searching questions have been asked and in the minds of at least some there is some concern and some apprehension.

I believe that the President and his negotiating team did a good job, but it should also be borne in mind—and this is in relationship to subsequent negotiations—that the President of the United States, whoever that might be, has to come back to the legislative body in the United States which represents the people to get in the one case any treaty agreement by the other body and an executive agreement approval by both bodies.

So the President in his negotiations does have to bear in mind the attitudes and the opinions of the 535 Members of the Congress as a whole. The President does not have a totally free hand, and under our system he should not.

This ought to be understood by those on the other side of the negotiating table. This fact of life in American politics ought to be understood by the other side in any such negotiations. It is a give and take with the Congress, figuratively, looking over the shoulder of our President.

In the case of the United States the President has the primary responsibility but he does have to bear in mind the facts, attitudes and opinions that do exist in the legislative branch under our system of government in America.

Mr. Chairman, I endorse the proposal before us and urge its affirmative consideration and I hope by an overwhelming vote.

Mr. YOUNG of Florida. Mr. Chairman, will the gentleman yield?

Mr. GERALD R. FORD. I yield to the gentleman from Florida.

Mr. YOUNG of Florida. Mr. Chairman, I thank the gentleman for yielding. I rise in support of the resolution and to pay tribute to President Richard Nixon for the dedicated effort on his part that made it possible for us to make this first significant step toward an understanding between peoples and nations. An understanding that could well set the stage for a full generation of peace.

It is important to understand that this agreement and the accompanying treaty on strategic arms limitation are not the total answer to the problem of the world today. It is important to understand that it is only a beginning. And it is important to understand that the success or failure of these agreements and future agreements will, in the end, be determined by the manner in which all parties involved conduct themselves.

Mr. Chairman, while this agreement is only a beginning, when I think of the possibilities it presents, when I dare to dream that world peace may finally be in our future, the pride I feel for my country and for my President cannot be contained.

Mr. Chairman, I pray that we are right in this effort. I pray that God will continue to lead President Nixon in these extremely delicate negotiations for peace and I pray that each of us will soon be able to live in a time when war is obsolete and has been set aside by a people determined to live in peace.

Mr. YOUNG of Florida. I thank the distinguished minority leader for yielding to me.

Mr. MORGAN. Mr. Chairman, I yield as much time as he may desire to the gentleman from Florida (Mr. SIKES).

Mr. SIKES. Mr. Chairman, I take this time to commend the leadership on both sides of the aisle for supporting the proposal before us today. It represents a significantly forward step in America's history and in foreign policy programs. I endorse the proposal.

I believe the strategic arms limitations agreements now before Congress represent a significant forward step in the struggle for peace in the world. Let us be perfectly frank in admitting the agreements have weaknesses. I am concerned over the apparent numerical superiority the Soviets will enjoy. I am disturbed that the Soviets are not deterred from installing multiple warheads on their missiles.

But the agreement is better than no agreement at all. It is an interim agreement for a 5-year period, to be in effect until such time as a permanent agreement can be reached, unless canceled. The agreements provide us a breathing room while, hopefully a better understanding among nations and permanent agreements on arms limitation is reached.

The proposal which we are now asked to approve is a welcome substitute for an expensive arms buildup. More significantly, it does provide a degree of limitation on the Soviets. This is important because they are not bound by concern for domestic programs. They can build weapons without the restrictions which we impose upon ourselves so that we can provide greater benefits to the people of our country.

Let us hope that the years immediately ahead will give us a better understanding with Russia and with other world powers. Let us hope that it opens the door to an opportunity for permanent agreements on arms limitations. But let me caution that we must maintain a proper level of defense for America during the interim period. Particularly should we explore every fruitful avenue of research and development. We must seek better weapons to offset the limitation which we are imposing on ourselves.

I urge adoption of the agreements by the Congress, and that we afford the President our full support as, with congressional endorsement, he moves toward that goal which we all seek—an end to the arms race everywhere.

Mr. MORGAN. Mr. Chairman, I yield 2 minutes to the gentleman from Maryland (Mr. LONG).

Mr. LONG of Maryland. Mr. Chairman, I support this agreement, but I want more assurance that we can verify compliance.

Article V of the interim agreement merely states that each nation "shall use national technical means of verification at its disposal in a manner consistent with generally recognized principles of international law."

It is obvious that we are counting heavily on observation satellites. We can doubtless count also on diplomatic contacts, newspapers and articles, defectors, espionage, tourists, and businessmen. But can any of these give us adequate verification?

When Secretary Laird testified on these accords before the Appropriations Committee, I asked him if we had adequate means to discover violations. Mr. Laird would only say:

> Dr. Long, I expect you to take my word for it because you have had the privilege of sitting in executive sessions of this committee, and I believe, based upon the briefings I have given you and the information that you have had available to you, you will accept my words.

Well, I do not recall any such reassurance, and it is not my job as a Congressman to accept anybody's word on anything so vital to our national security.

Nowhere in the two agreements is there any recognition of the uniertainties of what is going on in the closed system of the Soviet Union. Yesterday Senator JACKSON pointed out that the Soviet negotiators lied to our negotiators that they had 48 Yankee class submarines when they only had 42 of these ballistic missile carrying sub—in order to obtain a better bargaining position in the talks.

Satellites can count missiles, but they cannot look inside the silos. In addition, the treaty has not yet settled the question of mobile land missiles. How can we count missiles that are being moved around?

We have to be able to verify that the Soviet Union is living up to the arms limitation. We have to have confidence in our ability to verify. And the Soviet Union has to be convinced that we are able to verify, because if it thinks we cannot, it may be tempted to cheat.

Most treaties and agreements of this type fail—if they do fail—because of cheating and lack of confidence.

Mr. Chairman, I want the agreement on offensive weapons to succeed, but I am disturbed about the adequacy of our verification system, and I am not satisfied with assurances offered by the administration.

Mr. MORGAN. Mr. Chairman, I yield 1½ minutes to the gentleman from Florida (Mr. FASCELL).

Mr. FASCELL. Mr. Chairman, I rise in full support of House Joint Resolution 1227, the resolution expressing the approval of the Congress and authorization for the President to accept an interim agreement between the United States of America and the Union of Soviet Socialist Republics on certain measures with respect to the limitation of strategic offensive arms.

The signing of the interim agreement and the ABM treaty in Moscow on May 26, 1972, was a historic first step in our efforts to check the ever escalating, evermore expensive and dangerous nuclear arms race. We must not underestimate the long-term significance, nor can we let down our guard in the face of limited, although notable, progress.

The agreements reached in Moscow this spring represent the culmination of concerted efforts which began during the Kennedy administration with the creation of the Arms Control and Disarmament Agency by the Congress in 1961, action which I supported in the House. Efforts continued during the administration of President Johnson and steps were taken to prepare for direct discussions with the Soviet Union on mutual arms limitation. President Nixon's initiative then led to the opening of the strategic arms limitation talks in November of 1969, and finally, to agreements on the limitation of both offensive and defensive nuclear arms. It has been a long, hard road, but one which I feel we could not afford to ignore.

The United States must, of course, maintain a strong national defense, one which includes a strong strategic posture. The House Foreign Affairs Committee agreed, and I concur, that only by bargaining from a position of sufficient strength can the United States expect success in the attempt to achieve an effective, lasting agreement limiting offensive strategic systems.

I agree, to, that while offering the prospect of a more secure and peaceful world, the SALT agreements will permit the United States to take those steps necessary to maintain a strategic posture which both protects our vital national interests and guarantees our continued security.

We must continue to hope for and work toward a comprehensive nuclear offensive arms limitation. The interim agreement, however, is in the national security interests of our country, and deserves the support of the Congress.

Mr. Chairman, this is a historic occasion for at least two reasons, and for both reasons I can commend President Nixon and the negotiating team on the first count for the substance of both the treaty and the interim agreement, which speak for themselves. And on the second count, Mr. Chairman, because of the fact that this administration has sent the interim agreement for ratification and approval by the Congress of the United States. This is an important step for us, and I would hope that all these executive agreements would ultimately be sent to the Congress for our consideration and acceptance.

The language of the resolution before us, therefore, carries out that intent, and says that the Congress ratifies the agreement and authorizes the President to enter into the formal acceptance for that interim agreement.

Mr. Chairman, it is for these reasons that I rise in support of the pending resolution.

Mr. MORGAN. Mr. Chairman, I yield 2 minutes to the gentleman from New York (Mr. STRATTON).

Mr. STRATTON. Mr. Chairman, I rise today in support of this resolution, but I think there are some serious limitations to this agreement. Although we are all anxious to go home, and nobody, perhaps, is listening, I believe that if we pass this resolution today without recognizing some of the pitfalls in the agreement it ratifies, we may be in trouble.

It is impossible to explain all of these limitations in 2 minutes, and I hope to get a little more time under the 5 minute rule because, after all, this is basically an agreement with regard to long-range nuclear offensive missiles. The committee that has the primary concern with long-range nuclear offensive missiles is the Committee on Armed Services. We have examined the agreement; we have held hearings on it, but the legislation itself comes out today from the Committee on Foreign Affairs which, as we all know, is highly knowledgeable on the broad spectrum of political and military affairs. But perhaps a comment or two from someone on the military side of the picture might also be appropriate because there are very definite limitations to this SALT agreement from a military point of view.

The distinguished junior Senators from Washington probably the most knowledgeable man in the Congress today in the field of nuclear missiles and national defense generally, is so concerned about some of the inadequacies of this agreement that he has dominated the proceedings of the other body for the last week simply in an effort to put some language into their resolution of approval that will indicate that at least we in Congress know what these limitations are and that we will continue to be aware of them in the 5-year interim period that lies ahead.

The reason I support this agreement is that I think it is better than nothing. I believe that the military situation against us with regard to the Soviet Union would be worse if we did not have the agreement than if we have it.

So I am prepared to support it and I am not even going to offer the so-called Jackson amendment. But I do think we should recognize that this agreement will not exactly usher in the millennium—that we not only begin here from a position of slight inferiority for the United States—but, if we are not careful, it could parlay itself over the next 5 years into a position of substantial relative weakness on our part.

The time of the gentleman from New York has expired.

Mr. MAILLIARD. Mr. Chairman, I yield 2 minutes to the gentleman from New York.

Mr. STRATTON. Mr. Chairman, I thank the gentleman for the additional time.

Mr. Chairman, the present time we have 1,054 long-range ICBM missiles while the Soviets have some 1,643. We have 41 nuclear submarines at the present, while they have 31 afloat and 12 others building. So you might say in spite of these numerical differences, maybe we still have a general parity with the Russians. But the Soviets are now and have been, and would have been without this treaty, undertaking a very rapid expansion of their nuclear forces.

Even under this interim arrangement, they are going to be allowed to have as many as 62 missile-firing submarines while our 41 have been frozen at that number for some time and under the agreement could only increase to 44.

So the question is whether we in this country are going to be willing to make the difficult decisions that will be needed over the 5-year period ahead if we are going to prevent this period from being used by the Soviets to achieve an even greater gap between our nuclear missile power and that of the Soviets.

Mr. DENNIS. Mr. Chairman, will the gentleman yield?

Mr. STRATTON. I am glad to yield to the gentleman.

Mr. DENNIS. Mr. Chairman, I think the gentleman is making a very valuable contribution to this debate, to much of which I subscribe and which definitely needed to be made. I am glad the gentleman has made it.

I would like to add that we hear a lot these days about the need for greater participation by the Congress in the conduct of our foreign policy—a principle to which I subscribe. But I think personally that it is a poor argument for that principle, and rather reflects upon the Congress, that we are considering here this morning a highly important measure of foreign policy, in which we have been asked to participate, and only a corporal's guard is here present.

I thank the gentleman for yielding.

Mr. STRATTON. Mr. Chairman, the gentleman is absolutely correct.

Now, Mr. Chairman, there is some evidence that the terms of the agreement were arrived at rather hastily during 1 or 2 days of the Moscow conference in a desperate effort to get something that could be publicly agreed to. Some of the provisions of the agreement which was finally concluded, it has been suggested, involve concessions on which the American delegation to the SALT talks had until then steadfastly maintained they could not and would not yield.

I cannot pinpoint just which those provisions are, but we can readily see aspects of the agreement that do give cause for concern.

For example, the Soviets also have a substantial number of cruise-missile submarines not even covered by this agreement. Yet these submarines, with nuclear-typed missiles, pose a very considerable threat to the United States. Even though their range is only about 300 miles, they would still be capable of knocking out most of our major cities on the east coast, the west coast, and even along the gulf coast, since they can come in low and fast and thus get under our radar and antiaircraft defenses.

Indeed this is one area where we cannot match the Soviets since their major cities are so far inland that they are inaccessible to cruise missile attack.

In addition, there are the serious ambiguities in language to which I have already referred. Let me give just one example. On page 27 of the Presidential message transmitting the SALT agreements to Congress (House Document 92–311, June 13, 1972) there appears the following "Agreed Interpretation" numbered "J," which reads as follows:

> The Parties understand that in the process of modernization and replacement [permitted under the agreement] the dimensions of land-based ICBM silo launchers will not be significantly increased.

At the bottom of the same page there appears under the heading "Common Understanding" the following words:

> Increase in ABM Silo Dimensions—Ambassador Smith made the following statement on May 26, 1972: "The Parties agree that the term 'significantly increased' means that an increase will not be greater than 10–15 percent of the present dimensions of land-based ICBM launchers.
>
> "Minister Semenov replied that this statement corresponded to the Soviet understanding."

Now, Mr. Chairman, note the plural in the word "dimensions" in the next to the last sentence. In a launcher silo there are two important dimensions—the diameter and the depth. If we allow a 15 percent increase in just one of these two basic dimensions, the volume of the silo is increased by 32 percent—almost one-third. Is an increase of one-third in volume really an "insignificant" increase when it comes to the destructive power of the missile?

And since the wording on page 27 says "dimensions" not "dimension" let us see what happens if we increase both dimensions of the silo by 15 percent. In that case the volume is increased by an astounding 52 percent. That surely is not any "insignificant" increase. Indeed 52 percent is about the difference between the missiles on the new Trident submarine compared to the current Poseidon missile we now employ.

Ambassador Gerard Smith, our chief negotiator at the SALT talks did tell our committee that the wording of this particular "common understanding" actually meant "an increase of 10 to 15 percent in one dimension or a combination, but not in both." But in response to a question from me, he conceded there was nothing in the text of the agreements to demonstrate that the Soviet delegate had also accepted this view.

Let me touch on another problem that also disturbs me. We have heard a lot of talk lately that amendments like those being offered in the Senate by Senator Jackson upset the spirit of "trust" that marked these historic agreements. But the truth is, Mr. Chairman, that the Russians never did give us the precise number of ICBM launchers which they actually have. They just let us set our ceiling on the basis of our own intelligence estimates of the number of launchers which they have.

What kind of "trust" is this, if the Soviets will not even give us the basic figures on their own nuclear arsenal which are of course essential to any meaningful agreement?

So, Mr. Chairman, while this agreement before us may help to slow down the Soviet momentum, there are just too many loopholes in it for us to assume that peace suddenly is here at last, and that we can all safely let down our guard now and relax.

The Soviets have already indicated their intentions of proceeding at once—as indeed they may already be doing—to improve their missile capabilities under the terms permitted by the agreement. This is why it is so very important for us to continue during this 5-year interim period to improve the quality of our nuclear forces to maintain some continued position of equality.

There are some indications we may be prepared to do just this, since both the House and Senate have approved the new Trident submarine, as well as the B–1 bomber, as recommended by the Joint Chiefs of Staff. But there are other indications that Congress may hesitate to go as far as our military leaders have urged us to go to keep in step with other improvements the Soviets may be making in their forces during this interim period. The ABM missile site approved for the Washington area, for example, has been knocked out over in the Senate. And the Senate has also opposed research and development funds required to provide a steady degree of technological improvement for our own forces.

This is disturbing because if the Soviets do move ahead rapidly, and at the same time we lag back in the mistaken belief that we are now safe because of SALT, the real balance of power between ourselves and the Soviets could shift badly, and the chances of getting a real SALT II agreement would become almost impossible. This would be especially true if the Soviets were to succeed in MIRVing their much bigger and heavier SS–9 missiles.

Maybe all of this will not happen in just 5 years; but there is a chance that it just might happen. And we cannot afford to take that chance or at least be blind to the possibility it could occur.

So this is the reason for the Jackson amendment. I believe it makes a good deal of sense. Let me just read the text of that amendment:

> Resolved that the Government and the people of the United States ardently desire a stable international strategic balance that maintains peace and deters aggression. The Congress supports the stated policy of the United States that were a more complete strategic offensive arms agreement not achieved within the five years of the interim agreement, and were the survivability of the strategic deterrent forces of the United States to be threatened as a result of such failure, this could jeopardize the supreme national interests of the United States; the Congress recognizes the difficulty of maintaining a stable strategic balance in a period of rapidly developing technology; the Congress recognizes the principle of United States-Soviet Union equality reflected in the anti-ballistic missile treaty, and urges and requests the President to seek a future treaty that, inter alia, would not limit the United States to levels of intercontinental strategic forces inferior to the limits provided for the Soviet Union; and the Congress considers that the success of these agreements and the attainment of more permanent and comprehensive agreements are dependent upon the maintenance of a vigorous research and development and modernization program leading to a prudent strategic posture.

Mr. Chairman, I do not intend to offer this Jackson amendment here today. But there is a very good chance it will be added to the resolution in the Senate.

I just want to express here today the hope that if this Jackson amendment is added in the Senate the House conferees will accept it. Its inclusion in the joint resolution would simply demonstrate that we recognize the dangers in the interim agreement, intend to avoid them, and look hopefully ahead to the achievement of a more stable, equitable, and permanent agreement on offensive missiles as a result of the SALT II talks.

Mr. MAILLIARD. Mr. Chairman, I yield myself 1 minute.

Mr. Chairman, I just want to say I

have listened with great interest to the remarks of the gentleman from New York and I entirely subscribe to what he has said—that we ought not to take this as the millenium and sit back and feel that we are safe forever without taking some additional steps.

As I said in my original remarks, this is an interim agreement and it does not amount to much unless we proceed to the second stage.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. MAILLIARD. I yield to the gentleman.

Mr. ROUSSELOT. Mr. Chairman, I rise in opposition to House Joint Resolution 1227, the joint resolution approving the agreement on limitation of strategic defensive weapons between the United States of America and the Soviet Union. There are many reasons for my final conclusion to oppose this agreement which in "all hope" would genuinely provide a peaceful atmosphere in which our two countries can operate; however, I do not believe that either our immediate past experience or general conditions around the world justify the honest hope that this agreement will have any meaning should the Soviet Union decide to violate it. It is amazing how rapidly we forget, it was but 3 months ago that the Soviet Union was supplying massive amounts of armaments to the Communist North Vietnamese who were attacking not only the South Vietnamese but also our own American forces in South Vietnam. Further, on May 25. I introduced into the Record material from U.S. News & World Report which recounted previous agreements which the United States had with the Soviet Union and how they have violated 24 out of 25. I wish to review for my colleagues some of the facts from that article at this time because I believe it is very pertinent to the discussion here today.

Soviet Record in 25 Summit Agreements—Honored: 1, Broken: 24

In seven summit meetings between a U.S. President and a Soviet leader, 25 agreements have been reached. The Soviets have violated 24 of those 25 agreements, according to a staff study for the Senate Judiciary Committee. Here is their record:

1943. At Teheran, in a meeting with British Prime Minister Winston Churchill and U.S. President Franklin D. Roosevelt, Joseph Stalin made four major agreements. Russia broke all of them.

1945. At Yalta, in another wartime Big Three meeting, Russia entered into six major agreements, of which five were violated. The only pledge kept was to enter the war against Japan—and that was done only after the outcome was decided.

1945. At Potsdam, where President Harry Truman represented U.S. in a summit meeting after Germany's surrender, Stalin made 14 major agreements. All were broken.

1955. At Geneva, in a Big Four meeting including France, Russia agreed that Germany's reunification problem should be settled by free elections. Moscow later refused to permit such elections.

No hard agreements were reached at the last three summit meetings—in 1959 when President Dwight Eisenhower met with Nikita Khrushchev in Camp David, Md.; in 1961 when President John F. Kennedy met with Khrushchev in Vienna, and in 1967, when Premier Alexei Kosygin conferred with President Lyndon B. Johnson in Glassboro, N.J.

The Russians similarly have failed to keep many other international agreements with the United States. Examples:

In World War II, the Soviets promised Western allies they were seeking no territorial aggrandizement. But Russia by 1948 controlled 11 countries—plus East Germany—and 750 million people.

Russia repeatedly promised the U.S. between 1942 and 1946 that it would guarantee freedom and free elections in Hungary, Bulgaria, Poland, Czechoslovakia and Rumania. All those countries wound up with Communist dictatorships.

The Kremlin pledged to repatriate World War II prisoners, but instead sent millions of them to slave-labor camps.

Russia gave the U.S. a promise that Korea would be free and independent—then set up a Communist government in the northern half of the country and masterminded an attempt to invade and conquer the rest of Korea. That broken promise cost the lives of 33,629 Americans.

The Soviet Foreign Minister traveled to New York in 1946 and repeated a previous Kremlin promise that the Danube River would be opened to free navigation and trade. Today, the lower Danube, behind the Iron Curtain, is still a controlled Communist waterway.

The Soviet Union promised the U.S. that it would treat Germany as one country after World War II—then sealed off its occupation zone, turned it into a separate country and is now seeking to make Germany's division permanent.

Russia's promise of free travel between Berlin and the West has been broken repeatedly. Outstanding examples of this were the Berlin blockade of 1948–1949 and the 1961 construction of the Berlin Wall.

Russia repeatedly assured the U.S. in 1962 that the arms build-up in Communist Cuba was purely defensive in character—then secretly put in offensive missiles aimed at the U.S. When this action was met by a firm U.S. challenge and naval blockade, Russia promised to remove the missiles.

Faced with Russia's long history of breaking agreements, the U.S. attempted a tacit rather than a formal agreement to halt nuclear testing in 1958. In 1961 the Soviets broke this understanding and resumed testing.

In signing a nonproliferation treaty in 1969, Russia promised to end the nuclear arms race and work toward disarmament. Instead, Russia accelerated its missile construction, overtook the U.S. and is now challenging in almost every category of nuclear weaponry.

In 1970 Russia approved of a U.S. cease-fire plan in the Middle East, then helped Egypt violate it by moving SA-2 and SA-3 antiaircraft missiles up to the Suez Canal.

Other countries, as well as the U.S., have learned by experience that they could not rely on agreements with the Kremlin. Examples:

In joining the League of Nations in 1934, Russia pledged not to resort to war. In 1939, Russia was expelled from the League for acts of aggression, including the invasion of Poland and Finland—both countries with which Moscow had signed treaties of nonaggression.

In violation of nonaggression pacts, Russia invaded Estonia, Latvia and Lithuania in 1940 and incorporated them into the Soviet Union.

My colleague from Illinois, Mr. Pucinski, has pointed out that it is the General Secretary of the Communist Party who has signed this agreement and not the signature of the Premier of the United Soviet Socialist Republic. Therefore, a sudden change in the Communist Party leadership would give the Soviet Communists the excuse that the agreement was somehow jeopardized. It is not easy to raise some of these points of honest concern, but I cannot bring myself to believe that this agreement will have any more merit than those of the past which I have reviewed.

Mr. MATSUNAGA. Mr. Chairman, as one who is firmly convinced that further development of offensive armaments by the two great nuclear powers of the world would not advance the cause of world peace, I rise in support of House Joint Resolution 1227.

First, I would like to commend the members of the Committee on Foreign Affairs and its distinguished chairman, the gentleman from Pennsylvania (Mr. Morgan), for reporting to the House a bill which, stripped of verbiage, sets forth the congressional mandate to the Chief Executive in clear and concise language.

Although a great nuclear power, the United States nevertheless is strongly committed to seek world peace as an affirmative goal. This Nation's history and institutions do not permit the pursuance of any other course. Believing, therefore, that the interim agreement between the United States of America and the Union of Soviet Socialist Republics on certain measures with respect to the limitation of strategic offensive arms would advance the cause of world peace, I urge support of the measure now before this body. The proposed legislation very simply states that the Congress approves and authorizes the President to accept the interim agreement on behalf of the United States.

Mr. Chairman, my colleagues may have different reasons for supporting the interim agreement, and certainly among reasonable lawmakers the reasons for supporting that agreement may differ. However, whatever may be the basis from which that support springs, it should not, either in whole or in part, involve fear—fear of being relegated to the No. 2 position in the offensive strategic nuclear weapons race and, perhaps, fear of fear itself.

Maximum effectiveness in achieving the result to which the interim agreement merely points the way, can only come from a responsible recognition by the United States and the Soviet Union, as well as by other nations, that the overriding consideration in further sessions at the bargaining table is the fostering of world peace. It is only then that an agreement limiting offensive strategic systems will have any real meaning.

Mr. Chairman, for the reasons I have stated, I urge the passage of House Joint Resolution 1227.

Mr. PURCELL. Mr. Chairman, I rise in support of the resolution approving the acceptance by the President for the United States of the interim agreement between the United States and the Soviet Union on offensive weapons limitations.

The SALT I agreements were formalized in Moscow this spring. They consist of a treaty limiting anti-ballistic-missile systems and an interim agreement intended to freeze strategic offensive missile forces for a period of 5 years pending further negotiations. Today the House of Representatives is concerned only with the interim agreement.

Signed by President Nixon last May, the agreement holds forth real promise that global tension and suspicion can be curbed. After careful study of public opinion from my own constituency and of the wealth of strategic and scientific information brought together by the Committee on Foreign Affairs, and after careful comparison of the effects of the agreement upon U.S. strategic planning and Soviet strategic planning, I am convinced that the approval of the agreement is in the overall best interests of the Nation.

My decision has not come quickly. Public sentiment on this question seems to be just about evenly split among the voters of my northwest Texas district. The focus of concern for those who have expressed their doubts to me has been that such an agreement might compromise our defense posture. Having reviewed the assurances of the Secretary of Defense, the Secretary of State, and the Director of the Central Intelligence Agency in this regard, I am confident that not only will the security interests of the United States continue to be adequately attended, but they will be improved by Soviet compliance with the agreement. Technical inspection procedures have been agreed upon and Congress has received the assurances of our intelligence officials that they are satisfactory.

The Chairman of the Joint Chiefs of Staff, Admiral Moorer, has informed the Committee on Foreign Affairs that without an agreement such as this one, a large-scale Soviet expansion of its strategic forces—already underway—would have continued undaunted. Admiral Moorer testified that the momentum of the Soviet arms buildup would have pushed their capabilities far beyond our planned levels before the end of this decade. Thus, the approval of this agreement will, in the words of the committee, place limitations on current Soviet offensive programs, but not current U.S. programs.

The agreement and the SALT II talks which it makes possible were conceived more than a decade ago. Three administrations have carefully nurtured the course of negotiations to this point. I think there is much which can be gained from a permanent agreement—the objectives of the SALT II meetings scheduled to commence in October. To throw out this interim agreement which we have in front of us today could very well jeopardize strong gains which we will be able to bargain for in those talks.

The record should, and I think clearly will show that the agreement received the closely scrutinized and pragmatic support of the American people. Certainly no one in this Chamber considers the agreement sacrosanct as an end in itself. Actually, it is no more than a latticework supporting a platform upon which negotiating efforts will be made to carve out a permanent agreement.

Hence, at this welcome pause in the long arms race, this country should be resting with one eye open. My support for this resolution comes only with the assurance that this will be the case.

It is absolutely essential to accompany our approval of this agreement with a strong resolve to maintain a positive strategic stance. Far more turns on American strength than international pride. Millions of our world neighbors literally depend upon the strength of our posture. In today's times of volatile and tenuous global relations, our position must continue to be firm in the eyes of the world.

This will not only enhance our bargaining position at the future SALT talks, but it will continue to lend critically needed stability to an unsettled international setting.

Mr. HARRINGTON. Mr. Chairman, I rise in support of House Joint Resolution 1227. Today, as on many past occasions, I registered my wholehearted approval of the SALT agreements. I feel that the results of the summit meeting in Moscow are worthy of great praise. The President's efforts in May of this year culminated the careful negotiations of 2½ years and mark the beginning of what will hopefully become a new era in the foreign relations of this country. These accords are perhaps the most significant accomplishment of this administration and indeed may be referred to as an historic achievement, for the establishment of a relationship with the Soviet Union based on mutual trust and confidence is an important step toward the day when all men can live in peace.

The limitation of strategic offensive arms, which this joint resolution would approve, shows that both the United States and Soviet Union are aware of the increasing threat of a nuclear confrontation and of the pressing need for greater international cooperation in order to avert such a catastrophic event. Both nations have recognized the overall parity of their nuclear forces and have, in effect, agreed to establish a strategic policy of mutual deterrence. Most importantly, these talks have laid the groundwork for further discussion and are a foundation on which to build more stable United States-Soviet relations. The fact that these two great nations were able to agree on these matters is an encouraging sign, pointing the way to the establishment of an atmosphere of greater trust.

There is, however, a relevant matter which is of great concern to me. Although not dealt with in this particular legislation, this is something which has great bearing on how effective these agreements will be. The matter to which I refer, Mr. Chairman, is the proposed increase in military expenditures that is being requested as a result of these very accords.

Frankly, I find it very perplexing that even before the Congress has had the opportunity to consider these arms limitations measures, the Defense Department has come before us asking for additional funds. There is absolutely no valid reason why these moneys should be appropriated, for, as the Senate Committee on Foreign Relations reported from hearings on a joint resolution similar to the one before us now, "expert witnesses were generally agreed that the United States has enough deliverable warheads in the various delivery systems to assure that U.S. strategic forces can destroy the Soviet Union or any other nation many times over. Variations in strengths merely affect overkill, not the ability to kill."

In this same vein, Dr. Stanley Hoffman, professor of government and management of the Center for International Affairs at Harvard University, sees the arms race as an exercise in futility, "which merely condemns the two racers to keep running faster just in order to remain in place" and that "always leaves the two runners at the end of each phase in the same mutual relation but on a higher plateau of financial depletion and human absurdity." So, as many knowledgeable persons have testified, it is certain that the granting of the funds would serve no good purpose.

I fear, in addition, that this accelerated spending would have adverse effects on recent accomplishments, jeopardize changes for further meaningful negotiations, and would generally be an unwise action for this country to take. To increase defense spending at this time would be a hypocritical action with injurious ramifications, demonstrating to the Soviets, Americans, and to people all over the world a policy of hostility and distrust. We must, therefore, show good faith in the interim agreement, for as the aforementioned Senate committee report asserts:

> Escalation of weapons development at this juncture involves a risk that the Soviet Union will be incited into endeavors it might not otherwise undertake. It would be ironic indeed if what is purportedly an agreement on arms limitation might become a spur to further arms buildups.

Dr. Marvin L. Goldberger, chairman of Princeton University's Physics Department, asserted in testimony to the Senate committee:

> There is no reason for accelerating any offensive weapons programs at this time. Instead, if the agreements are to have any real value, then many proposed programs should be cut back.

It is clear that the effects of this add-on spending can only be a hinderance to progress already made.

Another factor to be considered in deciding about the appropriation of the Defense Department's request for an extra $110 million is public opinion within our own country. As I have pointed out, there is an inherent contradiction in reaching an accord on arms limitations on one hand and building up arms with more of the taxpayers' money on the other. I feel that Americans have a right to be upset with this kind of reasoning that links arms control and more spending together. I believe there is an increasing disenchantment and skepticism in our Nation and this spending would add to these feelings and therefore is ill advised.

Mr. Chairman, in conclusion, I would like to reiterate my complete approval of this joint resolution and of the SALT agreements. However, I do not want my vote to be interpreted as in any way supporting the Defense Department's request for additional funds after SALT. This would only work against the measures taken to date and would render ineffective House Joint Resolution 1227 and our other accords with the Soviet Union.

At this point I include in the Record an article by Chalmers M. Roberts which appeared in the Washington Post on August 16, 1972. I think it explains very well the reasons for which I oppose post-SALT increased defense spending. The article follows:

[From the Washington Post, Aug. 16, 1972]

Backward of Forward? Promise of SALT: What's Happening?

(By Chalmers M. Roberts)

Less than three months ago Richard Nixon and Leonid Brezhnev signed their names to "basic principles of relations" between the two superpowers, a sort of codification of the President's pledge that the United States would move from "an era of confrontation" to an "era of negotiation." The Nixon-Brezhnev "principles" included a statement that "differences in ideology and in the social systems" are not a bar to normal relationships, that both nations "will always exercise restraint in their mutual relations" and that both recognize they should eschew "efforts to obtain unilateral advantage at the expense of the other, directly or indirectly."

Three days earlier the two leaders had signed the strategic arms limitation (SALT) agreements. In assessing the Soviet-American atmosphere at the end of the Moscow summitry Henry Kissinger remarked that "I think trust has developed but not the point that it could survive a major challenge that one side would put to the other that affects its own estimate of its vital interests."

It is against this background, it seems to me, that one should assess the Jackson amendment to one of the two SALT pacts, that limiting offensive weapons. The fate of the amendment is far less important that what the discussion of it disclosed about the post-summit attitudes in Washington. The same is true of the related new, more accurate and more powerful American missile warheads that the administration has requested. Like a summer lightening storm the discussion suddenly illuminated the landscape in this capital, both in the Senate and in the White House and elsewhere in the executive branch.

"Confrontation" and "negotiation" are not, of course, mutually exclusive and that is just as true in Moscow as in Washington. Mr. Nixon last July 27 said that "the decision with regard to the SALT agreements involved a fight between the hawks and doves" in his own administration. On July 15 Kissinger remarked at a congressional briefing that during the SALT negotiations "we were acutely conscious of the contradictory tendencies at work in Soviet policy"—in other words, the hawk-dove problem in the Kremlin.

In asking both for congressional approval of the two SALT pacts and for money for the Trident submarine and B–1 bomber programs the President said Brezhnev and his colleagues "made it absolutely clear that they are going forward with defense programs in the offensive area which are not limited by these agreements." Soviet sources in a position to know about those conversations, however, contend that Mr. Nixon's version stretched Brezhnev's remarks for his own purposes. But American sources, equally in the know, contend Brezhnev left no doubt about what Mr. Nixon said he said. Jackson commented that he was "disturbed by the report of the President" on Brezhnev's remarks.

What the Jackson amendment affair plus the revelation of the new missile warhead program demonstrates is the limited meaning being applied by the Nixon Administration to the Moscow "basic principles of revelations" and that we can expect to see a lot more "confrontation" along with future "negotiation." Indeed, the "trust" about which Kissinger spoke seems close to nonexistent.

Jackson made his own motivation clear enough. He considered the offensive weapons agreement put the United States at a disadvantage and he used the amendment device to lock the administration into a SALT II posture of accepting nothing less than what he termed "a restoration of parity." The gloss he supplied on what constitutes "parity" made it clear he meant what those Americans who negotiated the agreements and many others consider old fashioned "superiority." What Jackson could not do by direction—defeat the agreement in the Senate—he sought to do by indirection—tie the administration's hands in the negotiations ahead that are designed to turn the five year agreement into a permanent treaty.

The Kremlin reaction to all this is unclear but not difficult to imagine. Quite probably the Moscow hawks have gained a point in their continuing suspicion of arms agreements with the United States. Whatever chance there was for both Washington and Moscow to exercise mutual restraint by not doing what they legally could do within terms of the SALT pacts has been diminished.

The history of the action-reaction phenomenon in the Soviet-American arms race clearly indicates that the dominant pressure in both capitals is to build those arms not forbidden by agreement out of fear that the other side will do so to its own advantage.

The tragedy is that the long history of the Cold War, of Soviet-American ideological differences on top of clashes of national interest, makes mutual restraint exceedingly difficult to achieve. As Jerome H. Kahan of the Brookings Institution put it to the Senate Foreign Relations Committee on June 28: "In theory, both nations ought to exercise unilateral restraint and pursue purely stabilizing strategic policies. But experience shows that neither nation has taken such initiatives."

The promise of SALT was more than just the important limitations for the first time on both offensive and defensive strategic weapons. The hope of Mr. Nixon's Moscow visit, in Kissinger's words, was that it would "mark the transformation from a period of rather rigid hostility to one in which, without any illusions about the differences in social systems, we would try to behave with restraint and with a maximum of creativity in bringing about a greater degree of stability and peace." Hence the language of the "basic principles" signed in Moscow. Hence Mr. Nixon's remark in his address to Congress that his Moscow and Peking trips had done away with "the kind of bondage" of which George Washington had said: "The nation which indulges toward another in habitual hatred is a slave to its own animosity."

In this larger context both the Jackson amendment and the new missile warhead program represent backward, not forward, steps.

Mr. ANDERSON of Illinois. Mr. Chairman, I am proud to lend my support to House Joint Resolution 1227 which would give congressional approval to the 5-year interim agreement with the Soviet Union on the limitation of offensive strategic weapons. This is truly an historic moment, not only for the Congress, but for the country and the world as the two great nuclear powers move toward halting the strategic arms race. The defensive treaty ratified by the other body, coupled with this interim offensive missile agreement, culminate 2½ years of intensive bargaining at the SALT talks and give tangible evidence that we are indeed, in the words of President Nixon, moving from an era of confrontation to an era of negotiation. It is my fervent hope and prayer that this spirit and momentum will be carried forward into the second round of SALT talks as we endeavor to forge a permanent treaty for the limitation of offensive weapons.

Mr. Chairman, I want to take special note of a reference on page 2 of the committee report to the ongoing briefings and consultations the committee had with our SALT negotiating team while the talks were in process. The report goes on, and I quote:

> The willingness of the Executive to be candid about the U.S. negotiating position and developments at SALT, together with the unblemished record of the Congress in keeping confidential the sensitive information imparted to it, have established a model of executive-legislative cooperation which might well be emulated in other areas related to national strategic policy.

Mr. Chairman, as a member of the Joint Committee on Atomic Energy, I would simply want to second those words of praise for the frequent and informative briefings we received both during the talks and subsequent to the signing of the treaty and agreements in Moscow. I would agree that this approach should serve as a model for future policy in related areas of national security policy, and this is what we had in mind in passing the war powers bill just last Monday.

In addition, let me say that as a result of those comprehensive briefings, I was able to develop a full appreciation and understanding of the issues involved and any fears I might have had about a potential strategic imbalance which might result from the treaty and agreement were completely allayed.

As this point in the Record, Mr. Chairman, I would like to include several articles on the SALT agreement and treaty including an editorial from the August 7 New York Times, an article by Alton Frye from the June 18 Sunday Star, an article by Chalmers Roberts from the August 17 Washington Post, and an excellent memo from my colleague from California (Mr. Hosmer) to the Republican Task Force on Nuclear Affairs:

Jackson's SALT Ploy

It is a truism of politics as well as economics that events are determined "on the margin." Possessors of the last few votes needed to pass a law or win an election often can determine the policy for the majority. But the price the Administration has been paying to its conservative supporters for acceptance of the historic strategic arms limitation (SALT I) agreements with Russia evidently is beginning to seem excessive even to the election-minded White House itself. The over-hasty Administration support given to reservations in a resolution proposed by Senator Henry Jackson reportedly is being reconsidered. It has to be seen whether compromise language really can be found that does not undermine the SALT I pacts and, even more, the prospects for mutual reductions of nuclear weapons in SALT II.

The essential cornerstone for strategic arms limitation, the treaty restricting defensive antiballistic missiles (ABM's) to 200 on each side, already has been approved 88 to 2 by the Senate. It halts the offensive-defense race in weaponry and makes it feasible not only to limit but ultimately to reduce strategic offensive forces, only some of which are to be temporarily restricted now.

The preliminary five-year agreement limiting numbers of ICBM's and submarine missiles could make a useful contribution to arms control, even though it permits some further increases in offensive missile forces and has failed to head off Pentagon efforts to accelerate nonrestricted strategic weapons programs, such as the long-range Trident missile submarine and the B–1 bomber. But the Jackson resolution as it now stands, makes it questionable whether that interim agreement is worth having at all.

The first major reservation in the Jackson resolution would warn the Soviet Union against taking steps to endanger American strategic deterrent forces, saying such steps would be grounds for abrogating the treaty. But this reservation already is covered by the standard escape clause in the interim offensive missile agreement. The United States can abrogate that agreement at any time if new weapons developments actually endanger American security. There is no need to specify as one such development Soviet deployment of MIRV multiple warheads on its giant SS–9 missiles—a development that the United States itself has made inevitable by inventing and deploying MIRV's and refusing to make realistic proposals for a mutual MIRV ban. If Soviet MIRV's one day should endanger the American Minuteman force—and the Administration has insisted that they could not do so within the life of the five-year interim agreement—better countermeasures are possible than abandonment of arms control. Invulnerable sea-based missiles and airborne bombers would continue effectively to deter a Soviet first strike.

The second reservation in the Jackson resolution is not only unnecessary but destructive. It would call for the United States in SALT II to seek numerical limits on Soviet and American strategic offensive weapons. It is destructive because it challenges Administration assurances to Congress that parity of strength is provided by the asymmetrical interim agreement, which gives the Soviet Union an edge in missile numbers to compensate for British and French missiles as well as for American geographic advantages and an American edge in warheads and missile quality. It would also call on American negotiators in SALT II to seek treaty terms the Soviet Union has shown itself unwilling to accept on the valid grounds that these terms would condemn Russia to inferiority.

There is no doubt that, to the layman, the numerical edge in the interim offensive pact appears to give the Soviet Union an advantage, although the Pentagon and its supporters know that this is not so. President Nixon showed political courage in agreeing to the Moscow terms. To undermine this achievement and further arms control prospects by concessions to Mr. Jackson and the military-industrial complex would be the height of folly.

SALT: The Accord Deserves Our Support

(By Alton Frye)

Cynics say it is a typical American failing to know the price of everything and the value of nothing. This human frailty is serious enough in the routine exchanges of everyday life. In the great transactions of international politics, the tendency can be fatal to the most enlightened and essential undertakings.

The point comes to mind because of the surprising reaction in some quarters to the historic Nixon-Brezhnev agreements to limit strategic arms. The general enthusiasm for this momentous breakthrough in the Strategic Arms Limitation Talks (SALT) has been tempered not only by grumblings on the far right but by the disturbing response of a few respected commentators and congressmen.

Crosby Noyes alleges in The Star that the agreements give Russia nuclear "superiority on a silver platter." Seeking to ward off unjustified euphoria, The Wall Street Journal wonders whether the accords should be approved "anytime during a presidential campaign." Paul Warnke terms the agreement to limit offensive weapons "slightly worse than none at all," although he warmly endorses the ABM treaty. Sen. Henry Jackson, D-Wash., reserves his final judgment on the understandings, but blasts the "comic opera" procedures in Moscow and charges that the agreements give the Soviets "more of everything."

These are thoughtful and knowledgeable observers. Their opinions will carry weight with many of their fellow citizens. But close analysis reveals that the hasty critiques of the SALT agreements share a common fault: They are preoccupied with short-term balances which are totally inadequate to measure the long-term investment in mutual security which the United States and the Soviet Union have now made. And even in gauging the short-term balances, they badly misread the ledger written in Moscow. In effect the early criticisms of the Moscow summit overstate the price and understate the value of what was done there. Let us see why this is so.

THE CONTEXT OF SALT I

In 1970 the Senate urged President Nixon to make a freeze on further deployment of strategic weapons the first priority of the SALT negotiations. While a freeze then would have set somewhat lower and more advantageous ceilings, the Moscow agreements contain a reasonable approximation of this objective—which was recommended by an overwhelming majority of senators.

The proposed treaty limits anti-ballistic missile deployment to no more than two sites with a maximum of 100 defensive missiles each, a force totally insufficient to weaken the credibility of either side's capacity to retaliate and hence to deter war. The interim agreement on offensive weapons halts ICBM deployments at the existing levels (about 1,618 on the Soviet side and 1,054 on the American) and limits modern submarine-launched missiles (SLBMs) to those now operational and under construction (710 on the Soviet side and 656 on the American).

Unnecessary confusion has grown out of the provision permitting conversion of some land-based missiles into sea-based weapons; briefly put, the Soviet Union can build to a total of 950 missiles on submarines but only if it phases out 240 launchers already deployed, i.e., if it actually reduces its land-based force to 1,400 missiles or so.

In sum, the ceilings provided in the interim agreement would permit the Soviets to deploy up to 2,350 long-range missiles on land and sea, compared with a total of 1710 for the United States. It is the starkness of this numerical contrast which suggests, at first glance, that the United States accepted less equitable terms than it should have demanded.

But these gross figures do not reflect the crucial dimensions of the strategic bargain struck at SALT. Imbedded in that bargain are other commitments and detailed restraints which leave little doubt that the outcome of SALT is a decisive turn toward greater security. It is remarkable how far these understandings go toward fulfilling the U.S. conceptions of the requirements of strategic stability.

The United States sought explicit confirmation that mutual deterrence would be the basis for erecting a stable balance. The Soviets agreed. By curtailing ABM deployment, both sides have ratified the principle that mutual deterrence depends on mutual vulnerability. They may not welcome the condition of reciprocal terror, but they recognize the fact and acknowledge that neither has yet conceived a safe way to alter it.

The United States sought explicit acceptance of the de facto "open skies" arrangements, through which satellites keep each side appraised of the other's strategic inventory and innovations. The Soviets agreed. By committing themselves to avoid interference with observation satellites and other verification techniques, and by foregoing deliberate measures to conceal strategic capabilities from observation, the two countries have installed a necessary building block for confident progress on more substantial arms arrangements.

The United States sought to test Russian acceptance of the principle of mutual deterrence by demanding that the overall freeze include a firm limit on the gigantic SS–9 class missile, weapons which have perplexed U.S. planners because of their potential capacity to destroy American missile silos. The Soviets agreed. The interim agreement suppresses the number of supersize boosters to around 300, a level well below the danger point calculated by the Department of Defense.

The United States insisted that the freeze cover ballistic missile submarines, since the Soviet Union has been building such systems at a rapid clip (eight or nine a year) while the United States in the next five years will add no subs to the 41 it now has in service. In a decision critical to the success of the negotiation, the Soviets agreed. Without such a limit, the present building rate would have given the Soviets more than 80 missile-launching submarines by 1977, just as their present pace of ICBM construction would have produced by that year a land-based force alone in excess of 2,800 missiles.

The blunt truth is that no U.S. effort, even on a crash basis, could have matched this Soviet rate, launcher for launcher and boat for boat, during the five years governed by the interim agreement. The interruption of the massive Soviet building program is a stupendous gain to American security and international stability.

Any genuine negotiation must produce movement toward accommodation by both parties. One can only gain a distorted picture of the process by focusing exclusively on the concessions made by one side. Yet some commentators have done precisely that, implying that the United States has been too eager in conceding presumed advantages to the Soviets. As a partial corrective, one ought to understand the numerous and substantial concessions made by Moscow in its determination to promote a mutually acceptable balance.

The foremost issue on which the Soviet Union yielded is one which casts an utterly different light on the gross balance in ICBMs and Strategic Land-Based Missiles. At the outset the Russians had insisted with considerable justification that a fair definition of "strategic weapons" would include all systems capable of delivering a nuclear attack on the homeland of the other party. In order to facilitate a preliminary understanding they reluctantly agreed to treat only long-range missiles, excluding not only the U.S. strategic bomber fleet of about 460 planes but also the enormous number of forward-based systems maintained by the United States in Europe and on aircraft carriers.

These latter types of weapons are unique to the United States, in the sense that Moscow has no true carriers and no forward bases from which to mount a strike on this country with tactical fighter-bombers.

What this means is that the Soviets have granted the Americans at least for the short run, *more than 2,000 additional aircraft* capable of devastating all of the Soviet Union west of the Ural Mountains. Furthermore, the U.S. B–52s are being modernized with the Short-Range Attack Missile (SRAM) which will vastly increase the lethality of the force; each plane can carry 24 such missiles. And, expensive though they are, the B–52s have demonstrated over Haiphong in recent days that they can survive and function in the densest anti-aircraft environment yet tested in combat.

Those who are tempted to toss off the significance of the Soviet concession on this point should ask themselves how we would view an understanding which left the Russians with a free and unrestricted ride on more than two thousand delivery vehicles, each one of which is quite capable of demolishing any city in the United States. Had the Soviets been adamant in demanding immediate limits on forward-based systems—which play a dual conventional-nuclear role in the NATO posture—SALT could well have collapsed.

Clearly, SALT II and the coming conferences on European security will face hard and complex negotiations on these systems and similar Soviet weapons targeted on Western Europe, including particularly the several hundred Soviet intermediate- and medium-range ballistic missiles.

Another factor is central to evaluating the simple numbers of launchers controlled by the interim agreement. The superficial Soviet advantage in numbers and sizes of missiles is paired against a staggering American advantage in deliverable warheads. Roughly described, the Soviets will have a three to one lead in "throw-weight" or megatonnage, while the United States will have a three to one lead in warheads.

The ongoing U.S. deployment of Multiple Independently Targetable Re-entry Vehicles (MIRV) on both Minuteman III and Poseidon missiles is sure to maintain that advantage for the period of the agreement; the U.S. warhead inventory may well exceed 10,000 by 1977.

Having flight-tested no MIRV system to date, the Soviet Union can hardly convert its throw-weight advantage into a warhead advantage during these years. Even if they successfully develop MIRV technology, only the larger Soviet missiles look promising as MIRV platforms, and it is not realistic to expect a complete replacement of their existing missile force with MIRV-capable boosters. Judgments may vary, but no one can doubt that Soviet acceptance of continued U.S. MIRV deployment represents a concession of the first magnitude.

The tough Soviet delegation made other adjustments in its original positions, as did the American team. The illustrations here suffice, however, to highlight the fact that SALT I began an important learning process for both sides and persuaded each that its own security required realistic consideration of the other's security needs. There were no one-sided or disproportionate concesssions.

PRECLUDE TO PARITY

One can only appraise the achievements of SALT I by examining the agenda for SALT II, the second phase of the negotiations which is expected to begin later this year. The true worth of the ABM treaty and the five-year missile freeze lies in what President Nixon has rightly termed the "unparalleled opportunity" they create.

Critics may damn the frenetic atmosphere surrounding the last hours of diplomatic activity, although the issues resolved in those final moments were relatively marginal ones on which the options had been thoroughly explored in advance. Arms control advocates may lament the tardiness and scope of the strategic freeze. Yet the delay in setting the freeze may prove invaluable, because the long and methodical diplomacy preceding it has engendered a degree of mutual confidence which is indispensable to further steps toward reinforcing strategic stability. SALT I has made the cautious decision; the time is at hand for bolder action.

The tight limits on ABM have virtually removed the threats to stability which might arise from defensive deployments. The pressing need now is to curb the instabilities which might arise through offensive deployments threatening the survivability of either side's deterrent weapons. Ambassador Gerard Smith stressed this point on May 9 when he told the Soviet SALT delegation that the follow-on negotiations should seek "to constrain and reduce on a long-term basis threats to the survivability of our respective strategic retaliatory forces." Both countries well understand that, unless progress is made on this front, the ABM limits may not endure.

Two central threats loom on the offensive side of the equation: (1) Highly accurate, multiple warhead systems which could destroy land-based ICBM silos, and (2) developments in anti-submarine warfare (ASW) capabilities which might jeopardize the sea-based forces.

The logic and the structure of the ABM treaty open promising possibilities for coping with these problems. The prohibition of extensive defenses greatly simplifies the deterrent problem. No feasible attack could destroy all of either side's retaliatory weapons; even a small fraction of surviving, single-warhead systems would be able to deliver unacceptable damage to an attacker.

Thus, there is no longer any need for the United States or the Soviet Union to retain the option of MIRVing its boosters, since MIRV is superfluous to deterrence in a situation where there are no defenses to penetrate. Indeed, in the new strategic environment the effect of MIRV systems is not to bolster deterrence by hedging against a non-existent ABM system but to weaken it by posing a threat to the survivability of land-based ICBMs. Thus, in light of the guiding standard of stable deterrence, both sides should perceive their common interest in seeking a ban on MIRV systems.

The potential centerpiece of SALT II could well be a trade of the U.S. MIRV systems now in deployment for a comparable number of Soviet missiles, including the gigantic SS–9s which have caused such consternation. Land-based forces might be phased down to 500 single-warhead systems, while the U.S. Poseidon fleet could be converted to single warhead systems.

The Soviets have been reticent about entering a MIRV limit until they perfect the technology, but skillful diplomats should be able to underscore the advantages Moscow would reap by foregoing MIRV development in return for a suspension of U.S. MIRV programs before they are fully deployed and refined to pinpoint accuracies. The President has stressed that U.S. MIRV systems are intended exclusively for retaliatory purposes, but the Soviets must realize that unrestricted testing in the future may push the technology to such precise delivery accuracies that even relatively small U.S. warheads would jeopardize hardened missile silos. That prospect is still some years away, but only concerted measures to inhibit MIRV testing and deployment can guard against it.

Each side clearly has a greater interest in persuading the other not to deploy MIRV than it has in deploying such systems itself? So long as the United States persists in its own MIRV deployment, it cannot hope to induce the Soviet Union to refrain from similar weaponry. There is a powerful case for the United States to slow its MIRV programs and to offer SALT II a chance to devise mutual restraints on this provocative and unnecessary technology.

MIRV is the principal qualitative innovation which might undermine the quantitative limitations sketched by SALT I. Henry Kissinger has intimated that "questions of technological change" will be addressed in SALT II. The ABM treaty not only facilitates such an effort: it offers vital precedents, for it specifically establishes a number of qualitative limits on defensive systems. Under the treaty, development, testing and deployment of rapid-reload launchers and multiple-interceptor launchers are banned. Sea-based, air-based, space-based or mobile ABM components are ruled out and radars are strictly controlled in numbers and characteristics. Test activities are restricted to designated ranges and the upgrading of anti-aircraft systems is closely regulated.

All of these controls deal with qualitative features of defensive systems. Parallel controls applied to offensive systems and monitored by the highly effective means planned for the ABM treaty could provide a strong barricade against destabilizing modifications of offensive missiles.

A sensible course would be to limit future missile tests to perhaps 10 or 20 a year, and to specify that there be no testing at all of multiple warheads or penetration aids. To convince the Soviet Union that the United States actually eliminates its existing MIRV boosters should pose no difficulty. Satellites could monitor the destruction of Minuteman III silos, just as they could the SS–9 and other complexes.

In the radically altered setting of joint planning for mutual security, it is conceivable that the two side can agree to more intimate inspection to guarantee that Poseidon and analogous Soviet missiles are carrying only single warheads. The exchange of technical information and crew training arrangements for the proposed joint space venture afford encouragement that the ancient shrouds over the advanced technology of both sides may now be partially removed.

Even without local inspection, however, a stringent prohibition against testing multiple payloads could be verified reliably; since neither side could maintain MIRV systems and crews without frequent operational tests, this kind of ban would provide high confidence that neither was retaining such weapons. Elimination of large "MIRV-able" boosters would mean that any clandestine work on a Soviet MIRV would be futile, since there would be no significant force to carry such payloads.

In short, having forestalled the instabilities that might flow from large-scale ABM deployment, the two powers could drastically reduce the potential instabilities on the offensive side by precluding MIRV systems. And such a measure could be enforced through precisely the kinds of test constraints they are relying on to verify compliance with the ABM limitations.

ANTISUBMARINE WARFARE

If limits on MIRV would enhance the survivability of the land-based deterrent, there is comparable value in measures to reduce the likelihood that sea-based forces will become vulnerable. This suggests that SALT II should give intensive study to controls over anti-submarine warfare capabilities.

A first and urgent goal would be to limit the number of hunter-killer submarines and other ASW forces to levels consonant with the maximum survivability of the SLBM fleets. It may be helpful to constrain certain undersea surveillance systems, since the invulnerability of the subs hinges directly on their ability to evade detection. One important possibility would be to carve out sizeable areas of the oceans as SLBM sanctuaries in which no ASW forces would normally intrude.

A third major objective of the coming phase of arms control discussions ought to be a comprehensive ban on nuclear weapons tests. There is growing confidence that national means of verification can monitor such an agreement and the administration is actively considering the proposal. By inhibiting further refinement of warheads for either offensive or defensive missiles, an end to underground nuclear tests could contribute markedly to other efforts to prevent destabilizing breakthroughs.

In weighing these and other options for SALT II a cardinal rule of systematic arms control comes into play. It is extremely helpful to have a broad and diverse set of reinforcing agreements, the violation of any one of which would be insufficient to destabilize the balance—but quite sufficient to indicate that one or the other side was acting in bad faith. Conversely, compliance with a number of interlocked arrangements would testify powerfully to the continued dedication of the partners to the common interest enshrined in the agreements.

As the two countries approach SALT II, they face a special hazard. Both sides may be so busy hedging against possible violation of the first accords—by all-out programs to modernize their allowable missiles, submarines, and bombers—that they will lose sight of the unprecedented chance to reduce their need for such hedges.

President Nixon has won some vindication for his thesis that he needs on-going strategic programs to gain bargaining leverage in the negotiations. But it would be tragic indeed if that proposition were taken to warrant full-speed ahead on a host of possibly superfluous programs. That tragedy can only become more likely if the administration feels compelled to defend the agreements of SALT I by buying off its critics with promises of major new weapons.

The United States certainly will wish to continue gradual improvements in its arsenal, but SALT I justifies a moderate, not an accelerated, pace in this realm.

From the diplomatic standpoint, it is fortunate that the planned modernization efforts take time; for example, the Soviets could not reach their potential ceilings on SLBM deployment for several years. The U.S. Trident SLBM system would not go on station until late in the decade and the B–1 bomber, if approved, is some years away from operation. There is ample time to use them as bargaining chips, and absolutely no necessity to become wedded to them before diplomacy determines whether both sides can safely content themselves with lower hedges against some hypothetical future attempt to upset the equilibrium.

The imperative task now is to sustain the momentum toward a reliable system of mutual security, a momentum which will be seriously threatened if either nation embarks on the campaign to pacify domestic criticism by intensifying the qualitative arms race.

Nothing Richard Nixon has done speaks so well of his judgment and his courage as the beginning he has made on strategic arms limitation. If SALT II is to fulfill the immense promise of SALT I, the president's diplomacy needs—and deserves—the confidence of the Congress and the country. He has earned it.

[From the Washington Post, Aug. 17, 1972]

BACKWARD OR FORWARD?—PROMISE OF SALT: WHAT'S HAPPENING?

(By Chalmers M. Roberts)

Less than three months ago Richard Nixon and Leonid Brezhnev signed their names to "basic principles of relations" between the two superpowers, a sort of codification of the President's pledge that the United States would move from "an era of confrontation" to an "era of negotiation." The Nixon-Brezhnev "principles" included a statement that "differences in ideology and in the social systems" are not a bar to normal relationships, that both nations "will always exercise restraint in their mutual relations" and that both recognize they should eschew "efforts to obtain unilateral advantage at the expense of the other, directly or indirectly."

Three days earlier the two leaders had signed the strategic arms limitation (SALT) agreements. In assessing the Soviet-American atmosphere at the end of the Moscow summitry Henry Kissinger remarked that "I think trust has developed but not the point that it could survive a major challenge that one side would put to the other that affects its own estimate of its vital interests."

It is against this background, it seems to me, that one should assess the Jackson amendment to one of the two SALT pacts, that limiting offensive weapons. The fate of the amendment is far less important that what the discussion of it disclosed about the post-summit attitudes in Washington. The same is true of the related new, more accurate and more powerful American missile warheads that the administration has requested. Like a summer lightening storm the discussion suddenly illuminated the landscape in this capital, both in the Senate and in the White House and elsewhere in the executive branch.

"Confrontation" and "negotiation" are not, of course, mutually exclusive and that is just as true in Moscow as in Washington. Mr. Nixon last July 27 said that "the decision with regard to the SALT agreements involved a fight between the hawks and doves" in his own administration. On July 15 Kissinger remarked at a congressional briefing that during the SALT negotiations "we were acutely conscious of the contradictory tendencies at work in Soviet policy"—in other words, the hawk-dove problem in the Kremlin.

In asking both for congressional approval of the SALT pacts and for money for the Trident submarine and B–1 bomber programs the President said Brezhnev and his colleagues "made it absolutely clear that they are going forward with defense programs in the offensive area which are not limited by these agreements." Soviet sources in a position to know about those conversations, however, contend that Mr. Nixon's version stretched Brezhnev's remarks for his own purposes. But American sources, equally in the know, contend Brezhnev left no doubt about what Mr. Nixon said he said. Jackson commented that he was "disturbed by the report of the President" on Brezhnev's remarks.

What the Jackson amendment affair plus the revelation of the new missile warhead program demonstrates is the limited meaning being applied by the Nixon Administration to the Moscow "basic principles of revelations" and that we can expect to see a lot more "confrontation" along with future "negotiation." Indeed, the "trust" about which Kissinger spoke seems close to nonexistent.

Jackson made his own motivation clear enough. He considered the offensive weapons agreement put the United States at a disadvantage and he used the amendment device to lock the administration into a SALT II posture of accepting nothing less than what he termed "a restoration of parity." The gloss he supplied on what constitutes "parity" made it clear he meant what those Americans who negotiated the agreements and many others consider old fashioned "superiority." What Jackson could not do by direction—defeat the agreement in the Senate—he sought to do by indirection—tie the administration's hands in the negotiations ahead that are designed to turn the five year agreement into a permanent treaty.

The Kremlin reaction to all this is unclear but not difficult to imagine. Quite probably the Moscow hawks have gained a point in their continuing suspicion of arms agreements with the United States. Whatever chance there was for both Washington and Moscow to exercise mutual restraint by not doing what they legally could do within terms of the SALT pacts has been diminished.

The history of the action-reaction phenomenon in the Soviet-American arms race clearly indicates that the dominant pressure in both capitals is to build those arms not forbidden by agreement out of fear that the other side will do so to its own advantage.

The tragedy is that the long history of the Cold War, of Soviet-American ideological differences on top of clashes of national interest, makes mutual restraint exceedingly difficult to achieve. As Jerome H. Kahan of the Brookings Institution put it to the Senate Foreign Relations Committee on June 28: "In theory, both nations ought to exercise unilateral restraint and pursue purely stabilizing strategic policies. But experience shows that neither nation has taken such initiatives."

The promise of SALT was more than just the important limitations for the first time on both offensive and defensive strategic weapons. The hope of Mr. Nixon's Moscow visit, in Kissinger's words, was that it would "mark the transformation from a period of rather rigid hostility to one in which, without any illusions about the differences in social systems, we would try to behave with restraint and with a maximum of creativity in bringing about a greater degree of stability and peace." Hence the language of the "basic principles" signed in Moscow. Hence Mr. Nixon's remark in his address to Congress that his Moscow and Peking trips had done away with "the kind of bondage" of which George Washington had said: "The nation which indulges toward another in habitual hatred is a slave to its own animosity."

In this larger context both the Jackson amendment and the new missile warhead program represent backward, not forward, steps.

JUNE 6, 1972.

From: Rep. CRAIG HOSMER, Chairman, GOP Task Force on Nuclear Affairs.
To: Members of Congress.
Subject: SALT—ABM Treaty and Offensive Weapons Interim Agreement.

It is generally conceded that America and Russia cannot risk attacking each other because their nuclear arsenals are sufficient to withstand surprise attack and still have enough undamaged retaliatory hardware left over to pulverize the aggressor.

President Nixon and Premier Brezhnev believe it is in the self-interest of their respective countries to perpetuate this condition of *mutual deterrence* based on *nuclear sufficiency*. The proposed SALT Treaty limiting defensive antiballistic missile systems and its accompanying interim agreement limiting certain offensive weapons was designed for this purpose.

The rationale of the ABM limitation is obvious. Each new ABM built by one side can be nullified by the other's new offensive installation. It is in nobody's security interest to spend money for that kind of an arms race only to end up poorer, but no safer than before.

The logic of allowing the Soviets a lopsided number of offensive missiles and submarines is obscure if quantity alone is considered. It emerges clearly, however, when other factors relevant to assessing the kill power of these two nation's strategic nuclear arsenals are taken into account. These include the following:

The actual number of nuclear warheads in the U.S. deterrent package considerably exceeds those of the Soviets because of our many multiple independently guided reentry vehicles (MIRVS);

The greater accuracy of the U.S. warheads gives them a proportionately large will capability, ample for nuclear sufficiency;

U.S. allies and near allies possess substantial strategic deterrent forces which augment the Free World's overall deterrent posture;

The arrangement impose no limitations at all on certain U.S. systems contributing to our deterrent strength, such as SAC bombers and U.S. aircraft based overseas on land and on aircraft carriers;

"Sufficiency to deter" is something in the mind of the beholder and when one side fields a mix of bombers, ICBMs and SLBMs with which it is satisfied, the other side would need to assume very large and unknown risks of miscalculation in order to assess it as "insufficient"; and

What are inside the strategic systems, how good they are now and how they may be qualitatively improved are not covered by the arrangements, leaving the parties in exactly the same circumstances, whatever they are, as before.

Provision for verification by such party's own intelligence apparatus involves minimal risk, since the arrangements are cast in terms of items which reasonably can be monitored by satellite photography and similar means.

The foregoing and many additional calculations undoubtedly influenced President Nixon's determination that the agreements are worthwhile and that their terms involve neither undue risks to United States security nor disproportionate advantage to the Soviet Union.

In making his decision the President also must have totalled the quite large costs of the superpowers taking no steps at all toward arms control against those involved in the limited agreements he made in Moscow. No person better knows these costs than he and his judgment deserves great respect.

To assure that the arrangements do not grow lopsided by the passage of time, Congress must support the President's R&D requests for the TRIDENT submarine program, the B-1 bomber and other improved strategic systems.

Mr. NIX. Mr. Chairman, I rise in support of House Joint Resolution 1227. In doing so I am conscious of the extreme seriousness of the subject matter included in that resolution. The resolution gives the approval of this body to an interim agreement between the United States and the Soviet Union with respect to the limitation of strategic offensive arms. This agreement was reached after several years of difficult negotiations between the two Governments.

I well know, as do my colleagues, that the American people are intensely devoted to the support of any measure that will reduce the possibility of a nuclear war. At the same time there is an understandable uneasiness that any agreement made with the Soviet Union may be the matter of evasion that will only leave us in a more disadvantageous position.

The committee hearings on this resolution were most informative. Based on the testimony of the witnesses it is easy to see that we can get into a "numbers" game—who has how many of what? Certainly the protracted debate in the other body gives support to this approach.

It is well that we keep in mind a few basic points. First, our negotiators believe we have ample means of verification of Soviet compliance. Second, while some of the "numbers" may show the United States to be lagging, one must consider the quality of our weaponry and the fact that no limitations are placed on strategic bombers. Third, this is an interim agreement of 5 years duration. During that period it is expected that the negotiators will continue to wrestle with more difficult issues. Fourth, as the distinguished chairman of our committee has told the House:

> This agreement is a first step toward checking the arms race. It enhances the security of both sides, while promising relief from costly weapons programs.

My support for this agreement is tempered by a realization that the millennium has not arrived. We still have to maintain an adequate arsenal of weapons that will assure us a strong strategic posture. In this imperfect and often irrational world we have struck the best bargain we can at this time. We must be as persistent in guarding our own security as we are in pursuing further negotiations on this complex problem.

The CHAIRMAN. There being no further requests for time, the Clerk will read.

The Clerk read as follows:

> *Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,* That acceptance by the President for the United States of the aforesaid interim agreement and the associated protocol is hereby approved.

COMMITTEE AMENDMENT IN THE NATURE OF A SUBSTITUTE

The CHAIRMAN. The Clerk will report the committee amendment in the nature of a substitute.

The Clerk read as follows:

> Committee amendment in the nature of a substitute: Strike all after the resolving clause and insert in lieu thereof the following:
>
> "That the Congress approves and authorizes the President to accept on behalf of the United States the Interim Agreement Between the United States of America and the Union of Soviet Socialist Republics on Certain Measures With Respect to the Limitation of Strategic Offensive Arms and the Protocol related thereto, signed at Moscow on May 26, 1972, by Richard Nixon, President of the United States of America, and Leonid I. Brezhnev, General Secretary of the Central Committee of the Communist Party of the Soviet Union."

Mr. PUCINSKI. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I take this time to ask the chairman of the Foreign Affairs Committee a few questions about this treaty. Before I do that, I think it is worthy to note that it is the height of irony that yesterday we spent 12 hours in a very crowded Chamber, almost until 2 o'clock this morning, debating the question of whether or not children shall be bused in this country. Yet, today, on perhaps the most important matter to ever come before this Congress, we find only 40 Members on the floor, and we are going to spend only 1 hour in discussion. If we are wrong on this treaty, we may never be around to know it. I pray this will not be a nuclear Yalta. Apparently a large number of people in Illinois are similarly apprehensive about the agreement. A statewide survey on how people felt about this agreement shows some revealing attitudes. In answer to the question:

> An executive agreement limits U.S. offensive missile capacity to 1,054 Intercontinental Ballistic Missiles and 41 missile firing submarines, while Russia shall be permitted to develop her strength to 1,618 ICBM's and 42 missile firing submarines. Do you approve?

So far as I know, this is the only survey that I have seen any place on this agreement. I have not seen any Harris polls or Gallup polls, but with 102 counties in Illinois responding, 69 percent of the people said, "No," and 31 percent said, "Yes." The only justification I might have to support this agreement is because on another question, the last question of the survey, I asked:

> Despite any shortcomings, do you believe these agreements should be approved by Congress as the first step toward nuclear arms control?

Eighty-one percent said, "Yes," and 18.9 percent said, "No."

What this indicates to me is that the people of Illinois have reflected how deeply concerned they are about the executive agreement, but still feel that we ought to approve it to take that first step toward nuclear control. This is an understandable attitude and does not constitute a contradiction. The people do not like the agreement in its present form but likewise do not want to impede at least a start toward nuclear control.

It is for this purpose that I rise now.

I might be persuaded to support the agreement but I should like to know first from the chairman of this committee whether or not if the other body adopts the Jackson amendment, which would substantially strengthen the executive agreement—and it is my understanding that the other body does have the votes to do this—what is going to be the attitude of the House conferees in accepting the Jackson amendment which is going to strengthen this agreement?

I should like to ask the gentleman from Pennsylvania, (Mr. MORGAN), what is his position on this?

Mr. MORGAN. Mr. Chairman, I know how the gentleman feels about the amendment of the Senator from Washington as set forth in his remarks which he inserted in the RECORD the other day. It is possible that this amendment would strengthen the interim agreement.

If the House passes the resolution which is now before us in the form recommended by the Committee on Foreign Affairs, it would be my duty as chairman of the House conferees to defend the position of the House.

I would be amenable, if the other body passes the Jackson amendment, to consider a compromise if we feel that it will strengthen the position of the United States in our future negotiations with the Russians.

Mr. PUCINSKI. Mr. Chairman, I had intended to offer the Jackson amendment here, and I believe our colleagues from New York has similar ideas, but at the request of the Senator who is leading this fight in the other body, we will withhold here, with the assurance from the chairman of our conferees that indeed if this amendment is agreed to in the other body to strengthen the entire executive agreement, the House will accept this amendment.

Of course, we will at that time have a vote on the conference report.

Mr. MORGAN. Of course, we cannot do that. The gentleman knows that we cannot commit ourselves to language that has not yet passed the Senate. I have to consider the fact that many Members of this House feel differently than the gentleman from Illinois, and feel that the amendment of the Senator from Washington does not strengthen the agreement. Of course, we will be bound by the way the resolution comes out of the Committee of the Whole here today. I cannot give you any assurance that this House is going to accept an amendment that is now pending in the other body.

As the Members know it is possible that the first vote in the other body may be on a motion to table the Jackson amendment. The gentleman cannot be sure that the amendment is going to be adopted in the other body. I would rather wait until we pass the House bill and then make my decision as to the position to take when we go to conference.

Mr. PUCINSKI. I certainly hope the House will adopt in its final form the amendment suggested by Senator JACKSON because, as has been quite properly pointed out by the gentleman from New York (Mr. STRATTON), there are a great many loopholes in this amendment.

I believe those of us who insist on strengthening the agreement do so from our experience in dealing with the Communists and their deception.

I am willing to vote for the agreement now but reserve the right to vote against the conference report if the Jackson amendment is not included in the final bill.

Mr. STRATTON. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I just want to reiterate a couple of points with respect to some of the loopholes that exist in this agreement that I referred to, briefly, a moment ago. The most obvious danger, of course, is that with the Soviet Union having 1,643 ICBM missiles to our 1,054, they could conceivably in the next 5 years MIRV those missiles and, then, with the greater throw-weight of their individual missiles compared to ours, they would have at hand a very much greater number of more powerful warheads that could knock out our own deterrent missiles right in their silos.

One of the things the Jackson amendment says is that anything that occurs during this 5 years that threatens the credibility of our deterrent forces could be a reason for breaking the agreement. Do we not have to be alert to this possibility as a matter of just plain commonsense?

The Soviets also have a substantial number of cruise missile submarines and we do not have any. What is serious about this? Well, the cruise missile has a nuclear warhead. It has a range of only 300 miles but that still brings its destructive power within range of almost every major city on the east coast, the gulf coast, and the west coast. The missile could come in at a fast speed, and at low altitude, below the radar, and it could destroy Washington, New York, or even New Orleans before we knew much about it.

Those cruise missile submarines are not even in the agreement and it is a serious error and something we must be concerned about. And I am also worried about the ambiguities, and this is a matter which the Armed Services Committee had an opportunity to explore at some length with Ambassador Gerard Smith and with Mr. Nitze. As I said earlier, the printed agreement actually deals with numbers of missile launchers, not the missiles themselves. The things that are controlled under the agreement are the numbers of missile launchers each side has, not the number of missiles we put in these silos.

Also it is agreed there cannot be any substantial increase in the size of these missile launchers, because, of course, a bigger launcher can fire a bigger, more destructive missile. Now what do they say is a "substantial" increase? They say 10 percent to 15 percent. That sounds simple enough, but the important thing on the missile launcher is the volume, and that is πr^2 times the depth of the silo. In other words, the radius and diameter of the missile launcher are what determine the volume. And if just one of those dimensions is increased by 15 percent, the volume goes up by 32 percent, a one-third increase.

But if Members will read the text carefully, it says we cannot increase the "dimensions" by more than 10 to 15 percent. So, suppose we were to increase both the radius by 15 percent and the depth by 15 percent. Do Members know how much that increases the volume of the silo by? By 52 percent.

And it is interesting in the interim agreement hearing that there is only a statement by the American negotiator who says that he believes that agreement means that only one dimension can be increased but not both. But there is no indication that the Soviet representative ever went along on that interpretation. And a 52-percent increase in the volume of the silo is the difference between our new Trident missile and the current Poseidon missile which we now have in our inventory. It is obviously a quantum jump increase, and not just an "insubstantial" increase that we may have agreed to permit.

This is the kind of ambiguity Senator JACKSON is concerned about and it is an ambiguity we ought to be concerned about. Although it has not been passed in the other body, my information is, as the gentleman from Illinois said, that the Jackson amendment will pass the other body, and I think if it does pass the other body then we ought to accept that amendment here, because all it says is that we in Congress do not want to see a situation develop, as a result of this agreement, where our deterrent force, the Minutemen missiles at Grand Forks and elsewhere, would be jeopardized and vulnerable to destruction even in their hardened silos.

Second, it urges that when we sit down for a phase 2 SALT agreement, let us not build a treaty that will allow the other side to expand much more rapidly than we expand. Let us shoot instead for equality. I think we need to get that into the ultimate resolution of approval in order to have some chance for real security.

Mr. BENNETT. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in support of House Joint Resolution 1227. It is difficult and dangerous to wage efforts in war and it is difficult and dangerous to wage efforts in peace. At the present time, the national defense strength of the United States is the greatest single contributor to the objective of peace, but no stone should be left unturned in an effort to pursue all other feasible and prudent efforts to maintain peace.

When the two strongest nations on earth, the United States and Russia, agree to limit their arms in a fair and proper manner, this would seem to be a way in which peace might be enhanced. Therefore, I congratulate the President on his efforts as represented by the resolution now before us and I sincerely hope that they will have the result of lessening tensions in the world and securing a better chance for peace for the future of mankind.

There are, indeed, things about the agreements which have taken place which could turn out wrong, but on balance what has been agreed to, when the safeguards are considered, seems to me to be a thrust toward lessening tensions and increasing the chances of peace. For these very simple reasons I support the resolution before us.

Some have cautioned that there has been an inequality in what has been agreed to and I raised such points in the discussions of this measure before the House Armed Services Committee and received reassurances that if circumstances would arise, such as the discovery and implementation of the MIRV system by the Russians, this would be grounds enough for new talks and ultimate unilateral action by the United States to cancel the agreements if this were found to be a matter of danger in retaining a proper balance. This has reassured me relative to the propriety of endorsing the President's actions in this matter at this time.

It is obvious to me and I think to everyone that, when the ultimate and final agreements are arrived at, there should be more clearly a balance favorable to the United States in any ultimate arrangements that are made with regard to offensive and defensive weaponry. But for the time being with the reassurances which have been received, the effect of these agreements has been to cool the tensions and limit the tremendous buildup which was apparently already under way in Russia in the direction of seeking massive superiority over the United States in arms. The thrust that these papers make toward cooling this buildup justifies the present action.

On January 6, 1960, I introduced a bill to create a national peace agency and eventually this formed the basis of legislation enacted by Congress in the creation of the Arms Control and Disarmament Agency. This Agency has been handling the SALT talks and making efforts to assure us that any agreements arrived at are in the direction of the security of our country and the attainment of peace in the world.

The enactment of the Arms Control

and Disarmament Agency left unenacted portions of the original legislative proposal which I believe still have merit and which are now pending before Congress in my H.R. 585. I include herein the provisions of this proposal, H.R. 585, and I hope Members of Congress will consider this legislation and seek to make improvements on it and to enact its provisions in the not-too-distant future:

H.R. 585

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "World Peace Agency Act."

STATEMENT OF PURPOSE

SEC. 2. It is the purpose of this Act to establish an independent agency within the Department of State which will not establish policy but will do research on problems related to achieving peace, including an examination of the economic, political, and sociological causes of war and the development of techniques for the elimination or reduction of these causes.

CREATION AND FUNCTIONS OF THE UNITED STATES AGENCY FOR WORLD PEACE

SEC. 3. There is hereby established within the Department of State the United States Agency for World Peace (hereinafter in this Act referred to as the "Agency"). The Agency, shall, under the direction of the Secretary of State, undertake programs to carry out the purpose of this Act, including, among others, programs—

(1) for development and application of communications and advanced computer techniques for analyzing the economic, political, and sociological problems of nation states as they bear upon world tensions and tensions among states which might possibly result in conflict,

(2) for development of new analytic organizations to—

(A) apply the techniques of operations research to peace problems in the same way that "war gaming" is conducted for the military problems,

(B) conduct studies on alternative methods of achieving world peace,

(3) for support of studies and research on projects such as—

(A) legal aspects of national sovereignty extended to the space domain and freedom of the seas, insofar as they contribute to the possibility of war,

(B) analyses of the effects of world peace upon national economies, and

(C) analyses of economic, political and sociological problems which contribute to the possibility of war,

(D) analyses of the effects of military and economic aid programs on the attainment and retention of world peace,

(4) for research on educational techniques aimed at rendering underdeveloped nations less technologically dependent, insofar as their dependence contributes to the possibility of war,

(5) for research and development in problems of underdeveloped nations, insofar as they contribute to the possibility of war, in such areas as food production, conservation of mineral and water resources (including desalination of sea and brackisk water), practical power-generating systems, and medicine and health,

(6) for research in meeting adequately the tensions created by overcencentration of population in some areas and inadequate population in other areas of the world,

(7) for research into the effect of present foreign policies of the United States upon world tensions and alternative courses or policies which might promote peace or tend to diminish the possibility of both long-range and short-range tensions and conflicts, and

(8) for research into long-range goals of United States foreign policy which would promote the interests of the United States and world peace.

LABORATORY FOR PEACE

SEC. 4. The Director of the Agency shall establish in the Agency a Laboratory for Peace through which the Agency shall develop and administer its research and study programs. In carrying on such programs the Agency shall enter into contracts with educational and research institutions within the United States and abroad with a view to obtaining the benefits of scientific and intellectual resources, wherever located in the world.

POLICY FORMULATION

SEC. 5. The Director is authorized and directed to prepare for the President, the Secretary of State, and the heads of such other Government agencies, as the President may determine, recommendations concerning United States efforts for peace: *Provided, however,* That this Agency's powers are restricted solely to research and no action shall be taken by this Agency under this or any other law that will obligate the United States to undertake any policy or commitment, except pursuant to the treatymaking power of the President under the Constitution or unless authorized by further affirmative legislation by the Congress of the United States.

RELATIONSHIP WITH OTHER AGENCIES

SEC. 6. The Secretary of State shall establish procedures designed to insure that the Agency will carry out its functions in close collaboration with the other agencies of the Federal Government, but without duplicating the efforts of any such agency or other agencies within the Federal Government. Such procedures shall also provide that information available to other agencies will be made available to the Agency, and shall prescribe other means by which other agencies of the Government may support the efforts of the Agency.

DIRECTOR AND DEPUTY DIRECTOR OF THE AGENCY

SEC. 7. (a) The Agency shall be headed by a Director who shall be appointed by the President by and with the advice and consent of the Senate, and shall receive compensation at the rate of $32,000 per annum. Under the supervision and direction of the Secretary of State, the Director shall be responsible for the exercise of all powers and the discharge of all duties of the Agency, and shall have authority and control over all personnel and activities thereof.

(b) There shall be in the Agency a Deputy Director, who shall be appointed by the President by and with the advice and consent of the Senate, shall receive compensation at the rate of $31,000 per annum, shall perform such duties and exercise such powers as the Director may prescribe. The Deputy Director shall act for, and exercise the powers of, the Director during his absence or disability.

ADMINISTRATION

SEC. 8. (a) In the performance of its functions, the Agency shall have the following powers:

(1) To make, promulgate, issue, rescind, and amend rules and regulations governing the manner of its operations and the exercise of the powers vested in it by law.

(2) To appoint and fix the compensation of such officers and employees as may be necessary to carry out such functions. Such officers and employees shall be appointed in accordance with the civil service laws and their compensation fixed in accordance with the Classification Act of 1949.

(3) To accept unconditional gifts or donations of services, money, or property, real, personal, or mixed, tangible or intangible.

(4) Without regard to section 3648 of the Revised Statutes, as amended (31 U.S.C. 529), to enter into and perform such contracts, leases, cooperative agreements, or other transactions as may be necessary in the conduct of its work and on such terms as it may deem appropriate, with any agency or instrumentality of the United States, or with any State, territory, or possession, or with any political subdivision thereof, or with any person, firm, association, corporation, or educational institution. To the maximum extent practicable and consistent with the accomplishment of the purpose of this Act, such contracts, leases, agreements, and other transactions shall be allocated by the Director in a manner which will enable small business concerns to participate equitably and proportionately in the conduct of the work of the Agency.

(5) To use, with their consent, the services, equipment, personnel, and facilities of Federal and other agencies with or without reimbursement, and on a similar basis to cooperate with other public and private agencies and instrumentalities in the use of services, equipment, and facilities. Each department and agency of the Federal Government shall cooperate fully with the Agency in making its services, equipment, personnel, and facilities available to the Agency, and any such department or agency is authorized, notwithstanding any other provision of law, to transfer to or to receive from the Agency, without reimbursement, supplies and equipment other than administrative supplies or equipment.

(6) To appoint such advisory committees as may be appropriate for purposes of consultation and advice to the Agency in the performance of its functions.

(7) To establish within the Agency such offices and procedures as may be appropriate to provide for the greatest possible coordination of its activities under this Act with related activities being carried on by other public and private agencies and organizations.

(8) When determined by the Director to be necessary, and subject to such security investigations as he may determine to be appropriate, to employ aliens without regard to statutory provisions prohibiting payment of compensation to aliens.

INFORMATION AND SECURITY

SEC. 9. (a) In order to promote the free flow and exchange of new ideas and concepts in the new technology of peace research and development, the Agency shall, so far as possible, have all research efforts of the Agency performed in subject matter not requiring classification for security purposes. Nothing in this Act shall be deemed to change or modify security procedures or to exempt personnel of the Agency from being required to obtain security clearance before obtaining classified information.

(b) The Director shall establish such security and loyalty requirements, restrictions, and safeguards as he deems necessary in the interest of the national security and to carry out the provisions of this Act. The Director shall arrange with the Civil Service Commission for the conduct of fullfield background security and loyalty investigations of all the Agency's officers, employees, consultants, persons detailed from other Government agencies, members of advisory boards, contractors, and subcontractors, and their officers and employees, actual or prospective. In the event the investigation discloses information indicating that the person investigated may be or may become a security risk, or may be of doubtful loyalty, the report of the investigation shall be turned over to the Federal Bureau of Investigation for a full field investigation. The final results of all such investigations shall be turned over to the Director for final determination. No person shall be permitted to enter on duty as such an officer, employee, consultant, or member of advisory committee or board, or pursuant to any such detail, and no contractor or subcontractor, or officer or employee thereof shall be permitted to have access to any classified information, until he shall have been investigated in accordance with this subsection and the report of such investigations made to the Director, and the Director shall have determined that such person is not a security risk or of doubtful loyalty. Standards applicable with respect to the security clearance of persons within any category referred to in this subsection shall not be less stringent, and the investigation of such persons for such purposes shall not be less intensive or complete, than in the case of such clearance of persons in a corresponding category under the security procedures of the Government agency or agencies having the highest security restrictions with respect to persons in such category.

Mr. ICHORD. Mr. Chairman, I move to strike the last word.

Mr. Chairman and members of the committee, I rise to commend the gentleman from New York (Mr. STRATTON) for the remarks he has just made and to associate myself with his remarks.

I agree with the distinguished chairman of the Committee on Foreign Affairs. I believe that this agreement is in the interests of the United States of America.

I also agree with the President. I do not believe that either side won or that either side lost. It is in the mutual interest of both nations to stop the arms race.

At the same time, I believe we should recognize there are loopholes in the interim agreement, there are dangers inherent in the interim agreement. We must recognize that the United States of America by the agreement is frozen into a numerically inferior position for the 5-year period; 1,050 ICBM launchers on the part of the United States, 1,618 on the part of Russia; 710 SLBM launchers on 44 Polaris-type submarines, compared to 950 SLBM launchers on 62 Polaris-type submarines for Russia.

The only basis for justifying the signing of this agreement on the part of the United States is that we do have a technological lead and that the ongoing programs of Russia compared to our programs would eventually result in superiority on the part of Russia. So we have to maintain our technological lead, or the balance of power will definitely shift to Russia.

I would point out that there are limitations as to how far we can go in increasing our technology. There are limitations to improving reliability. There are limitations to improving accuracy.

So, Mr. Chairman, I am very happy to hear you state that you do look with sympathy upon the amendment of the senior Senator from Washington, because I believe we should be careful in any follow-on agreement to provide for numerical equality.

Mr. MORGAN. Mr. Chairman, will the gentleman yield?

Mr. ICHORD. I yield to the chairman of the Committee on Foreign Affairs.

Mr. MORGAN. I thank the gentleman. I know the gentleman is a distinguished Member of the Committee on Armed Services, as was the gentleman from New York who has just spoken. I recognize that both of these gentlemen are well versed in the trends and the projections of our weapons procurement and military strategy.

The gentleman is well aware that in the year 1969 we closed out the production of weapons of these types. So, if we play the numbers game, it is really our fault that the Russians got ahead of us. If we had been in step with the Russians since 1969, we could now have more than 1,680 of the ICBM missiles now.

Mr. ICHORD. I did not mention MIRV but launchers.

Mr. MORGAN. Even in launchers since 1969 we have not kept pace with the Russians. They have been way ahead of us in their production. So in the numbers game we will not be able to keep pace with the Russians because we have not been in the production of launchers like the Russians have since 1969.

Mr. ICHORD. I am expressing concern, I would say to the gentleman from Pennsylvania, that the 5-year agreement may be used as a vehicle on the part of the Russians to catch up with us technologically. This is a danger, in that there are limitations as to how much farther we can go technologically.

Mr. MORGAN. This is only an interim agreement, and if SALT II comes up with a permanent agreement, I will be in agreement with the gentleman as to achieving strategic equality with the Russians.

Mr. ICHORD. Mr. Chairman, I yield to the gentleman from Virginia (Mr. DANIEL).

Mr. DANIEL of Virginia. Mr. Chairman, I rise in support of this agreement.

Mr. Chairman, I rise in support of the agreement. If this agreement is approved by the Congress, our Nation will have reached a way station on its long and difficult path toward peace.

According to information provided by the State Department, since World War II, the United States and the Soviet Union have together expended more than $2 trillion on weapons and armament—approximately $1.3 trillion by the United States, an estimated $1 trillion by the Soviet Union.

A trillion dollars defies comprehension. As an example, if you were to convert a million dollars to $1 bills, and starting at the city limits of Danville, in the Fifth District of Virginia, laid them end-to-end, you would run out of dollars somewhere near the Nottoway County line, in Congressman ABBITT's district between Danville and Richmond. If you converted a billion dollars to $1 bills, it would circle the earth four times at the Equator. And 1 trillion is a million times a million.

If preagreement trends continue, it is estimated that by the year 2000 an additional $5 trillion could be spent on weaponry.

Our defense spending has been diminished by budgetary restrictions; the U.S.S.R. is not so restrained. While we are currently spending about 8 percent of our GNP on defense, it is estimated the Soviet Union is spending in the range of 11 to 14 percent.

If we were to make a substantial unilateral reduction in strategic strength, as is urged in some quarters, our potential opponent—and it must be constantly borne in mind that Russia is a potential opponent—might lose incentive to continue at the bargaining table.

There is reason for some optimism, as a result of these agreements. Anything which results in a potential reduction of our expenditures for weaponry should be welcomed. There are many things this Nation might do with the billions of dollars which must be spent on defense under current world conditions, not the least of which is to reduce the awesome burden of taxation borne by all, and the additional burden of payment on the national debt, which in turn increases the potential threat for additional taxation and feeds inflationary pressures.

Our optimism must be tempered with recognition that, while this is a first step along the right path, it is not a leap to our immediate goal of world peace, for there are other, very important areas which are not covered by these agreements, such as intentions. Fundamental differences of philosophy between the powers remain strong. This is not a treaty of friendship, but a treaty for survival.

It is imperative for our survival that we maintain a relatively strong defense posture, so that we may continue to bargain from a position of strength. Unilateral disarmament is the sure road to national suicide.

Mr. ANNUNZIO. Mr. Chairman, I move to strike the requisite number of words.

Mr. PUCINSKI. Will the gentleman yield?

Mr. ANNUNZIO. I yield to my distinguished colleague from Illinois.

Mr. PUCINSKI. I appreciate my colleague yielding to me.

There is one thing that it is very important to point out in this agreement, and that is who signed it. This agreement, unlike any of the others in Moscow, is signed by Brezhnev. All of the others were signed by Podgorny or Kosygin. This one, however, was signed by Brezhnev. That is like having BOB DOLE sign it for the United States. We signed it through our constitutional head of the United States, the President. This agreement will be carried out on our part because the President signed it on behalf of the people of the United States, but in the case of the Soviet Union they had their Communist political boss sign the treaty for the Communist political party and not for the people of Russia. Therefore, all they have to do if they want to renege on this agreement is to fire Mr. Brezhnev.

And if you think I am wrong, when President Nixon arrived at the airport he was received at the airport by both Podgorny and Kosygin, and when the question was raised on the matter of why Brezhnev was not there the explanation was given both by the Soviet Union and by the American State Department that Brezhnev is not a part of the government. It would be against protocol for him to be there.

Now we are signing an agreement with

the chairman of the Communist political structure. They can just do away with that.

About the silliest explanation was given when Secretary of State Rogers was asked why we permitted this and why we are signing the agreement with Mr. Brezhnev rather than Mr. Podgorny. He said we do not like to interfere with another country and tell them how to run their business.

But we are signing a treaty with another country, Mr. Chairman, and perhaps it is the most important treaty and executive agreement in the history of this country. It would seem to me the administration should have insisted, if they really mean business and they are honest about this thing in Moscow, this treaty and this agreement on the part of the Government, they should have insisted on it being signed by Mr. Podgorny or Mr. Kosygin on behalf of the people of the Soviet Union and not by the Communist political boss of that country.

Mr. FINDLEY. Mr. Chairman, will the gentleman yield?

Mr. ANNUNZIO. I have the time, and I am not yielding time.

Is the gentleman from Illinois finished?

Mr. PUCINSKI. I am finished.

Mr. ANNUNZIO. Mr. Chairman, I yield back the balance of my time.

Mr. MILLER of Ohio. Mr. Chairman, I rise in support of the agreement.

Mr. Chairman, I rise in support of House Joint Resolution 1227, Interim Agreement on Limitations of Strategic Offensive Weapons, and urge its passage—1972 has been an historic year in man's quest for peace, understanding, and cooperation among nations. President Nixon's journeys to Peking and Moscow signal a new era in our relations with our two greatest global adversaries. Despite 25 years of animosity, mistrust, and ambivalance, the three great powers have agreed to try the path of talking about our differences instead of fighting about them. I applaud President Nixon for his peace initiatives, especially this interim SALT agreement which can be the cornerstone upon which to build a full generation of peace. Perhaps the most significant aspect of this agreement is that it is a first step—a key to further dicussion of a more comprehensive nature in SALT II or SALT III. A decade of preparation and 2½ years of intensive discussions in Vienna and Helsinki have produced this document which scores a joint conclusion that the continuation of the United States-U.S.S.R. arms race is not in the best interests of either nation and that some means must be devised to stop the arms escalation in a manner consistent with what each nation believes to be its vested security requirements.

This SALT agreement is clearly in our best interests for several reasons.

First, we have broken the momentum of the Soviet offensive buildup—a buildup which the President has stated this country could not possibly match during the next 5 years.

Second, we currently have a 2-to-1 advantage in warheads which offsets the Soviet numerical advantage in ballistics launchers. This advantage will be retained for the duration of the 5-year agreement. Moreover, it should be remembered the United States still maintains a distinct superiority over the Soviets in the field of MIRV capability and technology.

Third, the agreement still permits us a strategic modernization program putting us in a strong position if there is no agreement at the end of the 5-year period. In 5 years, the Trident SLBM system will be ready for deployment, the Trident I missile will be available, site defense development will be near completion, the B-1 bomber development will be completed, and standoff missiles will be ready for our strategic bomber force.

Finally, if the Soviets fail to live up to their end of the bargain, the agreement allows us to withdraw to protect our supreme national interests.

The agreement clearly does not sell us down the river but allows us to maintain a flexible defense posture sufficient to meet any threat to our vital interests or those of our allies. In the long run, we have much to gain under this agreement in reducing the costly redundancy in our defense structure through bilateral negotiation and agreement.

I would also like to commend my colleagues on the House Foreign Affairs Committee and Chairman MORGAN for their leadership in the Congress and cooperation with the administration in bringing this agreement before this body and working for its approval.

Mr. DELLUMS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, as all of you know by this point, I am an outspoken critic of America's involvement in Indochina. However, I would like to point out that I am not only an advocate of this Nation's withdrawal from Southeast Asia, but an advocate of this Nation's withdrawal from the mentality for war, death, and destruction as a way of solving international disputes, and dealing with serious human questions. Therefore, it is very important that we limit the extraordinary arms buildup that has been taking place in this Nation and the world.

In that regard, I believe that the interim agreement before us now is an important step toward the limitation of the United States and the U.S.S.R. arms buildup because this has an adverse effect in America's economy, and forces us into a position where we become more preoccupied with war, death and destruction than peace, justice and equality.

Therefore, Mr. Chairman, I would urge the adoption of the interim SALT agreement as reported by the Committee on Foreign Affairs, and I urge a unanimous vote on this important measure.

Mr. GONZALEZ. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, in view of the fact that we are living in a period of anything but open convenants openly arrived at, and we see emissaries flooding back and forth obviously in a position to bind the leadership of this Nation and all of us in the penumbra of backroom international politicking, therefore I am compelled to rise to direct some questions which I think ought to be raised at this time to anybody on the committee, the chairman, or others who are knowledgeable.

First, since we are being asked to vote on a resolution approving an agreement plus what is called the protocol, is there any Member of the House, either on or off the committee, the chairman or anyone, aware of any side or collateral understandings not part of the record with respect to these agreements that our leadership might have discussed with the Russian leadership?

Mr. MORGAN. Mr. Chairman, if the gentleman will yield the answer is "no."

Mr. GONZALEZ. Is the distinguished chairman aware of any kind of a side understanding, informal or formal, whereby our leadership has in effect agreed with the Russian leadership to let up with respect to Russian incursion into the Western Hemisphere, to wit, Cuba, in exchange for some understanding of the Russians letting up in another area of the world such as the Middle East? Is there any knowledge about that?

Mr. MORGAN. Mr. Chairman, I can assure the gentleman from Texas that there was no agreement in that respect.

Mr. GONZALEZ. Is the chairman of the opinion that this could be possible, and yet the membership of the House or the Congress be unaware of it? Could that be? Is it possible for that to happen?

Mr. MORGAN. I would hate to imply in any way that we cannot trust the President, or that we do not trust the military. They have given us their assurances. I think we can reassure the gentleman, and there is no doubt in my mind that there was no agreement or negotiation of that kind. There might have been discussions, but no agreement.

Mr. GONZALEZ. There is a possibility that such discussions could have been held?

Mr. MORGAN. Yes, I am saying to the gentleman that there may have been discussions, but no agreement.

Mr. GONZALEZ. Now, I do not want this to be interpreted as inferring distrust or lack of trust, but strange things have been known to happen to our leadership.

For instance, in 1944 our leadership turned over to the Russians the complete moneymaking machine to make the occupancy currency that the Russians circulated in Germany—until we finally had to limit it or put a stop to it. We turned over the printing press and material to the Russians and then they came back less than 2 weeks later and complained and said, "Hey, you did not give us the ink, either." We had to turn over the special ink to them. That cost the taxpayers conservatively $250 million then as best we can figure.

Now, that sounds astounding—but it did happen in the context of the atmosphere of that time.

What I am saying is—I just wonder if we are fully charged with knowledge in order to give our imprimatur to an agreement that is far reaching insofar as the national security is concerned.

Mr. HOLIFIELD. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I want to place on the record my position on this bill.

This is probably one of the most important documents that has faced this Congress, at least in my 30 years of experience here. Anyone can find something to criticize about anything. I can find some things in the Strategic Arms Limitation Treaty that are not exactly to my liking. But I think this is a step away from chaos and from the possible total destruction of mankind.

As the former chairman and vice chairman, and as a member for 26 years, of the Joint Committee on Atomic Energy, I think I know a little something about what I am speaking.

I have watched the growth of the capability to wage nuclear destruction, both of our country on other countries, and of other countries on our country over the years, with great concern and apprehension in my mind.

I have sustained a strong capability on the part of this country, and I will sustain that as long as I am a Member of this House, because I confidently believe that in so sustaining that capability I was and am sustaining the power of deterrence which would keep the other fellow from making a mistake.

I also thought it was the only way we could guarantee peace in this world during this dangerous period, when the people of the world were beginning to find out what the total destructive capability of nuclear weapons could be.

As far back as 1959, I started hearings on the effects of atomic warfare. You can find it in several bound volumes, each 3 inches thick. We of the Joint Committee brought out for the first time a study by the experts of the Defense Department, as to what the exact capability of destruction was at that time. That was in 1959.

It said that a mild attack, a very reasonably mild attack upon the United States would destroy 60 million lives. Today each nation has many, many times the number and megaton warheads we had then.

One of my purposes in bringing these facts out was that I wanted the people of the United States to know, and I wanted the people of the world to know, the destructive capability of nuclear weapons. That knowledge has grown now to the point where I believe there is a new wind blowing in the world. I am not naive about the Soviet purposes—about their philosophy—about their dedication some day to be the controller of the world. But I am also not naive about the fact that they know if they start a nuclear war, it will start the destruction of the Soviet Union as well as of Western Europe and the United States.

So I say that for the first time in the history of mankind there is the most compelling motive in the hearts and minds of man—of every nation—to have a more peaceful world than has ever existed before.

That compelling motive is based on self interest—on the will to survive of the individual, which is the strongest instinct in mankind. When that will to survive permeates the intelligence of the leaders of nations of the world—that they too will perish in a nuclear war for that there is no place for the leaders to hide. In the event of a nuclear war radiation from nuclear weapons will permeate this Chamber and every other building in the United States. It would kill the people sitting in this Chamber, if it should occur—even though we were not in the blast area. This is the reason that there is growing throughout the world a compelling instinct to survive. It is causing the leaders of nations to make up their minds that no longer can we risk nuclear war. We cannot endure a full-scale nuclear war. Military capability to destroy is no longer partial, it is total.

Military capability to defend against full-scale nuclear attack is negligible. It is no longer credible. This applies to all clear weapon powers as well as ourselves.

This situation has never existed before in the annals of recorded history.

This wind that is the wind that is blowing in the minds of men throughout the world—and it is blowing in the minds of the leaders of the Soviet Union the same as it is in our minds. This is why I must pin my faith in some kind of agreement, not a perfect agreement, but an agreement that, in my opinion, is a step, is an important step, toward recognition of this one fact: That if mankind is to survive, mankind cannot afford a nuclear war. We cannot afford to start one; they cannot afford to start one. We cannot afford to retaliate; they cannot afford to retaliate. The price is too great to pay. This is the first real major power recognition of these principles that I am talking about. It is not perfect, but it is a building stone upon which we can build an edifice of peace.

I believe we should all get behind this and take this step forward.

I wish to pay my tribute to the President of the United States for his work in this field. It is far more important than this coming election; I will tell you that. It is of importance to you and your wife and your children and your children's children, and it may be the first important step for the preservation of the human race.

What more can I say?

What more can any man say?

Mr. ASHBROOK. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, let us take a closer look at the statement of Senator SMITH which appears in her article, "It's Time To Speak Up for National Defense," from the March 1972, issue of Reader's Digest. She stated:

> We may well have lost one of the crucial battles of the cold war when we entered into the 1963 Nuclear Test Ban Treaty with the Soviets. I was one of 19 in the Senate who voted against the treaty. Now, after nearly nine years of reflection, *my only regret is that the American people still have not been told the whole story about how the treaty worked to the Russians' tremendous advantage and to our own vast detriment.*
>
> Senators who voted against the treaty were not popular, but we who did so *acted on the basis of information that was—wrongly, I still believe—classified secret* and given to us behind closed doors. . . ." (Italic added.)

Note that Senator SMITH believes that the American people should have been given information which was classified secret and which was withheld from them during the Nuclear Test Ban Treaty of 1963. Furthermore, she states that this information should today be made available to the public.

Now let us consider the interim agreement which we are debating today. House Report 92-1324 of the Committee on Foreign Affairs states that the interim agreement is so closely linked with the treaty limiting anti-ballistic-missile systems that "an understanding of both is essential." The report states:

> The SALT accords consist of (1) a treaty limiting antiballistic missile systems and (2) a five-year interim agreement which freezes the overall levels of strategic offensive missile forces pending further negotiations which are to begin in October. There is also a protocol to the interim agreement, and a number of statements of "interpretation," some agreed and some unilateral. The texts may be found in House Document 92-311.
>
> As is customary, the treaty was sent to the Senate for its "advice and consent," while the interim agreement on offensive strategic arms has been submitted to both Houses for approval. Although the House of Representatives is being called upon to pass on only the interim agreement, the two accords are so closely linked that an understanding of both is essential.

Remembering Senator SMITH's objection to the element of secrecy surrounding the information withheld in 1963, consider the statement of Dr. Edward Teller, the eminent nuclear weapons authority, before the House Foreign Affairs Committee on the subject of the SALT Accords just a few days ago on August 9:

> The agreement on rocket deployment contains an Article VI which is *similar to Article XIII of the ABM Treaty*. In this case, as well as in the *ABM Treaty*, it is important to pay attention to the *national means of verification* which is supposed to furnish *prima facie* (Teller's emphasis) evidence of compliance. *These means of verification are secret. It is disturbing that on this vital point the public cannot get detailed* information. In fact, even the *information available to Congress* is less than complete. *One should raise the question* whether these *national means of verification should be declassified*. (Italic added.)

Dr. Teller's objection to secrecy is reminiscent of Senator SMITH's experience in 1963 although Dr. Teller goes a step further and claims that the information available to Congress was less than complete. As with Senator SMITH, he maintains that certain secret information should at the present time be declassified. It is interesting to note that information on the national means of verification which Dr. Teller holds should be declassified was mentioned in the committee report mentioned above. The report states:

> In addition, a special briefing on national means of verification was provided by Director Richard Helms of the Central Intelligence Agency.

Assuming that Mr. Helms' briefing was not for public consumption, the insistence on secrecy with regard to national means of vertification raises a serious logical muddle built into the treaty. Supposedly, we must withhold the nature of these verification means from the U.S. public because the Soviets do not fully know what these means are—and it is not in our interests to reveal these means. What other reason could there be for not making them known to the U.S. public?

However, the Russians must know of our means of verification, in order to fulfill the letter of the treaty, for in article V, section 2, of the interim agreement signed by President Nixon and the Communist leader Brezhnev, it says:

> Each Party undertakes not to interfere with the national technical means of verification of the other Party operating in accordance with pargaraph 1 of this Article.

How is it possible not to interfere, if the means of verification are not completely known to the other party? The same problem is built into the ABM treaty by identical language in article XII, section 2. It is highly predictable that any violations of the treaties by the Soviets in the future will be described as "inadvertent," and therefore be turned over to the "Standing Consultative Commission" created by article XIII which is empowered by section 2(c) to "consider questions involving unintended interference." Thus the American people will be forever cut off from any real knowledge of what is going on. Even if the Soviets deliberately violate the treaty, they will not learn of it.

A word of clarification should be added concerning Dr. Teller's recommendation that the House approve the interim agreement. As will be noted in Dr. Teller's prepared statement, he proposes four safeguards:

First. That thorough use should be made of article XIII of the treaty and article VI of the agreement to make it probable that the treaty is honesty observed;

Second. That defense-oriented research receive vigorous support;

Third. That practical and economic measures be taken to improve our preparedness in civil defense; and

Fourth. That we establish better cooperation between the free and advanced democracies to insure our survival by collective action.

Dr. Teller concludes his prepared statement with these words:

> *Once these safeguards are adopted,* I recommend wholeheartedly the endorsements of the treaty and interim agreement, including particularly the planned cooperation in several fields which our President has called "building blocks of peace." (Italic added.)

It is evident that Dr. Teller's approval is a conditional one. After—and only after—the four safeguards are adopted would Dr. Teller give his endorsement. Close inspection of safeguard No. 4 demonstrates how serious and encompassing are Dr. Teller's stipulations. In his statement No. 4 he further expanded:

> Since we have lost leadership in the military field, it becomes even more important to cooperative closely with our Allies for the common defense of freedom. A united, free world could insure safety, peace and democracy. Nothing in the treaty or in its interpretation should stand in the way of the effort to build a better world based on the ideas of human dignity and safeguarded by proper measures to defend the citizens of a free society.

This proposal of free world unity capable of militarily defending free nations against aggressors is the same basic idea proposed by the late President Herbert Hoover in 1962 when he proposed his Council of Free Nations. Dr. Teller is, in effect, proposing a comprehensive and basic foreign policy to insure international security as a prerequisite of world peace.

At this point I insert the excellent statements of Senator SMITH and Dr. Teller:

IT'S TIME TO SPEAK UP FOR NATIONAL DEFENSE

(By Senator MARGARET CHASE SMITH)

For some time now, I have been growing increasingly concerned over a matter of public business which, it seems to me, ought to alarm all Americans. Yet, amazingly, I have heard little from my constituents or my Senate colleagues on the subject. Considering what is at stake—nothing less than America's ability to assure the future security and freedom of its people—the situation is incredible. Obviously, far too many Americans remain unaware of the frightful danger that is rising. As senior Republican member of the Senate Armed Services Committee, I feel I must speak out.

To put it as plainly as possible, there simply is no question that, if present trends continue, the Soviet Union will attain clear military superiority over the United States within the next very few years, perhaps as early as 1975 or 1976. Even now, in fact, the U.S.S.R. has far more land-based nuclear firepower than we have. It will equal or surpass us in submarine-based nuclear firepower by the middle of next year. It is embarked on an anti-submarine warfare program that may eventually succeed in neutralizing much of our missile-carrying submarine fleet. It has an extensive ABM (anti-ballistic-missile) deployment. It has been developing space weapons systems, as we have not. It has been modernizing and expanding its air and maritime forces, while we have allowed our own virtually to atrophy. And the modernized Red Army may now well be at its best.

FROM SUPREMACY TO PARITY

Thus, today, our previously unchallengeable military supremacy is gone. And although we are in a state of rough strategic parity—equality—with the U.S.S.R., even that is eroding at a fast clip. In short, we are on the threshold of a world that will be unimaginably different from any that Americans have ever known—a world in which our President will not be able confidently to demand, for example, that the Kremlin remove its nuclear missiles from Cuba. Or that it refrain from constructing a missile submarine base on that island, or from establishing air bases there for its strategic bombers. Nor will the President be able to press credibly for equitable resolutions of probems at other points of vital interest, such as the Middle East or Berlin. Our President, whoever he is, will have to negotiate as best he can from a position of weakness—if he gets a chance to negotiate at all.

For, make no mistake, we are rapidly approaching a day when the United States will be subject to all sorts of diplomatic blackmail and a strategy of terror waged by the Soviet Union. That is what the U.S.S.R.'s hugely expensive, decade-long military buildup is all about. There is no other logical reason for it. Moreover, as military ascendancy passes to the Soviet Union, the danger will increase that an over-confident Kremlin leadership will miscalculate, will try to impose its will somewhere in some way that will prove intolerable to the American people and will trigger nuclear war.

Unfortunately, this is not mere Pentagon propaganda, aimed at silencing opposition to defense spending and scaring Congress into apportioning a larger slice of the federal budget to the military. No one would be more delighted than I if we could safely eliminate military spending altogether and turn our full attention to improving the quality of American life—to refurbishing our cities, eradicating poverty, disease and crime, and solving our environmental problems. But first things must come first. As President Nixon has pointed out, if we are less strong than we should be, there soon may be no domestic society to look after.

SAFETY IN WEAKNESS?

Many Americans may be shocked to learn that we are in such serious and fast-increasing danger. But our military decline did not come about overnight. In fact, it has been ten years in the making. Briefly, here is how it happened:

The Soviet Union did not demobilize as we did after World War II. Having swallowed Eastern Europe, the Russians secured their newly conquered lands by maintaining and strengthening their military posture. The stronger they became, the more menacing became their behavior toward the free world—the United States in particular. But they always backed away when confronted with forceful resolve.

For example, a nearly successful communist takeover in Lebanon in 1958 failed only when President Eisenhower moved strong American forces onto the country's beaches in a dramatic display of U.S. determination to protect a friendly free nation. The Russians mounted a number of crises over West Berlin, but always backed off when America made clear that it firmly intended to keep the city free. In 1962, when President Kennedy ordered the Kremlin to remove its nuclear missiles from Cuba, he was standing under the umbrella of military security that had been raised during the Eisenhower 1950s.

Yet, in the face of such history, the Kennedy Administration was persuaded by a powerfully influential anti-defense clique that we Americans were largely to blame for Soviet behavior. The theory was that the military strength we had built to prevent a communist takeover of the world was fostering a paranoia in the Kremlin that could lead the Soviet leadership to launch a pre-emptive first strike against the United States. In effect, the anti-defense lobby warned, safety lay in weakening ourselves.

It's difficult to believe that such rubbish could have been accepted by responsible men. Yet it surely was accepted—by President Kennedy's Secretary of Defense, Robert McNamara, for one. McNamara decided that a balance of terror, where each side was capable of destroying the other was preferable to American supremacy. He believed that a military equal Kremlin would be a less aggressive Kremlin. The cold-war lessons, which clearly demonstrated that peace and freedom hinged on American strength and the will to use it, were discarded.

Some of us in Congress were on record early as opposed to this line of thought. It was disturbing that those who presided over our defenses should really believe that we could more effectively deter the Soviets by preparing to do less against them if they launched a war! Certainly it should have been clear, to the McNamara Defense Department as well as to the Kremlin, that the United States had no intention of launching a war. After all, there were a good many years when we enjoyed nuclear supremacy and could have put an end to the communist world at no real risk to ourselves.

But the anti-defense clique prevailed, and ever since we have been engaged in what has amounted to a one-sided disarmament program. Since the Cuban missile crisis, we have withdrawn all of our overseas-based nuclear missiles—from Turkey, Italy and the United Kingdom. We have drastically reduced the size of our strategic-bomber force; starved our military research-and-development programs of funds and talent, thereby retarding development of our military technologies; and canceled a number of promising new weapons-systems proposals.

FROZEN ADVANTAGE

We may well have lost one of the crucial battles of the cold war when we entered into the 1963 Nuclear Test Ban Treaty with the Soviets. I was one of 19 in the Senate who voted against the treaty. Now, after nearly nine years of reflection, my only regret is that the American people still have not been told the whole story about how the treaty worked to the Russians' tremendous advantage and to our own vast detriment.

Senators who voted against the treaty were not popular, but we who did so acted on the basis of information that was—wrongly, I still believe—classified secret and given to us behind closed doors. This was the background:

In 1958, the United States and the Soviet Union entered into a moratorium on atmospheric nuclear testing. U.S. test teams were largely disbanded, and our expertise flagged. In 1961, however, the Soviets suddenly and without warning ended the moratorium with the most extensive and sophisticated nuclear-test series ever mounted. The American response was to conduct some hastily organized tests, but these were ended before anything important could be accomplished.

Then, communist propaganda drummed up a tidal wave of specious sentiment for a treaty banning atmospheric testing, and got plenty of help from our home-grown anti-defense clique. The argument ran that a well-organized American nuclear-testing program would trigger a new round in the arms race; that the United States ought to be satisfied with having enough nuclear weaponry to blow up the Soviet Union several times over; and that we would contaminate the world's atmosphere with radioactive fallout. Having advanced their nuclear technology well beyond ours, the Soviets were naturally anxious to freeze their advantage.

To our great peril, they succeeded. Their tests enabled them to develop the kinds of monster warheads that they have since installed on their giant SS-9 ICBMs. And they learned how the electromagnetic radiations of high-yield nuclear detonations might affect our retaliatory ICBMs; never having fired such high-yield shots, we could not know what these weapons' effects might be, and the treaty prohibits us from learning so that we can move to counter them.

All this should have been clearly explained at the time to the American people. But President Kennedy and Secretary McNamara classified the information secret, prohibiting us from presenting it to the people. The treaty was then rammed through and hailed as a great peace breakthrough. In reality, it was a disaster for the American people and a great victory for the Russians who, with their superior nuclear technology, were soon embarked on a military buildup that has no parallel.

The Need for Realism. Now, nearly a decade later, we are again involved in arms-control negotiations with the Soviets. I share the hope that the SALT talks will produce some meaningful agreements, and that the world can start to stop arming. Meanwhile, however, we must be realistic. Although, since the SALT talks began in 1969, the Russians have continued to arm at a quickening pace, the United States has virtually been standing still. One reason is fear that any dramatic American move to redress the growing imbalance might jeopardize the chances of success in the SALT talks. Never mind the Kremlin's supreme indifference to the possibility that we might take exception to Russia's continuing military buildup!

A second, more understandable reason for our continued arms-development inertia is rooted in the Vietnam war. We are sick to death of war, defense spending and all things military. We are disgusted with and weary of the vilification that has been heaped upon us, at home as well as abroad, for our attempts to block communist enslavement in Southeast Asia. We yearn to turn away from foreign entanglements and to begin making our own house a better place to live in. We feel so strongly about this that President Nixon will risk his political life if he embarks on any new weapons-development programs requiring major expenditures. But if he fails to do so for much longer, he will gravely risk our national future!

The key to security is public information. There is no doubt whatever in my mind about the will and determination of the American people to safeguard their freedom and the future security of their children. But it is essential that we understand what has happened and is happening: that the Soviets have demonstrated that they have no intention of settling for parity with us, but are hell-bent on achieving across-the-board superiority. And we need only recall the Soviet slaughter in Hungary in 1956, Russia's brazen attempt in 1962 to place nuclear missiles in Cuba, and its ruthless suppression of Czechoslovakia in 1968 to imagine what kind of world it will be if we allow a dominance of Russian arms.

WANTED: A MANDATE

Elementary prudence dictates that we revitalize our defenses. Unfortunately, however, we have not lost so much time waiting futilely for the Soviets to rein in their arms programs that there seems no way to avoid becoming at least temporarily militarily inferior, perhaps sometime in mid-decade. Recognizing this, Sen. James Buckley (C.-R., N.Y.) last October suggested some steps we can and should take immediately to see us through the dangerous years ahead. First, he says, we must improve the accuracy of both our land-based Minuteman III ICBMs and our submarine-borne Poseidon missiles to the extent that, in an emergency, the President could attack the U.S.S.R.'s land-based ICBM force with reasonably high confidence of destroying a significant portion of it. At present, the President's only option is to attack Soviet population and industrial centers.

Senator Buckley also sensibly proposed that we begin research and development that by 1974 would enable us, if we deem it necessary, to rapidly replace an additional 450 Minuteman II ICBMs with a like number of Minuteman IIIs, each of which has the capability of striking a number of separate targets. And he suggested an additional three-year research-and-development program to improve the guidance systems in our submarine-launched Poseidon missiles.

Senator Buckley's good ideas all could have been implemented by adding $42 million to the defense-research-procurement authorization bill of $21 billion—a relatively modest increase, especially in view of what would have been accomplished in terms of national defense. I encouraged him to introduce them in the Senate as amendments to the bill, and supported him when he did so. But the Administration did not support the Buckley amendments; nor did many of my Senate colleagues, some of whom have been strong advocates of national defense. The amendments were rejected—mainly, I believe, because too many in the Senate have neglected to inform themselves of the reality of our growing peril, and are preoccupied with politically appealing domestic-welfare schemes they hope to finance with funds stripped from the defense budget. Also, I fear, too many who should be exercising leadership have been cowed by the anti-defense atmosphere that pervades the country.

I hope I have made it clear that we are running out of time. While many in Congress continue to do their best on behalf of national security, they need to know that they have the support of the people. For enormous opposing pressures continually are being brought to bear. The anti-defense lobby is well organized, articulate and effective. The time is long overdue for Americans who believe that our future safety lies in strength, and not in weakness, to make themselves heard, to let those who represent them in the House of Representatives and the Senate know how they feel. A ringing public mandate for a sensibly revitalized defense posture would be the clearest signal we could send the Kremlin that America's will to survive in freedom has not diminished.

COMMENTS ON THE MOSCOW AGREEMENT

(By Edward Teller)

Though the SALT Agreements signed in Moscow put us at a dangerous disadvantage, I recommend approval by the House of Representatives. It would take many billions of dollars in the next five years if we tried to catch up with the Soviets. In the absence of treaties, the Russian advantage would grow faster.

These agreements freeze our present disadvantage, but leave the door open for the Russians to catch up with us and surpass us in any field where we are still ahead.

It is claimed that we have a two-to-one lead in numbers of nuclear explosive missile warheads. This claim is probably correct but this advantage will not last. Mr. Laird's specific estimate that the Russians can develop MIRVs in two years is plausible.

The ABM Treaty has a valuable and novel provision: Article XIII. It establishes a standing commission with the purpose to strengthen the credibility of the treaty. It should be staffed by experts who possess vision and are dedicated to the defense of our Country.

According to this article, proof of compliance should be offered on a voluntary basis. Since it is difficult to establish foolproof checks, this provision is wise. It is, for instance, difficult to verify the exclusion of rapid reloading capability of ABM launchers. The question of whether or not missiles such as the SA-5 could be changed into an ABM defense by rapidly moveable radars is most worrisome.

The agreement on rocket deployment contains an Article VI which is similar to Article XIII of the ABM Treaty. In this case as well as in the ABM Treaty, it is important to pay attention to the national means of verification which is supposed to furnish *prima facie* evidence of compliance. These means of verification are secret. It is disturbing that on this vital point the public cannot get detailed information. In fact, even the information available to Congress is less than complete. One should raise the question whether these national means of verification should be declassified.

The geatest immediate danger of the agreements is unjustified euphoria. The great potential advantage is that the agreements spell out American inferiorities in vital fields; thus, needed preparation of our defenses may be spurred.

One phase of such preparation is research directed toward means of defense. Today such an activity is unpopular. If this does not change, our future is dark.

In the understandings which accompany the treaty, a most doubtful point is a limitation placed in the implementation of novel ABM ideas, should they develop in the future. It is indeed a mistake to limit the use of systems which do not exist as yet and may not even be imagined at present.

It is also important to know that the Russians have a decisive advantage over us in another vital respect. They have an effective plan to evacuate their cities, which they have published in half a million copies. In case they choose to subject us to nuclear blackmail, they would be able to protect their population so that their losses will not exceed under any circumstances 4%. At the same time in such an exchange more than half of the Americans would be killed.

Therefore, the generally accepted statement that our retaliatory power will certainly suffice is of most doubtful validity. It behooves us to take economically feasible measures to protect our people and thereby to insure peace for America as well as freedom from coercion.

Since we have lost leadership in the military field, it becomes even more important to cooperate closely with our Allies for the common defense of freedom. A united, free world could insure safety, peace and democracy. Nothing in the treaty or in its interpretation should stand in the way of the effort to build a better world based on the ideas of human dignity and safeguarded by proper measures to defend the citizens of a free society.

In summary, I recommend as safeguards

a) That thorough use should be made of Article XIII of the Treaty and Article VI of the Agreement to make it probable that the treaty is honestly observed;

b) That defense-oriented research receive vigorous support;

c) That practical and economic measures be taken to improve our preparedness in civil defense; and

d) That we establish better cooperation between the free and advanced democracies to insure our survival by collective action.

Once these safeguards are adopted, I recommend wholeheartedly the endorsements of the treaty and interim agreement, including particularly the planned cooperation in several fields which out President has called "building blocks of peace."

Finally, I refer to an excellent and recent study on the SALT accords which was called to my attention by its authors, A. H. Stanton Candlin and Gilbert S. Stubbs. The study presents a survey of some of the defects in the SALT agreements and how these defects all accrue to the military advantage of the Soviet Union. The study further explores the possibility of whether the Soviet Union will exploit the SALT loopholes based on the past Soviet diplomatic record and the Soviet military doctrine.

Mr. Candlin is a military analyst and author who served with the Allied Commission that supervised the disarmament of Germany following World War II. Mr. Stubbs, an electrical engineer by profession, is an assistant director of the Draper Lab at the Massachusetts Institute of Technology.

The SALT accords, everyone will concede, certainly have an important bearing on the national security of this Nation and by extension upon the security of the free world. The Stanton-Stubbs study provides much provocative discussion on various aspects of SALT which should be reviewed by the American public and, despite its length, I place the text entitled "SALT: Hanging By the Thread of a Soviet Promise" in the RECORD at this point:

SALT: HANGING BY THE THREAD OF A SOVIET PROMISE

(By A. H. Stanton Candlin and Gilbert S. Stubbs)

The recent Summit Conference in Moscow between Communist Party Secretary Leonid Brezhnev and President Nixon, and the Strategic Arms Limitation Agreements which were signed there, have been as rewarding to the USSR as they have been damaging and possibly disastrous to the United States.

Much has already been said about the advantage which the SALT agreements confer on the Soviets in terms of the total weight of nuclear warheads which they can deliver on the United States. Estimates of this advantage range from 3:1 to 5:1. Some military authorities contend that the presently larger number of U.S. warheads, obtained by dividing missile payloads into multiple, independently-targeted re-entry vehicles (MIRV's) is able to offset the Soviet advantage in total nuclear megatonnage. However, whatever may be the value of this U.S. capability, its countervailing effect is obviously short-lived, and will last only until the Soviets develop their own MIRV capability. The greater throw-weight of the Soviet SS–9 missiles plus the numerical superiority of the other Soviet missiles will allow the Soviet Union to obtain a virtually overwhelming superiority in flexibility, sophistication and destructive capability of their offensive missile systems.

The imbalance in nuclear weapons which the SALT pacts grant the Soviet Union is but one defect of these agreements, which are vaguely-worded, ill-defined, unverifiable and unenforceable.

It will be the purpose of the following analysis to present a survey of some of the defects in the current SALT agreements and to show how these defects all accrue to the military advantage of the Soviet Union. The particular question of whether the Soviet Union will exploit the SALT loopholes and SALT verification deficiencies to augment its present military superiority will be discussed in the context of the Soviet diplomatic record and the Soviet military doctrine.

It will be shown that the United States has no recourse but to reject the present SALT accords and to seek a new set of accords that are well-defined and enforceable by on-site inspection—and that until such time as meaningful and enforceable agreements are obtained, the United States has no choice but to take those measures necessary to restore the credibility of its strategic nuclear missile forces, and to regain as far as possible (and as rapidly as possible) a position which has almost been bargained away.

THE PROMISE NOT TO CONCEAL

Just one month prior to the Nixon-Brezhnev summit conference one of the authors prepared a paper for the April 28, 1972 issue of the American Security Council entitled, "On-Site Inspection: The Key Issue in SALT." This paper delved into the many ways in which the Soviets could completely ignore and circumvent any SALT agreement that was not based on ironclad provisions for verification by on-site inspection. The paper stated three points which are particularly pertinent to the SALT agreements now before the Senate.

"1. No missile or arms limitation pact can be safe without an agreement to open all weapons installations and all suspected weapons installations to close-up physical inspection by international inspection teams which are given unrestricted freedom of travel and entry.

"2. An arms agreement without provisions for direct personal inspection would not halt the "arms race"; it would merely guarantee success to any nation that would seek to achieve an overwhelming military superiority through the concealed production and concealed deployment of new missile systems. An inspectionless agreement would permit Communist bloc nations to take advantage of their closed societies to conceal massive nuclear missile buildups, while at the same time being certain that the open society of the United States would not permit such a subterfuge.

"3. At best, an arms limitation agreement without inspection would create a temporary, false impression of security. At worst, it could leave the United States with a choice only between surrender and annihilation by overwhelming nuclear forces."

At the time these three points were set down, the public was still uncertain as to what form the expected SALT agreements would take. Uppermost in many minds was a fear that U.S. SALT negotiators would defer to the repeated Soviet refusals to permit any kind of on-site inspection. However, on that particular concern the foregoing article quoted favorably some reassuring words of Secretary of Defense Melvin R. Laird, published in the March 27, 1972 issue of U.S. News and World Report:

"But it is my strong view that it would be a great and dangerous mistake for the United States to take unilateral disarmament actions. In short, we must have verifiable mutual-arms-limitation agreements . . . To put it bluntly, this President and this Secretary of Defense are not going to place the destiny of the United States or of our friends and allies, at the mercy of the hoped-for good will of any other power."

Two months later, these fine words of Secretary Laird were entirely ignored as two agreements were signed in Moscow that place the destiny of the United States and its allies squarely in the lap of the "hoped-for good will" of the Soviet Union.

In a remarkable capitulation to the Soviet Union, the Moscow SALT agreements contain absolutely no provision for any type of verification, on-site or otherwise, that goes beyond the normal means now employed (without agreement) to gather military intelligence. Such independent intelligence gathering methods are referred to in the SALT agreements as "national technical means of verification". They include, principally, the use of satellite surveillance, aerial reconnaissance and electronic intelligence in conjunction with the so-called "classical" intelligence sources.

Recognizing the deficiencies of these "allowed" means of verification, SALT negotiators have inserted a clause which calls upon the U.S. and the Soviet Union "not to use deliberate concealment measures which impede verification by national technical means . . .". This clause is found in Article XII of the Treaty on ABM's and in Article V of the Interim Agreement (on offensive missiles). Insofar as the United States is concerned, the effect of this clause is to hang U.S. security on the tenuous thread of a Soviet promise not to engage in concealed missile buildups.

Defenders of the SALT pacts have apparently chosen to ignore the significance of the "deliberate concealment" clause. They continue to assert, as they have in the past, that "national technical means of verification" are adequate in any case, independent of any Soviet attempts at concealment. They are able to avoid any proof of this assertion by taking refuge in the veil of secrecy that must necessarily surround the methods of military intelligence gathering. They are able to say, "If you knew what we know, you would not question the reliability of our verification means".

However, the very fact that secrecy is required to protect "national technical means of verification" is in itself an indication of extreme fallibility. One major reason for this secrecy is that once the details of any particular means of verification are known, countermeasures can be developed to thwart that method of verification. The delicate and uncertain balance between measures and countermeasures in the intelligence field makes any secrecy-dependent means of verification highly risky as a sole basis for arms limitation.

TACTICS OF CONCEALMENT

It is on the relatively recent development of surveillance satellites that SALT proponents appear to be basing their claim for a "see all, know all" capability in the so-called "national technical means of verification". In promoting this unfounded claim, the SALT proponents are able to take advantage not only of military secrecy but also of the awe and wonderment with which the public regards any space achievements.

Fortunately, the barriers of secrecy need not be penetrated to disprove any claims of satellite infallibility. That is, it is not necessary to go into details of what satellites can do, which is restricted information, but rather to explain what satellites cannot do, which is determined by the laws of nature.

Satellites cannot, for example, examine the interiors of missile sites, buildings, tunnels, caves, mines, trains, trucks, tankers, fishing trawlers, etc.; and satellites cannot probe the crust of the earth with sound and electrical waves or with sample borings. Satellite measurements of nuclear particles, which are used to detect nuclear explosions, are not applicable to detecting the dormant warheads of nuclear missiles on the surface of the earth. Furthermore, the nature of magnetic and gravitational fields is such that a local variation in these fields produced by any man-made object on or beneath the earth's surface would be so attenuated and marked by poor resolution at satellite attitude that even perfect sensors would be incapable of obtaining any data that would be meaningful in a military sense.

By process of elimination there is only one means of measurement open to satellites for the surveillance of objects on the surface of the earth. That is the measurement of electromagnetic radiation, which ranges from ultraviolet to visible light to infrared (heat) radiation to radio waves to x-rays to gamma rays. Such radiation may be emitted and/or reflected from the earth. Reflected radiation may come originally either from the sun or from the satellite (for example, from radar or laser systems).

(Lest any deeper meaning be ascribed to the foregoing conclusions, other than the laws of nature imply, it is here stipulated that the writers have not had access to current classified information on satellite measurement capabilities.)

In the case of offensive missiles, which do not require radars, lasers, or radio communication for their operation, their detection by satellites must be linked to (1) a telltale emission of infrared (heat) waves and light from the missile installation, (2) a revealing reflection of radar or laser radiation transmitted from the satellite, or (3) a significant pattern in the reflection of solar radiation. None of these categories of reflected or emitted radiation pose any insurmountable obstacles to a successful concealment of offensive missiles by scientific camouflage. All that is required is to enclose the missile and its launching system in a building or other structure whose surface reflects and emits radiation in a way that does not betray its contents.

Parenthetically, it should be mentioned that even in the area of radio emissions there is a whole field of deceptive action within the category of ECM (Electronic Countermeasures) which has an important bearing on the boundary conditions or limits of acquisition of satellites or special aircraft.

The ease with which satellite measurements can be deceived depends on the type of environment in which the missile system is concealed. Missiles can be concealed in caves, in mines, in forests, in railroad boxcars, in rivers, in harbors, on the bottom of the sea, in barges, in fishing trawlers, in freighters, in tankers, in any metal structure or building that conceals its contents, in dummy oil wells, in other dummy structures which are disguised as components of oil refineries, chemical plants, steel plants, electric power plants and the like, in silos which are installed beneath the surface of a mountain by drilling upwards from highway or railway tunnels, and in many other places human ingenuity can devise. Obviously, concealment can be easier in areas where the normal transportation and communication requirements parallel those of a missile installation, and where the physical dimensions of the missile system either correspond to or are masked by the characteristics of the environment, and where the normal characteristics for the emission and reflection of radiation either correspond to or mask those of the missile system. Many of the places of concealment listed above fit these requirements.

To answer those who will suggest that such concealment is too impractical or too costly, it is necessary to refer only to the effective concealment of entire factories by the Germans during World War II. The construction and maintenance of such factories, located underground, was made entirely feasible by the availability of slave labor—which is available also to the Soviets.

The resource and ingenuity which the Germans displayed in the concealment and protection of their factories from location and allied bombing had to be seen to be fully believed. One of the authors had this opportunity of first-hand observation while serving with a military government and with an allied commission which supervised the disarmament of Germany. In this capacity, he carried out aerial reconnaissance and on-site inspection of a number of underground factories and fully camouflaged strategic surface targets. A few of the examples of German concealment familiar to this author are described below.

Examples of German concealment are legion. A particularly intriguing case was that of the Kriegsmarine's principal Torpedo Research and Development Establishment at Eckenforde, whose general location was known, but where the Germans were able to conceal its extent and the full nature of its operations by the skillful use of artificial fog and other measures. This author has examined an underground refinery with full scale straight-run distillation units about seventy feet high which were concealed in a small hill whose rock had been completely hollowed out for the purpose and whose entrance could only be detected from the distance of a few feet at ground level—and even then only when the exact position was known. On one occasion this author when fully supplied with map references and good directions had difficulty in finding the concealed entrance to an underground factory installed to produce ball-bearings—which was totally invisible from above and only partially visible within a restricted range of access from the ground. He has also flown over certain wartime oil-field and oil delivery targets on the Kiel Canal at a height of about 200 feet being quite unable to distinguish any special characteristics of pumping stations disguised as thatched cottages whose exact location and detailed construction were known to him. This was not surprising because the pumps in some cases were below light screening structures which had been built inside the cottages and the machinery could not be seen even by looking through the windows. Also, at Flemhude the Kriegsmarine (German Navy) constructed an underground oil storage installation designed to hold seven million tons of oil in large concrete storage tanks. This was totally invisible from the air.

Another impressive example of concealment was the German construction of a small arms and medium ordnance factory in a mine. The sudden influx of gun-manufacturing machinery and outflux of "ore-bearing" railroad cars (containing guns) was explained by the announcement of the discovery of a new vein of ore. All the operations of the factory were masked by the simulated operations of a mine, even to the extent of supplying real mining equipment to the mine.

A masterful piece of concealment by the Germans was the construction of an arms factory as part of a prison, and the use of the prison population as a factory labor force. The Soviets are easily capable of such a ruse to conceal a missile component factory or a launch facility. It is well known, in fact, that many Soviet strategic projects have been constructed by slave labor administered by the MVD.

The activities of the allied disarmament commission sometimes involved the comparison of wartime intelligence on Germany with what was actually found by first hand inspection. The discrepancy was great. No satellite system could possibly fill this kind of gap.

In considering the virtually unlimited possibilities for missile concealment by the Soviets it should be borne in mind that missile facilities need not be accompanied by the massive, complex, underground concrete structures that are associated with U.S. missile complexes. It is quite feasible to construct light, mobile launchers for ICBM's, as the Soviets have already done for their intermediate range ballistic missiles (IRBM's). It is particularly significant that the SALT Interim Agreement places no limit on land-mobile ICBM's, as per the Soviet refusal to do so. This fact strongly suggests a need to re-examine recently publicized proposals to give our own ICBM's mobility that would help to protect them from a Soviet first-strike attack.

On the subject of concealment, two popular misconceptions about missile transportation and storage should be corrected. First, missiles need not be transported intact. Rather, it is quite feasible to design any missile so that it can be shipped as sections in crates whose physical size and dimensions give no clue as to their contents. These component sections can then be assembled at a concealed launch site. Thus, transportation from the factory to the launch site presents no problem in concealment. Second, missile storage, either at the launch site or elsewhere, need not be in the upright position, and therefore requires neither a tall building nor a deep hole.

In order to execute plans depending on large-scale mobility of ICBM's, the USSR possesses extremely adequate means for achieving this since they have very extensive state-controlled air cargo fleets as well as rail and inland waterway routes already involved as a means of logistic dispersal and deployment.

ARE SUSPICIONS ENOUGH?

Some defenders of the SALT agreements may contend that it is not necessary to determine with an absolute certainty that the Soviets are violating the SALT agreements with a concealed missile deployment. They may argue that "national technical means of verification" should at least be capable of uncovering enough evidence of any concealed Soviet buildup to generate suspicions in Washington. While not for one moment accepting this presumption of general capability, we may nevertheless ask, "What would or could Washington do in response to such suspicions?"

Viewed from a historical perspective, the chances of any U.S. response to mere suspicions of a Soviet arms buildup appear to be very small. On two occasions during the past decade the Soviet Union has solemnly promised not to seek a military advantage through a massive deployment of missiles, and on both occasions it has subsequently violated that promise in a way that gravely threatened the security of the United

States and/or its allies. In both cases, which shall be described below, the Administration then in Washington initially rejected all evidence of these buildups and publicly denied that they were taking place. Fortunately, for reasons best known to the Soviets, neither of the Soviet missile deployments was concealed, so that conclusive proof of these deployments was ultimately obtainable by aerial photographs. It was not until this proof was obtained that the respective Administrations were finally able to face the fact of Soviet duplicity.

EXAMPLE OF THE FIRST SOVIET MISSILE BUILDUP

The first of the Soviet missile buildups occurred in 1962, in Cuba. In this case we have the admission of Kennedy's Director of the Bureau of Intelligence and Research in the State Department, Roger Hilsman, that "classical" intelligence from CIA agents in the field was rejected for almost a month, until direct photographic evidence of the Soviet offensive missiles was obtained by a U-2 flight on October 16, 1962. He explained this policy as follows:

"To take the action the United States did in fact take and to mobilize public opinion in the United States and our allies to support that action requires 'harder' information than agent reports. It was only in the third [i.e., deployment] stage—after missiles and supporting equipment had actually been installed at the launching sites—that the necessary 'hard' information could be acquired. The 'hardest' information of all were pictures, for example, and it was only in this third stage that the installations would be recognizable in aerial photography." (Roger Hilsman, *To Move a Nation*, Doubleday and Company, Inc., 1967, p. 184.)

This statement is subject to a good deal of critical re-interpretation. When intelligence work is properly conducted and agents are properly selected, trained and used, the intelligence which they can obtain is within the hardest of all categories—and in many cases has revealed (*to those entitled to receive it*) with absolute accuracy the intentions of an enemy as well as his capabilities. During WW II such decisive battles as those of Kursk, the Battle of the Atlantic and the Normandy Invasion depended to a great extent on the successful use of agents and of well-tried methods now regarded as "classical". These are still supremely effective—and scientific aids, however sophisticated, can still only be regarded as an auxiliary to them rather than as a primary and basic substitute for other methods for which, in fact, there is no substitute. Hilsman himself, elsewhere in his book, discussed the problem of over-reliance on scientific aids during the Cuban Missile Crisis:

"As the scientific instruments of information-gathering have become so marvelous, the intelligence community, having the normal American love of technical gadgetry had neglected the time-consuming, tedious, but still essential methods of classical espionage. Recruiting, training, and implanting an agent may take years, and it may take still more years before he reports anything of significance. It is so much easier to send a U-2 or use some other scientific gadget. But there are some matters on which we need information that even a U-2 camera cannot pick up." (p. 191.)

Notwithstanding the efforts of dedicated and resourceful agents, classical methods can be thwarted by techniques of deception, just as can satellites and other purely technical means. This is a built-in hazard, which is quite evident when the potentialities of double agents are taken into account.

Together, classical and scientific national means of verification are necessary but *not sufficient* to police an agreement in which the U.S. security is critically dependent on absolute Soviet compliance. To impose such a burden on "national means" is to ask dedicated people to perform an impossible task, risking in some cases their lives and personal security to do what the diplomats did not have the courage to do around the conference table by insisting on on-site inspection.

EXAMPLE OF THE SECOND SOVIET MISSILE BUILDUP

A disbelief of early evidence of a second Soviet missile buildup was voiced by the Nixon Administration in response to Israeli charges of a SAM missile buildup along the Suez Canal. This missile buildup was in direct violation of an Egyptian-Israeli cease fire agreement, which took effect at midnight, Friday, August 7, 1970. Unlike the Cuban buildup, we are told that the initial evidence in this case was photographic. According to the New York Times, August 14, 1970 (page 6), only three or four hours after the cease-fire began,

"Israeli aircraft on reconnaissance missions were said to have sighted the [Soviet] missile batteries advancing toward the Canal. The United States was immediately informed. The reply from Washington was described as tentative. American reconnaissance was said to have confirmed that there were missiles in the forward position, but there was no firm evidence that they had not been in these locations before the cease-fire took effect."

However, such "firm evidence" was then supplied by the Israeli Ambassador to the United States, Itzhak Rabin, who according to the Times, flew from Israel to the United States on Monday morning, August 10, "with Israeli reconnaissance photographs said to have been taken at 3:30 Friday afternoon, before the cease-fire, showing that the movements were indeed new". Despite this Israeli evidence the Nixon Administration refused to believe that the Egyptians and Soviets were violating the cease-fire, and continued to express that disbelief until September 1, at which time the Administration revealed that not only had the Soviets violated the cease-fire in the initial hours after Friday midnight, but they had continued to move in SAM missiles during much of the month of August!! The final "convincing" evidence was said to have been in the form of photographs taken by U–2's and satellites.

The effect of the delayed U.S. response in the Suez crisis was described by the New York Times editorial of September 20, 1970:

"The weak American reaction to the original violations, the initial skepticism voiced about Israel's charges and the withholding of Phantom jet-fighters from Israel in the face of a shifting power balance doubtless encouraged Moscow and Cairo to go on with their buildup."

We cannot help but wonder what would have happened if the Soviets had concealed their missiles so as to prevent photographic evidence from being obtained in the 1962 Cuban crisis or if they had decided to conceal their missiles along the Suez Canal after the U.S. had rejected early photographic evidence. Would the existence of all these missiles still be a subject for debate today?

It should be pointed out that responsible sources have claimed that there are still Soviet missiles concealed in Cuba. Aerial photographs can neither prove nor disprove such claims. As President Kennedy once explained, "We cannot prove there is not a missile in a cave or that the Soviet Union is not going to ship next week".

The requirement for direct, photographic proof, imposed by both Democratic and Republican Administrations in two different situations, may hold some significance in relation to the present SALT agreements. Normally, the proof from "classical" intelligence sources can be just as reliable as aerial photographs, perhaps sometimes more reliable. However, in these times when the credibility of government officials (and their intelligence sources) has been repeatedly questioned (often unjustly), only photographic evidence may suffice to convince the general public. Under the present SALT agreements it is not impossible that some future Administration which has been able to acquire information of a concealed nuclear missile buildup would nevertheless be unable to convince the public of this buildup because of an inability to photograph the concealed missiles. The possibility of such an occurrence can neither be ignored nor dismissed.

PROMISES MADE TO BE BROKEN

In deciding whether Soviet promises have any value in the present SALT agreements, we should not lose sight of the fact that both the Suez and Cuban missile deployments were carried out in violation of prior agreements and promises, and that even during these deployments the Soviets repeatedly denied that they were taking place. This use of the "big lie" as a cover-up for clandestine Soviet operations is neither an isolated nor an occasional phenomenon, as any cursory look at Soviet history will reveal.

The American Bar Association published a particularly informative study in this regard in 1958. This study, which was conducted by the ABA's Special Committee on Communist Tactics, Strategy, and Objectives, summarized the record of Communist promises up to 1958:

"During the past 25 years, the United States has had 3,400 meetings with the Communists, including Teheran, Yalta, Potsdam, Panmunjom and Geneva. The negotiators spoke 106 million words (700 volumes). All this talk led to 52 major agreements, and Soviet Russia has broken 50 of them. The Communists have followed Lenin's dictum about treaties and agreements: "'Promises are like pie crusts—made to be broken.'"

One may well ask, in the face of this evidence of Soviet bad faith, "Should we be so foolish as to trust them again?" And yet, in the same year the ABA report was published, the United States entered still another agreement with the Soviet Union, this time an agreement to impose a moritorium on nuclear testing. The Soviet Union kept this agreement for three years—just long enough to acquire a substantial advantage over the U.S. in the development of new nuclear weapons, and to complete extensive preparations for the testing of these weapons which began late in 1961. President Kennedy strongly condemned this Soviet subterfuge, vowing never again to enter into a testing moratorium which did not have provisions for inspection:

"We now know enough about broken negotiations, secret preparations, and the advantages gained from a long test series never to offer again an uninspected moratorium." (1962 speech of President Kennedy, quoted by *Human Events*, June 3, 1972, p. 4.)

Nevertheless, in spite of this strong declaration of President Kennedy and in spite of the subsequent indication of Soviet bad faith in the 1962 Cuban Missile Crisis, the United States allowed the Soviets to retain their ill-gotten lead in nuclear weaponry by signing an atmospheric-test ban treaty in 1963—an agreement which once again contained no provisions to inspect against secret test preparations!!

To place the reliability of Soviet promises further in perspective, it may be noted that shortly before the present SALT accords were completed the Senate Judiciary Committee released a report which updated the Soviet record on honoring summit agreements: 24 out of 25 summit agreements violated to date!

The dismal Soviet record in honoring agreements points to just one conclusion: As long as the United States continues to enter into unenforceable, unverifiable agreements with the Soviet Union, the Soviets will continue to break these agreements whenever it serves their purpose to do so.

In this regard their motives and intentions are obvious when the rate of Soviet missile and submarine build-up is considered which continued and even accelerated during the period of the SALT negotiations. The rate at which it still continues is a commentary on the use of the term "limitation" in connection with those or future SALT discussions.

LOOPHOLES

Not only are the current SALT agreements not enforceable and not verifiable to a degree that could ensure compliance, but a close examination of these pacts reveals numerous ambiguities and omissions that virtually invite a concealed missile buildup by the Soviet Union. A few of these deficiencies are listed below:

(1) The Interim Agreement avoids specifying any upper limit on the number of fixed land-based ICBM launchers, requiring the parties to this agreement merely to support an undefined status quo by not initiating any new launcher construction after July 1, 1972. Donald G. Brennan of the Hudson Institute, who has always concurred with past disarmament efforts, sees a major loophole in this SALT feature: ". . . the Soviets have refused to say how many missiles they have. Thus, our estimates of the Soviet strategic forces are presumably lower bounds . . . If we later discover a whole field of ICBM's, which I am told has happened in the past, there may be some controversy over just when it was started". (Donald G. Brennan, "When the SALT Hit the Fan", *National Review*, June 23, 1972, pp. 685–692.)

(2) Article V of the Interim Agreement, which prohibits "deliberate concealment measures", provides no definition of what constitutes "deliberate concealment". The Article states only that this prohibition "shall not require changes in current construction, assembly, conversion or overhaul practices". Accordingly, the Soviets will be able to excuse any future concealment techniques by merely claiming that these techniques are not changes from past practices. Article XII of the Treaty of ABM's offers the Soviets the same loophole.

(3) The Interim Agreement deals only with the construction of fixed land-based launchers and submarine launchers for offensive missiles. The Agreement does not prohibit the continued production of the missiles themselves or of the sophisticated electronic equipment required for launch operations. This omission is most serious in the case of the huge Soviet SS–9 missiles and their even larger replacements. The United States has no modern ICBM's comparable to these mammoth first-strike weapons. It would take the U.S. perhaps five to ten years to develop such weapons—plus more time to produce and deploy them. On the other hand, the Soviets would require a relatively short time to construct the launch facilities for accumulated stockpiles of these massive weapons.

(4) While the Treaty on ABM's does, in effect, prohibit the stockpiling of ABM missiles in Article VIII, this prohibition is obviously not capable of being enforced by "national means of verification". It should be noted that the Soviet ABM launching equipment does not involve underground silos, and would therefore be capable of being rapidly deployed from a concealed stockpile. Moreover, it has been pointed out by Senator James Buckley, in his June 29, 1972 testimony before the Senate Foreign Relations Committee, that the Soviet single-ABM-launchers, permitted by the ABM treaty, are capable of being modified covertly so that they will be able to launch more than one missile in rapid succession.

(5) Senator Buckley has further suggested that the Soviets also have the possible option of upgrading their new anti-aircraft systems to an ABM role: "There are those who believe, for example, that the existing SA–5 missiles, with their effective altitude of 100,000 feet, could be given an ABM capability and connected with the necessary radar installations without detection".

(6) Strangely, the particular weapons which the Soviets could be deployed most rapidly from concealment are not even covered by the SALT agreements. These are the land-mobile ICBM's. U.S. negotiators, who originally demanded the inclusion of these weapons, subsequently capitulated to Soviet intransigency on May 20, 1972, only six days before the SALT pacts were signed. In a most ineffectual attempt to mitigate the effects of this astounding Soviet diplomatic victory, U.S. negotiators issued a unilateral statement on May 20 in which they declared, ". . . the U.S. would consider the deployment of operational land-mobile ICBM launchers during the [five year] period of the interim agreement as inconsistent with the objectives of that agreement". This statement makes little sense when it is realized that the very fact that such launchers would be rapidly deployable makes it unnecessary to deploy them until they are needed—either for a surprise nuclear attack or for an attempt at nuclear blackmail.

(7) The Soviets have refused to define what they consider to be a "heavy ICBM" under Article II of the Interim Agreement, which prohibits the replacing of "light ICBM's" by "heavy ICBM's". Without a binding definition, the Soviets are free to do as they please under this article.

(8) A further ambiguity on missile replacement relates to the question of whether the Soviets are now replacing their intermediate missiles with SS–11's that have an intercontinental range. Senator Buckley testified:

"It is not at all clear that the so-called 'national means of verification' available to the United States will suffice to provide conclusive evidence as to whether or not Soviet medium and intermediate range ballistic missiles (M/IRBM) will be upgraded to an intercontinental capability through the replacement of obsolescent SS–4 and SS–5 missiles with 'variable range' SS–11 missiles. It has already been noted in the press and elsewhere that the Soviet Union has begun to place SS–11 missiles in her M/IRBM fields in the western part of the Soviet Union. If the United States does not obtain ironclad proof that an upgrading to an intercontinental capability is not taking place, the Soviet Union could add an additional 700 ICBM's to its arsenal without detection."

DANGER OF A UNILATERAL FREEZE IN WEAPONS TECHNOLOGY

Perhaps the single most objectionable feature of the present SALT agreements is that they guarantee that the Soviet Union will be the sole future possessor of a unique class of weapons for which the United States has no modern equivalents. These are the colossal SS–9 first strike ICBM's and their even larger replacements permitted by SALT. It is through the development of these massive-payload missiles that the Soviet Union now poses the threat of a first-strike capability against U.S. ICBM's. And, it is through these same giant carrier rockets that the Soviet will enjoy an unmatched future flexibility in the delivery of weapons of mass destruction on the United States.

A significant aspect of the unilateral Soviet acquisition of the SS–9-class ICBM's is that this acquisition occurred in the face of a unilateral, self-imposed freeze on such weapons by the United States. It was held in this country that any such weapons were unthinkable because they would constitute a first-strike capability that would be contrary to the spirit and rationale of the SALT negotiations. Ironically, the Soviets, who proceeded with their SS–9 buildup independent of SALT, have now been granted a permanent superiority by the SALT Interim Agreement which prohibits the U.S. construction of launchers for similar size missiles.

A very real danger now exists that the pattern of events of the SS–9 case may be repeated in other areas of weaponry, with the Soviets ultimately acquiring overwhelming superiority in crucial arms categories where the United States has frozen its own development of new weapons and new weapons technology. Such U.S. freezes may be self-imposed in the "spirit of SALT," as they were in the case of the SS–9 weapons category, or they may be imposed through the medium of unenforceable and unverifiable agreements negotiated in SALT. The magnitude of the danger that the Soviet Union will not be bound to impose identical freezes on its own weapons development becomes quite apparent when one considers the possible outcome of a unilateral Soviet acquisition of a near-absolute capability in either ballistic missile defense or anti-submarine warfare. Either development could make U.S. nuclear forces obsolete virtually overnight.

Proponents of the present line of negotiations in SALT must face the fact that "national means of verification" are no more capable of detecting the covert development of new weaponry than they are capable of detecting the concealed production and deployment of current weapons systems. This fact becomes particularly understandable when the full potentialities for the use of deception in developmental testing are realized. Thus, in the final stage of testing, where the weapons system would presumably be most visible, it is quite feasible in most cases to disguise both the test and the system to appear as something else—either as the operation of a non-military system or as the testing of an already existing weapons system. History indicates that the Soviets are not beyond such subterfuges.

In the case of initial SS–9 developmental tests, New York Times correspondent William Beecher suggested on October 28, 1969 (pp. 1, 12) that the Soviets deliberately tried to conceal the nature of these tests by launching the missiles from an area normally reserved for non-military space vehicles.

"The new Soviet intercontinental missile [SS–9] is also a puzzlement. Its test firings from Plesetsk in northwest Russia, seemed to be of a new space vehicle. But analysis decided it was in fact an intercontinental missile when shots were fired at a test range in the Kamchatka Peninsula, 3,500 miles away. Until now the Russians have tested new missiles in the Pacific before displaying them. And they did not try to disguise the tests to look like something else, whereas, informed sources say, this time they did just that. Since the United States experts believe they may have to depend largely on reconnaissance satellites to police any arms control agreement, they are disquieted by presumed Soviet attempts to disguise their testing." [*Emphasis supplied.*]

While Mr. Beecher did not indicate the extent to which U.S. Intelligence operations were deceived by the SS–9 testing subterfuge, he did reveal a serious failure to predict the missile buildup which included the SS–9:

"As recently as last November, for example, the intelligence community predicted that the Soviet Union would stop deploying more intercontinental missiles when they had roughly equaled the 1054 in the American arsenal. The Russians have far exceeded this level, however, and show no sign of stopping."

A concrete example of one U.S. failure to determine the nature of early developmental testing by the Soviet Union has been cited by columnist Joseph Alsop. In an article which appeared in the *Washington Post*, November 22, 1971 (p. A17), he described the initial U.S. reaction to the testing of a Soviet destroyer satellite, designed to blind reconnaissance satellites by exploding in their vicinity. According to Alsop, the successful exploding of this satellite near a target satellite, "was interpreted in reverse by the more wishful members of the intelligence community. It was said to be a sad failure, because the destroyer satellite had blown up while the target satellite continued on its course. In fact, as is now known, the target satellite was badly hit by pellets that the explosion of the destroyer satellite is designed to expel. As the target was a mere drone, this made no visible difference. But if the target has been a reconnaissance satellite the damage to the complex and vulnerable instrumentation would have caused instantaneous blinding."

It is notable that to date the U.S. has attempted only one mutual freeze on weapons development with the Soviet Union—and that this resulted in the Soviet development of the very weapons proscribed by the freeze. In April 1967 the United States ratified the Outer Space Treaty, which banned orbiting nuclear weapons but provided no means of either verifying or enforcing this ban. Seven months after the ratification of this treaty the world learned that the Soviets had broken the spirit, if not the letter, of the Treaty by developing a so-called Fractional Orbital Bombardment System (FOBS).

The FOBS was claimed to be exempt from the treaty because it orbited for less than a full revolution before launching its nuclear payload. Of course, this exempting feature was of scant comfort to the treaty signers. The resulting helplessness of the signers was indicated by the then-Secretary of Defense Robert S. McNamara. Asked how he would respond if FOBS were to be circulated for a full revolution or more, McNamara, according to the Washington Post of November 4, 1967, replied, "We will observe it".

Despite the lessons of history and logic the present SALT Treaty on ABM's embarks on the perilous course of attempting without inspection safeguards to prohibit the development, testing and deployment of "ABM systems or components which are sea-based, air-based or mobile land based". (Article V.) Senator Buckley, in his recent testimony on SALT, was particularly critical of this treaty clause, pointing out that it "would have the effect, for example, of prohibiting the development and testing of a laser type system based in space which could at least in principle provide an extremely reliable and effective system of defense against ballistic missiles". Here the potential danger is not just the denial of a means of defense to the U.S., but also the possibility that the Soviets themselves will acquire such a defense unilaterally through their own covert efforts.

Evidence now seems to be mounting that during SALT II there will be an attempt to promote a weapons technology freeze that would undermine the U.S. submarine capability at sea and interfere with our defense against anti-submarine warfare measures to place our second strike capability in hazard. Paradoxically, this freeze would be promoted in the name of *preserving* the U.S.-Soviet submarine deterrent forces by freezing anti-submarine warfare (ASW) developments. However, such a freeze must by its nature include also the development of countermeasures to ASW, which would be needed by the United States to guard against a covert development of advanced ASW technology by the Soviets.

If the Soviets gain the objective of a clear preponderance of offensive force by the present SALT agreements—and the crippling of our retaliatory power by subsequent agreements—they will have achieved the situation of nuclear checkmate for which they appear to be playing.

CONTEXT OF SOVIET NUCLEAR DOCTRINE

When considering the likelihood of Soviet subterfuges to evade the SALT agreements, one should take into account the doctrines which would cause such evasions.

It is important to recognize that the embodiment of the fullest capabilities for mobility and surprise in almost all aspects of their nuclear armament and its related doctrine, and the strategic deployment of their nuclear inventory, the Soviets proceed on the basic assumption that the capability for decisive offensive action is not only possible but mandatory. Such action is total in its concept and its applications to all elements of force within a wide range of alternative forms.

In no way, for example, does the Soviet operational planning or employment of combined forces call for a mutually exclusive distinction between "Strategic Forces" and "General Purpose Forces" as is the practice in the United States and to an increasing extent in the West. Indeed there are, within their system, modes of military thinking which have no real counterpart in the West which they call "operational art."[1] It is within this area that modern ideas about the application of nuclear warfare to the use of armored forces and the Grand Tactics of the land battle can be realistically explored and with the aim of victory in mind—at whatever cost. An examination of Soviet doctrine leaves no room for doubt that they believe in the essential validity of an overall strategy of combined arms within which ground forces and naval forces have a decisive strategic role.

SOVIET NUCLEAR DOCTRINE—GENERAL OBSERVATIONS

Before the Soviet Nuclear Weapons Program had gained full momentum, there were some evidences of a certain lack of precision in defining the nature of the military doctrine which would be needed in order to take these weapons into account. However, during the period 1954–55, a significant series of about fifty articles on nuclear warfare, modern weaponry, jet propulsion, radar, etc., appeared in the professional military press under the general title, "The Military-Technical Revolution", because these new developments were supposed to represent a break with the past and a new dimension in warfare was emphasized by Major General G. I. Pokrovsky who wrote in 1956:

"The appearance of the atomic weapons, long range rockets, guided missiles, supersonic aircraft, helicopters, nuclear-propelled warships, radar for reconnaissance and for bombing and for many other things have so strongly affected the possible means of combat that contemporary military affairs are completely dissimilar to what they were during the Great Fatherland War of 1941–45, or what they were in recent times in Korea. Therefore, at the present time, the partial experience of the wars of the past can only be regarded as important landmarks of the past and not as unchanging dogma determining military affairs of today and tomorrow." (Major General Engineering Technical Service, Prof. G. I. Pokrovsky, "Nauka i technika v sovremennykh voinakh", Science and Technology in Contemporary Wars, Voenizdat, October 1956.)

However, in spite of some professional opinions which accepted the idea of the indecisiveness of modern war and concepts of deterrence similar to those held in the U.S., after the decision had been to attain overwhelming superiority ("podavliausche prevoskodstsvo" in their teminology), the tune of their pronouncements began to change rapidly.

Soviet Nuclear Doctrine has gone, in the main, through three phases:

(1) Lip service to Deterrence Theory and repudiation of the decisiveness of nuclear arms. This has reflected a position of aspiration and inferiority to the U.S.

(2) Acceptance of the possibility of decisive victory in war in which nuclear weapons are used but also postulating the need for teamwork for all arms. Nuclear striking power regarded as an extension of the fire-power of the Armed Forces—characteristic of the period of approach-to-parity.

(3) an emphatic re-assertion of the decisive potentialities of nuclear warfare and the attainment of victory by combined arms. Recognition of the primary role of nuclear strikes in gaining such decisions and of the importance of pre-emption or surprise. Indicative of the possession of conscious superiority in nuclear armament and more effective defensive arrangements.

The year 1965 was an important year in the evolution of Soviet Doctrine, and in the evolution of their weapons systems it signifies the abandonment of any further adherence to deterrence of theories of "sufficiency" and may well have been linked to important assessments of defensive or damage limiting systems. In the important study issued by the Royal United Services Institute for Defense Studies (London) in 1971 called "Soviet Military Power" by John Erickson there is the following observation:

"It might be argued that these assertions [by the Soviets] about 'superiority' were connected not so much with any real concept of numbers but rather with the attempt to introduce 'reality' into the discussion about nuclear war—that war between the two system *is* possible, that the concept of 'victory' or 'winning' continued to have meaning if effective margins of strength were brought into play and, above all, that undue reliance on 'deterrence' in the Khrushchev style was no substitute for the assurance that the Soviet Union can realistically stand up to the risk of nuclear war. This concept was summed up by Colonel Telyatnikov[2] who insisted upon the 'correct understanding by our cadres of the possibilities of conducting a victorious nuclear missile war', demanded an '*active struggle* for creation of *definite capabilities* for achieving victory' and dismissed 'passive dispositions or views of certain people which border on fatalism'."

Throughout the development of Soviet thinking on this subject runs the consistent thread of the dominance of trained professional military thought applied with imagination and perseverance to the task in hand and basing its conclusions and findings on tested and well-tried principles of war which have not been superseded by the arrival of nuclear weapons but which need to be reviewed and interpreted with full understanding. The Soviet Union has been judged by some without proper understanding to be a defensive power without agressive intentions because, more than most, its professional military strategists study deeply and prize the importance of the defensive mode in war. After all, the Roman Legion, a fighting instrument of matchless offensive power for probably a longer period in history than any other and which conquered the known world for Rome, used to place the highest stress on defensive works and would build elaborate fortified camps night after night even without apparent need or an enemy presence. The Principle of Security is fundamental to warfare, and the Russians are supremely aware of this. Again Erickson:

---

[1] According to R. L. Garthoff, American author of "Soviet Military Doctrine" (Rand, 1953), the term "operativna iskusstva" (operational art) is unusual to the Western military man and may seem to overlap both strategy and tactics. Garthoff refers to the Soviet definition of this term as "the organization and conduct of military operations", wherein "the operational art occupies a mildle position between strategy, the conduct of war and tactics, the study of battle". The concept has probably been developed by the Russians because the large standing armies that have always existed there, and the need to study theoretically the command of larger formations than divisions. The term may be said to correspond roughly to what is known outside Russia as "grand tactics".

[2] Colonel Telyatnikov in "Kommunist Vooruzhennykh Sil", No. 24, 1965.

"Such a position (Telyatnikov's) demanded an offensive-defensive 'mix' in order to induce the kind of stability which was contemplated; on the other hand, sections of American opinion held to the view that 'stability' was fundamentally connected with mutual vulnerability (or 'deterrence' and 'defense' are incompatibles) so that defensive measures such as the deployment of an ABM system embody an intention to gain 'invulnerability' and thus exert a de-stabilizing effect. The brunt of the post-Khrushchev arguments among Soviet specialists was quite the contrary, that 'deterrence' unsupported by 'defense' was both dangerous and unstable; at the same time, however, the offensive-defensive 'mix' or balance must have held out several obvious advantages, including that of surpassing American 'assured destruction' capabilities—bypassing might be an even better term." (R.U.S.I., "Soviet Military Power," pp. 43–44.)

In the same study, Erickson draws attention to the interesting fact that the announcement made by Mr. Gromyko on June 27, 1968 that the Soviet Union was ready to embark on the Strategic Arms Limitation Talks was made four days after the decision was made in the U.S. to embark on a major defensive system—"Safeguard". The great stress placed on Civil Defense and its obvious linkages with the highly developed Soviet Anti-Aircraft and Anti-Missile systems, taken together with the immense nuclear arsenal which the Russians have been stockpiling *during* the arms limitation talks, all underline the importance which they attach to these interrelated components of a modern first-strike capability.

The extremely ominous and menacing nature of this can be gauged by the revealing statement made by Marshal Nicolai Krylov, Commander of the Soviet Nuclear Missile Forces, which was quoted in an article in the *New York Times* by Wm. Beecher on September 12, 1969, shortly before the beginning of the SALT negotiations:

"The imperialist ideologists are trying to lull the vigilance of the world's people by having recourse to propaganda devices to the effect that there will be no victors in a future nuclear war. These false affirmations contradict the objective laws of history.

"Victory in war, if the imperialists succeed in starting it, will be on the side of world socialism."

SURPRISE IN SOVIET MILITARY DOCTRINE

In view of the great advantages of a surprise attack in terms of damage to the enemy—and the possibility of limiting one's own damage by means of a first strike combined with really effective damage-limiting active and passive systems—the role of surprise in Soviet military thinking needs to be examined in its relationship to possible first strikes.

In 1954–55 it began to be recognized in the Soviet Union that nuclear weapons and delivery systems provided an unparalleled opportunity for strategic surprise. In fact, since 1955, surprise has begun to be recognized by Soviet military circles as a means of achieving decisive and rapid success in war, especially if achieved by nuclear means. Although surprise had always been recognized as advantageous, it had not, hitherto, been recognized as potentially decisive.

One of the best known Soviet military writers who has extensively explored the factor of surprise has been Marshall P. Rotmistrov, who published a significant series of articles which appeared in "Voennaia Mysl", No. 2, Feb. 1955, "Voennyi Vestnik", No. 11, 1955 and "Kraznaia Zvezda", March 24, 1955. In these, he explored the differences between and the potential importance of preventive wars and pre-emptive strikes.

In regard to the concept of a sudden nuclear strike, some more than usually significant statements were made in a Soviet military article called "The Revolution in Military Affairs and Its Result". Near the beginning of the article occurs the following statement by the author, Lt. Gen. N. A. Sbitov: "The Communist Party and its Leninist Central Committee were the organizers and leaders of this revolution." (The reference is to the Revolution in Military Affairs.) The author continues,

"The Party reached the conclusion that the Armed Forces and the country as a whole must prepare for a war in which nuclear rocket weapons will be widely used; which will represent a decisive, classic collision of two, opposed world systems; and which will be distinguished by unprecedented violence, dynamic force and high maneuverability in combat operations . . .

"Nuclear rocket war signifies that the main means of armed combat, the main means of defeating the enemy, will be the nuclear weapon and the main means of delivering it to the target will be the rocket.

"The characteristics of the nuclear rocket weapon also cause the appearance of a new law in nuclear war which lies in the fact that war will be accompanied by massive extermination of people and massive destruction of resources. The action of this law calls for a change in the means of waging combat actions. The basic determining method of waging war is not the attack of the Ground Forces as it was earlier, but the *delivery of mass nuclear rocket strikes*. For instance, nuclear rocket strikes will deprive the U.S.A. of that geographical inaccessibility which it had earlier. In the event of war, the vital centers and strategic nuclear offensive weapons of the belligerents which are located throughout enemy territory, might turn out to be the main objectives of military actions.[3] This means that the line of separation between the front and the rear will disappear. The very meaning of "interior of the country" will become untenable because *the focus of armed combat will move to the interior of the territory of the belligerents.*

"The long range of strategic means makes it possible to achieve strategic-military and military political goals at the very beginning of the war. The enemy's strategic means of nuclear attack, economy, system of military administration and also main groupings of troops and naval forces in the theatre of military operations will undergo massive nuclear rocket strikes. (In the past, war was the other way around; the strategic successes were achieved or built up gradually, according to the tactical and operational successes.)

"The results of strategic rocket strikes must be used by the Ground Forces in full measure. The task of accomplishing the defeat of remaining groupings of enemy forces, occupying the enemy's territory, and protecting one's own country from invasion by the enemy's troops is given to them. Combat operations in naval theatres might have as a goal the defeat of the enemy's naval groups of forces, destroying his communications, and protecting one's own communications and coasts from nuclear strikes from the sea."

The article also contained the following:

"The revolution in military affairs brought about under the leadership of the Party solved the following problems:

"(1) The mass production of the nuclear weapon, as the main means of mass destruction was organized; and the mass production of rockets of various designations, as the basic means for delivering the rocket ammunition to the objectives of destruction was accomplished.

"(2) The equipping of the Soviet Army and Navy with the nuclear rocket weapon was fully completed, and the basic reorganization of the Armed Forces, connected with the introduction of the weapon was carried out.

"(3) Modern Soviet military doctrine which determines the new principles of Soviet military strategy, operational art, and tactics, was developed; and on the basis of the guiding instructions of the Communist party, the Soviet government, and the achievements of leading military-scientific thought, regulations and manuals were re-processed, taking into account the peculiarities and requirements of nuclear rocket war.

"(4) The retraining of all troop personnel, especially of officers, was carried out; a systematic and purposeful character was given to the mastering of the new sorts of complicated and powerful military equipment and weapons by the servicemen; this same thing was done in mastering new methods of combat operations; in the process of all this work, the high political consciousness, the military-theoretical and military-technological preparation of our military cadres and their ability always to be at the level demanded by contemporary theory and practice was once again demonstrated."

Thus, the revolution in military affairs is an accomplished fact. It led to basic quantitative changes in the military technological base of the Armed Forces and its structure. It marked a revolution in the method of waging war, a revolution in the theory of military art and the combat training of troops.[4]

It should be noted that the pronouncements presented above and other similar statements by Colonel V. V. Larionov in another article in the same book (entitled "A New Means of Fighting and Strategy") were made at about the time that initial plans must have been made for the massive nuclear development and deployment which now faces us.

The Soviet ideas on the means of achieving victories by the skilled use of nuclear arms are completely at variance with those in this country which have been largely conceived by civilian strategists with little or no experience rather than military men fully trained in the higher direction of war and in military practices. Soviet doctrine is one which confidently believes in the attainment of victory by such means, while U.S.

---

[3] The "counterforce" concept of attacking strategic nuclear offensive weapons is associated primarily with a first strike strategy, since these weapons would presumably already have served their intended functions by the time a second (retaliatory) attack could be launched. U.S. nuclear strategic thinking has tended to avoid the counterforce concept as "unthinkable" because of its association with a nuclear first strike.

[4] Excerpts from an article by Lt. Gen. of Aviation N. A. Sbitov entitled, "The Revolution in Military Affairs and Its Results". This appeared in the book, "Problems of the Revolution in Military Affairs", edited by Gen. P. M. Derevyanko, published by Voenizdat, Moscow, 1965. An English translation of Sbitov's article is presented in the book, "The Nuclear Revolution in Soviet Military Affairs", edited by Wm. R. Kintner and H. F. Scott, published by the University of Oklahoma Press, Norman, Oklahoma, 1968.

doctrine, still influenced by concepts of deterrence long rendered obsolete by the new imbalance, clings to a strictly defensive posture with any permissible action being of a retaliatory nature only—an action which is rapidly becoming less "credible". Russia's fully offensive posture is increasingly becoming defined in terms of a first strike—and this includes deployment plans for their rocket-carrying vessels and nuclear attack submarines, which menace our carrier fleet as well as posing a mounting threat to our submarine-based second strike capability. On the one hand there is an avowed and ready strategy of action imbued with offensive thinking while on the other there is the U.S. defensive doctrine and strategy which is completely oriented towards "counter-value" (i.e. population) targets rather than "counter-force" (military and strategic) targets. Under such conditions and with such a basic divergence in doctrine any further use of such terms as "parity", "strategic balance" or "nuclear symmetry" become completely meaningless.

PROSPECTS FOR THE NEAR FUTURE

One SALT critic has asserted that the current SALT agreements give the Soviets such an overwhelming superiority in nuclear weapons that they need go no further. He may be right. The presently estimated 3:1 Soviet advantage in deliverable nuclear megatonnage is certainly impressive.

On the other hand, the glaring omissions, inadequate verification means and gaping loopholes in the SALT agreements may tempt the Soviets to maintain their present momentum in weapons production, perhaps temporarily stockpiling their missiles to avoid jeopardizing the enormous advantages they now have under SALT.

In the case of the Soviet SS–9 missiles, even a small increment in these missiles could drastically increase the Soviet capabilities for a first strike against U.S. ICBM's. Secretary of Defense Melvin Laird once estimated that 420 SS–9's could wipe out 95% of the U.S. ICBM force. The Soviets are now known to have at least 300 of these missiles, and the SALT agreements will allow these to be replaced with even larger missiles. According to Secretary Laird's figures, the Soviets would have to produce only 120 more SS–9's to gain an overwhelming first strike capability against U.S. ICBM's. Of course the deployment of the limited U.S. ABM forces allowed by SALT will increase this Soviet first strike requirement, just as the allowed replacements for the SS–9's will reduce it.

Whatever may be the actual requirements for a Soviet first strike capability, these requirements must be quite modest in comparison to present Soviet production capabilities. In his June 29, 1972 press conference, President Nixon estimated that the Soviets have the capacity to produce 1000 additional ICBM's and 1000 additional ABM's over the next five years. There is little likelihood that the present SALT agreements can prevent the Soviets from using this capability if they choose to do so.

Even now the Soviets have an impressive first-strike capability which, however, they are unlikely to employ either directly or as a threat unless certain essential conditions are achieved. These will be achieved the next few years probably under five unless the most strenuous countermeasures are taken. Taking into account the evidence of impressive military defensive measures which they have installed and their extremely extensive and highly organized civil defense effort which they have developed and to which we have no equivalent whatsoever, it can only be said that instead of a situation of "strategic balance" or of "symmetry" leading to "deterrence" we are now within a situation of asymmetry which is becoming more acute as time progresses. Stability has been replaced by "Meta-stability" and will be replaced soon by extreme instability.

Thus, the opportunities which are likely to rise in the near future and which will tempt the Soviet Union into nuclear action or blackmail unless we evidence a capability and will check them by a vigorous and unmistakeable response will be overwhelming. Although superficially persuasive to the uninformed, the current U.S. concept of "sufficiency" is, in fact only an inducement for the Soviet Union to execute a military strategy of outright destruction relying on an overwhelming first strike or of "compellence" (successful nuclear blackmail) based on a fully credible threat of such a strike.

In the civil defense field the Soviet Union has now a highly trained population which could evacuate its cities in a crisis, enabling the military authorities to contemplate seriously a first strike. The facts of Soviet civil preparedness—and their relation to a Soviet first-strike capability—are thoroughly discussed by Dr. E. P. Wigner and Joanne Gailar in their recent article, "Will Soviet Civil Defense Undermine SALT?", published in the Washington newspaper, *Human Events*, July 8, 1972 (pp. 9, 10). Dr. Wigner, a recipient of the Nobel Prize for Physics and one of the nation's foremost authorities on civil defense, has estimated that if the Soviets carried out their elaborate plans for evacuating their cities and dispersing their population, a nuclear exchange might result in only 10 million Soviet deaths as compared to 100 million American deaths.

The possibility that damage of that order in the Soviet Union would not be considered unacceptable by the Soviet leadership is suggested by such statements as the following:

"In major contemporary war atomic or thermonuclear weapons may be employed in quantities of hundreds, thousands or even tens of thousands. The Soviets have shown that they can take losses. During World War II they lost control of 40% of the population, 40% of their grain production, 60% of their coal, iron, steel and aluminum output and 95% of key military industries such as ball-bearing production." (Maj. Gen. Pokrovsky, in Marxism-Leninism o voine i armii, Feb. 3, 1955.)

All these possibilities need to be understood and avoided in the US by the urgent and realistic adoption of new defense policies. Many of these policies have been canvassed but remain in abeyance for reasons which are far from clear. Without the adoption of a much more determined attitude and the completely convincing evidence of a powerful revival of the US military establishment which would include an improved identification with the nation as well as procurement of essential equipment, the survival of the US as an independent state and of all its friends and allies as free and sovereign members of the international community is placed in the gravest danger.

In regard to the SALT agreements currently under consideration, it should be emphasized that quite aside from the serious imbalances which they countenance, these agreements are totally unacceptable under any conditions because of the lack of any provisions for physical inspection. Real and lasting progress in arms limitation will be achieved only when there is an established right to physical inspection of nuclear armaments in all their levels of production, storage and deployment. Only then will the danger of nuclear war recede.

The United States presently has no recourse but to reject the unverifiable and unenforceable SALT agreements signed in Moscow and to demand that the Soviet Union evidence a sincere desire for peace by agreeing to arms limitations that are precisely defined and enforceable by ironclad provisions for on-site inspection. Until such time as meaningful and enforceable agreements are obtained, the United States must pursue those measures of weapons development and re-armament that are necessary to restore the credibility of its nuclear defenses.

The CHAIRMAN. The question is on the committee amendment in the nature of a substitute.

The committee amendment in the nature of a substitute was agreed to.

The CHAIRMAN. The Clerk will read the preamble.

The Clerk read as follows:

Whereas an Interim Agreement Between the United States of America and the Union of Strategic Offensive Arms and an associ- Measures With Respect to the Limitation of Strategic Offiensive Arms and an associated protocol were signed on May 26, 1972; and

Whereas the said interim agreement provides that it shall enter into force upon exchange of written notices of acceptance by each party, such exchange to take place subject to and concurrently with the exchange of instruments of ratification of the treaty on the limitation of antiballistic missiles; and

Whereas this interim agreement is a significant first step away from an era of nuclear confrontation and toward an era of mutually agreed upon restraint and arms limitation between the two principal nuclear powers; and

Whereas the new era toward which this agreement points can be a time when the dangers of war are substantially lessened and when nations can turn more of their energies to the works of peace; and

Whereas this agreement and the treaty limiting ballistic missile defense were made possible by the maintenance in the United States of a strategic defense posture second to none; and

Whereas the success of these agreements and the attainment of more permanent and comprehensive agreements are dependent upon the continuing maintenance of that strategic posture and a sound strategic modernization program: Therefore be it

COMMITTEE AMENDMENT TO THE PREAMBLE

The CHAIRMAN. The Clerk will report the committee amendment to the preamble.

The Clerk read as follows:

Committee amendment: Strike out the preamble.

The committee amendment to the preamble was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. DANIELS of New Jersey, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the joint resolution (H.J. Res. 1227) approving the acceptance by the President for the United States of the interim agreement between the United States of America and the Union of Soviet Socialist Republics on certain measures with respect to the limitation of strategic offensive arms, pursuant to House Resolution 1097, he reported the joint resolution back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the amendment to the text of the joint resolution.

The amendment to the text of the joint resolution was agreed to.

The SPEAKER. The question is on the engrossment of the joint resolution.

The joint resolution was ordered to be engrossed.

The SPEAKER. The question is on the amendment to the preamble.

The amendment to the preamble was agreed to.

The SPEAKER. The question is on the third reading of the joint resolution.

The joint resolution was ordered to be read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the joint resolution.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. ASHBROOK. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 330, nays 7, not voting 95 as follows:

Mr. Blanton with Mr. Baker.
Mr. Boggs with Mr. Rhodes.
Mr. Carney with Mr. Harvey.
Mr. Clark with Mr. Schneebeli.
Mr. Landrum with Mr. Betts.
Mr. Kluczynski with Mr. Railsback.
Mr. Melcher with Mr. Nelsen.
Mr. Mollohan with Mr. Bell.
Mr. Nichols with Mr. Clancy.
Mr. Ryan with Mr. Riegle.
Mrs. Griffiths with Mr. McDade.
Mr. Evins of Tennessee with Mr. Chamberlain.
Mr. Dulski with Mr. Coughlin.
Mr. Dingell with Mr. Esch.
Mr. Van Deerlin with Mr. Collins of Illinois.
Mr. Ullman with Mr. Ruppe.
Mr. Passman with Mr. Edwards of Alabama.
Mr. Gallagher with Mr. Metcalfe.
Mr. Runnels with Mr. Lloyd.
Mr. Hagan with Mr. Derwinski.
Mr. Diggs with Mr. Hull.
Mr. Abernethy with Mr. Dickinson.
Mrs. Abzug with Mr. Long of Louisiana.
Mr. Anderson of California with Mr. Lujan.
Mr. Caffery with Mr. Burke of Florida.
Mr. Corman with Mr. Talcott.
Mr. Abourezk with Mr. Davis of Wisconsin.
Mr. Hungate with Mr. Quillen.
Mr. Lennon with Mr. Carter.
Mr. Edmondson with Mrs. Heckler of Massachusetts.
Mr. Pryor of Arkansas with Mr. McClory.
Mr. Rarick with Mr. Keith.
Mr. McMillan with Mr. Kuykendall.
Mr. Dowdy with Mr. Pelly.
Mr. Whalen with Mr. McEwen.
Mr. Kinney with Mr. Terry.
Mr. Steiger of Arizona with Mr. Michel.
Mr. Thone with Mr. Minshall.
Mr. Springer with Mr. Scott.
Mr. Wydler with Mr. Zion.

The result of the vote was announced as above recorded.

The title was amended so as to read: "Approval and authorization for the President of the United States to accept an Interim Agreement Between the United States of America and the Union of Soviet Socialist Republics on Certain Measures With Respect to the Limitation of Strategic Offensive Arms."

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. MORGAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and to include extraneous matter of the joint resolution just passed (H.J. Res. 1227).

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

PERSONAL EXPLANATION

Mrs. ABZUG. Mr. Speaker, I was inadvertently detained on business on rollcall No. 329. Had I been present, I would have voted "yea."

CONFERENCE REPORT ON S. 3726, EQUAL EXPORT OPPORTUNITY ACT AND INTERNATIONAL ECONOMIC POLICY ACT OF 1972

Mr. COLMER. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1102 and ask for its immediate consideration.

The Clerk read the resolution as follows:

Resolved, That upon the adoption of this resolution it shall be in order to consider the conference report on the bill (S. 3726) to extend and amend the Export Administration Act of 1969 to afford more equal export opportunity, to establish a Council on International Economic Policy, and for other purposes, the provisions of clause 2, Rule XXVIII notwithstanding.

The SPEAKER. The gentleman from Mississippi is recognized for 1 hour.

Mr. COLMER. Mr. Speaker, I yield the customary 30 minutes to the minority to the gentleman from California (Mr. SMITH), pending which I yield myself such time as I may consume.

Mr. Speaker, as a reading of the resolution indicates, this is a simple resolution making in order the consideration of the conference report on S. 3726 for the extension of the Export Administration Act of 1969.

Mr. Speaker, this rule has become necessary according to the rules of the House that the conference report has to be allowed to lie over for 3 days. It is a simple procedure to waive that 3-day provision.

Mr. Speaker, I reserve the balance of my time.

(Mr. SMITH of California asked and was given permission to revise and extend his remarks.)

Mr. SMITH of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, 2 days ago we had a resolution here on the floor to permit any conference report to be considered during the last 3 days of this week even though the 3-day intermission requirement under clause 2 of rule XXVIII was not observed. That resolution was defeated by a rather large vote. I think possibly we may have done wrong in the Rules Committee in having it so broad because it was not known whether there would be other reports.

I believe, however, the only one we were really concerned about was S. 3726, the Export Administration Act of 1969.

Mr. Speaker, we are here today with this resolution to waive the 3-day requirement rule for a conference report to be available so that we can consider this particular measure. The 3 days will not be up until tomorrow. In other words, tomorrow would be the first time this conference report could be considered.

I doubt that I will vote for the conference report. Mr. Speaker, in my opinion this is an extremely important matter, and I should like for the Members to give consideration to adopting this resolution.

Mr. Speaker, we are in a state of confusion on the cattle hide situation. We have had arrangements in the Export-Import Control Act where, under the situation, both Houses legislated, and then subsequent thereto we had to have a control program, which calls for the export of a ticket system which goes into effect on September 1, 1972.

The Department of Commerce has already scheduled the issuance of these tickets, starting August 17, 1972, which was yesterday.

The entire cattle hide industry is already in a state of grave uncertainty with respect to whether or not the Congress is going to defeat this provision or permit it to exist. In all fairness, Mr. Speaker, it seems to me we should take this bill under consideration and either vote it up or vote it down.

I realize the House took action on the so-called Commission, or whatever it was, which was included in the bill, to strike it out, and that it is now back in the conference report, which I do not like. Mr. Speaker, the administration has been operating, just as previous administrations did, under the Trading With the Enemy Act. Although this is probably a correct power to operate under, some place, some time—and today, in my opinion—we should straighten this out so that the departments will know what they are going to do, and the administration will know, and the cattle hide people will know one way or the other.

Mr. Speaker, I would urge that we adopt House Resolution 1102 and then decide what we are going to do with this conference report. If the Members want to vote it down, then vote it down. Let us not play games this afternoon. Let us dispose of this. We have some other business to get to. We had a big night last night.

I would suggest and hope, Mr. Speaker, that the Members seriously consider this. I have never, in my 16 years here, and 11 years on the Rules Committee, misled any Member of this body. In my opinion this measure has to be disposed of one way or the other before we adjourn tonight.

I urge the adoption of House Resolution 1102.

Mr. COLMER. Mr. Speaker, I yield 5 minutes to my friend, the gentleman from Massachusetts (Mr. BURKE); but, Mr. Speaker, I do so with one reservation; namely, that the gentleman does not pay me the dubious compliment which he did the other day when I yielded to him on the previous consideration of this matter.

Mr. BURKE of Massachusetts. Mr. Speaker, I want to thank my good and gracious friend, the chairman of the Rules Committee for yielding me this time.

It is not my intention to take up too much time in this debate. This is the same subject matter we discussed, I believe, about 24 hours ago. I was opposing at the time the rushing through of this type of legislation.

This is a very complex bill. I know the cattle people have been misled into believing that this legislation is going to help them. Actually, what this bill will do is set up a new advisory council, and we are going to have a new Henry Kissinger on the scene, I believe, in the person of Peter Flanigan.

Of course, if there is a change in the Presidency next year, the place of Peter Flanigan will be more likely taken by Pierre Salinger. So that is what you are confronted with here on some of the parts that have not been discussed in this bill.

I have nothing against Pierre Salinger or Peter Flanigan, but I will say this: We have enough advisory councils now.

This bill is really a far-reaching piece of legislation. The tanneries in my district tell me that if we can hold this bill up for a couple of weeks, they might be able to get a supply of hides in to continue their business. It almost puts them in a position where they can negotiate for high-grade hides that they cannot get now.

I am pleading with this House on behalf of the Members on the other side, about 20 of them, who are today down in Miami Beach trying to formulate the rules and guidelines for the Republican Party convention. Some of those Members would like to be heard on this legislation, but they will not have a chance. They are not going to have a chance. So I cannot see how any Member on that side can allow a bill like this to go through that will deprive them of their right to speak for their constituency.

I know there are enough spokesmen on the other side to speak on behalf of the 20 Members in Miami, but let us consider those Members anyway, and let us consider the other cattle people here who are being led around believing this legislation will help them.

This does not help you in any way, shape, or form. You have been misled. You have been misled by people who speak with forked tongues.

Mr. Speaker, we can get out of here by 3 o'clock this afternoon and we will be on our way back home and come here after the recess completely rested and with a new, fresh frame of mind and look at this legislation in its proper perspective. I do not know. I might even vote for it then. But I would be very hesitant to vote for it now.

Another question that comes up here is the jurisdiction of this type of legislation. I do not know what it is doing over in Mr. PATMAN's committee. This is a trade bill if I have ever seen one.

So there are a lot of questions that can be raised. I do not want to go on until midnight fighting this bill when we can get out of here by 3 o'clock. Let us vote down the rule, and when we come back after the recess we will deal with it in a very fair and equitable manner.

Mr. GROSS. Will the gentleman yield?

Mr. BURKE of Massachusetts. I yield to the gentleman.

Mr. GROSS. The gentleman's solicitude for the Republicans and their convention overwhelms me.

Mr. BURKE of Massachusetts. I want to point out to my good friend from Iowa I have a great deal of solicitude for the Republican Party, because I was the first Democrat in 100 years in my district, and if it were not for the Republican votes I received that year, I would never be here. So I always think of you fellows. I like you.

Mr. COLMER. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The question was taken; and on a division (demanded by Mr. Burke of Massachusetts) there were—ayes 58, noes 21.

TELLER VOTE WITH CLERKS

Mr. CLEVELAND. Mr. Speaker, I demand tellers.

Tellers were ordered.

Mr. CLEVELAND. Mr. Speaker, I demand tellers with clerks.

Tellers with clerks were ordered; and the Speaker appointed as tellers Messrs. Colmer, Burke of Massachusetts, Smith of California, and Cleveland.

The Committee divided, and the tellers reported that there were—ayes 194, noes 111, not voting 127, as follows:

So the resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. PATMAN. Mr. Speaker, I call up the conference report on the bill (S. 3726) to extend and amend the Export Administration Act of 1969 to afford more equal export opportunity, to establish a Council on International Economic Policy, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of August 15, 1972.)

Mr. PATMAN (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the statement of the managers be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

Mr. DENT. Mr. Speaker, reserving the right to object, I would like to ask a question. I do not object. All of us would like to leave because we have had a long week, but I would like to know if the chairman is prepared to give a few minutes or so to those of us who have something to say.

Mr. PATMAN. I will certainly be delighted to.

Mr. DENT. I thank the gentleman from Texas.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. PATMAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this measure returns from conference with two titles designed to promote American exports and increase employment here in the United States.

Title I of the bill extends and amends the Export Administration Act of 1969 and requires that the Secretary of Commerce act expeditiously to eliminate unilateral controls on the export of peaceful, nonstrategic goods.

The conferees adopted Senate provisions which would require the Secretary of Commerce to investigate which items should no longer be subject to export controls because they are not significant to the national security of the United States and require the President to remove unilateral export controls on items he determines are available in significant quantity and quality comparable to those produced here, except when he determines that the absence of controls would prove detrimental to our national security.

Another Senate provision adopted by the conferees requires that the Secretary of Commerce report to the Congress not later than 9 months after the date of enactment of this act concerning steps he has taken to reduce our unilateral controls, and a provision that the Secretary of Commerce shall report items and information subject to control procedures which are more burdensome than procedures of our allies.

The conferees also adopted a Senate provision which requires the Secretary of Commerce to establish technical advisory committees to assist in reducing both unilateral and multilateral export controls. The House receded to the Senate with an amendment which eliminated the requirement that the members of any such committee be compensated. The House conferees substituted a provision which authorizes the Secretary to reimburse any such member for travel and subsistence, when appropriate, upon request of the member.

The Senate provisions of title I agreed

to by the House constituted an explicit expression of the legislative intent indicated by your Committee on Banking and Currency in House Report 92-1260. In that report we indicated that the required reviews and revisions established in the 1969 act to be made by the Secretary of Commerce have not been made promptly and that consultations with industry have left much to be desired. The House report indicated that there shall be established technical advisory committees composed of representatives of relevant Federal agencies and relevant producers for each group of commodities which is subject to export controls because of its significance to national security and which is difficult to evaluate for technical reasons.

The House report further indicated that such committees should be activated expeditiously, with emphasis on commodity groups for which there is a significant export potential, and that such committee should have representatives from producers of the commodities to be reviewed. The House report further stated that consultative reviews should include the commodities under both multilateral control and unilateral control.

The House gave this expression of legislative intent in order to clarify the meaning of section 4(a)(1) and section 5(a) of the 1969 act. The Senate provisions agreed to by the House conferees are entirely consistent with the action taken by the House in consideration and passage of H.R. 15989.

Title II of the bill creates on a temporary, statutory basis until June 30, 1973, a Council on International Economic Policy in the Executive Office of the President. We are very hopeful that this Council can provide, on a statutory basis, an even better focus on solutions of U.S. trade, foreign investment, and monetary problems than has been the case until now.

The establishment of a linkage between the executive and the Congress in the forging of a more rational international economic policy, and in developing more consistency between domestic and international economic policy can be achieved with adoption of the title in the Senate bill.

The purpose of this Council is to provide for closer interagency coordination because there are many departments and agencies of the Federal Government operating in the international economic policy area, often at cross-purposes and because better coordination is needed between domestic and foreign economic policy.

The membership of the Council includes the President and nine Cabinet officers and executive office officials. The duties of the Council include advising and assisting the President in the preparation of an International Economic Report, reviewing the policies of the many agencies operating in the international economic policy area, and making recommendations to the President for improving and making more consistent our international economic policy.

The Senate bill provided that the President, with the assistance of the Council, shall submit an annual international economic report to the Congress.

The Senate bill further provided for a Council staff to be headed by an Executive Director. The Executive Director would be required to keep the appropriate committees of both the House and the Senate fully and currently informed regarding the activities of the Council.

The Senate bill authorized $1,400,000 for the Council for fiscal year 1973 and provided that the legislation creating the Council shall expire on June 30, 1973, unless specifically extended by legislation enacted by the Congress.

The House amendments contained no similar provision. Among the amendments to the Senate provision accepted by the House conferees there was the provision that, in connection with the duty of the Council to review the activities and the policies of the U.S. Government, there was stricken explicit reference to a specific international agreement and to specific trading partners. The conferees agreed that the remaining language was broad enough to allow the Council to review any such trade relationships.

In connection with the appointment of an Executive Director for the Council, it was agreed to delete the requirement that he be an assistant to the President.

The conferees unanimously agreed that the work of the Council and the report of the President shall include the following objectives:

First, strengthening the U.S. competitive position in world trade;

Second, achieving equilibrium in international payment accounts of the United States;

Third, increasing exports of goods and services;

Fourth, protecting and improving the earnings of foreign investments consonant with the concepts of tax equity and the need for domestic investment;

Fifth, achieving freedom of movement of people, goods, capital, information, and technology on a reciprocal and worldwide basis;

Sixth, increasing the real employment and income of workers and consumers on the basis of international economic activity; and

Seventh, preserving the diversified industrial base of the United States.

Mr. CULVER. Mr. Speaker, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman.

Mr. CULVER. I thank the gentleman for yielding.

Mr. Speaker, I regret the complete retreat of the House conferees on the question of confirmation of the Executive Director by the Senate. In addition, in the colloquy this afternoon, I hope to clarify this question of appearances by the Executive Director before congressional committees and his availability for normal committee hearings. However, we did, in our action on the floor, provide one safety valve in the insistance that the authorized life of the Council not extend beyond June 30, 1973, unless there is affirmative renewal by the Congress. This will clearly put the burden on the Executive to prove and establish that the Council is the best mechanism for coordinating U.S. foreign economic policy, and on the Council and its Executive Director to, in fact, fulfill their declared intention of keeping the Congress fully and currently informed. The Subcommittee on Foreign Economic Policy will for one closely monitor the activities of the Council and will await the unstinted cooperation of the Executive Director and the other members of the Council.

The most appropriate administrative structure for the harmonization of foreign economic policy is a complex question and is currently the basis of hearings before the Foreign Affairs Committee. The recommendations from this inquiry will be available by the end of this Congress.

The results of these hearings should better equip Congress to carefully monitor the work of CIEP. In addition, it should help us make a judgment on the desirability of its existence as a statutory body and the discharge of its obligation to be accountable and responsive to proper congressional involvement in this extremely critical area of U.S. foreign policy.

In addition, Mr. Speaker, I realize the imperative necessity to act promptly on the provision in the legislation which repeals the Presidents order limiting the export of cattle hides. If this order is permitted to stand it would result in an increase in the cost of dressed beef to the consumer and a reduction in the return to the farmer on the hide.

Mr. WIDNALL. Mr. Speaker, I rise in support of the conference report and yield myself such time as I may consume.

Mr. Speaker, I rise to support the conference report. This bill extends and amends the Export Administration Act of 1969 and establishes a Council on International Economic Policy.

Title I of the bill amends the Export Administration Act and requires that the Secretary of Commerce move swiftly to end unilateral U.S. controls on the exports of peaceful nonstrategic goods. This will have the effect of promoting American exports and increasing jobs here in the United States by allowing our industries to better compete in the Eastern European market. Of course, we will still maintain controls on those goods of strategic and national security importance.

Title II of this bill gives a statutory imprint to a Council on International Economic policy within the Executive Office of the President. This Council, which was created by presidential memorandum in January 1971, has been in existence for the last 18 months, but has been crippled because of a lack of funds and because it did not have statutory approval. What the Congress is doing here is to give the Council legislative sanction and assuring that the Congress is in a better position to be informed of and to review the operations of the Council.

The legislation specifically requires that the appropriate congressional committees be kept fully and currently informed regarding the activities of the Council. This is a specific responsibility of the Executive Director of the Council.

Since there has been some misunderstanding as to what this provision requires, I would like to make the record clear.

The conference committee considered this question during three session which were held on the bill. It was agreed that the "fully and currently informed" provisions does not require the Executive Director to testify formally before congressional committees. The conference committee specifically rejected a proposition that the Executive Director be required to testify. It also rejected a proposal that such an understanding be included in the statement of managers.

Although the legislation does not mention that the Executive Director of the Council is to be an assistant to the President, it is a possibility that the President would appoint a Presidential assitant to that position as is the situation now. In such a case, it is not intended to alter the longstanding tradition that those who hold such a position and therefore have a personal and confidential staff relationship to the President do not testify.

However, as I stated earlier, it is understood that the Executive Director shall keep the enumerated committees fully and currently informed of the Council's activities. This will assure an adequate exchange of views and information. I have been assured that the Executive Director of CIEP will make himself available for informal meetings and briefings with Members and committees of the Congress.

Additionally, the annual report by the President on international economic matters which is required by the bill is another available means of keeping the Congress informed.

Beyond all this, however, Congress has retained direct control over the Council by giving it a short life. The legislation will expire in June of 1973. If the Council is not forthcoming during this period the Congress need not extend its life.

Fundamentally, what the conferees agreed to on this title is very similiar to the action the House took on August 3 before it struck this title from the bill. The only exception is that the House had agreed to an amendment by a voice vote which required Senate confirmation of the Executive Director. Since this was not in the Senate bill, it was not a point of discussion in conference.

Mr. Speaker, I believe the conferees have come up with a good bill. I think we will have a good relationship with the Council, and I certainly think we should give it a trial run.

I recommend that the House accept the conference report.

Mr. PATMAN. Mr. Speaker, I yield to the gentleman from Ohio (Mr. ASHLEY).

Mr. ASHLEY. Mr. Speaker, I take this time simply to point out to the membership of the House that the items in disagreement between the House conferees and the Senate were very few.

As all of you know, the amendment which would diminish the control of agricultural exports was in both the House and Senate versions of this legislation. So, obviously, that was beyond the consideration of the conference.

The major item in disagreement was with respect to the statutory establishment of a Council on International Economic Policy.

Mr. Speaker, I would like to say to the membership that the House conferees sought to insist on the action taken by the House. Finally, it was the thought and the decision of the House conferees by a vote of some 6 to 3, the six being equally divided between the majority and minority party members, that the Senate version be retained. There were three that were in disagreement.

That was the only major item in disagreement. It was resolved, as you find expressed in the conference report.

The SPEAKER. The time of the gentleman has expired.

(Mr. PATMAN asked and was given permission to proceed for 2 additional minutes.)

Mr. CULVER. Mr. Speaker, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman.

Mr. CULVER. I appreciate the gentleman yielding. I have a question at this point in the debate, and that is I am concerned with the interpretation given to the conference report by the gentleman from New Jersey as well as remarks on the floor of the other body by one minority Senate conferee regarding the understanding of the conferees with respect to the issue of accountability to the Congress by the executive director.

As the gentleman from Ohio knows, I believe the House voted clearly and emphatically on this issue in the course of the debates a week ago.

I wonder whether or not the gentleman from Ohio a manager on the part of the House in the conference would be good enough to state his understanding concerning the obligation of the Executive Director to appear before the appropriate committees of the Congress enumerated in the conference report. Is this understood as an obligation on behalf of the executive director to appear before the committees in the regular course—or had that issue actually been considered and resolved as indicated by the statement earlier by the gentleman from New Jersey.

Mr. ASHLEY. It is my very firm understanding, I will say to my friend, the gentleman from Iowa, it was the consensus of the conferees, of both the House and Senate, that this issue be obviated by striking the Senate language that would have provided that executive director shall be a special assistant to the President.

Now there is nothing that would say an executive director, if he is simply appointed and holds no other position, should not appear before the appropriate committees of the Congress. Why on earth should he not?

The SPEAKER. The time of the gentleman has expired.

(Mr. PATMAN asked and was given permission to proceed for 2 additional minutes.)

Mr. ASHLEY. We sought to obviate the issue of Presidential prerogative with respect to confidentiality and privilege by striking the language—"shall be a special assistance to the President." We simply placed the focus on the duties of an Executive Director, which we felt would embrace a task of considerable scope and importance.

But we did not—and I repeat—we did not resolve the question of the availability or the nonavailability of an Executive Director who prospectively might also be a special assistant to the President.

Now that is my firm understanding, notwithstanding the comments of the gentleman from New Jersey and of a minority conferee from the other body.

Mr. WYLIE. I think that would be the understanding of the gentleman from New Jersey.

Mr. ASHLEY. I will go further and say that it was the intent of all of the conferees that there be no explicit language requiring or exempting the appearance of the Executive Director formally before committees if he happens to be a personal assistant to the President.

Mr. PATMAN. Mr. Speaker, will the gentleman yield to me?

Mr. ASHLEY. I yield to the gentleman from Texas.

Mr. PATMAN. Mr. Speaker, I concur in the views expressed by the gentleman from Ohio (Mr. ASHLEY). It was the consensus of the conferees that they wanted this Executive Director to appear before congressional committees, and by using the title, "Assistant to the President"—it was felt that that language would be sufficient to excuse him. from testifying before congressional committees. In order to get away from that contention, we agreed to strike out that he would be "Assistant to the President," so he would not be Assistant to the President.

Therefore, although the law does not require him to appear before congressional committees, in striking out that language, "Assistant to the President," which it was insisted would exempt him from appearing, of course, that leaves him where he will have to appear before congressional committees. And if he does not, the law will expire 10 months from now, and I assure you that the President will have a difficult time getting an Executive Director who has refused to appear before congressional committees.

Mr. J. WILLIAM STANTON. Mr. Speaker, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Ohio (Mr. J. WILLIAM STANTON).

Mr. J. WILLIAM STANTON. Mr. Speaker, I just want to ask a couple of simple questions. Basically it is what came out of our committee; would the gentleman from Ohio agree?

Mr. ASHLEY. Yes, it is.

Mr. J. WILLIAM STANTON. According to the report, 23 members of our committee voted for this bill?

Mr. ASHLEY. That is true.

Mr. J. WILLIAM STANTON. There were two who voted against, and one who was present.

Am I correct on that?

Mr. ASHLEY. The gentleman is correct.

Mr. J. WILLIAM STANTON. We got into a mixture of hides and leather, and all that business. Would the gentleman from Ohio agree that I led the fight against hides in the committee when the gentleman from Texas (Mr. Gonzalez) brought it up? We fought hard, and we fought long, and we lost.

Mr. ASHLEY. We lost.

Mr. J. WILLIAM STANTON. I am going to vote strongly for this legislation today, Mr. Speaker. As the chairman mentioned, the other body passed the legislation, and we need the legislation; am I right or wrong?

Mr. ASHLEY. The gentleman is accurate.

(Mr. MAYNE, at the request of Mr. Widnall, was granted permission to extend his remarks at this point in the Record).

Mr. MAYNE. Mr. Speaker, I rise in strong support of the conference report. It is urgently necessary that it be adopted today before the beginning of the congressional recess. I am, of course, deeply concerned about the unsettling effect which uncertainty about this legislation's being enacted is having on the hide and cattle market. I therefore urge all Members to vote in favor of the report, which will make it clear once and for all that neither the Secretary of Commerce nor any other governmental official has the power to limit our free market in hides both at home and abroad, which is so essential to our livestock industry.

Surely the gentleman from Massachusetts (Mr. Burke) cannot be serious when he states this salutary legislation is being hurried to a vote without sufficient consideration. This House debated all the issues before us today at great length when the bill first passed the House on July 15. It was again discussed at some length in debate on the rule on Wednesday of this week.

I am certain that we all realize that this Nation would have an even greater deficit in our balance of trade but for our export of American agricultural produce. Artificially limiting the export of our agricultural produce through embargoes, such as the embargo on export of hides, contradicts the established policy of this country to foster growth in our export markets and to promote freer trade between the nations. Limiting the export of hides gives one domestic industry advantages at the expense and detriment of another. We should be encouraging, not limiting, hide exports in order to improve our balance-of-payments picture and strengthen the dollar at home and abroad.

When the bottom dropped out of the hide market several years ago, our cattle producers had to develop new hide markets abroad at their own considerable effort and expense. Having now developed a flourishing export market abroad, they should not be deprived of the right to sell in a free market, even to foreign purchasers who outbid American domestic customers. The order to limit hide exports has already had a depressant effect on the market prices of cattle. Maintenance of healthy foreign export markets for American agricultural produce, including cattle hides, clearly has long-term benefits not only for the farmer and cattle feeder, but also for the consumer. Enactment into law of the Export Administration Act extension provisions as reported by the conference is essential if we are to see to it that no official can place a lid on exports of hides and other agricultural commodities. I strongly urge the House to vote for adoption of the conference report.

Mr. WIDNALL. Mr. Speaker, I yield 5 minutes to the gentleman from Georgia (Mr. Blackburn).

Mr. BLACKBURN. Mr. Speaker, I thank the gentleman for yielding.

I appreciate the attitude of most of the Members, because I share your impatience with our being here again this week on a matter that was decisively voted on by the House on two previous occasions. I think it is proper that we do review for judgment what has led to this particular moment on the last day, practically the last hour in this session, when we are all anxious to get on about our business, either at the convention in Miami, or perhaps on our private vacations and other matters that would take us away from Washington.

The only occasion on which this House could have dealt with this legislation realistically and fairly was settled weeks ago when it first came up. On that occasion the House acted decisively and said: "We do not want that Trade Advisory Council." They said it so decisively that no one even bothered to ask for a vote, and that is the only time when the House could have exercised its judgment freely. But what has happened in the meantime?

Mr. BURKE of Massachusetts. Mr. Speaker, will the gentleman yield?

Mr. BLACKBURN. I yield to the gentleman from Massachusetts.

Mr. BURKE of Massachusetts. Is it not true that the conferees on the part of the House, despite the way the House spoke and in spite of the message we gave them, went over there and caved in in the fastest fashion in the history of this Congress?

Mr. BLACKBURN. I think it is fair to pronounce as a matter of fact that out of the 10 House conferees, only one conferee defended the position of the House on the floor of this House, and I happen to be that one. When we got to the conference, I said, "You fellows have the votes, and you can put through whatever agreement you want to, but when we get back to the House, if there is any way I can beat you, I will beat you again."

They have all the cards. They have an illegal Executive order over the heads of Members who have cattle producers in their districts. They say they will not enforce the rules unless we vote for their trade council. That is why we cannot have a fair vote. It is much easier to bring it up under these circumstances. They say, "You buy this bill or you who have cattle in your district will be hurting." That is why we are seeing people today voting exactly the opposite on the rule than they did on the floor the other day.

I do not submit to such treatment very kindly. Perhaps some others do.

Last night one of the issues on the bill we were voting on was the fact that if we would not agree on what the Senate wanted, the Senate said they would disagree and then the students would not be able to get their loans. I am proud the House said it wanted to put in its provisions and see what the Senate would do. The Senate caved in this morning in less than 2 minutes.

We are setting another precedent for the Senate today We are saying: Do not worry. We will stall around and submit eventually. I say what is at issue is not the International Trade Council and it is not the extension of the Act. It is the integrity of the House which is at issue today. That is why I have no reluctance to stand here and tell the Members I intend to vote against this conference report. It is the only way to send the message to the Senate or to the White House that the House does have a will and when it exercises its will it intends to stand behind it.

Mr. Speaker, I urge rejection of the conference report.

Mr. PATMAN. Mr. Speaker, I yield 4 minutes to the gentleman from Pennsylvania (Mr. Dent).

Mr. DENT. Mr. Speaker, I think we are neglecting the most important item before us. This is the strategic raw material which is limited in supply. No matter what the demand is, the supply cannot meet that demand and there is a question of balancing what we call payments against what is known to be the need.

The American hide industry, while being so important that it has to be regulated by the export-import control, still is given little importance in its position as a strategic limited material. No nation on the face of the earth allows any raw material to be exported until the demands of that nation are met. If this committee sincerely and if the hide people sincerely have the interest of this Nation and its people at heart, it is such an easy formula to follow. Hides are bought on futures. So if we establish a cutoff date for the purchase orders of futures by American consumers of hides, we could do it on the basis of our needs and requirements. We could do it at world prices, if you please, although most of us know who have made any study at all of the economics of trade, that sooner or later we are going to have to get into national parity prices on trade with the nations that deal with us and which we deal with. But here we are saying yes, we know we need hides, and we know we can get higher prices from foreigners, so we are selling 8 million hides at $160 million on a balance of trade. We are importing 360 million pairs of shoes.

Twenty pairs to the hide that is sold, plus the plastics.

We have forced ourselves in this country into making the shoddiest products that any nation makes. A backward nation does not make any more shoddy a product than we foist off.

Shoes, clothes, television sets, radios, automobiles—forced by the low-cost competition to reduce our quality and produce a shoddy product, so that I am ashamed to say it makes me sometimes wonder what has happened to that pride so many people used to have when they said, "Made in America."

Shoes. Yes, I got shoes. You got shoes. All God's children got shoes. Thanks to Italy, thanks to France, thanks to Sweden, thanks to Brazil thanks, to Portugal, thanks to Spain, thanks to Great Britain we all got shoes.

Maybe they are trying to put us back on our feet—our bare feet.

Let me tell all the Members something. It took 110 years to build the shoe industry in America to an adequacy for the needs of this country. It took 110 years, and we have dissipated that in the last 20 years. And only because of hides.

On this floor less than 12 years ago I reported from my hearings on the impact of imports on employment. I told this House what would happen, and it is in the Record.

The SPEAKER. The time of the gentleman from Pennsylvania has expired.

Mr. PATMAN. Mr. Speaker, I yield the gentleman 1 additional minute.

Mr. DENT. I said that the day would come, within the next decade—and I am a few years out of line—that we would find the policy of our State Department, implemented by our Agriculture and Commerce Departments, sending salesmen all over the world, selling hides, loaning them the money to buy hides. With our money, that did not cost them anything, they started in the marketplace and outbid the American hide tanneries. We lost 87 or 88 percent of all the tanneries of the United States, and we gave them the hides. They started their tanneries and started their shoe factories.

I visited one of the highest price shoe factories in the world, in Italy, that ships ladies' shoes to the United States. Those shoes sell anywhere from $40 to $65 a pair. And the workers were earning 70 cents an hour.

Go ahead. This is what you have done. And I am guilty of it, and I plead before you to forgive me.

I transferred the interest of certain Members of this Congress on this legislation from what they conceded to be a very bad feature—I agree with them—the feature of the unaccountability of the Commission. That was shifted to hides, and they shifted their whole position on the bill, and have now crucified both my shoeworkers and themselves.

Mr. WIDNALL. Mr. Speaker, I yield 5 minutes to the gentleman from Ohio (Mr. Wylie).

Mr. WYLIE. I thank the gentleman from New Jersey for yielding me this time to speak in opposition to this conference report.

Mr. Speaker, the gentleman from Iowa (Mr. Culver) asked about the accountability of the Executive Director of this new international economic agency. I believe if he will read the Congressional Record for August 15 during the Senate consideration of this conference report, which is reported on page 28242, there is light shed on the question. Mr. Bennett, in presenting the conference report, said:

> It was agreed that the "fully and currently informed" provision does not require the executive director of the council to testify formally before Congressional committees. But I have been assured, he continues that the executive director will make himself available for informal meetings and briefings with Members and committees of Congress.

Well, is that not nice? Some of you will be able to have breakfast with the Executive Director and find out what is going on. There is no accountability provided for in the conference report, and Senator Bennett recognized that and said so. This bill started out as a simple extension of the Export Administration Act, normally referred to as the Export Control Act, which expired on August 1, 1972. That bill was introduced last year. There appears to be no objection to extending the Export Administration Act to June 30, 1974, and I certainly would not have any objection to that. That bill would have passed easily and without fanfare.

But the other body had to add a title providing for a Council on Economic Policy, which would provide a new statutory Federal agency with an authorization of $1.4 million for the current fiscal year and the Banking and Currency Committee fell in line. I have consistently objected to this as a duplication which is not needed and would be a waste of $1.4 million of the taxpayers' money.

You will recall, as the gentleman from Georgia, Mr. Blackburn, mentioned, this House rejected the Council on International Economic Policy previously and on Tuesday again rejected by an overwhelming vote a resolution which would have waived the 3-day rule for all conference reports.

Those of us who have been keeping an eye on this bill were not fooled by that resolution on Tuesday. We knew S. 3726 would be back when it was defeated on Tuesday, and the advocates of that resolution, sure enough, went immediately to the Committee on Rules and came back with this special resolution today would apply only to one conference report.

This bill is like Hydra; every time you chop off a head two more pop up.

I think we should separate the Council on International Economic Policy from the Export Control Act and pass that act, which I am sure we can do very quickly, and vote up or down this Council on International Economic Policy.

The Senate added language which would also terminate the statutory life of this council on June 30, so its life is limited even before it is created. If the legislation is approved today—and it's almost certain it will be—the council must obtain an appropration for funding, and by the time that is accomplished it will have maybe 4 or 5 months to spend $1.4 million. Then the members of the Council on International Economic Policy will be back before the Congress saying, "We have not had enough time to get our information and our reports together as to recommendations for a better understanding of foreign economic policy, so we are asking the Congress to continue the council for an additional so many years and we need an additional so many millions of dollars in order to do it." The Council on Economic Policy is not needed to accomplish anything additional—there is a council in existence at the present time by Executive order—except that it will provide 30 people with jobs, and I suppose there is something to be said for that.

Members of the House, I urge rejection of the conference report.

Mr. PATMAN. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from Massachusetts (Mr. Burke).

Mr. BURKE of Massachusetts. Mr. Speaker, I am very reluctant to take the time of the House today, but this is the way we are always presented with problems of this type.

I want to point out in the New England area 115 shoe factories closed since 1965, and we have tanneries closing up there. We have shoe factories today that cannot get the hides from the tanneries because the best grades of hides are being sent overseas for the highest prices they can get there. We have to start concerning ourselves in America with American industries and American jobs.

We are only pleading here to keep the American people working, and by passing legislation like this you are kiting up the welfare rolls of our Nation, you are depriving people who want the opportunity to work from getting a job, you are forcing them on welfare, and you are getting them accustomed to the welfare system.

We are facing a $7 billion deficit in our trade balance this year. There has been one devaluation of the dollar already, and we are going to face some more. And within 1 year some of the people who will vote for this bill today will be doing the greatest flip-flop in history trying to repeal it.

Now, everybody talks about the Burke-Hartke bill, and the only reason this bill was not before the Committee on Ways and Means—and, believe me, this is a trade bill from one end to the other—but, if this bill was ever considered in the House Committee on Ways and Means, I would have offered an amendment attaching the Burke-Hartke bill to it. I have said before that I filed the Burke-Hartke bill to bring to the attention of the American people the problems that we are faced with in our international trade.

The SPEAKER. The time of the gentleman from Massachusetts has expired.

Mr. BURKE of Massachusetts. Mr. Speaker, will the gentleman from Texas yield me some additional time?

Mr. PATMAN. Mr. Speaker, I would ask the minority side to use their time, we have only 4 minutes total remaining.

The SPEAKER. Does the gentleman from New Jersey desire to yield time to the gentleman from Massachusetts?

Mr. WIDNALL. Mr. Speaker, I yield back the balance of my time.

Mr. PATMAN. Mr. Speaker, I yield 1 additional minute to the gentleman from Massachusetts (Mr. Burke).

Mr. DRINAN. Mr. Speaker, will the gentleman yield?

Mr. BURKE of Massachusetts. Yes, I will yield to the gentleman from Massachusetts, but before I do so I wish to say that these are the types of tactics that we are facing here. This is why America is losing the fight. They come in here and steamroll a bill through, ram it down your throat, and then America suffers a $7 billion deficit in trade this year and they will give us only a minute for debate.

I yield to the gentleman from Massachusetts.

Mr. DRINAN. Mr. Speaker, I am happy to associate myself with the remarks of the distinguished gentleman from Massachusetts.

Mr. BURKE of Massachusetts. I concur in everything that the gentleman has said about the impact of this bill, and also about the tactics that are being utilized to push it through today.

Mr. PATMAN. Mr. Speaker, the gentleman from Massachusetts has no complaint, since we have yielded time to him three different times with the remaining time that we had.

Now, since the gentleman from New Jersey, (Mr. WIDNALL) has used his time, and we have used our time for all practical purposes, I will ask for a vote on the conference report.

Mr. BROOKS. Mr. Speaker, this conference report contains a provision of utmost importance to cattle raisers, shippers, longshoremen, and other workers throughout the Nation.

The provision revoking authority of the President to restrict hide exports under the Export Administration Act is not in controversy so far as the conference report is concerned. Both Houses of Congress have gone on record opposing the action restricting the export of cattle hides and revoking the authority that was used.

As I indicated in my statement on the floor on August 2 when this matter was before us, the sudden action by the Secretary of Commerce has resulted in a severe and unanticipated hardship, not only for the ranchers and farmers, but also to the shipping industry and related activities. In my own district, it will mean the loss of hundreds of thousands of dollars and a number of jobs in the maritime industry in a county that already has 6.8 percent unemployment.

Congress did not intend for this act or any other to be used to transfer unemployment from one section of the country to another. At this point, time is of the essence. Hides are waiting on the docks in Galveston. Transportation has been arranged. Purchasers are awaiting delivery.

The House should again join the Senate in telling the President that we do not approve of these export restrictions and that we are expressly revoking the authority to impose them, including the authority to issue the regulations under some other less specific statutory provision as he has attempted to do since the expiration of the Export Administration Act.

Even if this conference report is not adopted, there should be no question that Congress does not want the Executive to have the authority to continue this program. That provision is not in disagreement in conference. Incidentally, I understand that the administration is having great difficulty in initiating the proposed quota system and that even they would prefer to drop the program. To remove all doubt, the House should adopt this report today and send it to the President for signature.

Mr. VANIK. Mr. Speaker, I am voting against the conference report to accompany S. 3726 because I object to title II which would create a Council on International Economic Policy to create a costly bureaucracy under leadership which I seriously question.

Mr. PRICE of Texas. Mr. Speaker, it is most important that the House of Representatives take action upon the conference report relating to the extension of the Export Administration Act before we recess for 2 weeks for the Republican National Convention.

As we all know, the Department of Commerce has recently imposed controls on the export of cattlehides from the United States, and the extension of the Export Administration Act as passed by both Houses of Congress would legislatively remove these controls by the Department.

It is important that we take action on this legislation before the recess not only because I firmly believe this legislation to be fully justified, but in addition, any stalling or indecision on the part of the Congress until September would only create a chaotic situation in the entire cattlehide industry, both domestic and export.

The export control program as ordered by the Commerce Department is scheduled to go into effect September 1, 1972. After that time exporters will be required to purchase export tickets from a cattlehide producer and then to present the tickets to the Office of Export Control in order to obtain an export license.

Since the Commerce Department is planning to issue these export tickets starting August 17, 1972, the urgency of our taking final action on this legislation becomes completely apparent. Failure to do so will mean that cattlehide businessmen will be faced with the prospect of having to obtain export tickets which might or might not prove to be worthless, and these people would be forced to make business decisions in a state of complete uncertainty.

I also urge that action be taken before the recess on the Export Administration Act which has already lapsed, otherwise the export control program will be dependent upon the authority vested in the Trading with the Enemy Act. Since the Trading With the Enemy Act is very broad in its power and has a minimum of statutory safeguards or restrictions, I do not believe that its use should be continued for the purpose of general export control beyond the time or the occasions where it is really necessary. Furthermore, unlike the Export Administration Act, the Trading with the Enemy Act provides only for criminal penalties and does not provide for the imposition of monetary civil penalties.

Mr. Speaker, for the very important reasons I have cited, I strongly urge that we take final action upon the conference report on the Export Administration Act today, and that we pass this most needed piece of legislation to give justice to our cattlehide producers and exporters. In this time of a serious balance of payments deficit for the United States, it simply makes no sense to cut off the export of a valuable commodity which is helping the national income of this Nation.

Mr. FLOOD. Mr. Speaker, as all the Members know very well, my congressional district suffered unbelievable damage when Tropical Storm Agnes struck on June 23, with such force and devastation that the experts tell me that the total damages will reach $1 billion, including homes, businesses, public utilities, roads, bridges, farms and railroads. Just imagine; $1 billion damage in one congressional district. Hard to imagine but true.

And, as the saying goes, we need all the help we can get—and we need it now.

One vital segment of our economy is the shoe manufacturing industry. In fact, the State of Pennsylvania ranks either one or two nationally in the manufacturing of shoes. And it is very important in my congressional district.

Given the difficulties that I previously mentioned, if there is one thing we do not need it is a national policy that would depress the economic health of the shoe manufacturing industry.

I have specific reference to a policy that would ship the very best quality hides overseas, and leave the lower grade hides here. It is quite obvious that such an arrangement would place our shoe manufacturers in less than a fair and competitive position with those industries manufacturing overseas and shipping their products to this country for sale. Such an arrangement, also, would cost the jobs of many of our citizens who have spent the greater part of their working lives in our domestic shoe manufacturing industry. They must be protected and it is our responsibility as their Representatives in the U.S. Congress to do so.

For years I have been a cosponsor of the Burke-Hartke bill to protect our Nation's shoe manufacturing industry.

I rise today in support of it again. We should not do anything in this House that will cause economic grief to one of our major industries and one of our major employers—the shoe manufacturing industry.

Let us protect the industry and let us protect its workers.

Mr. HANNA. Mr. Speaker, it is unmistakably clear that the intent of the conferees is to free American business from unnecessary, outmoded, bureaucratic restrictions in trade with Eastern Europe. United States and CoCom controls which discriminate against Americans must be done away with immediately if we are to get our rightful share of trade in this vastly expanding market. With the adoption of this conference report, we now call upon American industry to contribute its technical and commercial experience to assist in creating a more balanced and realistic export control posture. Joint industry-Government technical advisory committees should, in accordance with the provisions and clearly stated objectives of this law, be formed as soon as possible in order to avoid further losses to American businessmen, and further losses in our balance of trade.

PARLIAMENTARY INQUIRY

Mr. **BURKE** of Massachusetts. Mr. Speaker, a parliamentary inquiry.

The **SPEAKER**. The gentleman will state his parliamentary inquiry.

Mr. **BURKE** of Massachusetts. Mr. Speaker, may I inquire how much time the minority side had left before they yielded back their time?

The **SPEAKER**. The Chair will state that the gentleman from New Jersey (Mr. Widnall) had 16 minutes remaining.

Mr. **BURKE** of Massachusetts. I thank the Speaker.

The **SPEAKER**. Without objection, the previous question is ordered on the conference report.

There was no objection.

The **SPEAKER**. The question is on the conference report.

The question was taken; and on a division (demanded by Mr. Burke of Massachusetts) there were—ayes 77, noes 36.

Mr. **BURKE** of Massachusetts. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The **SPEAKER**. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 183, nays 124, not voting 125, as follows:

[Roll No. 348]

Mr. Veysey for, with Mr. Young of Florida against.
Mr. Whalen for, with Mr. Carter against.
Mr. Zion for, with Mr. Harvey against.
Mr. Del Clawson for, with Mr. Schneebeli against.

Until further notice:

Mr. Melcher with Mr. Arends.
Mr. Corman with Mr. Baker.
Mr. Abourezk with Mr. Keith.
Mrs. Hansen of Washington with Mr. Goldwater.
Mr. Hays with Mr. Bell.
Mr. Hungate with Mr. Jonas.
Mr. Landrum with Mr. Derwinski.
Mr. McMillan with Mr. Betts.
Mr. Pepper with Mr. Kemp.
Mr. Pryor of Arkansas with Mr. Kuykendall.
Mr. Reid with Mr. Lloyd.
Mr. William D. Ford with Mr. Broomfield.
Mr. Hagan with Mr. Dickinson.
Mr. Long of Louisiana with Mr. Lujan.
Mr. Anderson of California with Mr. Chamberlain.
Mr. Edmondson with Mr. McClory.
Mr. Gallagher with Mr. Esch.
Mr. Bob Wilson with Mr. McDonald of Michigan.
Mr. Peyser with Mr. Mailliard.
Mr. Quillen with Mr. Ruppe.
Mr. Nelsen with Mr. Riegle.
Mr. Minshall with Mr. Mallary.
Mr. Terry with Mr. Hamilton.

Mr. **KOCH** and Mr. **BUCHANAN** changed their votes from "yea" to "nay."

Mr. DENHOLM changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. PATMAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the conference report just agreed to.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment bills of the House of the following titles:

H.R. 3413. An act for the relief of Dr. David G. Simons, lieutenant colonel, U.S. Air Force (retired);

H.R. 8549. An act to amend title 10, United States Code, to broaden the authority of the Secretaries of the military departments to settle certain admiralty claims administratively, and for other purposes; and

H.R. 10310. An act to establish the Seal Beach National Wildlife Refuge.

The message also announced that the Senate had passed with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 11185. An act to amend the Internal Revenue Code of 1954 with regard to the exempt status of veterans' organizations.

The message also announced that the Senate agrees to the amendment of the House to a joint resolution of the Senate of the following title:

S.J. Res. 260. Joint resolution to delay the effectiveness of certain amendments to the interest subsidy provisions of the guaranteed student loan program in the case of certain students.

The message also announced that the Senate had passed a bill and a concurrent resolution of the following title, in which the concurrence of the House is requested:

S. 32. An act to amend the National Science Foundation Act of 1950 in order to establish a framework of national science policy and to focus the Nation's scientific talent and resources on its priority problems, and for other purposes; and

S. Con. Res. 94. Concurrent resolution providing for an adjournment of the two Houses from August 18, 1972, to September 5, 1972.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

Washington, D.C., August 18, 1972.

The Honorable the SPEAKER,
House of Representatives.

DEAR SIR: The Clerk of the House of Representatives received on August 17, 1972 from the U.S. Marshal by certified mail (812887) an unattested copy of the Summons in a Civil Action together with a copy of the complaint filed by Lewis Gene Freeman v. The United States Government, the United States Congress, the United States House of Representatives and others in Civil Action File No. 72 C 380 in the United States District Court for the Southern District of Indiana, Indianapolis Division.

The summons requires the Congress of the United States to answer the complaint within sixty days after service.

The summons and complaint in question are herewith attached, and the matter is presented for such action as the House in its wisdom may see fit to take.

Sincerely,

W. PAT JENNINGS,
Clerk, House of Representatives.

WASHINGTON, D.C., *August 18, 1972.*

Hon. RICHARD G. KLEINDIENST,
Attorney General of the United States, Washington, D.C.

DEAR MR. KLEINDIENST: I am sending you a certified copy of a summons and complaint in a civil action (72 C 380) filed against the United States Congress and the United States House of Representatives and others in the United States District Court for the Southern District of Indiana, Indianapolis Division, and served upon me by certified mail (812-887) on August 17, 1972.

In accordance with 2 U.S.C. 118 I have sent a certified copy of the summons and complaint in this action to the U.S. District Attorney for the Southern District of Indiana, Indianapolis Division, requesting that he take appropriate action under the supervision and direction of the Attorney General. I am also sending you a copy of the letter I forwarded this date to the U.S. Attorney.

With kind regards, I am,

Sincerely yours,

W. PAT JENNINGS,
Clerk, House of Representatives.

WASHINGTON, D.C., *August 18, 1972.*

Hon. STANLEY B. MILLER,
U.S. Attorney for the Southern District of Indiana, Indianapolis, Ind.

DEAR MR. MILLER: I am sending you a certified copy of a summons and complaint in a civil action (72 C 380) filed against the United States Congress and the United States House of Representatives and others in the United States District Court for the Southern District of Indiana, Indianapolis Division, and served upon me by certified mail (812-887) on August 17, 1972.

In accordance with Title 2, U.S. Code, sec. 118, I respectfully request that you take appropriate action, as deemed necessary, under the "supervision and direction of the Attorney General" of the United States in defense of this suit against the U.S. House of Representatives.

I am also sending you a copy of the letter that I forwarded this date to the Attorney General of the United States.

With kind regards, I am

Sincerely,

W. PAT JENNINGS,
Clerk, House of Representatives.

ADJOURNMENT OF THE HOUSES FROM AUGUST 18 TO SEPTEMBER 5, 1972

The SPEAKER laid before the House the Senate concurrent resolution (S. Con. Res. 94) providing for an adjournment of the two Houses from August 18, 1972, to September 5, 1972:

Resolved by the Senate (the House of Representatives concurring), That when the Senate adjourns on Friday, August 18, 1972, it stand adjourned until 10 o'clock ante meridian on Tuesday, September 5, 1972.

AMENDMENT OFFERED BY MR. O'NEILL

Mr. O'NEILL. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. O'NEILL: Strike out in page 1, line four, "1972.", and insert the following: "1972, and that when the House adjourns on Friday, August 18, 1972, it stand adjourned until 12 noon on Tuesday, September 5, 1972."

The amendment was agreed to.

The Senate concurrent resolution, as amended, was concurred in.

A motion to reconsider was laid on the table.

AUTHORIZING CLERK TO RECEIVE MESSAGES FROM SENATE AND SPEAKER TO SIGN BILLS AND JOINT RESOLUTIONS NOTWITHSTANDING ADJOURNMENT

Mr. O'NEILL. Mr. Speaker, I ask unanimous consent that notwithstanding any adjournment of the House until September 5, 1972, the Clerk be authorized to receive messages from the Senate and that the Speaker be authorized to sign any enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

AUTHORIZING PRINTING OF REPORTS BY COMMITTEES AUTHORIZED TO CONDUCT INVESTIGATIONS

Mr. O'NEILL. Mr. Speaker, I ask unanimous consent that reports filed with the Clerk following the adjournment of the House until September 5, 1972, by committees authorized by the House to conduct investigations, may be printed by the Clerk as reported of the 92d Congress.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

AUTHORIZING SPEAKER TO ACCEPT RESIGNATIONS AND TO APPOINT COMMISSIONS, BOARDS, AND COMMITTEES

Mr. O'NEILL. Mr. Speaker, I ask unanimous consent that, notwithstanding any adjournment of the House until September 5, 1972, the Speaker be authorized to accept resignations and to appoint commissions, boards, and committees authorized by law or by the House.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

DISPENSING WITH BUSINESS IN ORDER ON CALENDAR WEDNESDAY, SEPTEMBER 6, 1972

Mr. O'NEILL. Mr. Speaker, I ask unanimous consent that the business in order on Calendar Wednesday, September 6, 1972, may be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

PRIVILEGE OF MEMBERS TO REVISE AND EXTEND OWN REMARKS NOTWITHSTANDING ADJOURNMENT UNTIL SEPTEMBER 5, 1972

Mr. O'NEILL. Mr. Speaker, I ask unanimous consent that, notwithstanding any adjournment of the House until September 5, 1972, all Members of the House shall have the privilege to extend and revise their own remarks in the CONGRESSIONAL RECORD on more than one subject, if they so desire, and also to include therein such short quotations as may be necessary to explain or complete such extensions of remarks, but this order shall not apply to any subject matter which may have occurred or to any speech delivered subsequent to the adjournment of the House.

I also advise the membership that such extensions may be deposited in the CONGRESSIONAL RECORD boxes to be picked up in the customary manner.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

YOUTH APPRECIATION WEEK

Mr. EDWARDS of California. Mr. Speaker, I ask unanimous consent for the immediate consideration of the joint resolution (H.J. Res. 1080) providing for the observance of "Youth Appreciation Week" during the 7-day period beginning November 13, 1972.

The Clerk read the title of the joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from California (Mr. EDWARDS)?

There was no objection.

The Clerk read the joint resolution as follows:

H.J. RES. 1080

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the seven-day period beginning November 13, 1972, is hereby designated as "Youth Appreciation Week", and the President is requested to issue a proclamation calling up the people of the United States to observe such week with appropriate ceremonies and activities.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

NATIONAL COACHES DAY

Mr. EDWARDS of California. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate joint resolution (S.J. Res. 213) to authorize and request the President to issue a proclamation designating October 6, 1972, as "National Coaches Day."

The Clerk read the title of the joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from California?

Mr. GROSS. Mr. Speaker, reserving the right to object, I would like to ask the gentleman if that would include the coach of the baseball team of Washington, D.C., the major league team?

Mr. EDWARDS of California. Does the gentleman refer to the coach of the Republican team that won the baseball game against the Democratic team?

Mr. GROSS. I suppose that would have to be the coach, since there is no other major league team in Washington, D.C. Does this include all the coaches of what—baseball teams, football teams, basketball teams, ping pong teams?

Mr. EDWARDS of California. This resolution was sponsored by our colleague from Texas (Mr. PICKLE) who happens to be here, and I am sure he can answer better than I.

I defer to the gentleman from Texas (Mr. PICKLE).

Mr. PICKLE. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield.

Mr. PICKLE. The resolution is sponsored by the National Coaches Association. This includes collegiate and high school coaches in America. It is not professional coaches. It pertains to the National Coaches Association, primarily college and high school coaches.

Mr. GROSS. I stand corrected, Mr. Speaker. I just assumed that it included all coaches. It does not include coaches of chess teams, checker teams, and that sort of thing. I withdraw my reservation.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read the Senate joint resolution as follows:

S.J. RES. 213

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is authorized and requested to issue a proclamation designating October 6, 1972 as "National Coaches Day," and calling upon the people of the United States and interested groups and organizations to observe such day with appropriate ceremonies and activities.

Mr. PICKLE. Mr. Speaker, I am grateful for the opportunity and proud to join my colleagues in supporting passage of Senate Joint Resolution 213 to designate the period October 6 to honor the coaches of this Nation.

It is fair to say that these teacher-friends play a major role in the development not only of high standards for athletic competition but in the very development of the men and women.

It is easy for someone to put something down on paper that looks to be the perfect strategy in a sports event. It is entirely another thing to be able to take that paper and go to the ball field or the court and inspire the myriad qualities that a team function in harmony with brilliance and effectiveness.

This nation can be thankful for its sports institutions and it should be grateful for the men and women who mold the contestants for these games.

Any parent can tell you it is no easy task to instill high character, courage or dedication in their young. It takes a special person of outstanding physical ability and strong emotional status to project high ideals in those who participate in sports.

I was privileged recently to attend the annual Texas high school coaches luncheon in Houston where I was the recipient of the association's outstanding achievement award this year. I am grateful, of course, for this honor, but I am equally grateful for the opportunity to have been so closely associated with the high caliber of individuals that fill the ranks of those in coaching careers.

I think a day to honor those who serve youth particularly, is a day on which we can all reflect on the blessing that wholesome competition brings to our society.

As a nation, we are known for "our fair play." Certainly this attitude is a chapter that was first written in our sports annals. Without those leaders and mentors in the arena of sports competition this spirit would have perished with the horse and buggy.

Through the mirrors of sports we see ourselves reflected in a setting that shows we are a growing, prosperous and outgoing nation.

All over America every person interested in sports can express thanks to our coaches—at the university, college, high school and grammar school level. In Texas I especially express appreciation to the president of the Texas High School Coaches Association, Mr. Lloyd Parker, of Bay City, and to his board. And I would be remiss if I did not specially state my admiration to Mr. L. W. McConachie, executive vice president, and to Coach Darrell Royal who represent the finest qualities of coaches and men which our State possesses.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

NATIONAL FAMILY WEEK

Mr. EDWARDS of California. Mr. Speaker, I ask unanimous consent for the immediate consideration of the joint resolution (H.J. Res. 135) to authorize the President to issue a proclamation designating the week in November which includes Thanksgiving Day in each year as "National Family Week."

The Clerk read the title of the joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read the joint resolution, as follows:

H.J. RES. 135

Whereas the family is the basic strength of any free and orderly society; and

Whereas it is appropriate to honor the family as a unit essential to the continued well-being of the United States; and

Whereas it is fitting that official recognition be given to the importance of family loyalties and ties: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is hereby authorized and requested to issue a proclamation designating the week beginning on the Sunday preceding the fourth Thursday in November of each year as "National Family Week" and inviting the Governors of the several States, the chief officials of local governments, and the people of the United States to observe such day with appropriate ceremonies and activities.

AMENDMENTS OFFERED BY MR. EDWARDS OF CALIFORNIA

Mr. **EDWARDS** of California. Mr. Speaker, I offer two amendments, and ask unanimous consent that they be considered en bloc.

The **SPEAKER**. Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read as follows:

Amendments offered by Mr. EDWARDS of California: On page 1, strike out the entire preamble.

On page 2, line 4, strike out the phrase "each year" and insert in lieu thereof "1972".

The **SPEAKER**. The question is on the amendments offered by the gentleman from California (Mr. EDWARDS).

The amendments were agreed to.

Mr. **MYERS**. Mr. Speaker, I appreciate the patience of the House this afternoon. It is late and after the session yesterday that lasted 14 hours, I am happy that the House will consider this bill today.

The basic strength of our or any free and orderly society is the family. There could be no more appropriate week than that including Thanksgiving Day for us to honor our family loyalties and ties.

This legislation will authorize the President to designate the week beginning with the fourth Thursday in November of each year as "National Family Week." It also encourages the States and local communities to observe the week with appropriate ceremonies and activities.

The idea for a family week observance came from a constituent, Mr. Sam Wiley, who formerly taught in the Shakamak School system and is now assistant principal at Whiteland High School, both in Indiana.

The current unrest and dissatisfaction among the younger generation and the so-called generation gap can be traced in most cases to a complete breakdown in communications between parents and their children. While observance of family week does not promise to resolve all the unrest, I view it as a giant step toward the goal of restoring the traditional principles of respect and self-discipline which have made this a great Nation.

National Family Week is designed to coincide with Thanksgiving Day, that traditional time in America when families are rejoined for the purpose of giving thanks to God for the blessings which have come to them.

National Family Week would serve as the focal point for the enlistment of millions of American parents in an effort to better understand the wants and needs of their children and to encourage the children to better understand the duties and obligations of their parents.

I urge the adoption of this legislation.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "To authorize the President to issue a proclamation designating the week in November of 1972 which includes Thanksgiving Day as 'National Family Week'."

A motion to reconsider was laid on the table.

NATIONAL SOKOL U.S.A. DAY

Mr. **EDWARDS** of California. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Joint Resolution (H.J. Res. 1263) authorizing the President to proclaim October 30, 1972, as "National Sokol U.S.A. Day."

The Clerk read the title of the joint resolution.

The **SPEAKER**. Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read the joint resolution as follows:

H.J. RES. 1263

Whereas the Sokol gymnasium and Sokol activities provide a training ground for improving individual strength and skill through gymnastics and encouraging development of the ultimate peak of physical fitness; and

Whereas the first Slovak Sokol Society was organized in Chicago, Illinois, eighty years ago on October 30, 1892, and from this modest beginning grew an organization of more than twenty-three thousand members across our Nation; and

Whereas Sokol U.S.A. during this span of eighty years has made an invaluable contribution to the health and vitality of our citizens by encouraging young people to take up the sport of gymnastics and by fostering the development of physical strength and fitness through gymnastics; Now, therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is hereby authorized and requested to issue a proclamation designating October 30, 1972, as "National Sokol U.S.A. Day", and calling upon the people of the United States to observe such day with appropriate ceremonies and activities.

AMENDMENT OFFERED BY MR. EDWARDS OF CALIFORNIA

Mr. **EDWARDS** of California. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. EDWARDS of California: On page 1, strike out the entire preamble.

Mr. **ANNUNZIO**. Mr. Speaker, as the sponsor of House Joint Resolution 1263, which would designate October 30, 1972, as "National Sokol U.S.A. Day," I want to commend and thank Hon. DON EDWARDS of California, the distinguished chairman of Subcommittee No. 4 of the House Judiciary Committee, for the expeditious manner in which he has brought this legislation to the floor of the House for action.

I also want to express my appreciation to Hon. EMANUEL CELLER of New York, outstanding chairman of the Judiciary Committee, and all of the members of the committee for the prompt and favorable action they have taken in bringing this measure up on the House floor.

The 80th anniversary of the first Slovak Sokol Society, which was organized in my own city of Chicago, will take place on October 30, 1972, and the enactment of my resolution will enable more than 23,000 members of Sokol lodges across our Nation to proceed with plans for appropriate ceremonies in observance of this special anniversary.

This anniversary is especially significant in view of the fact that the 20th Olympiad will begin in the next few days in Munich, Germany, and many fine athletes, including gymnasts, from the United States will be competing in the Olympics.

The organization known as Sokol U.S.A. has made an outstanding contribution over the past 80 years toward development of individual strength and physical fitness of all Americans through gymnastics, and therefore, the special recognition afforded by my bill, House Joint Resolution 1263, is indeed fitting. I urge my colleagues to join in bipartisan support of House Joint Resolution 1263 which would make this special recognition possible.

The **SPEAKER**. The question is on the amendment offered by the gentleman from California (Mr. EDWARDS).

The amendment was agreed to.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and motion to reconsider was laid on the table.

NATIONAL MICROFILM WEEK

Mr. **EDWARDS** of California. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Joint Resolution (H.J. Res. 1193) to provide for the designation of the week which begins on September 24, 1972, as "National Microfilm Week."

The Clerk read the title of the joint resolution.

The **SPEAKER**. Is there objection to the request of the gentleman from California?

Mr. **GROSS**. Mr. Speaker, I reserve the right to object. I should like to ask the gentleman where this Microfilm Week is going to be celebrated and how.

Mr. **EDWARDS** of California. In answer to the question of the gentleman from Iowa, there certainly will not be any celebration that I know anything about. It is merely a recognition of the contribution that the industry has made, and we are eliminating the "Whereas" clauses which reflect how microfilm is making an essential contribution toward society, and so forth.

Mr. **GROSS**. I should have asked this question a long time ago when this started. Will any of these resolutions cost the poor old taxpayers of the United States any money?

Mr. **EDWARDS** of California. I assure the gentleman they surely will not.

Mr. **GROSS**. And they are all emergencies; are they?

Mr. **EDWARDS** of California. The dates are approaching.

Mr. **GROSS**. Mr. Speaker, I withdraw my reservation of objection.

The **SPEAKER**. Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read the joint resolution as follows:

H.J. Res. 1193

Whereas microfilm has made an essential contribution to our society and every facet of our lives as a means of quickly and efficiently storing, transferring, retrieving, and disseminating information; and

Whereas microfilm has made possible economical and convenient preservation of our history and opened the portals of knowledge for all who desire it; and

Whereas the National Archives and Records Service and the Library of Congress utilize microfilm to preserve the Nation's history and provide basic documentation for research in many fields and the Nation's V-mail program used microfilm to make sure its fighting men received their mail in battle zones; and

Whereas microfilm touches the lives of each of us through our Government, our place of employment, the merchants with whom we deal, our schools and other institutions; and

Whereas microfilm has played a significant role in American society, and its importance continues to expand as demands for information continue to grow: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is authorized and requested to issue a proclamation (1) designating the week which begins on September 24, 1972, as "National Microfilm Week"; and (2) inviting the Governors and mayors of States and local governments of the United States to issue similar proclamations.

AMENDMENT OFFERED BY MR. EDWARDS OF CALIFORNIA

Mr. EDWARDS of California. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Edwards of California: On pages 1 and 2 strike the entire preamble.

The amendment was agreed to.

Mr. CONABLE. Mr. Speaker, I rise at this time to urge my colleagues to join me in voting for passage of the resolution designating the week of September 24, 1972, as "National Microfilm Week" in honor of an industry and technological system which has revolutionized information gathering and dissemination in a way that has affected everyone's life.

I first introduced this resolution last April along with Congressman Horton, and reintroduced it in May along with Congressmen Boggs, Smith of New York, Corman, Betts, Karth, Frelinghuysen, Thompson of New Jersey, Erlenborn, Dorn, Gubser, Helstoski, Conte, Abzug, Steiger of Wisconsin, Esch, Kuykendall, Williams, Kemp, Lent, and McKinney. The bill provides that the designation be made in 1972 only.

I am quite pleased that so many of my colleagues on both sides of the aisle have seen fit to honor this industry and to recognize the significant role of microfilm in American society. Microfilm has made possible economical and convenient preservation of our history as well as the opening of the portals of knowledge for all who desire it. Government is the largest single user of microfilm—historically through such programs as the V-mail program and currently through its use by the Library of Congress, the National Archives and most of the departments of the Federal Government. Private industry, as well as the education community, utilizes microfilm extensively for recordkeeping purposes.

I thank my colleagues for their support of this legislation and I am hopeful that the Senate will soon join the House of Representatives in recognizing this exceptional technological system of information and records.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

WOMEN'S RIGHTS DAY

Mr. EDWARDS of California. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate bill (S. 3490) to authorize and request the President to issue annually a proclamation designating August 26 of each year as "Women's Rights Day."

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read the Senate bill as follows:

S. 3490

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in commemoration of the anniversary of the adoption on August 26, 1920, of the nineteenth amendment to the Constitution granting women the right to vote, the President is authorized and requested to issue annually a proclamation designating August 26 of each year as "Women's Rights Day", and calling upon the people of the United States and interested groups and organizations to observe such day with appropriate ceremonies and activities.

AMENDMENTS OFFERED BY MR. EDWARDS OF CALIFORNIA

Mr. EDWARDS of California. Mr. Speaker, I offer two amendments, and ask unanimous consent that they be considered en bloc.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read as follows:

Amendments offered by Mr. Edwards of California: On page 1, line 6, strike the word "annually".

On page 1, line 7, strike the phrase "each year" and insert in lieu thereof "1972".

The amendments were agreed to.

Mrs. ABZUG. Mr. Speaker, I am very pleased that this House has acted to declare August 26 "Women's Rights Day." In the year since I originally introduced a bill, House Joint Resolution 808, similar to the one approved today, the women's rights movement has gained national influence and stature, and this action is one recognition of that development.

August 26 has a dual significance. It is the anniversary of the date 52 years ago when women, a majority of the Nation, won the right to vote after a struggle that took three-fourths of a century. It is also the date that marks the renascence of a national women's movement. Two years ago, on the 50th anniversary of women's suffrage, women declared a nationwide strike to dramatize their demands.

In New York next Friday, thousands of women will gather for the third successive year to march down Fifth Avenue in a women's strike for justice and equality. The many different groups and individuals participating indicate the breath of the womens' movement and the diversity of its issue and demands. All over the country, similar actions will be taking place.

One of our major demands last year, adoption of the equal rights amendment, is on the way to fulfillment. In the past year, we have also increased national awareness and sensitivity to the wrongs done to women under the discrimination in our legal, social, economic, and political institutions. But we are not deluding ourselves that mere passage of an amendment or declaration of a special day will wipe out discrimination. We know this is a continuing struggle. We also know that it is only when women organize politically that the full potential of their power can be felt. We also know that our demand for equal representation within the framework of a peaceful society is based on a humanist ideology opposed to violence and to discrimination not only on the grounds of six, but of race, age, and class.

The National Women's Political Caucus has become a major force since it was organized a year ago as a multipartisan group. Due to its efforts, dramatic reforms have been made within the Democratic Party, and women played a highly visible and significant role at the recent Democratic Convention in Miami Beach. Women comprised 40 percent of the delegates, worked on key committees, and occupied leading positions at the convention and in the party. Republican women in the NWPC are now in Miami Beach making a similar effort to gain effective recognition of women's rights within the Republican Party, but I gather from news reports that they are meeting more resistance than did their Democratic counterparts.

I think it should be clear to all Members of this body that women's issues cut across party lines and affect women of all classes and backgrounds. Women are rightly concerned with elimination of all forms of discrimination, with equal pay and job opportunity, equal job training and promotion, professional recognition and advancement, with universally available child care programs that are so necessary for the millions of working women who have young children, with the accessibility of birth control information, repeal of antiquated abortion laws, elimination of inequalities from the social security system and divorce and credit laws, and with equal representation in the political institutions of our Nation, including this Congress.

We have made considerable progress in the past year, but we have a long way to go. I call upon my colleagues to follow up their positive actions of the past year and today by enacting into law bills which I and other Members have introduced to eliminate many of the inequalities directed at women. Women all across the Nation look forward to the time when they will be recognized as citizens who are fully equal to men in both responsibility and privileges. We also look forward to the time when the composition of the Congress itself reflects the reality of our population. It is shocking that there should be one woman in the Senate and only a dozen in the House. The National Women's Political Caucus is working to change that, and I should advise you that it will be working for its goal not just on August 26, but on every day of every year for as long as it takes to succeed.

At this point, I would like to insert into the Record a list of the bills that I have introduced on women's rights.

Bills Relating to Women's Rights

H.R. 7533—lowers length of marriage required for divorcee to receive Social Security benefits on former husband's account.

H.R. 8402—comprehensive child care.

H.R. 9565—tax deductions for child care expenses.

H.R. 10121—prohibit use of prefixes denoting marital status by federal government ("Ms." bill)

H.R. 10240—authorizes abortions in military facilities notwithstanding local laws.

H.R. 14430—prohibit discrimination on the basis of sex in public accommodations, public education, housing, federally-assisted programs.

H.R. 14715—Abortion Rights Act.

H.R. 15114—prohibit sex discrimination in federally-related mortgage transactions.

H.R. 15115—prohibit discrimination on the basis of sex by grantors of consumer credit.

H.R. 15116—prohibit discrimination on the basis of sex by banks, credit unions, and other financial institutions in the granting of credit or loans.

H.R. 15522—establish "householder's basic benefit" under Social Security system.

H.R. 15526—reduces from 20 to 5 the number of years a divorced woman's marriage must have lasted to qualify her for wife's or widow's benefits.

H.R. 15527—eliminates special dependency requirements for wives and widows under Social Security system.

H.R. 15529—marriage or remarriage of beneficiary not to reduce benefits to which he or she is entitled; double payment prohibited.

H.R. 15533—eliminates the duration-of-marriage and other special requirements for Social Security eligibility.

H.R. 16574—authorizes HEW to make special educational grants for women's and related educational purposes.

The Senate bill, as amended, was ordered to be read a third time, was read the third time, and passed.

The title was amended so as to read: "To authorize and request the President to issue annually a proclamation designating August 26, 1972, as 'Women's Rights Day'."

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. EDWARDS of California. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the five measures just passed.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

AMENDING INTERNAL REVENUE CODE OF 1954 WITH REGARD TO EXEMPT STATUS OF VETERANS' ORGANIZATIONS

Mr. MILLS of Arkansas. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 11185) to amend the Internal Revenue Code of 1954 with regard to the exempt status of veterans' organizations, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Strike out all after the enacting clause and insert:

That (a) section 501(c) of the Internal Revenue Code of 1954 (relating to list of exempt organizations) is amended by adding at the end thereof the following new paragraph:

"(19) A post or organization of war veterans, or an auxiliary unit or society of, or a trust or foundation for, any such post or organization—

"(A) organized in the United States or any of its possessions,

"(B) at least 75 percent of the members of which are war veterans and substantially all of the other members of which are individuals who are veterans (but not war veterans), or are cadets, or are spouses, widows, or widowers of war veterans or such individuals, and

"(C) no part of the net earnings of which inures to the benefit of any private shareholder or individual.".

(b) Section 512(a) of such Code (relating to definition of unrelated business taxable income) is amended by adding at the end thereof the following new paragraph:

"(4) Special rule applicable to organizations described in section 501(c)(19).—In the case of an organization described in section 501(c)(19), the term 'unrelated business taxable income' does not include any amount attributable to payments for life, sick, accident, or health insurance with respect to members of such organizations or their dependents which is set aside for the purpose of providing for the payment of insurance benefits or for a purpose specified in section 170(c)(4). If an amount set aside under the preceding sentence is used during the taxable year for a purpose other than a purpose described in the preceding sentence, such amount shall be included, under paragraph (1), in unrelated business taxable income for the taxable year."

(c) The amendments made by this section shall apply to taxable years beginning after December 31, 1969.

Sec. 2. (a) Section 165(h) of the Internal Revenue Code of 1954 (relating to disaster losses) is amended by—

(1) striking out the first sentence and inserting in lieu thereof the following: "Notwithstanding the provisions of subsection (a), any loss attributable to a disaster occurring in an area subsequently determined by the President of the United States to warrant assistance by the Federal Government under the Disaster Relief Act of 1970, may, at the election of the taxpayer, be deducted for the taxable year immediately preceding the taxable year in which the disaster occurred."; and

(2) inserting before the period in the second sentence a comma and the following: "based on facts existing at the date the taxpayer claims the loss".

(b) Section 6405 of such Code (relating to reports of refunds and credits to the Joint Committee on Internal Revenue Taxation) is amended by adding at the end thereof the following new subsection:

"(d) Refunds Attributable to Certain Disaster Losses.—If any refund or credit of income taxes is attributable to the taxpayer's election under section 165(h) to deduct a disaster loss for the taxable year immediately preceding the taxable year in which the disaster occurred, the Secretary or his delegate is authorized in his discretion to make the refund or credit, to the extent attributable to such election, without regard to the provisions of subsection (a) of this section. If such a refund as credit is made without regard to subsection (a), there shall thereafter be submitted to such Joint Committee a report containing the matter specified in subsection (a) as soon as the Secretary or his delegate shall determine the correct amount of the tax for the taxable year for which the refund or credit is made."

(c) The amendment made by subsection (a) shall apply to disasters occurring after December 31, 1971, in taxable years ending after such date. The amendment made by subsection (b) shall apply with respect to refunds or credits made after July 1, 1972.

Amend the title so as to read: "An Act to amend the Internal Revenue Code of 1954 with regard to the exempt status of veterans' organizations, and for other purposes."

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

Mr. BYRNES of Wisconsin. Mr. Speaker, reserving the right to object, I do so not because it is my intention to object but because I want to ask the gentleman from Arkansas for an explanation of the Senate amendments. I yield to the gentleman from Arkansas.

Mr. MILLS of Arkansas. Mr. Speaker, I thank my friend, the gentleman from Wisconsin, for yielding.

Mr. Speaker, H.R. 11185 was brought up by unanimous consent and passed by the House on February 29, 1972. As passed by the House, it established a separate category in section 501(c) of the Code for the already existing Federal income tax exemption for war veterans' organizations. The bill also made it clear that income from insurance activities of such organizations would be exempt from taxation to the extent it is used for payment of insurance benefits or for educational, charitable, or religious purposes.

Mr. Speaker, the Senate accepted the House-passed provisions but made two modifications in them. First, it refined and clarified the tax-exempt category in the House bill to make it applicable to all veterans' organizations whose memberships consist of at least 75 percent of war veterans as long as substantially all the other members are veterans—other than war veterans—cadets, or are spouses, widows or widowers of war veterans or such other individuals. In addition, the Senate bill amends the effective date of the House provision to make it effective as of the generally effective date of the Tax Reform Act of 1969, that is, taxable years beginning after December 31, 1969. This amendment is consonant with the 1969 act under which it was never the specific intent to tax the insurance income of war veterans' organizations. I recommend that the House concur in these amendments, which are related to the original subject matter of the House-passed bill.

Mr. Speaker, the Senate has also added two unrelated amendments to H.R. 11185. These amendments, in my judgment, also deserve the concurrence of the House. It will be recalled that in June, Congress approved an amendment to section 165 (h) of the Internal Revenue Code, the section relating to disaster losses, to provide that if a Presidentially-declared disaster occurred within the first 6 months of the taxable year, a taxpayer in a designated disaster area could elect to deduct any casualty loss resulting therefrom on his tax return for the preceding taxable year. The first Senate amendment would extend this recently enacted provision and allow the same treatment if the disaster occurred at any time during a taxable year, rather than during the first 6 months of the year, I should state, Mr. Speaker, that this provision of the law applies to the deduction of casualty losses with respect to property—it has no application to the deduction of expenses, bad debts or similar items which may be attributable to the occurrence of the disaster.

Mr. Speaker, this particular amendment is necessary to place fiscal year taxpayers and calendar year taxpayers in the same position with respect to claims arising out of the recent Hurricane Agnes. I strongly recommend that the House concur in this necessary amendment, which should have been included in the public law enacted in June.

The second Senate amendment also relates to the consequences of Hurricane Agnes. It speeds the processing of refund claims resulting from that storm and other recent disasters by authorizing the Internal Revenue Service to make credits or refunds in excess of $100,000 before, rather than after, submitting a report to the Joint Committee on Internal Revenue Taxation. Refund claims under that amount do not have to be submitted to the joint committee either under existing law or under the amendment. Under the amendment, a report will be submitted by the Service to the Joint Committee after a refund in excess of $100,000 is made. This procedure would apply only in the case of disaster losses, and it will have the effect of preventing delay in the granting of badly needed tax relief, but at the same time provides for adequate subsequent review by the joint committee on large disaster loss refund claims.

Mr. Speaker, these amendments are entirely worthy of approval by the House, and I urge concurrence in them.

Mr. BYRNES of Wisconsin. Mr. Speaker, I believe the amendments should be concurred in.

I withdraw my reservation.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The Senate amendments were concurred in.

A motion of reconsider was laid on the table.

CONFERENCE REPORT ON H.R. 15580, DISTRICT OF COLUMBIA POLICE AND FIREMEN'S SALARY ACT

Mr. CABELL. Mr. Speaker, I ask unanimous consent for the immediate consideration of the conference report on the bill (H.R. 15580) to amend the District of Columbia Police and Firemen's Salary Act of 1958 to increase salaries, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. CABELL. Mr. Speaker, I ask unanimous consent that the statement be read in lieu of the report.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of August 15, 1972.)

Mr. CABELL (during the reading). Mr. Speaker, I ask unanimous consent to dispense with further reading of the statement.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER. The gentleman from Texas is recognized.

Mr. CABELL. Mr. Speaker, first may I apologize to the Members for having to bring this up at this late hour. However, this will avoid a 30-day delay. This will mean an additional $1 million in tax revenue to the District of Columbia.

I should also like to thank most sincerely the chairman of the Committee on Interstate and Foreign Commerce for yielding this time to me.

There are no really substantive changes from the House-passed bill. The only change of any significance, on which the House conferees receded, was that we did agree to a 2-month retroactivity for the pay bill as opposed to the 4-month retroactivity as called for in the Senate bill.

This will cost approximately $3 million, which is the only additional cost of any significance that is provided for in this bill.

We held our position on all of the major items, including the proposals for funding of the items in the bill before you. We were able to hold our position on all other items of any consequence, and the position of the House, I can assure you, has been maintained.

Mr. CABELL. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The conference report was agreed to.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. CABELL. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the conference report just agreed to.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

GENERAL LEAVE TO EXTEND ON SENATE AMENDMENT TO H.R. 11185

Mr. MILLS of Arkansas. Mr. Speaker, I ask unanimous consent that the gentleman from Pennsylvania (Mr. SCHNEEBELI) and any other Members desiring to do so may have 5 legislative days in which to extend their remarks in the RECORD in connection with the concurrence of the House in the Senate amendments to H.R. 11185.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

PROVIDING FOR CONSIDERATION OF H.R. 14847, AIR PASSENGER FEES, STATE AND LOCAL CHARGES

Mr. MATSUNAGA. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1095 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1095

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 14847) to amend the Airport and Airway Development Act of 1970 to increase from 50 to 75 per centum the United States share of allowable project costs payable under such Act; to amend the Federal Aviation Act of 1958 to prohibit State taxation of the carriage of persons in air transportation; and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider the amendment in the nature of a substitute recommended by the Committee on Interstate and Foreign Commerce now printed in the bill as an original bill for the purpose of amendment under the five-minute rule, and all points of order against said substitute for failure to comply with the provisions of clause 7, rule XVI are hereby waived. At the conclusion of such consideration, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions. After the passage of H.R. 14847, it shall be in order in the House to take from the Speaker's table the bill S. 3755 and to move to strike out all after the enacting clause of the said Senate bill and insert in lieu thereof the provisions contained in H.R. 14847 as passed by the House.

The SPEAKER. The gentleman from Hawaii is recognized for 1 hour.

Mr. MATSUNAGA. Mr. Speaker, I yield 30 minutes to the gentleman from Illinois (Mr. ANDERSON) pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 1095 provides an open rule with 1 hour of general debate for consideration of H.R. 14847 to amend the Airport and Airway Development Act and the Federal Aviation Act. The resolution also provides that it shall be in order to consider the committee substitute as an original bill for the purpose of amendment and, after passage of the House bill, it shall be in order to take from the Speaker's table

S. 3755 and move to strike all after the enacting clause and amend it with the House-passed language. The committee amendment in the nature of a substitute is not altogether germane to the original bill; therefore, points of order are waived for failure to comply with clause 7 of rule XVI.

H.R. 14847 provides an 18-month moratorium barring States or local governments from levying or collecting any charges on persons traveling by air. At the present time, approximately 20 communities are levying such charges. The effective date of the legislation is the day of its enactment.

During the moratorium, the Civil Aeronautics Board is authorized and directed to make an investigation into the matter and report, with its findings and recommendations, within 1 year. For the purpose of conducting its investigation, the CAB would be authorized to conduct hearings, issue subpenas and receive evidence in the same manner as in regular board proceedings under the Federal Aviation Act.

The sum of $100,000 is authorized to be appropriated to enable the CAB to make the investigation.

The legislation also extends from May 21, 1972, to May 21, 1973, the time within which the Secretary of Transportation is to publish a national airport system plan for the development of public airports.

Mr. Speaker, H.R. 14847 was reported out unanimously by the Subcommittee on Interstate and Foreign Commerce and by voice vote out of the full committee. I urge the adoption of the rule in order that the legislation may be considered.

Mr. HALL. Mr. Speaker, will the gentleman yield?

Mr. MATSUNAGA. I yield to the gentleman from Missouri.

Mr. HALL. Mr. Speaker, I wonder if the distinguished gentleman from Hawaii, a member of the Committee on Rules, could elaborate just a little more on the point that it is necessary to waive points of order? I understand that the substitute may not be germane to the original bill considered, but it was not quite enough to satisfy the gentleman from Missouri because this seems to be a rather innocuous bill, albeit opposed by the administration and by all departmental reports in the report. Furthermore, it is opposed rather vehemently by various airport managers that have written in from around the country.

Be that as it may, I direct my question, Mr. Speaker, to any information the gentleman from the Committee on Rules might have as to why we again have a rule waiving points of order and again taking away the rights of the individual Members to make a point of order against certain portions of the bill.

Mr. MATSUNAGA. If the gentleman from Missouri will turn to page 5 of the bill itself, H.R. 14847, and look at section 5, line 5, that section is new, and not covered in the original bill, which would require a waiver of the rule in order that it may be considered at this hour by the committee.

Mr. HALL. Mr. Speaker, if the gentleman will yield further, my understanding is that that provision extends something already mandated in the Airway Development Act of 1970 by striking "two years" and inserting in lieu thereof "three years."

I am well aware of the fact that the Airways and Airport Development Act of 1970 is not a part of the original intent of this bill, but actually the substitute printed in the bill that this rule makes—in order, mandates the Civil Aeronautics Board agency, in being, a creature of the Congress, to do all of this work and these studies. Why do they need 3 years to do this instead of 2 years?

Mr. MATSUNAGA. This is just to give them an additional year, which it was reported would be necessary in making the appropriate plans.

Mr. HALL. Mr. Speaker, I appreciate the gentleman's explanation. Of course, I had already read the bill and referred to the item where the waiver of points of order was made. It seems quite inadequate, and is another case where we have waived points of order, thus robbing the Members of their individual rights, and, as usual, I oppose such a rule.

I thank the gentleman for yielding.

Mr. ANDERSON of Illinois. Mr. Speaker, I yield myself such time as I may consume.

Mr. ANDERSON of Illinois. Mr. Speaker, I think the gentleman from Hawaii, my colleague on the Committee on Rules, has adequately explained the purpose of this legislation and also the rule that makes it in order.

Mr. Speaker, I would associate myself with his remarks and urge the House adopt this rule.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I am pleased to yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, when was this rule approved? Does the gentleman remember?

Mr. ANDERSON of Illinois. On Tuesday, I believe.

Mr. GROSS. Of this week?

Mr. ANDERSON of Illinois. I believe it was Tuesday of this week.

Mr. GROSS. What is the emergency character or nature of this bill which requires it to be considered at this late hour?

Mr. ANDERSON of Illinois. I am not sure that I can answer the gentleman's question in its entirety. I do believe, however, there is a tendency on the part of local airport authorities around the country to begin to levy these head taxes, user taxes.

I happened to be in the State of Michigan on Monday of this week, and it just so happened it was in Kalamazoo, and I learned that that very week one of these head taxes was going into effect at that particular airport.

Mr. Speaker, I would be pleased to yield to some member of the Committee on Interstate and Foreign Commerce for a more complete explanation, but I am inclined to believe this may be one of the reasons for the urgency that is attached to this legislation.

Mr. GROSS. I wonder why, this being a Friday—and we never before have worked on Friday, or so seldom. I cannot remember when we have previously worked on Friday. We come down to this stage, just before an adjournment, and I wonder if we ought not suspend operations and join in singing that old hymn:

> Work for the night is coming. Work in the morning hours.

And really celebrate this occasion.

Mr. ANDERSON of Illinois. I am very sympathetic, of course, with the gentleman's feelings. However, I was on the floor earlier today and heard his colloquy with the gentleman from Florida when the gentleman from Florida brought up the so-called SALT bill. The gentleman from Iowa has certainly retained his ability to follow the proceedings here very well. I would hope that he would bear with us until this action is taken.

Mr. WARE. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman.

Mr. WARE. May I just add that the situation you have described in Kalamazoo, Mich., is identical to that which occurred recently in Philadelphia and elsewhere throughout the country. I think that prompts a sense of urgency.

Mr. ANDERSON of Illinois. I thank the gentleman for that added explanation.

Mr. Speaker, I have no further requests for time.

Mr. MATSUNAGA. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. HALL. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members, and the Clerk will call the roll:

The question was taken; and there were—yeas 215, nays 23, not voting 194, as follows:

[Roll No. 349]

Mr. Shoup with Mr. Smith of California.
Mr. Steiger of Arizona with Mr. Schwengel.

Mrs. ABZUG and Messrs. WHITEHURST and ROBINSON of Virginia changed their votes from "nay" to "yea."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

CONFERENCE REPORT ON H.R. 12350, ECONOMIC OPPORTUNITY AMENDMENTS OF 1972

Mr. PERKINS submitted the following conference report and statement on the bill (H.R. 12350) to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, and for other purposes:

CONFERENCE REPORT (H. REPT. No. 92–1367)

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 12350) to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate and agree to the same with an amendment as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

That this Act may be cited as the "Economic Opportunity Amendments of 1972".

EXTENSION OF ECONOMIC OPPORTUNITY ACT

SEC. 2. (a) Sections 171, 245, 321, 408, 615, and 835 of the Economic Opportunity Act of 1964, as amended, are each amended by striking out "five succeeding fiscal years" and inserting in lieu thereof "eight succeeding fiscal years".

(b) Section 523 of such Act is amended by striking out "four succeeding fiscal years" and inserting in lieu thereof "seven suceeding fiscal years".

AUTHORIZATION OF APPROPRIATIONS

SEC. 3. (a) For the purpose of carrying out parts A, B, and E of title I (relating to work and training) of the Economic Opportunity Act of 1964, there are authorized to be appropriated $900,300,000 for the fiscal year ending June 30, 1973, and $950,000,000 for the fiscal year ending June 30, 1974.

(b) (1) For the purpose of carrying out the Project Headstart program described in section 222(a) (1) of the Economic Opportunity Act of 1964, there are authorized to be appropriated $485,000,000 for the fiscal year ending June 30, 1973, and $500,000,000 for the fiscal year ending June 30, 1974.

(2) The Secretary of Health, Education, and Welfare shall establish policies and procedures designed to assure that not less than 10 per centum of the total number of enrollment opportunities in the Nation in the Headstart program shall be available for handicapped children (as defined in paragraph (1) of section 602 of the Elementary and Secondary Education Act of 1965, as amended) and that services shall be provided to meet their special needs. The Secretary shall implement his responsibilities under this paragraph in such a manner as not to exclude from any project any child who was participating in the program during the fiscal year ending June 30, 1972. Within six months after the date of enactment of this Act, and at least annually thereafter, the Secretary shall report to the Congress and the status of handicapped children in Headstart programs, including the number of children being served, their handicapping conditions, and the services being provided such children.

(3) For the purpose of carrying out the Follow Through program described in section 222(a) (2) of such Act, there are authorized to be appropriated $70,000,000 annually for the fiscal year ending June 30, 1973, and the succeeding fiscal year.

(c) (1) For the purpose of carrying out titles II, III, VI, VII, and IX of the Economic Opportunity Act of 1964, there are authorized to be appropriated $840,000,000 for the fiscal year ending June 30, 1973, and $870,000,000 for the fiscal year ending June 30, 1974.

(2) Notwithstanding any other provision of law, unless expressly in limitation of the provisions of this section, of the amounts appropriated pursuant to paragraph (1) of this subsection for the fiscal year ending June 30, 1973, and for the succeeding fiscal year, the Director of the Office of Economic Opportunity shall for each such fiscal year reserve and make available not less than $328,900,000 for programs under section 221 of the Economic Opportunity Act of 1964 and not less than $71,500,000 for Legal Services programs under section 222(a) (3) of such Act.

(3) The Director shall allocate and make available the remainder of the amounts appropriated for carrying out the Economic Opportunity Act of 1964 for each fiscal year pursuant to paragraph (1) of this subsection (after funds are reserved for the purposes specified in paragraph (2) of this subsection) in such a manner, subject to the provisions of section 616 of such Act, as to make available with respect to each fiscal year—

(A) not less than $18,000,000 annually to be used for the Alcoholic Counseling and Recovery program described in section 222 (a) (8) of such Act; and

(B) not less than $30,000,000 annually to be used for the Emergency Food and Medical Services program described in section 222(a) (5) of such Act.

(d) (1) There are authorized to be appropriated $58,000,000 for the fiscal year ending June 30, 1973, to be used for Domestic Volunteer Service programs under title VIII of the Economic Opportunity Act of 1964, of which (A) the amount of $44,500,000 shall be available for carrying out full-time volunteer programs designed to strengthen and supplement efforts to eliminate poverty under part A of such title VIII, and (B) the amount of $13,500,000 shall be available (notwithstanding the 10 per centum limitation set forth in the second sentence of section 821 of such Act) for carrying out programs designed to strengthen and supplement efforts to eliminate poverty under part B of such title VIII.

(2) If the sums authorized to be appropriated under paragraph (1) of this subsection are not appropriated and made available in full, then such sums as are so appropriated and made available for such fiscal year shall be allocated so that—

(A) any amounts appropriated not in excess of $37,000,000 shall be used for carrying out programs designed to strengthen and supplement efforts to eliminate poverty under part A of such title VIII;

(B) any amounts appropriated in excess of $37,000,000 but not in excess of $50,500,000 shall be used for programs designed to strengthen and supplement efforts to eliminate poverty under part B of such title VIII; and

(C) any amounts appropriated in excess of $50,500,000 shall be used for programs designed to strengthen and supplement efforts to eliminate poverty under part A of such title VIII.

(3) Section 833 of the Economic Opportunity Act of 1964 is amended (A) in subsection (b) thereof by striking out "under part A" and inserting in lieu thereof "under this title", and (B) in subsection (c) thereof by striking out "a volunteer under part A of this title" and inserting in lieu thereof "a full-time volunteer receiving either a living allowance or a stipended under this title".

(e) In addition to the amounts authorized to be appropriated and allocated pursuant to subsections (c) and (d) of this section, there are further authorized to be appropriated the sum of $16,000,000 to be used for Domestic Volunteer Service programs under title VIII of the Economic Opportunity Act of 1964, of which $8,000,000 shall be available for carrying out full-time volunteer programs under part A of such title VIII for ninety days after the enactment of this Act (of which amount $2,000,000 shall be available without regard to the limitation placed on the expenditure of funds by section 24 of this Act for programs, projects, or activities for which academic credit is granted to volunteer participants) and $8,000,000 shall remain available for expenditure in accordance with the provisions of such title during the fiscal year ending June 30, 1973.

TRANSFER OF FUNDS

SEC. 4. (a) Section 616 of the Economic Opportunity Act of 1964 is amended by inserting "for fiscal years ending prior to July 1, 1972, and not to exceed 20 per centum" immediately before the words "for fiscal years ending thereafter".

(b) Section 616 of such Act is further amended by striking out the semicolon the first time it appears therein and all matter thereafter through "$10,000,000" the second time it appears in such section.

TRAINING PROGRAMS FOR YOUTH

SEC. 5. Section 125(a) of the Economic Opportunity Act of 1964 is amended by adding at the end thereof the following new sentence: "The Director shall insure that low-income persons otherwise capable of such participation who reside in public or private institutions shall be eligible for participation in programs under this part.".

PROHIBITION OF ELECTIONS OR OTHER DEMOCRATIC SELECTION PROCEDURES ON SABBATH DAYS

SEC. 6. Section 211 of the Economic Opportunity Act of 1964 is amended by adding at the end thereof a new subsection (g) as follows:

"(g) The Director shall ensure that no election or other democratic selection procedure conducted pursuant to clause (2) of subsection (b), or pursuant to clause (2) of subsection (f), shall be held on a Sabbath Day which is observed as a day of rest and worship by residents in the area served."

COMMUNITY ACTION BOARDS

SEC. 7. (a) The last sentence of section 211(b) of the Economic Opportunity Act of 1964 is amended by striking out "three" and inserting in lieu thereof 'five" and by striking out "six" and inserting in lieu thereof "ten".

(b) Section 211(b) (1) of such Act is amended to read as follows: "(1) one-third of the members of the board are elected public officials, or their representatives, except that if the number of elected officials reasonably available and willing to serve is less than one-third of the membership of the board, membership on the board of appointive public officials may be counted in meeting such one-third requirement.".

PARTICIPATION OF THE NONPOOR IN HEADSTART PROGRAMS

SEC. 8. The third sentence of section 222 (a) (1) of the Economic Opportunity Act of 1964 is amended by striking out the comma and all the language following the words "make payment" and inserting in lieu thereof the following: "in accordance with an appropriate fee schedule established by the Secretary of Health, Education, and Welfare, based upon the ability of the family to pay, which payment may be made in whole or in part by a third party in behalf of such family, except that any such charges with respect to any family with an income of less than the lower living standard budget shall not exceed the sum of (i) an amount equal to 10 per centum of any family income which exceeds $4,320 but does not exceed 85 per centum of such lower living standard budget, and (ii) an amount equal to 15 per centum of any family income which exceeds 85 per centum of such lower living standard budget but does not exceed 100 per centum of such lower living standard budget, and if more than two children from the same family are participating, additional charges may be made not to exceed the sum of the amounts calculated in accordance with clauses (i) and (ii) with respect to each additional child. No charge will be made with respect to any child who is a member of any family with an annual income equal to or less than $4,320, with appropriate adjustments in the case of families having more than two children, except to the extent that payment will be made by a third party. Funds appropriated for the purpose of carrying out this section shall be used first to continue ongoing Headstart projects, or new projects serving the children from low-income families which were being served during the preceding fiscal year. There shall be reserved for such projects from such funds an amount at least equal to the aggregate amount received by public or private agencies or organizations during the preceding fiscal year for programs under this section. The Secretary may defer but not later than April 1, 1973, the establishment of a fee schedule under this paragraph upon certification that the establishment of such fee schedule would hinder the orderly operation of such projects prior to such time."

COMPREHENSIVE HEALTH SERVICES CHARGES

SEC. 9. Section 222(a) (4) (A) (ii) of the Economic Opportunity Act of 1964 is amended by striking out "such services may be available on an emergency basis or pending a determination of eligibility to all residents of such areas" and inserting in lieu thereof "pursuant to such regulations as the Director may prescribe, persons provided assistance through programs assisted under this paragraph who are not members of low-income families may be required to make payment, or have payment made in their behalf, in whole or in part for such assistance".

DRUG REHABILITATION PROGRAM

SEC. 10. (a) Section 222(a)(8) of the Economic Opportunity Act of 1964 is amended by striking out the last sentence thereof.

(b) Section 222(a)(9) of such Act is amended by striking out the last sentence and inserting in lieu thereof the following: "The Director is authorized to undertake special programs aimed at promoting employment opportunities for rehabilitated addicts or addicts enrolled and participating in methadone maintenance treatment or therapeutic programs, and assisting employers in dealing with addiction and drug abuse and dependency problems among formerly hard-core unemployed so that they can be maintained in employment. In undertaking such programs, the Director shall give special priority to veterans and employers of significant numbers of veterans, with priority to those areas within the States having the highest percentages of addicts. The Director is further authorized to establish procedures and policies which will allow clients to complete a full course of rehabilitation even though they become non-low-income by virtue of becoming employed as a part of the rehabilitation process but there shall be no change in income eligibility criteria for initial admission to treatment and rehabilitation programs under this Act."

NEW SPECIAL EMPHASIS PROGRAMS

SEC. 11. Section 222(a) of the Economic Opportunity Act of 1964 is further amended by inserting at the end thereof the following:

"(10) An 'Environmental Action' program through which low-income persons will be paid for work (which would not otherwise be performed) on projects designed to combat pollution or to improve the environment. Projects may include, without limitation: clean-up and sanitation activities, including solid waste removal; reclamation and rehabilitation of eroded or ecologically damaged areas, including areas affected by strip mining; conservation and beautification activities, including tree planting and recreation area development; the restoration and maintenance of the environment; and the improvement of the quality of life in urban and rural areas.

"(11) A program to be known as 'Rural Housing Development and Rehabilitation' designed to assist low-income families in rural areas to construct and acquire ownership of adequate housing, to rehabilitate or repair existing substandard units in such areas, and to otherwise assist families in obtaining standard housing. Financial assistance under this paragraph shall be provided to nonprofit rural housing development corporations and cooperatives serving areas which are defined by the Farmers Home Administration as rural areas, and shall be used for, but not limited to, such purposes as administrative expenses; revolving development funds; nonrevolving land, land development and construction writedowns; rehabilitation or repair of substandard housing; and loans to low-income families. In the construction, rehabilitation, and repair of housing for low-income families under this paragraph, the services of persons enrolled in Mainstream programs may be utilized. Loans under this paragraph may be used for, but not limited to, such purposes as the purchase of new housing units, the repair, rehabilitation and purchase of existing units, and to supplement existing Federal loan programs in order that low-income families may benefit from them. The repayment period of such loans shall not exceed thirty-three years. No loans under this paragraph shall bear an interest rate of less than 1 per centum per annum, but if the Director, after having examined the family income of the applicant, the projected housing costs of the applicant, and such other factors as he deems appropriate, determines that the applicant would otherwise be unable to participate in this program, he may waive the interest in whole or in part and for such periods of time as he may establish except that (1) no such waiver may be granted to an applicant whose adjusted family income (as defined by the Farmers Home Administration) is in excess of $3,700 per annum and (2) any applicant for whom such a waiver is provided shall be required to commit at least 20 per centum of his adjusted family income toward the mortgage debt service and other housing costs. Family incomes shall be recertified annually, and monthly payments for all loans under this paragraph adjusted accordingly."

PUERTO RICO

SEC. 12. (a) Effective after June 30, 1972, section 225(a) of such Act is amended by striking out "Puerto Rico,".

(b) Effective after June 30, 1972, the first sentence of paragraph (1) of section 609 of such Act is amended by striking out the word "or" the second time it appears in such sentence and inserting in lieu thereof a comma and the following: "Puerto Rico, or".

NON-FEDERAL CONTRIBUTION CEILING

SEC. 13. Section 225(c) of the Economic Opportunity Act of 1964 is amended by inserting after the second sentence thereof the following new sentence: "The Director shall not require non-Federal contributions in excess of 20 per centum of the approved cost of programs or activities assisted under this Act."

SPECIAL PROGRAMS AUTHORIZED

SEC. 14. Part B of title II of the Economic Opportunity Act of 1964 is amended by adding at the end thereof the following new sections:

"DESIGN AND PLANNING ASSISTANCE PROGRAMS

"SEC. 226. (a) The Director shall make grants or enter into contracts to provide financial assistance for the operating expenses of programs conducted by community-based design and planning organizations to provide technical assistance and professional architectural and related services relating to housing, neighborhood facilities, transportation and other aspects of community planning and development to persons and community organizations or groups not otherwise able to afford such assistance. Such programs shall be conducted with maximum use of the voluntary services of professional and community personnel. In providing assistance under this section, the Director shall afford priority to persons in urban or rural poverty areas with substandard housing, substandard public service facilities, and generally blighted conditions. Design and planning services to be provided by such organizations shall include—

"(1) comprehensive community or area planning and development;

"(2) specific projects for the priority planning and development needs of the community; and

"(3) educational programs directed to local residents emphasizing their role in the planning and development process in the community.

"(b) No assistance may be provided under this section unless such design and planning organization—

"(1) is a nonprofit organization located in the neighborhood or area to be served with a majority of the governing body of such organization comprised of residents of that neighborhood or area;

"(2) has a primary function the goal of bringing about, through the involvement of the appropriate community action agency or otherwise, maximum possible participation of local residents, especially low-income residents, in the planning and decision-making regarding the development of their community; and

"(3) will carry out its design and planning services principally through the voluntary participation of professional and community personnel (including, where available, VISTA volunteers).

"(c) Design and planning organizations receiving assistance under this section shall not subcontract with any profitmaking organization or pay fees for architectural or other professional services.

"(d) The Director shall make whatever arangements are necesary to continue pilot or demonstration projects of demonstrated effectiveness of the type described in this section receiving assistance under section 232 of this Act during the fiscal year ending June 30, 1971.

"YOUTH RECREATION AND SPORTS PROGRAM

"SEC. 227. (a) In order to provide to disadvantaged youth recreation and physical fitness instruction and competition with high-quality facilities and supervision and related educational and counseling services (including instruction concerning study practices, career opportunities, job responsibilities, health and nutrition, and drug abuse education) through regular association with college instructors and athletes and exposure to college and university campuses and other recreational facilities, the Director shall make grants or enter into contracts for the conduct of an annual youth recreation and sports program concentrated in the summer months and with continued activities throughout the year, so as to offer disadvantaged youth living in areas of rural and urban poverty an opportunity to receive such recreation and educational instruction, information, and services and to participate in such physical fitness programs and sports competitions.

"(b) No assistance may be provided under this section unless satisfactory assurances are received that (1) not less than 90 per centum of the youths participating in each program to be assisted under this section are from families with incomes below the poverty level, as determined by the Director, and that such participating youths and other neighborhood residents, through the involvement of the appropriate community action agency or otherwise, will have maximum participation in program planning and operation and (2) all significant segments of the low-income population of the community to be served will be served on an equitable basis in terms of participating youths and instructional and other support personnel.

"(c) Programs under this section shall be administered by the Director through grants or contracts with any qualified organization of colleges and universities or such other qualified nonprofit organizations active in the field with access to appropriate recreational facilities as the Director shall determine in accordance with regulations which he shall prescribe. Each such grant or contract and subcontract with participating institutions of higher education or other qualified organizations active in the field shall contain provisions to assure that the program to be assisted will provide a non-Federal contribution (in cash or in kind) of no less than 20 per centum of the direct costs necessary to carry out the program. Each such grant, contract, or subcontract shall include provisions for—

"(1) providing opportunities for disadvantaged youth to engage in competitive sports and receive sports skills and physical fitness instruction and education in good health and nutrition practices;

"(2) providing such youth with instruction and information regarding study practices, career opportunities, job responsibilities, and drug abuse;

"(3) carrying out continuing related activities throughout the year;

"(4) meeting the requirements of subsection (b) of this section;

"(5) enabling the contractor and institutions of higher education or other qualified organizations active in the field located conveniently to such areas of poverty and the students and personnel of such institutions or organizations active in the field to participate more fully in the community life and in solutions of community problems; and

"(6) serving metropolitan centers of the United States and rural areas, within the limits of program resources.

"CONSUMER ACTION AND COOPERATIVE PROGRAMS

"SEC. 228. (a) The Director shall make grants or enter into contracts to provide financial assistance for the development, technical assistance to and conduct of consumer action and advocacy and cooperative programs, credit resources development programs, and consumer protection and education programs designed to demonstrate various techniques and models and to carry out projects to assist and provide technical assistance to low-income persons to try to improve the quality, improve the delivery, and lower the price of goods and services, to obtain, without undue delay or burden, financial credit at reasonable cost, and to develop means of enforcing consumer rights, developing consumer grievance procedures and presenting consumer grievances, submitting consumer views and concerns for protection against unfair, deceptive, or discriminatory trade and commercial practices and educating low-income persons with respect to such rights, procedures, grievances, views and concerns.

"(b) No assistance may be provided under this section unless the grantee or contracting organization or agency is a nonprofit organization and has as a primary function the goal of bringing about, through the involvement of the appropriate community action agency or otherwise, maximum possible participation of low-income persons in the project.

"(c) The Director shall make whatever arrangements are necessary to continue pilot or demonstration projects of demonstrated effectiveness, or which have not yet been evaluated until such time as an evaluation is conducted and the effectiveness determined and to carry out evaluations of such projects, of the type described in this section receiving assistance under section 232 of this Act during the fiscal year ending June 30, 1971 or June 30, 1972."

TERMINATION OF ASSISTANCE

SEC. 15. Section 231 of the Economic Opportunity Act of 1964 is amended by adding at the end thereof the following:

"(d) If any member of a board to which section 211(b) is applicable files an allegation with the Director that an agency receiving assistance under this section is not observing any requirement of this Act, or any regulation, rule, or guideline promulgated by the Director under this Act, the Director shall promptly investigate such allegation and shall consider it; and, if after such investigation and consideration he finds reasonable cause to believe that the allegations are true, he shall hold a hearing, upon the conclusion of which he shall notify all interested persons of his findings. If he finds that the allegations are true, and that, after being afforded a reasonable opportunity to do so, the agency has failed to make appropriate corrections, he shall forthwith terminate further assistance under this title to such agency until he has received assurances satisfactory to him that further violations will not occur."

SPECIAL ASSISTANCE

SEC. 16. Part C of title II of the Economic Opportunity Act of 1964 is amended by adding at the end thereof the following new section:

"SPECIAL ASSISTANCE

"SEC. 234. The Director may provide financial assistance for projects conducted by public or private nonprofit agencies which are designed to serve groups of low-income individuals who are not being effectively served by other programs under this title. In administering this section, the Director shall give special consideration to programs designed to assist older persons and other low-income individuals who do not reside in low-income areas and who are not being effectively served by other programs under this title."

DISTRIBUTION OF FINANCIAL ASSISTANCE

SEC. 17. Section 244 of the Economic Opportunity Act of 1964 is amended by adding at the end thereof the following:

"(8) Consistent with the provisions of this Act, the Director shall assure that financial assistance under this title will be distributed on an equitable basis in any community and within any State so that all significant segments of the low-income population are being served."

AMENDMENT TO MIGRANT FARMWORKERS PROGRAM

SEC. 18. Section 312(b)(3) of the Economic Act of 1964 is amended by inserting after the word "Government" the words "employment or".

DAY CARE STANDARDS

SEC. 19. Section 522(d) of the Economic Opportunity Act of 1964 is amended by adding a new sentence after the words "local levels." as follows: "Such standards shall be no less comprehensive than the Federal interagency day care requirements as approved by the Department of Health, Education, and Welfare, the Office of Economic Opportunity, and the Department of Labor on September 23, 1968."

PROHIBITION OF POLITICAL ACTIVITY

SEC. 20. Section 603 of the Act is amended by adding at the end thereof the following new subsection:

"(c) No part of any funds appropriated to carry out this Act, subpart (1) of part B of title V of the Higher Education Act of 1965, or any program administered by ACTION shall be used to finance, directly or indirectly, and activity designed to influence the outcome of any election to Federal office, or any voter registration activity, or to pay the salary of any officer or employee of the Office of Economic Opportunity, the Teacher Corps, or ACTION, who, in his official capacity as such an officer or employee, engages in any such activity. As used in this section, the term 'election' has the same meaning given such term by section 301(a) of the Federal Election Campaign Act of 1971 and the term 'Federal office' has the same meaning given such term by section 301(c) of such Act."

DEFINITION OF LOWER LIVING STANDARD BUDGET

SEC. 21. Section 609 of the Act is amended by adding at the end thereof the following:

"(5) the term 'lower living standard budget' means that income level (adjusted for regional and metropolitan, urban and rural differences and family size) determined annually by the Bureau of Labor Statistics of the Department of Labor and referred to by such Department as the 'lower living standard budget'."

GUIDELINES

SEC. 22. Part A of title VI of the Economic Opportunity Act of 1964 is amended by adding at the end thereof the following new section:

"GUIDELINES

"SEC. 623. All rules, regulations, guidelines, instructions, and application forms published or promulgated pursuant to this Act shall be published in the Federal Register at least thirty days prior to their effective date."

NONDISCRIMINATION

SEC. 23. Part A of title VI of the Economic Opportunity Act of 1964 is further amended by adding at the end thereof the following new section:

"NONDISCRIMINATION PROVISIONS

"SEC. 624. (a) The Director shall not provide financial assistance for any program under this Act unless the grant, contract, or agreement with respect to such program specifically provides that no person with responsibilities in the operation of such program will discriminate with respect to any such program because of race, creed, color, national origin, sex, political affiliation, or beliefs.

"(b) No person in the United States shall on the ground of sex be excluded from participation in, be denied the benefits of, be subjected to discrimination under, or be denied employment in connection with, any program or activity receiving assistance under this Act. The Director shall enforce the provisions of the preceding sentence in accordance with section 602 of the Civil Rights Act of 1964. Section 603 of such Act shall apply with respect to any action taken by the Director to enforce such sentence. This section shall not be construed as affecting any other legal remedy that a person may have if that person is excluded from participation in, denied the benefits of, subjected to discrimination under, or denied employment in connection with any program or activity receiving assistance under this Act."

POVERTY LINE

SEC. 24. Part A of title VI of the Economic Opportunity Act of 1964 is further amended by inserting the following new section at the end thereof:

"POVERTY LINE

"SEC. 625. (a) Every agency administering programs authorized by this Act in which the poverty line is a criterion of eligibility shall revise the poverty line at annual intervals, or at any shorter interval it deems feasible and desirable.

"(b) The revision required by subsection (a) of this section shall be accomplished by multiplying the official poverty line (as defined by the Office of Management and Budget) by the average percentage change in the consumer price index during the annual or other interval immediately preceding the time at which the revision is made.

"(c) Revisions required by subsection (a) of this section shall be made and issued not more than thirty days after the date on which the necessary consumer price index data becomes available."

COMMUNITY ECONOMIC DEVELOPMENT

SEC. 25. (a) The Economic Opportunity Act is amended by inserting immediately after title VI the following new title:

"TITLE VII—COMMUNITY ECONOMIC DEVELOPMENT

"STATEMENT OF PURPOSE

"SEC. 701. The purpose of this title is to encourage the development of special programs by which the residents of urban and rural low-income areas may, through self-help and mobilization of the community at large, with appropriate Federal assistance, improve the quality of their economic and social participation in community life in such a way as to contribute to the elimination of poverty and the establishment of permanent economic and social benefits.

"PART A—SPECIAL IMPACT PROGRAMS

"STATEMENT OF PURPOSE

"SEC. 711. The purpose of this part is to establish special programs of assistance to private locally initiated community corporations and related nonprofit agencies, including cooperatives, or organizations conducting activities which (1) are directed to the solution of the critical problems existing in particular communiites or neighborhoods (defined without regard to political or other subdivisions or boundaries) within those urban and rural areas having concentrations or substantial numbers of low-income persons; (2) are of sufficient size, scope, and duration to have an appreciable impact in such communities, neighborhoods, and rural areas in arresting tendencies toward dependency, chronic unemployment, and community deterioration; and (3) hold forth the prospect of continuing to have such impact after the termination of financial assistance under this title.

"ESTABLISHMENT OF PROGRAMS

"SEC. 712. (a) The Director is authorized to provide financial assistance to community development corporations and to cooperatives and other nonprofit agencies in conjunction with qualifying community development corporations for the payment of all or part of the costs of programs which are designed to carry out the purposes of this part. Such programs shall be restricted in number so that each is of sufficient size, scope, and duration to have an appreciable impact on the area served. Such programs may include—

"(1) economic and business development programs, including programs which provide financial and other assistance (including equity capital) to start, expand, or locate businesses in or near the areas served so as to provide employment and ownership opportunities for residents of such areas, and programs including those described in title IV of this Act for small businesses in or owned by residents of such areas;

"(2) community development and housing activities which create new training, employment, and ownership opportunities and which contribute to an improved living environment; and

"(3) manpower training programs for unemployed or low-income persons which support and complement economic, business, housing, and community development programs, including without limitation activities such as those described in part B of title I of this Act.

"(b) The Director shall conduct programs assisted under this part so as to contribute, on an equitable basis between urban and rural areas, to the elimination of poverty and the establishment of permanent economic and social benefits in such areas.

"REQUIREMENTS FOR FINANCIAL ASSISTANCE

"SEC. 713. (a) The Director, under such regulations as he may establish, shall not provide financial assistance for any program or component project under this part unless he determines that—

"(1) such community development corporation is responsive to residents of the area under guidelines established by the Director;

"(2) all projects and related facilities will, to the maximum feasible extent, be located in the area served;

"(3) projects will, where feasible, promote the development of entrepreneurial and management skills and the ownership or participation in ownership of assisted businesses and housing, cooperatively or otherwise, by residents of the area served;

"(4) projects will be planned and carried out with the maximum participation of local businessmen and financial institutions and organizations by their inclusion on program boards of directors, advisory councils, or through other appropriate means;

"(5) the program will be appropriately coordinated with local planning under this Act, the Demonstration Cities and Metropolitan Development Act of 1966, and with other relevant planning for physical and human resources of the areas served;

"(6) the requirements of subsections 122 (e) and 124(a) of this Act have been met;

"(7) preference will be given to low income or economically disadvantaged residents of the areas served in filling jobs and training opportunities; and

"(8) training programs carried out in connection with projects financed under this part shall be designed wherever feasible to provide those persons who successfully complete such training with skills which are also in demand in communities, neighborhoods, or rural areas, other than those for which programs are established under this part.

"(b) Financial assistance under this section shall not be extended to assist in the relocation of establishments from one location to another if such relocation would result in an increase in unemployment in the area of original location.

"(c) The level of financial assistance for related purposes under this Act to the area served by a special impact program shall not be diminished in order to substitute funds authorized by this part.

"APPLICATION OF OTHER FEDERAL RESOURCES

"SEC. 714. (a) SMALL BUSINESS ADMINISTRATION PROGRAMS.—

"(1) Funds granted under this part which are invested, directly or indirectly, in a small business investment company or a local development company shall be included as 'private paid-in capital and paid-in surplus,' 'combined paid-in capital and paid-in surplus,' and 'paid-in capital' for purposes of sections 302, 303, and 502, respectively, of the Small Business Investment Act of 1958.

"(2) Within ninety days of the enactment of the Economic Opportunity Amendments of 1972, the Administrator of the Small Business Administration, after consultation with the Director, shall prescribe such regulations as may be necessary and appropriate to insure the availability to community development corporations of such programs as shall further the purposes of this part.

"(b) ECONOMIC DEVELOPMENT ADMINISTRATION PROGRAMS.—

"(1) Areas selected for assistance under this part shall be deemed 'redevelopment areas' within the meaning of section 401 of the Public Works and Economic Development Act of 1965, and shall qualify for assistance under the provisions of title I and title II of that Act.

"(2) Within ninety days of the enactment of the Economic Opportunity Amendments of 1972, the Secretary of Commerce, after consultation with the Director, shall prescribe such regulations as may be necessary and appropriate to insure the availability to community development corporations of such programs as shall further the purposes of this part.

"(c) PROGRAMS OF THE DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT.—The Secretary of Housing and Urban Development, after consultation with the Director, shall take all necessary steps (1) to assure that community development corporations assisted under this part or their subsidiaries, shall qualify as sponsors under section 106 of the Housing and Urban Development Act of 1968, and sections 221, 235, and 236 of the National Housing Act of 1949; (2) to assure that land for housing and business location and expansion is made available under title I of the Housing Act of 1949 as may be necessary to carry out the purposes of this part; and (3) to assure that funds are available under section 701(b) of the Housing Act of 1954 to community development corporations assisted under this part.

"(d) COORDINATION AND COOPERATION.—The Director shall take such steps as may be necessary and appropriate, in coordination and cooperation with the heads of other Federal departments and agencies, so that contracts, subcontracts, and deposits made by the Federal Government or in connection with programs aided with Federal funds are placed in such a way as to further the purposes of this part.

"(e) REPORTING ON OTHER FEDERAL RESOURCES.—On or before six months after the date of enactment of the Economic Opportunity Amendments of 1972, and annually thereafter, the Director shall submit to the Congress a detailed report setting forth a description of all Federal agency programs which he finds relevant to achieving the purposes of this part and the extent to which such programs have been made available to community development corporations receiving financial assistance under this part including specifically the availability and effectiveness of programs referred to in subsections (a), (b), and (c) of this section. Where appropriate, the report required under this subsection also shall contain recommendations for the more effective utilization of Federal agency programs for carrying out the purposes of this part.

"FEDERAL SHARE

"SEC. 715. Federal grants to any program carried out pursuant to this part, including grants used by community development corporations for capital investments, shall (1) not exceed 90 per centum of the cost of such program including costs of administration unless the Director determines that assistance in excess of such percentage is required in furtherance of the purposes of this part, and (2) be made available for deposit to the grantee, under conditions which the Director deems appropriate, within thirty days following approval by the Director and the local community development corporation of the grant agreement. Non-Federal contributions may be in cash or in kind, fairly evaluated, including but not limited to plant, equipment, and services. Capital investments made with funds granted as a result of the Federal share of the costs of programs carried out under this part, and the proceeds from such capital investments, shall not be considered Federal property.

"PART B—RURAL PROGRAMS

"STATEMENT OF PURPOSE

"SEC. 721. It is the purpose of this part to meet the special economic needs of rural communities or areas with concentrations or substantial numbers of low-income persons by providing support to self-help programs which promote economic development and independence, as a supplement to existing similar programs conducted by other departments and agencies of the Federal Government. Such programs should encourage low-income families to pool their talents and resources so as to create and expand rural economic enterprise.

"FINANCIAL ASSISTANCE

"SEC. 722. (a) The Director is authorized to provide financial assistance, including loans having a maximum maturity of 15 years and in amounts not resulting in an aggregate principal indebtedness of more than $3,500 at any one time, to any low-income rural family where, in the judgment of the Director, such financial assistance has a reasonable possibility of effecting a permanent increase in the income of such families, or will contribute to the improvement of their living or housing conditions, by assisting or permitting them to—

"(1) acquire or improve real estate or reduce encumbrances or erect improvements thereon;

"(2) operate or improve the operation of farms not larger than family sized, including but not limited to the purchase of feed, seed, fertilizer, livestock, poultry, and equipment; or

"(3) participate in cooperative asociations, or to finance nonagricultural enterprises which will enable such families to supplement their income.

"(b) The Director is authorized to provide financial assistance to local cooperative associations in rural areas containing concentrations or substantial numbers of low-income persons for the purpose of defraying all or part of the costs of establishing and operating cooperative programs for farming, purchasing, marketing, processing, and to improve their income as producers and their purchasing power as consumers, and to provide such essentials as credit and health services. Costs which may be defrayed shall include but not be limited to—

"(1) administrative costs of staff and overhead;

"(2) costs of planning and developing new enterprises;

"(3) costs of acquiring technical assistance; and

"(4) initial capital where it is determined by the Director that the poverty of the families participating in the program and the social conditions of the rural area require such assistance.

"LIMITATIONS ON ASSISTANCE

"SEC. 723. (a) No financial assistance shall be provided under this part unless the Director determines that—

"(1) any cooperative association receiving assistance has a minimum of fifteen active members, a majority of which are low-income rural persons;

"(2) adequate technical assistance is made available and committed to the programs being supported;

"(3) such financial assistance will materially further the purposes of this part; and

"(4) the applicant is fulfilling or will fulfill a need for services, supplies, or facilities which is otherwise not being met.

"(b) The level of financial assistance for related purposes under this Act to the area served by a program under this part shall not be diminished in order to substitute funds authorized by this part.

"PART C—SUPPORT PROGRAMS

"TRAINING AND TECHNICAL ASSISTANCE

"SEC. 731. (a) The Director shall provide directly or through grants, contracts, or other arrangements such technical assistance and training of personnel as may be required to effectively implement the purposes of this title. No financial assistance shall be provided to any public or private organization under this section unless the Director provides the beneficiaries of these services with opportunity to participate in the selection of and to review the quality and utility of the services furnished them by such organization.

"(b) Technical assistance to community development corporations and both urban and rural cooperatives may include planning, management, legal, preparation of feasibility studies, product development, marketing, and the provision of stipends to encourage skilled professionals to engage in full-time activities under the direction of a community organization financially assisted under this title.

"(c) Training for employees of community development corporations and for employees and members of urban and rural cooperatives shall include, but not be limited to, on-the-job training, classroom instruction, and scholarships to assist them in development, managerial, entrepreneurial, planning, and other technical and organizational skills which will contribute to the effectiveness of programs assisted under this title.

"DEVELOPMENT LOAN FUND

"SEC. 732. (a) The Director is authorized to make or guarantee loans (either directly or in cooperation with banks or other organizations through agreements to participate on an immediate or deferred basis) to community development corporations and to cooperatives eligible for financial assistance under section 712 of this title, to families under section 722(a), and to local cooperatives eligible for financial assistance under section 722(b) for business, housing, and community development projects who the Director determines will carry out the purposes of this title. No loans, guarantees, or other financial assistance shall be provided under this section unless the Director determines that—

"(1) there is reasonable assurance of repayment of the loan;

"(2) a loan is not otherwise available on reasonable terms from private sources or other Federal, State, or local programs; and

"(3) the amount of the loan, together with other funds available, is adequate to assure completion of the project or achievement of the purposes for which the loan is made.

Loans made by the Director pursuant to this section shall bear interest at a rate not less than a rate determined by the Secretary of the Treasury taking into consideration the average market yield on outstanding Treasury obligations of comparable maturity, plus such additional charge, if any, toward covering other costs of the program as the Director may determine to be consistent with its purposes, except that, for the five years following the date on which funds are initially available to the borrower, the rate of interest shall be set at a rate considered appropriate by the Director in light of the particular needs of the borrower, which rate shall not be lower than 1 per centum. All such loans shall be repayable within a period of not more than thirty years.

"(b) The Director is authorized to adjust interest rates, grant moratoriums on repayment of principal and interest, collect or compromise any obligations held by him, and to take such other actions in respect to such loans as he shall determine to be necessary or appropriate, consistent with the purposes of this section.

"(c) (1) To carry out the lending and guaranty functions authorized under this part, there shall be established a Development Loan Fund consisting of two separate accounts, one of which shall be a revolving fund called the Rural Development Loan Fund and the other of which shall be a revolving fund called the Community Development Loan Fund. The capital of each such revolving fund shall remain available until expended.

"(2) The Rural Development Loan Fund shall consist of such amounts as may be deposited in such Fund by the Director out of funds made available from appropriations for the purposes of carrying out this title.

"(3) The Community Development Loan Fund shall consist of such amounts as may be deposited in such fund by the Director out of funds made available from appropriations for the purpose of carrying out this title. The Secretary may make deposits in the Community Development Loan Fund in any fiscal year in which he has made available for grants to community development corporations not less than $60,000,000 out of funds made available from appropriations for the purpose of carrying out this title.

"EVALUATION AND RESEARCH

"SEC. 733. (a) Each program for which grants are made under this title shall provide for a thorough evaluation of the effectiveness of the program in achieving its purposes, which evaluation shall be conducted by such public or private organizations as the Director may designate, and all or part of the costs of evaluation may be paid from funds appropriated to carry out this part. The results of such evaluations, together with the Director's findings and recommendations concerning the program, shall be included in the report required by section 608 of this Act.

"(b) The Director shall conduct, either directly or through grants or other arrangements, research designed to suggest new programs and policies to achieve the purposes of this title in such ways as to provide opportunities for employment, ownership, and a better quality of life for low-income residents. The Director shall particularly investigate the feasibility and most appropriate manner of establishing development banks and similar institutions and shall report to the Congress on his research findings and recommendations not later than June 30, 1973.

"PART D—GENERAL

"PROGRAM DURATION AND AUTHORITY

"SEC. 741. The Director shall carry out programs provided for in this title during the fiscal year ending June 30, 1972, and for the three succeeding fiscal years. For each fiscal year only such sums may be appropriated as the Congress may authorize by law."

(b) Part D of title I of the Economic Opportunity Act of 1964 is repealed.

AMENDMENT WITH RESPECT TO VOLUNTEER PROGRAMS

SEC. 26. (a) The second sentence of section 801 of the Economic Opportunity Act of 1964 is amended by inserting after the words "to eliminate poverty" the following: "and to deal with environmental problems focused primarily upon the needs of low-income persons and the communities in which they reside".

(b) Section 811(a) of such Act is amended as follows:

(1) by striking out the first sentence thereof, and

(2) by inserting in lieu thereof: "Volunteers under this part shall be required to make a full-time personal commitment to achieving the purpose of this title and the goals of the projects or programs to which they are assigned."

(c) Section 820(a) of such Act is amended as follows:

(1) by striking out the first sentence of subsection (a), and

(2) by inserting in lieu thereof: "The Director shall develop programs designed to expand opportunities for persons to participate in a direct and personal way, on a part-time basis or for short periods of service either in their home or nearby communities or elsewhere, in volunteer activities contributing to the elimination of poverty and otherwise in furtherance of the purpose of this title."

(d) The first sentence of section 821 of such Act is amended, effective July 1, 1972, by inserting before the period at the end thereof a comma and the following: "and such programs shall include any program, project, or activity otherwise authorized under the provisions of this title for which academic credit is granted to volunteer participants in connection with their volunteer service (not including time devoted to training)".

EVALUATION

SEC. 27. (a) The Economic Opportunity Act of 1964 is further amended by inserting at the end thereof the following new title:

"TITLE IX—EVALUATION

"COMPREHENSIVE EVALUATION OF PROGRAMS

"SEC. 901. (a) The Director shall provide for the continuing evaluation of programs under this Act and of programs authorized under related Acts, including evaluations that describe and measure, with appropriate means and to the extent feasible, the impact of such programs, their effectiveness in achieving stated goals, their impact on related programs, and their structure, and mechanisms for delivery of services, and including, where appropriate, comparisons with appropriate control groups composed of persons who have not participated in such programs. The Director may, for such purposes, contract or make other arrangements for independent evaluations of those programs or individual projects.

"(b) The Director shall to the extent feasible develop and publish standards for evaluation of program effectiveness in achieving the objectives of this Act. He shall consider the extent to which such standards have been met in deciding whether to renew or supplement financial assistance authorized under any section of this Act.

"(c) In carrying out this title, the Director may require community action agencies to provide independent evaluations.

"COOPERATION OF OTHER AGENCIES

"SEC. 902. Federal agencies administering programs related to this Act shall—

"(1) cooperate with the Director in the discharge of his responsibility to plan and conduct evaluations of such poverty-related programs as he deems appropriate, to the fullest extent permitted by other applicable law; and

"(2) provide the Director on a cooperative basis with such agency, with such statistical data, program reports, and other materials, as they collect and compile on program operations, beneficiaries, and effectiveness.

"CONSULTATION

"SEC. 903. (a) In carrying out evaluations under this title, the Director shall, whenever possible, arrange to obtain the opinions of program participants about the strengths and weaknesses of programs.

"(b) The Director shall consult, when appropriate, with State agencies, in order to provide for jointly sponsored objective evaluation studies of programs on a State basis.

"PUBLICATION OF EVALUATION RESULTS

"SEC. 904. (a) The Director shall publish summaries (prepared by the evaluator) of the results of evaluative research and evaluations of program impact and effectiveness no later than sixty days after its completion.

"(b) The Director shall take necessary action to assure that all studies, evaluations, proposals, and data produced or developed with Federal funds shall become the property of the United States.

"(c) The Director shall publish summaries of the results of activities carried out pursuant to this title in the report required by section 608 of this Act.

"EVALUATION BY OTHER ADMINISTERING AGENCIES

"SEC. 905. The head of any agency administering a program authorized under this Act may, with respect such program, conduct evaluations and take other actions authorized under this title to the same extent and in the same manner as the Director under this title. Nothing in this section shall preclude the Director from conducting such evaluations or taking such actions otherwise authorized under this title with respect to such programs."

(b)(1) Subsection (a) of section 113, subsections (b) and (c) of section 132, section 233, and section 314(b) of the Economic Opportunity Act of 1964 are repealed.

(2) Section 632(2) of such Act is amended by striking out "carry on a continuing evaluation of all activities under this Act, and".

(3) Sections 132 and 314 of such Act are each amended by striking out "(a)".

FUNCTIONS OF DIRECTOR

SEC. 28. Notwithstanding the provisions of section 602(d) of the Economic Opportunity Act of 1964, the Director of the Office of Economic Opportunity shall not delegate his functions under section 221 and title VII of such Act to any other agency.

AMENDMENT TO THE OLDER AMERICANS ACT OF 1965

SEC. 29. (a) Section 611(a) of the Older Americans Act of 1965 (42 U.S.C. 3044(b)) is amended by adding at the end thereof the following new sentence: "The Director of ACTION may approve assistance in excess of 90 per centum of the cost of the development and operation of such projects if he determines, in accordance with regulations establishing objective criteria, that such action is required in furtherance of the purposes of this section."

(b) The amendment made by subsection (a) of this section shall be effective from the date of enactment of this Act. In the case of any project with respect to which, prior to such date, a grant or contract has been made under such section or with respect to any project under the Foster Grandparent program in effect prior to September 17, 1969, contributions in cash or in kind from the Bureau of Indian Affairs, Department of the Interior, toward the cost of the project may be counted as part of the cost thereof which is met from non-Federal sources.

And the Senate agree to the same.

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two houses on the amendment of the Senate to the House bill (H.R. 12350) to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report:

The points in disagreement and the conference resolution of them are as follows:

The House bill authorized $2,304,066,000 for fiscal year 1972 and $3,000,000,000 for fiscal year 1973. Of these amounts $350,000,000 a year was reserved for local initiative programs and a specific authorization of $500,000,000 for fiscal 1972 and $1,000,000,000 for fiscal 1973 was authorized for Project Headstart.

The Senate amendment authorized the following amounts:

[In millions]

	1972	1973	1974
Department of Labor programs:			
Title IABE	$900.0	$950.0	$950.0
Special NYC	500.0	500.0	500.0
Health, education, and welfare programs:			
Headstart	500.0	500.0	500.0
Follow Through	100.0	100.0	100.0
ACTION programs: VISTA	37.0	58.0	
OEO programs:			
Total titles II, III, VI, VII, IX, X	(950.0)	(1,000.0)	(1,000.0)
Local initiative [1]	328.9	328.9	328.9
Legal services [1]	71.5	71.5	71.5
Comprehensive health	114.0	114.0	114.0
Emergency food	62.5	62.5	62.5
Family planning	25.0	25.0	25.0
SOS	8.8	8.8	8.8
Alcoholic counseling	18.0	18.0	18.0
Drug rehabilitation	$18.0	$18.0	$18.0
Environmental action	5.0	5.0	5.0
Rural housing	10.0	10.0	10.0
Consumer action	7.5	7.5	7.5
Design and planning	10.0	10.0	10.0
Youth recreation and sports	6.0	6.0	6.0
T. & T.A., SEOO, R. & D	117.6	117.6	117.6
Title III migrants	38.0	38.0	38.0
Titles VI and X	18.0	18.0	18.0
Title VII	58.0	58.0	58.0
Other	33.2	83.2	83.2
Add ons:			
Title VII		62.0	62.0
Legal services		100.0	100.0
Rural housing		5.0	5.0
VISTA	16.0		
SOS		21.2	21.2
Urban housing	20.0	20.0	20.0
Special assistance	50.0	50.0	50.0

[1] These amounts are reservations as well as authorization levels.

The conference agreement contains the following authorizations of appropriations:

For title I, Parts A, B, and E (work and training programs) the sums of $900,300,000 for fiscal year 1973 and $950,000,000 for fiscal year 1974;

For Headstart the sums of $485,000,000 for fiscal year 1973 and $500,000,000 for fiscal year 1974;

For Follow Through the sums of $70,000,000 for each of fiscal years 1973 and 1974;

For title VIII (VISTA) the sum of $74,000,000 for fiscal year 1974;

For all OEO-administered programs, titles II, III, VI, VII and IX the sums of $840,000,000 for fiscal year 1973 and $870,000,000 for fiscal year 1974. Of the amounts appropriated for OEO programs, the conference agreement reserves not less than $328,900,000 for programs under section 221 of the Act (Local Initiative) for each fiscal year and not less than $71,500,000 for Legal Services programs under section 222(a)(3) for each fiscal year. The conference agreement further provides that the remaining amounts are to be so allocated that for each fiscal year not less than $18,000,000 shall be used for the Alcoholic Counseling and Recovery program under section 222(a)(8) and not less than $30,000,000 shall be used for the Emergency Food and Medical Services program under section 222(a)(5).

For the balance of the programs operated by OEO, the conferees strongly recommend that the following amounts be made available for each of the programs;

	Fiscal 1973	Fiscal 1974
Comprehensive health	$100,000,000	$100,000,000
Family planning	20,000,000	20,000,000
Senior opportunities	8,000,000	18,000,000
Drug rehabilitation	18,000,000	19,000,000
Environmental action	5,000,000	5,000,000
Rural housing	15,000,000	20,000,000
Consumer action	7,500,000	7,500,000
Design and planning	10,000,000	10,000,000
Youth recreation and sports	4,500,000	4,500,000
T. & T.A., SEOO, R. & D	109,600,000	109,600,000
Title III (migrants)	36,000,000	36,000,000
Title VI and IX (administration and evaluation)	18,000,000	18,000,000
Title VII (community economic development)	40,000,000	55,000,000

In paragraphs (2) and (3) of section 3(c) of the conference agreement, the term "reserve and make available" is used in connection with the reservation and allocation of funds. By this the conferees mean that the sums required to be "made available" shall be newly obligated during each of the fiscal years for which such sums are required to be made available.

The Senate amendment authorized the Secretary of HEW to establish procedures to assure that not less than 10% of the enrollment opportunities in Project Headstart in the nation be available for handicapped children. There was no comparable House provision. The House recedes.

The House bill extended the authority for programs under the Act for two additional years. The Senate amendment extended the provision for three additional years. The House recedes.

The Senate amendment extended the length of time a person can serve on a community action board from three to six consecutive years and increased the total number of years a person may serve to twelve years. There was no comparable House provision. The conference agreement extends the length of service on a community action board to five consecutive years and increases the total number of years to ten.

The House bill required that the public officials who comprise one-third of each community action agency board be elected officials except where fewer than the requisite number of elected officials were available and willing to serve, in which case appointive public officials could be counted toward fulfilling the requirements of this subsection. There was no comparable Senate provision. The Senate recedes with the understanding that elected officials refers to those with general governmental responsibilities or responsibilies encompassing antipoverty programs—not to officials with limited or administrative responsibilities in specialized areas, such as a water district commissioner.

The House bill established guidelines which must be followed by the Secretary of Health. Education, and Welfare in promulgating fee schedules for the participation of non-low-income children in Project Headstart. No charge could be made with respect to any child who was a member of a family with an annual income less than $4,320. A graduated fee schedule was prescribed up to the level of the lower living standard budget as determined by the Bureau of Labor Statistics. Beyond that point the Secretary is given discretion. There was no comparable Senate provision. The Senate recedes.

The Conference agreement further provides that if the Secretary of HEW certifies that the establishment of such a fee schedule would substantially impair the ongoing Headstart programs, he may postpone their establishment, but under no circumstances may such establishment be postponed beyond April 1, 1973.

The Senate amendment allowed addicts enrolled and participating in methadone maintenance treatment or therapeutic programs to participate in the program. The House bill limited participation to rehabilitated addicts. The House recedes.

The Senate amendment allowed the Director to undertake special programs assisting employers in dealing with problems of employee "drug abuse and dependency". The House bill only allowed programs dealing with "drug abuse". The House recedes.

The Senate amendment required that priority be given to areas within the States having the highest percentage of addicts. There was no comparable House provision. The House recedes.

Both the House bill and the Senate amendment called upon the Director to establish procedures whereby addicts undergoing rehabilitation and participation in this program who, during the course of such rehabilitation, became non-low-income as a result thereof would nevertheless remain eligible to participate in this program until they had completed a full course of rehabilitation. The House bill also made clear that there is to be no exception to income criteria for initial entry into the program. The Senate amendment had no comparable provision. The Senate recedes.

Both the House bill and the Senate amendment established an Environmental Action program through which low-income persons would be paid for working on projects to combat pollution or to improve the environment. The Senate amendment also required that such work projects be those which would not otherwise be performed. There was no comparable House provision. The House recedes. The purpose of the provision in the Senate amendment is to insure that the program be operated in such a way as not to displace persons currently employed in similar tasks, but the conferees wish to make clear that they do not expect the Director to arbitrarily use the language as an excuse for not funding programs authorized under this section.

Both the House bill and the Senate amendment authorized a new program to be known as Rural Housing and Rehabilitation. In addition, the Senate amendment allowed the use of persons enrolled in Mainstream programs in the construction, rehabilitation, and repair of housing for low-income persons under this paragraph. The House recedes. The conferees wish it clearly understood that this new program is intended for a limited number of sponsors in order to fully demonstrate its potential. The conferees expect that the program will be administered in the national office of the Office of Economic Opportunity and that no regionalization of the program will take place until Congress has had an opportunity to assess its effectiveness.

The Senate amendment placed the administrative responsibility for the Youth Recreation and Sports Program with the Director of the Office of Economic Opportunity. The House bill placed such responsibility with the Secretary of Health, Education, and Welfare. The House recedes. The conferees wish to make clear that the Director of the Office of Economic Opportunity is given the discretion to continue to enter into delegation agreements he considers appropriate.

The Senate amendment specifically required the participation of all significant segments of low-income population to be served. There was no comparable House provision. The House recedes.

The House bill and the Senate amendment authorized the Director to provide financial assistance for projects designed to serve groups of low-income individuals who are not being effectively served by other programs under this title. The Senate amendment authorized $50 million for fiscal year 1972 and the two succeeding fiscal years. The House bill authorized $50 million for fiscal year 1972 and such sums as may be necessary for each succeeding fiscal year, creating in effect a permanent authorization. The conference agreement contains the substance of the amendment but eliminates the specific dollar authorizations.

The House bill provided for the equitable distribution of financial assistance under the Act to all significant segments of the low-income population within a State and within a community. The Senate amendment required such equitable distribution only within a community. The Senate recedes.

The conferees urge the Director to exercise authority under this section to the extent appropriate to accomplish its purposes, utilizing funds available under the authorization for programs conducted under title II of the Act.

The House bill prohibited the use of funds appropriated for Teacher Corps or ACTION from being used to finance any activity designed to influence the outcome of any election, or for voter registration, or to pay the salary of any officer or employee of OEO, Teacher Corps or ACTION who in an official capacity engages in such activity. As used in this amendment, "election" and "Federal office" are defined as in the Federal Election Campaign Act of 1971. There was no comparable Senate provision. The Senate recedes.

The House bill required that any standards for day care programs be no less comprehensive than the interagency day care requirements as approved by the Department of Health, Education, and Welfare, the Office of Economic Opportunity, and the Department of Labor on September 23, 1968. There was no comparable Senate provision. The Senate recedes.

The Senate amendment amended section 616 of the Economic Opportunity Act to increase the portion of an allocation that may be transferred from one program or activity to another from 15% to 25%. The amendment also deleted the limitation which placed a ceiling on the amount that may be transferred into a program. Existing law provided that such transfers could not result in increasing by more than 100% any program for which there was available $10 million or less or by increasing by 25% any program for which amounts available were in excess of $10 million. The House bill reduced the authority of the Director to transfer earmarked funds to 10% of the amount appropriated or allocated. The House bill further limited the degree to which the program or activity could be increased. The conference agreement increases the portion of an allocation that may be transferred from one program to another to 20 per centum.

The House bill prohibited any funds appropriated for programs administered by the Office of Economic Opportunity or ACTION from being used to finance any activity in which students in higher education perform voluntary or community service where, as a condition for eligibility for funds, an institution is required to award credit to students for training or experience derived from such voluntary or community service. There was no comparable Senate provision. The House recedes.

The Senate amendment prohibited the Director from providing financial assistance to anyone under this Act unless the grant, contract or agreement under which funds are to be provided specifically provides that no person with responsibilities in the operation of such program will discriminate because of race, creed, color, national origin, sex, political affiliation or beliefs. There was no comparable House provision. The House recedes.

The Senate amendment prohibited sex discrimination, to be enforced in accordance with Civil Rights Act procedures. There was no comparable House provision. The House recedes.

The House bill required the national poverty action plan to be presented by December 31, 1971. The Senate amendment required submission by August 1, 1972. The House bill required subsequent plans no later than December 31st of succeeding years. The Senate amendment required subsequent reports on January 31st of each year. The dates provided in both the House and Senate bill presented a situation where it would have been impossible for the agency to comply. Therefore, the conferees dropped the specific date that the national poverty action plan was to be presented to the Congress. It is the intention of the conferees, however, that at the earliest possible date the Office of Economic Opportunity submit such a plan.

Both the House bill and the Senate amendment consolidated all evaluation activities into a single title. They differed in the following respects:

(a) The Senate amendment specified that such evaluations may be made of programs under the Office of Economic Opportunity Act, or related Acts. There was no comparable House provision. The House recedes.

(b) The Senate amendment qualified the directives to develop evaluation standards with the words "to the extent feasible". There was no comparable House provision. The House recedes.

(c) The House bill required the results of evaluation to be considered in renewing financial assistance. There was no comparable Senate provision. The Senate recedes.

(d) The Senate amendment required the Director to exchange data "on a cooperative basis with such agency." There was no comparable House provision. The House recedes.

(e) Under the House bill the Director would "consult where appropriate with States to sponsor jointly funded evaluations" while the Senate amendment read "may consult when appropriate." The Senate recedes.

(f) The House bill required the publication of evaluations where the Senate amendment only required the publication of summaries of such evaluations. The conference agreement requires that summaries prepared by the evaluator be published. The conferees want to make clear that the publication of such summaries in no way relieves the Director from existing obligations to make evaluation reports in their entirety available to the Congress.

(g) The Senate bill authorized the head of any agency administering a program authorized by the Act to conduct evaluations or take other actions authorized under this title but specified that nothing in this section would preclude the Director from conducting such evaluations or taking such actions as otherwise authorized under the Act. There was no comparable House provision. The House recedes.

Both the House bill and Senate amendment established a new title of the Economic Opportunity Act to create a National Legal Services Corporation.

The Conferees regret that it was necessary to delete Title IX, which would have established a National Legal Services Corporation, as a result of the failure to reach agreement with respect to the composition of the Board of Directors and certain other elements of the Corporation.

The Conferees continue to strongly support the existing legal services program and the concept of a legal services corporation and intend to continue to seek appropriate means of expanding the program and insuring its independence, to provide the poor greater access to our system of justice under law.

The Senate amendment established a new program in title II, Design and Planning Assistance Programs, providing for the Director to fund to community-based design and planning organizations to provide technical assistance and professional services to community organizations and to continue existing section 232 programs of a comparable nature. There was no comparable House provision. The House recedes.

The Senate amendment established a new program in title II, Consumer Action and Cooperative Programs, providing for the Director to fund programs in consumer advocacy and protection and to continue existing section 232 programs of a similar nature. There was no comparable House provision. The House recedes.

The Senate amendment established a new program in title II, Urban Housing Demonstration Projects, to authorize the Director to provide financial assistance for demonstration projects in urban areas, and authorized $20.0 million for each of three fiscal years. There was no comparable House provision. The Senate recedes.

While the conferees did not adopt the new specific authority for Urban Housing Demonstration Projects contained in the Senate amendment, they expect the Director of the Office of Economic Opportunity to increase funding of projects to assist low-income families living in neighborhoods characterized by abandonment and deteriorating residential housing to maintain and upgrade existing substandard residential housing in such neighborhoods. The projects are to be carried out by appropriate community based organizations including tenant associations. It is anticipated that such projects may include financial assistance in the form of grants and loans for administrative expenses and to defray costs of repair and moderate rehabilitation, for tenant organization and counselling, management and maintenance services, and for encouragement of home ownership by low-income families. It is anticipated that such projects will be funded from general sources available under the Act, including general demonstration authority and authority under Title VII. Community Economic Development, to the extent consistent with that title; however, no such projects are to be funded from sums made available under the new Rural Housing and Rehabilitation programs.

The Senate amendment prohibited the Director from delegating his functions under section 221 and title VII of such Act, notwithstanding the provisions authorizing delegation of programs of section 602 of the Economic Opportunity Act. There was no comparable House provision. The House recedes.

The Senate amendment combined the existing title I–D Special Impact Program and title III–A Rural Loan Program into a new unified Community Economic Development Program (title VII). This new title provided expanded authorization for grants as well as loans to rural cooperatives. There was no comparable House provision. The House recedes.

The rules of the House forbid managers on the part of the House from accepting Senate amendments that provide for appropriations within authorization bills. It was felt that the transfer of funds from one agency to another and the requirement that interest payments on loans from a revolving fund be returned to the fund rather than to the Treasury would violate the rule against including appropriations provisions in authorizing legislation.

It was therefore necessary for the conferees reluctantly to delete those provisions of title VII that detailed the operation of the newly authorized Community Development and Rural Development revolving funds, to delete those provisions that would have transferred the assets of the existing title III–A loan fund from the Department of Agriculture back to the Office of Economic Opportunity for consolidation with the new Rural Development revolving fund, and to delete those provisions in title VII that would have repealed title III–A. As approved by the conferees, title VII authority for a Rural Development Loan revolving fund will exist in addition to the authority in title III–A for the present Rural Loan revolving fund. It is the intent of the conferees, to the extent not prohibited by law, that the revolving funds authorized by title VII operate as is common with such funds, i.e., that repayments of principal shall be returned to the fund to be available for new loans and that the budget provide for the appropriation of the amount of the interest paid on such loans to the fund, to be used to offset the cost of operating such funds. Further, it is the intent of the conferees that the Office of Economic Opportunity seek to operate the Rural Loan fund provisions of title VII and those under title III–A in close conjunction pending legislation to transfer the title III–A loan fund to this title. In deleting the language in title VII that detailed the operation of the new revolving funds it was necessary to delete the provision authorizing the use of interest payments to the funds to defray administrative expenses. However the conferees wish to make it clear that it is their understanding that the statutory authority of the Director to make payments out of the existing title III–A revolving fund for "loans, participation, and guarantees" encompasses the same authority as is provided in other federally supported revolving funds to defray such costs as are necessarily incurred in the administration of loans from such revolving funds.

The Senate amendment amended title VIII of the Act by making clear authority for VISTA volunteers to work on environmental problems focused primarily on the needs of low income persons and the communities in which they reside. There was no comparable House provision. The House recedes.

The Senate amendment added a new section to title VI requiring frequent review and revision of the poverty levels based on the changes in the consumer price index. There was no comparable House provision. The House recedes.

The Senate amendment authorized persons who are otherwise eligible and live in public and private institutions to participate in Neighborhood Youth Corps programs. There was no comparable House provision. The House recedes.

The Senate amendment amended section 211 by requiring the Director to insure no local community action agency election be held on a Sabbath Day. There was no comparable House provision. The House recedes.

The Senate amendment amended the Federal Property and Administrative Service Act of 1949 by requiring the GSA to continue its policy of making excess property available to a grantee of any agency under a program established by law for which funds had been appropriated. There was no comparable House provision. The Senate recedes because the rules of the House prohibit House conferees from agreeing to a nongermane Senate amendment.

SUBSIDIZED STUDENT LOAN PROGRAM

(Mr. PERKINS asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. PERKINS. Mr. Speaker, Congress has now given final approval to a resolution delaying the effective date of amendments made 2 months ago to the subsidized student loan program, and I know that all of us are pleased that the confusion that has surrounded this program for the past few weeks will now be removed in time for the begining of the academic year next month.

I cannot say, Mr. Speaker, that I was entirely satisfied with the specific provisions of the resolution this body approved to effect such a delay, but now that it is behind us, I am pleased that the Senate saw fit to concur in the House amendment and send the measure on to the President.

Banks and other private lenders will now be able to go ahead and process subsidized loan applications, and the thousands of families all over the country who depend on this program to help send their children to college will be relieved of anxiety.

In order that Members of the House may have some more background information as to the nature of the problem we discussed early this morning, Mr. Speaker, I would like at this time to make some additional comments on the subject, and also to take this opportunity to say a few personal words concerning one of my colleagues in the other body, the junior Senator from Rhode Island, who played such a large part in the recent revisions made to the Higher Education Act.

The federally guaranteed student loan program, including federally subsidized loans, was one of several important student assistance programs extended and revised by the Education Amendments of 1972.

Over 20,000 financial institutions in the United States participate in this program, under which the principal and interest of loans made to students by banks and other lenders is insured by the Federal Government against default. If a student qualifies, he or she may also receive a partial interest subsidy from the Government. Under previously existing law—which has now been temporarily put back into effect by the resolution we approved—students with adjusted family incomes under $15,000 are automatically eligible to receive these interest benefits.

During the year ending last June 30, over 1 million students, most of whom were eligible for interest benefits, at more than 8,000 colleges and universities borrowed money under the guaranteed student loan program.

Thus this program has far broader coverage than the other Federal student programs, and forms the backup support for all other student assistance programs—Federal, State, and institutional—that make it possible for each student to come up with a package of support sufficient to meet his or her needs.

As you know, Mr. Speaker, the conference that produced the Educational Amendments of 1972 was one of the longest and most difficult negotiations between the two Houses of Congress in recent years. We met 20 times over a period of 11 weeks to bring back a bill that could command bipartisan support in both the House and Senate.

I am proud to say, Mr. Speaker, that the conference committee did succeed in bringing back a bill that won the approval of both the House and Senate, and that was subsequently signed into law. Many Members from both the House and Senate deserve credit for this accomplishment, but I would like today to say a few special words about my conference counterpart from the other body—the junior Senator from Rhode Island—who was in so many ways a principal architect of the bill that was finally reported.

During his first two terms, Senator Pell has proved himself a vigorous and effective champion of education, one who gained the deep respect of his colleagues in both the House and the Senate. As chairman of the Senate Subcommittee on Education for the past 4 years, he has demonstrated his concern for the needs of all of America's students, rich and poor, urban and rural, and he has worked quietly but courageously to see that their needs are met.

For 11 weeks, during conference sessions which often lasted long into the night, Senator Pell was both diplomat and advocate, impeccably courteous, yet never yielding on his principles. Never contentious but always persuasive, Senator Pell's contribution to this landmark legislation was enormous and, indeed, indispensable.

Mr. Speaker, the bill produced by that conference represents the most comprehensive aid to education measure passed by the Congress in this century. Senator Pell was the author of one of the most significant programs in the bill, a new system of basic educational opportunity grants.

Beginning next year, every American student will be entitled to what should now be known as a "Pell grant," a grant of $1,400 each year to help pay for the costs of a college education, less the amount his or her parents can reasonably be expected to contribute.

With the enactment of the Pell grant program, Congress took a historic step. We committed ourselves to the principle that no student who wants to go to college will be denied that opportunity merely because of financial need.

Mr. Speaker, America's students have Senator Pell to thank for this commitment. In the years to come, I am sure that Claiborne Pell will both continue and enhance this record of courageous leadership by his achievements in the Senate.

I look forward to working with him in future Congresses in the service of American education.

AMERICAN REVOLUTION BICENTENNIAL COMMISSION

The SPEAKER laid before the House the following resignation from the American Revolution Bicentennial Commission:

Washington, D.C., *August 18, 1972.*

Hon. Carl Albert,
Speaker, House of Representatives, Washington, D.C.

My Dear Mr. Speaker: I do hereby submit my resignation as a House of Representatives designee to the American Revolution Bicentennial Commission.

Respectfully yours,
Harold D. Donohue.

The SPEAKER. Without objection, the resignation is accepted.

There was no objection.

APPOINTMENT AS MEMBER OF AMERICAN REVOLUTION BICENTENNIAL COMMISSION

The SPEAKER. Pursuant to the provisions of section 2(b), Public Law 89-491, as amended, the Chair appoints as a member of the American Revolution Bicentennial Commission the gentleman from Massachusetts (Mr. Burke) to fill the existing vacancy thereon.

AIR PASSENGER FEES—STATE AND LOCAL CHARGES

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent that the bill (H.R. 14847) to amend the Airport and Airway Development Act of 1970 to increase from 50 to 75 percent the U.S. share of allowable project costs payable under such act; to amend the Federal Aviation Act of 1958 to prohibit State taxation of the carriage of persons in air transportation; and for other purposes, be considered in the House as in the Committee of the Whole House on the State of the Union.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Clerk read the bill, as follows:

H.R. 14847

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Air Passenger Safety and Convenience Act".

Sec. 2. (a) Section 17 of the Airport and Airway Development Act of 1970 (49 U.S.C. 1717), relating to United States share of project costs, is amended—

(1) by striking out "50 per centum" in subsection (a) of such section and inserting in lieu thereof "75 per centum"; and

(2) by striking out subsection (c) of such section and inserting in lieu thereof the following:

"(c) Security Equipment and Facilities.—The United States share payable on account of security facilities and equipment for designated airports shall be 100 per centum of the costs of such facilities and equipment.".

(b) The amendments made by subsection (a) of this section shall apply only with respect to the United States share of project costs payable under grant agreements entered into after the date of its enactment.

Sec. 3. (a) Title XI of the Federal Aviation Act of 1958 is amended by adding at the end thereof the following new section:

"State Taxation

"Sec. 1113. No State (or any political subdivision thereof) shall levy or collect a tax, fee, or other charge, directly or indirectly, on persons traveling in air transportation or the carriage of persons in air transportation by any aircraft—

"(1) operated by an air carrier certificated by an agency of the United States to perform air transportation,

"(2) operated by any person subject to regulation by an agency of the United States in the performance of air transportation, or

"(3) operating to or from any airport financed, in whole or in part, from Federal funds.".

(b) That portion of the table of contents contained in the first section of such Act which appears under the center heading "Title XI Miscellaneous" is amended by adding at the end thereof the following: "Sec. 1113. State taxation."

With the following committee amendment in the nature of a substitute:

Strike out all after the enacting clause and insert in lieu thereof the following: That, during the eighteen-month period beginning on the date of enactment of this Act, no State (or any political subdivision thereof) shall levy or collect any tax, fee, or other charge, directly or indirectly, on persons traveling in interstate, overseas, or foreign air transportation or on the carriage of persons in interstate, overseas, or foreign air transportation.

SEC. 2. (a) The Civil Aeronautics Board shall conduct a full and complete investigation of taxes, fees, and other charges levied and collected by States and their political subdivisions, directly or indirectly, on persons traveling in interstate, overseas, or foreign air transportation or on the carriage of persons in interstate, overseas, or foreign air transportation in order to determine the effect of such taxes, fees, or other charges on air transportation in the United States. Not later than twelve months after the date of enactment of this Act, the Board shall report to the President and to the Congress the results of such investigation, together with such recommendations as it may deem appropriate.

(b) The Civil Aeronautics Board may secure directly from any department or agency of the United States information necessary to enable it to carry out this section. Upon request of the Board, the head of such department or agency shall furnish the information so requested.

(c) In the conduct of the investigation required by this section, the Civil Aeronautics Board may hold hearings, issue subpenas, administer oaths, examine witnesses, and receive evidence in the same manner as provided by section 1004 of the Federal Aviation Act of 1958 (49 U.S.C. 1484).

SEC. 3. As used in this Act—

(1) the term "State" means a State of the United States, the Commonwealth of Puerto Rico, the District of Columbia, the Virgin Islands, and Guam; and

(2) the terms "interstate air transportation," "overseas air transportation," and "foreign air transportation" shall have the same meaning given such terms by section 101(21) of the Federal Aviation Act of 1958 (49 U.S.C. 1301 (21)).

SEC. 4. There are authorized to be appropriated such sums, not to exceed $100,000, as may be necessary to enable the Civil Aeronautics Board to carry out the provisions of section 2 of this Act.

SEC. 5. The first sentence of section 12(a) of the Airport and Airway Development Act of 1970 (49 U.S.C. 1712(a)) is amended by striking out "two years" and inserting in lieu thereof "three years."

Mr. STAGGERS. Mr. Speaker, I move to strike the last word.

Mr. Speaker, the purpose of H.R. 14847 is to authorize the Civil Aeronautics Board to conduct a 1-year investigation as to the ramifications of air passenger fees exacted by State and local agencies. The CAB will determine the financial needs at the airports throughout the country and make recommendations to the President and to the Congress as to the manner in which such needs should be met. To allow time for the CAB investigation, report, and recommendations and time for congressional review of the Board's action, the bill provides for an 18-month moratorium barring States and subdivisions of States from levying or collecting any per capita charges on air travelers.

The need for this legislation was brought to the fore by recent Supreme Court cases concerning air passenger charges enacted in New Hampshire and in Indiana. The cases were decided on April 19 of this year. There are now some 17 jurisdictions which have enacted per capita or enplaning charges on air passengers. They are listed on page 4 of the committee report. All except the Indiana and New Hampshire charges have been enacted since the Supreme Court decisions in April. The Committee on Interstate and Foreign Commerce feels very strongly that the moratorium is warranted so that these new charges can be evaluated both as to the merit of such charges and as to the need for insuring uniformity in fundraising for the support of airport construction, maintenance, and development.

In addition to the actions which the committee took with respect to air passenger fees, the committee amended section 12(a) of the Airport and Airway Development Act to allow the Secretary of Transportation 3 years rather than 2 years in which to complete a national airport system plan.

I urge the passage of this bill by the House.

Mr. MATSUNAGA. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Hawaii.

Mr. MATSUNAGA. I thank the distinguished chaiman of the Committee on Interstate and Foreign Commerce for yielding.

For the purpose of establishing legislative history, and for clarifying the language which is used on page 3, beginning with line 13, I wish to ask the gentleman whether the word in line 16 "indirectly" is intended to cover user fees imposed on the basis of tonnage, as some airports do, as in the case of Hawaii.

Mr. STAGGERS. I would answer the gentleman in the negative, positively it does not affect that.

Mr. MATSUNAGA. Even though the tonnage may be based on the weight which may be increased by the number of passengers onboard?

Mr. STAGGERS. Not in any way. It was not intended to do this, and it specifically goes to "head tax" charges.

Mr. MATSUNAGA. I thank the gentleman from West Virginia for making it clear, because I am fearful that the word is rather broad and may be misinterpreted by those who are charged with enforcement of the act.

Mr. STAGGERS. Mr. Speaker, if the gentleman will look on page 4 of the report, beginning with the last paragraph, I think the gentleman will find an explanation there.

Mr. SMITH of Iowa. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Iowa.

Mr. SMITH of Iowa. Mr. Speaker, Des Moines has contemplated imposing an airport tax by October 1. I do not think it is unreasonable to do that, but I think it unreasonable to have taxes on both enplaning passengers and deplaning passengers.

My question is this. They need money for facilities. Under the Senate version would some of this increased money that will be coming up go back to the local airports and be available for facilities?

Mr. STAGGERS. All I can tell the gentleman is in the Senate bill, and I do not know what will happen when we go to conference, part of the money will be allowed for facilities.

Mr. SMITH of Iowa. As I understand it, due to the fact that the gentleman did not have proper reports and so forth, his committee did not actually take it up and turn it down. They simply did not pass on that.

Mr. STAGGERS. We had in the original bill to pay 75 percent instead of 50, but we determined to establish an 18-month moratorium without making any changes in the Federal funding at this time.

Mr. MURPHY of New York. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from New York.

Mr. MURPHY of New York. Mr. Speaker, as we consider H.R. 14847, a bill which would enact a moratorium and suspension of State and local charges on air passenger fees, or, as it is more commonly known, the passenger head tax, I want the Members to know that this is a matter which the House Committee on Interstate and Foreign Commerce has studied, and we have recognized the need for a more in-depth investigation of the complex problems involved.

This is particularly true because we must fully evaluate the potential impact of head taxes on the vital Airport and Airways Act, and on the municipalities involved.

I have therefore supported H.R. 14847 in the Commerce Committee and here today, and I am gratified that a majority has joined in enacting this suspension of head taxes while our committee study goes forth. I am confident this will prove to have been a wise decision for the House, and I congratulate my colleagues for their vote.

I enclose for the RECORD a letter from the Port of New York Authority which clearly states the issue as seen by the airport authority in the largest metropolitan area in the United States in order to help place the issue in perspective:

JULY 24, 1972.

Hon. JOHN M. MURPHY,
House Office Building,
Washington, D.C.

MY DEAR CONGRESSMAN: Former Commissioner Ammidon has asked me to reply to your letter of July 10, 1972, concerning proposed head tax legislation (H.R. 2337).

Our major objection to that bill is that it would prevent public airport operators from collecting revenues from landing fees, rentals and per passenger charges for the use of specific facilities even though such charges are just, reasonable and non-discriminatory and not a burden upon interstate and foreign commerce.

At this time, the Port Authority is not planning to impose an airport head tax. However, even with significant Federal aid available for certain airport projects, we are aware that some of our nation's airports will have difficulty in raising the local share of financing for badly needed improvements if they are limited to existing sources of funds. Unless facilities at these airports are improved, the growth of air service between the Northern New Jersey-New York metropolitan region and many other areas could be limited. Although we also recognize that the irresponsible employment of boarding fees could have a chilling effect on air commerce at a time when the airlines are beginning to recover from last year's recession, we are confident that the courts will be quick to strike down any boarding fee which imposes an undue burden on interstate and foreign commerce. The Port Authority, therefore, believes that the public interest will best be served by leaving the resolution of the head tax matter to the courts. We also believe there is sentiment for legislation by Congress which would impose a moratorium on head taxes to allow further study. A properly drafted bill to this effect would be a more meaningful course to pursue than H.R. 2337.

As to the information you received from Congressman Fletcher Thompson, I assume that he had reference to the conference conducted last year by the American Assembly on Transportation in America at Arden House, Harriman, New York. Our copy of the speech which Mr. Tobin made at that meeting on mass transportation problems in the New York-New Jersey metropolitan area does not contain the statement attributed to him by Congressman Thompson. In that speech, however, Mr. Tobin referred to the fact that revenues from other Port Authority facilities (tunnels and bridges, marine terminals and inland terminals, as well as airports) help support the deficits incurred in the operation of the Port Authority Trans-Hudson Railroad (PATH), a commuter railroad linking Newark, Jersey City and Hoboken, New Jersey, with downtown and midtown Manhattan.

The Port Authority was able to acquire, operate and improve that bankrupt commuter railroad at the direction of the States of New York and New Jersey because the two States have authorized the pooling of revenues from all Port Authority facilities. I must emphasize that it was only by virtue of the ability to use revenues derived from other Port Authority facilities that the Port Authority in 1947-8 was enabled to take over the then deficit-ridden New York City and Newark Airports and subsequently to invest in excess of a billion dollars of its own funds in the physical development of airline and other facilities at these airports.

PATH, like all Port Authority terminal, transportation and other facilities of commerce, plays a vital role in the preservation of the economic well-being of our Newark, New Jersey metropolitan area. Indeed, PATH may prove to be of special benefit to air passengers in the years ahead since the Port Authority is presently evaluating the feasibility of a plan to provide direct rail access to Newark Airport utilizing PATH equipment.

Moreover, in our opinion, the fees paid by the air carriers for the use of Port Authority airports, which are the result of intensive bargaining between the Port Authority and the airlines, are just and reasonable.

Thank you for your interest in this matter.

Sincerely,

MATTHIAS E. LUKENS,
Acting Executive Director.

Mr. STAGGERS. Mr. Speaker, I commend the chairman of the subcommittee and the members of the subcommittee for bringing this very serious situation to the attention of the Congress so we could take some action on it at this time.

Mr. JARMAN. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Oklahoma.

Mr. JARMAN. Mr. Speaker, the hearings of our Subcommittee on Transportation and Aeronautics revolved around the question of State and local taxation and the Federal share of funds to be used for airport construction, maintenance, and improvements. Interest in the hearings was augmented by recent U.S. Supreme Court cases upholding the constitutionality of enplaning charges on passengers using scheduled aircraft. Witnesses representing virtually all segments of air transportation appeared.

Our subcommittee decided to report H.R. 14847 with an amendment to limit the bill to an 18-month moratorium barring the levying or collecting of State or local charges on passengers in air transportation and the vote of the subcommittee was unanimous.

Mr. Speaker, the purpose of this legislation is to authorize the Civil Aeronautics Board to conduct a 1-year study to determine the financial needs at airports which are funded in whole or in part at a State or local level. The Civil Aeronautics Board is to report to the President and to the Congress the results of its investigation with appropriate recommendations as to how the financial needs at airports may best be met. In order to allow time for the Civil Aeronautics Board's investigation and report and for congressional review of the Board's action, the legislation provides for an 18-month moratorium barring States, or subdivisions thereof, from levying or collecting any charges on persons traveling in air transportation.

Mr. Speaker, the Committee on Interstate and Foreign Commerce believes that this moratorium is warranted so that these new charges can be evaluated both as to the merit of such charges and as to the need for insuring uniformity in fundraising for the support of airport construction, maintenance, and development. I urge the passage of H.R. 14847.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, is this to be considered as the Senate version on this subject or the House version?

Mr. STAGGERS. The House version.

Mr. GROSS. Certainly it is not the same as the original House bill.

Mr. STAGGERS. No. We explain it in the latter part of the bill that changes are made, setting forth and amending the title so as to read: A bill to provide for a moratorium on State taxation of the carriage of persons in air transportation, and for other purposes.

Mr. GROSS. Mr. Speaker, I will say to the gentleman I have asked the question because I have had communications from airports in Iowa in my district, and they supported the Senate version and they are very much opposed to the House version or the House treatment on this subject. I am unable on this short notice to determine whether this is the Senate version or the House version.

Mr. STAGGERS. I would say to the gentleman we have to have a conference on it. In the original bill we did have 75 percent instead of 50 percent, but we did not include that as a part of the temporary moratorium.

Mr. BROYHILL of North Carolina. Mr. Speaker, I move to strike the last word.

Mr. Speaker, the situation is that a number of cities and towns around the country have been imposing these head taxes on passengers and it is growing by leaps and bounds. I am sure Members have been hearing from their airport authorities and the managers around the country.

What the committee is concerned about are two things.

First. It is going to result if it continues in a real hodgepodge. We do not know what the administrative burden would be of trying to collect on these taxes. They are certainly not uniform.

Second. Another thing we are concerned about is that the purpose, they say, of collecting these head taxes is so they can build capital improvements at their local airports, but we have evidence to show that these funds may not necessarily be spent for this purpose. They may be used to defray some of their present ongoing administrative costs. So the committee felt a moratorium was necessary at this time in order to give us a chance to come up with a sound long-range program.

No one denies the fact that the local communities which operate these airports certainly need funds to build the needed capital improvements and facilities.

If we are going to do this, I believe we should have a sound, long-range plan which is workable and which does not impose an undue administrative burden.

For this reason the committee has recommended to the House a moratorium and a study. This is not a complete prohibition. All it does is to put a moratorium on for 18 months for the collection and levying of these so-called head taxes. Hopefully by then we can come up with sound recommendations.

Mr. DON H. CLAUSEN. Mr. Speaker, will the gentleman yield?

Mr. BROYHILL of North Carolina. I am delighted to yield to the gentleman from California.

Mr. DON H. CLAUSEN. Mr. Speaker, I rise in support of the position the committee has taken because I am convinced that the moratorium, as suggested, is the only way in which we will be able to come up with the kind of recommendation that will lead to an ultimate end of the problem and an integrated airport system coordinated among the States and with the local governments that will be systematic, rather than growing like Topsy, piecemeal, as it has in the past.

I believe there will be some recommendations for some of the facilities that will be desired. If we do not do this in a systematic way we will have problems, not only financially but also with respect to congestion and safety as well.

I commend the committee for its action.

Mr. STAGGERS. Mr. Speaker, I yield to the gentleman from Pennsylvania (Mr. ROONEY).

Mr. ROONEY of Pennsylvania. Mr. Speaker, the legislation before us today provides for an 18-month moratorium on the levying of airport head taxes on airline passengers. I strongly object to the moratorium and, as a frequent air traveler and one vitally interested in the continued improvement of our Nation's airports, am greatly disappointed with the committee's recommendation that it be enacted.

The most important effect of the legislation is the continuing burden it places on the individual taxpayer. The financial support of airport operations should be provided by the traveler who benefits from improved facilities and services for air travel, and not by the general public, part of whose tax dollar is already applied to airport costs.

In my own district, Lehigh and Northampton counties annually contribute $175,000 apiece to operate Allentown-Bethlehem-Easton airport. In addition, a $9 million airport expansion program—which will cost each county approximately $375,000 a year for 30 years—and an airfield expansion program requiring $1 million of local funds over the next 5 years, are both under serious consideration. The tax burden on nonusers of the airport would be greatly alleviated by the imposition of a reasonable head tax on those who use and benefit from the facilities.

The legislation also authorizes the Civil Aeronautics Board to conduct a 1-year study to determine, identify and measure the financial needs of airports. I agree that such an investigation is most important at this time—the percentage of Federal funds to be made available to the airports, extension of Federal aid to construction costs of terminals and land acquisition for new airports, Federal funding of antihijacking and safety equipment required by Federal regulation and provision for long-term operating subsidies for carrying out these programs—all of these questions call for serious investigation. Before establishment of the aviation trust fund in 1970 all Federal moneys for the airports had to be appropriated from general funds. But although the revenue raised by the 8-percent excise tax on domestic tickets, air freight, fuel, and aircraft taxes and the tax on passengers destined for foreign countries has created a substantial backstop for Federal funding, the States and communities are finding it increasingly difficult to raise the 50 percent they are required to provide to match Federal grants.

The Supreme Court decision validating the head tax provided the airport operator with a reasonable and adequate means of collecting additional funds from the users of air transportation to meet the requirements not covered or funded through the airport development aid program. I strongly feel we must support this decision.

Mr. KYL. Mr. Speaker, in the absence of a record vote on final passage, I want to note that I oppose this bill in its present form.

Though there is unquestionably an advantage for all people in a community which operates an airport, those people who actually use the facilities should pay for the service they receive.

Mr. BROWN of Michigan. Mr. Speaker, I think it is regrettable that this legislation, H.R. 14847, was considered while the Members were in a headlong rush to recess, many having already left the Hill and the city. I had several questions to ask, the answers to most of which I knew but which I think should have been made part of this bill's legislative history.

Let me cite just a few:

Does the bill require a return of fees collected to date? Of course, the answer is no; but is that fair to those who have paid the fees and by what authorization can such funds be used for other purposes?

Am I correct that the bill does not alter the present 50–50 Federal-State and local cost sharing, even though it was the carrot of improved and increased Federal funding which prompted the consideration and passage of this legislation? Again, the answer is no.

In other words, Mr. Speaker, every airport badly in need of capital improvements, but which cannot produce the funds necessary to make up the 50 percent local share, will be required to wait 18 months before it can expect any help on the funding of local improvements, and even then such help is not promised nor do we even have any assurance that such a recommendation, if made, will be acted upon promptly by the Congress.

I have mixed emotions regarding this legislation.

I can understand the concern of many which provided the impetus for the consideration of this bill; namely, if we fail to legislate a prohibition against these so-called head taxes they will proliferate indiscriminately and profusely all over the country and administrative and tax chaos will result.

At the same time, I think the cost of the airport construction and improvement, like the cost of highway construction and improvement, should be primarily borne by those who use these facilities, to wit, air carriers, passengers, and air cargo shippers and users. Not only has the practice of requiring general taxpayers and property taxpayers to bear this cost become unpopular, it has become unproductive of revenues, the voters having rejected such proposals all over this land.

To illustrate the myriad problems that presently confront airport authorities, I would like, at this point, to quote in full a letter I received last week from Mr. James Caplinger, city manager of Kalamazoo, Mich., one of the cities in my district:

AUGUST 16, 1972.

Hon. GARRY BROWN,
House of Representatives,
Washington, D.C.

DEAR MR. BROWN: The City Commission of the City of Kalamazoo, by a unanimous decision, has asked that my office communicate with you to define our problems and our feelings as to the importance of allowing us to maintain a user's fee at our airport. Both the City Commission and the City administration of the City of Kalamazoo wish to go on record as being strongly opposed to current legislation which would call for a moratorium on, or abolition of, the use of user's fees. We do, however, feel that "head taxes" which are not specifically allocated to the development, maintenance, and operations of airports are improper and should not be allowed. Therefore, we could support legislation which would abolish an indiscriminate head tax but yet permit reasonably based user's fees which will support actual airport operations and development. While this letter is somewhat lengthy, it relays a number of very basic concerns and problems we are faced with. Therefore, I hope you will have the time to study it in some detail.

The City of Kalamazoo operates its own municipal airport, which has been recently designated to have interim regional status as a result of route consolidations in our area. We are about to embark on a $5,500,000+ airport development program. Obviously, we are going to need substantial additional revenues above and beyond our current revenue base, if we are to implement this capital improvement program and also to operate and maintain the new facilities created on an ongoing basis.

We anticipate that we will be able to pay a part of the cost of the capital improvements and operations through increased fees at our airport. Unfortunately, the City of Kalamazoo Municipal Airport, like many smaller airports, has only one regularly-scheduled commercial air carrier. This is the case, even though we serve a definite regional area concerning air transportation services. Therefore, we are in a rather difficult position with regard to how high we can effectively raise such things as landing fees and space rental rates.

In the past the City of Kalamazoo has substantially subsidized airport operations from local city tax revenues. However, with the recent trends of rising costs and the less rapid growth of revenues available, severe budgetary constraints have been imposed on many of our activities and programs. We feel that we are realistically facing the fact that we will no longer be able to substantially support airport costs from our local tax revenues. At the same time, air carriers feel they should not have to pay the actual cost of providing facilities for air transportation operations. They expect either city government, state government, or the federal government to pay a substantial portion of that price tag.

As an effort to provide improved and high-quality air transportation facilities for Kalamazoo and the southwestern Michigan area, our City Commission recently enacted by ordinance a user's fee at our Kalamazoo Municipal Airport. The revenues from this user's fee are designated solely for use in airport development and operations and, in fact, will be kept in a separate fund aside from the City general fund. We are making, and will continue to make, every effort to comply with both the technicalities and the spirit of the Supreme Court decisions recently handed down concerning usage of such fees. We recognize that there may be some possibilities that a few scattered communities may try to misuse this newly-found source of revenue, and we feel that whenever this happens, immediate and continued prosecution against those misuses should be undertaken. However, we do not feel that all communities having costly airport operations to support should be penalized for the potential misconduct of a very few airport operations.

We feel that the legislation currently pending before Congress has the effect of severely penalizing communities by removing from them a newly-found, much-needed, and long overdue source of revenues for their airport operations. Attempts to remove this source of revenue come at an especially bad time, when construction and operational costs are skyrocketing and at a time when new safety standards and security measures are being required for airport operations.

I wish to make it clear that we are not at all adverse to implementing, in good spirit, programs which will provide for necessary safety and security measures at our airport. But these items do have a significant ongoing cost. It is highly questionable if we will have adequate funds to carry out these programs if a user's fee is not allowed at our airport, due to the tightness of our budget, which was mentioned earlier.

We know that the airlines have a powerful lobby, which contributes substantially to election campaigns and political parties, and we realize the pressure this must bring to bear against many of our Senators and Congressmen. But we are hopeful that the same idealism and hard work, which is moving our country to the much-sought-after, popular, and needed goal of federal revenue sharing, will not be lost in a backward step, which would have the effect of removing from local governments the ability to fund their own operations at the local level.

> It is my understanding that some of the legislation being considered, which would propose a moratorium on, or abolition of, head taxes and user fees, does include the possibility of substantially greater grants from the federal government. *However, increased percentages in grants mean nothing if, in fact, appropriations are not made which provide enough grant monies to meet the needs of virtually all of our airports. If the grant percentages are any less than 100%, it will still be virtually impossible for many smaller airports to come up with the local share needed to obtain the grants, if the user fee is disallowed.* (Emphasis added.) Also, by placing a higher emphasis on grant programs and grant percentages, we will be placed in a political situation where the larger airports, which are more capable of being self-supportive, will, indeed, have the better chance to obtain the grants, whereas the smaller airports, having less of a chance to support themselves, will have a lesser possibility of obtaining the grants. This is the paradox which often creeps into grant programs and which makes it difficult for smaller communities to compete, even though they have significant long-term needs.
>
> We also would like to take this opportunity to reply to one of the major criticisms that airlines have levied against the user fee concept. That criticism goes something like this: If a user fee is allowed at airports, this will have the impact of increasing the cost of air travel, thus significantly reducing passenger enplanements and the utilization of air transportation services. I call on you and plead with you to recognize the fallibility of this argument. In fact, if the airlines were so concerned with this area, they undoubtedly would not ask for and receive continual rate increases for airline fares. It seems to me that there is some hypocrisy in this approach. When they need the money, fare increases are an absolute necessity! When local government needs the money to supply air facilities, then the increase in cost should not be passed on to the passengers, because it may deter them from using air services.
>
> I not only hope that you as an individual will vote against the pending legislation or legislation that may come out of a Senate-House Conference Committee, which would abolish, or call for a moratorium on, user fees; but I hope very sincerely that you will accept a personal responsibility to convince at least one or two other Congressmen, who would otherwise support such a bill, to change their minds and to vote against it.
>
> A vote *against* legislation of this type is a vote for making local government fiscally responsible for its actions and coping with its own needs and problems. A vote *for* legislation of the aforementioned nature is a vote to make local government more captive of airline interests than they already are and to place them in a position of growing dependence on federal monies simply to support their existence. I think you will agree with me that local government which loses the ability to have reasonable control over its destiny, with regard to its development and financial management, will in the long run cease to function as a reasonable entity in solving the problems our society is facing today and will face in the future.
>
> Please oppose this legislation, which is being lobbied by the airline and other associated interests. Thank you very much for your consideration and assistance in this matter.
>
> Sincerely,
>
> JAMES L. CAPLINGER,
> *City Manager.*

It, therefore, seems to me that the Congress could have acted much more responsibly. If we were going to decide to limit the availability of revenue resources to airport authorities, municipalities, and other units of government, we should have, in the same legislation, discharged our responsibility to these units of government by providing an alternate source of revenue; that is, increased Federal assistance.

For longer than I care to remember, I have advocated at least a 75–25 Federal-State ratio of funding for airport construction and improvement. It should have been incorporated in this bill regardless of the method used to finance such additional assistance at the Federal level. Irreparable damage will be done to good airport planning and air service while this airport financing "moratorium," if I may call it such, is in effect.

I, therefore, call upon those charged with the responsibility of this study and report to get to their task immediately and file their recommendations far in advance of the time limitation the bill provides.

The SPEAKER. The question is on the committee amendment in the nature of a substitute.

The committee amendment in the nature of a substitute was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill to provide for a moratorium on State taxation of the carriage of persons in air transportation, and for other purposes.".

A motion to reconsider was laid on the table.

Mr. STAGGERS. Mr. Speaker, pursuant to the provisions of House Resolution 1095, I call up from the Speaker's table the bill S. 3755, to amend the Airport and Airway Development Act of 1970, as amended, to increase the U.S. share of allowable project costs under such act; to amend the Federal Aviation Act of 1958, as amended, to prohibit certain State taxation of persons in air commerce, and for other purposes.

The Clerk read the title of the Senate bill.

MOTION OFFERED BY MR. STAGGERS

Mr. STAGGERS. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. STAGGERS moves to strike out all after the enacting clause of S. 3755 and to insert in lieu thereof the provisions of H.R. 14847, as passed.

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill to provide for a moratorium on State taxation of the carriage of persons in air transportation, and for other purposes.".

A motion to reconsider was laid on the table.

A similar House bill (H.R. 14847) was laid on the table.

GENERAL LEAVE

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent that all Members have 5 legislative days in which to extend their remarks on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate agrees to the amendment of the House to a concurrent resolution of the Senate of the following title:

S. Con. Res. 94. Concurrent resolution providing for an adjournment of the two Houses from August 18, 1972, to September 5, 1972.

CONFERENCE REPORT ON S. 3323, NATIONAL HEART, BLOOD VESSEL, LUNG, AND BLOOD ACT OF 1972

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the conference report on the bill (S. 3323) to amend the Public Health Service Act to enlarge the authority of the National Heart and Lung Institute in order to advance the national attack against diseases of the heart and blood vessels, the lungs, and blood, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent that the statement be read in lieu of the report.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of August 16, 1972.)

The SPEAKER. The gentleman from West Virginia is recognized for 1 hour.

Mr. STAGGERS. Mr. Speaker, the conference report we are considering today is in most respects the same as the House-passed bill, except that we split the money figures with the Senate, added provisions relating to emergency medical services, and permitted the conduct of prevention programs at research, training, and demonstration centers authorized by the House bill.

As passed by the House, the bill would have authorized appropriations of $1.290 million over a 3-year period, and the Senate bill authorized $1.470 billion over the same period. The conference agreement splits the differences, authorizing $1.380 billion.

The House-passed bill authorized the construction and operation of up to 30 research, training, and demonstration centers. The Senate bill contained the same provision for 30 centers but also provided authority for construction of 10 cardiovascular disease prevention centers. There was considerable opposition to this feature of the Senate bill, and in the conference, the Senate receded from this feature, but we included as functions of the research, training, and demonstration centers the activities intended to be covered in the 10 clinics contained in the Senate bill.

Mr. Speaker, this bill does the same thing in the area of heart disease as the Congress did last year with respect to cancer. Enactment of this bill, in our opinion, will strengthen the national attack on heart disease, which as we know is the Nation's No. 1 killer.

I know of no opposition to the conference report and urge its passage.

Mr. ROGERS. Mr. Speaker, I join Chairman STAGGERS in urging my colleagues to unanimously agree to the conference report on the National Heart, Blood Vessel, Lung, and Blood Act of 1972. This report will authorize an all-out Federal attack on major causes of death and disability in our country today:

On cardiovascular disease which is the Nation's leading health problem, afflicting more than 27 million and killing more than 1 million persons annually;

On chronic pulmonary disorders—such as asthma, bronchitis, and emphysema, which directly cause more than 30,000 deaths each year and contribute to at least 60,000 more;

On diseases of the lung which disable 20 million persons annually; and

On disorders of the blood such as sickle cell anemia and hemophilia, which produce lifelong disability for those afflicted and cause untold suffering and anxiety for victims and their families.

Mr. Speaker, this report is in most respects identical to the House-passed bill which was reported by the Subcommittee on Public Health and Environment. I am certain all my colleagues can support it, and I urge that they do so.

Mr. STAGGERS. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The conference report was agreed to.

A motion to reconsider was laid on the table.

AMENDING THE PUBLIC HEALTH SERVICE ACT

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 15474) to amend the Public Health Service Act to provide assistance for programs for the diagnosis, prevention, and treatment of, and research in Cooley's anemia, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 4, line 4, strike out "$25,000" and insert "$1,000,000".

Page 5, line 15, strike out "part," and insert "title,".

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

Mr. ROGERS. Mr. Speaker, I rise to urge the House to concur in the amendment of the other body to the National Cooley's Anemia Control Act which passed the House almost unanimously on August 1. This legislation is designed to provide for increased research emphasis within the National Institutes of Health against this little understood disease which threatens to continue to increase across this country. The legislation also provides for the establishment of critical screening, treatment, and counseling and information programs to benefit persons unfortunate enough to have the disease or carry its trait. This measure will insure better therapy and badly needed increased efforts at prevention of Cooley's anemia. Hopefully, it will result in a cure for this painful, debilitating disorder. I urge its unanimous approval by the House.

The Senate amendments were concurred in.

A motion to reconsider was laid on the table.

CLAIMS OF YOKOHAMA SPECIE BANK DEPOSITORS

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 8215) to provide relief for certain prewar Japanese bank claimants.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Clerk read the bill as follows:

H.R. 8215

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding any other provision of law to the contrary, persons of Japanese ancestry interned or paroled pursuant to the Alien Enemy Act during World War II may assert debt claims based upon yen certificates of deposit issued by the pre-World War II Hawaiian or United States branches of the Yokohama Specie Bank, Limited, payable from the vested assets of the bank remaining in the custody of the Attorney General after final distribution is made under the April 30, 1968, judgments and decrees of the United States District Court for the District of Columbia in Honda against Clark, civil action numbered 1179–64. Legal representatives or successors in interest, by inheritance, devise, bequest, or operation of law, of debt claimants, other than persons who would themselves be disqualified from allowance of a debt claim, may apply for and receive payment to the same extent as their predecessors in interest would have. Claims under this Act shall be filed not later than one hundred and eighty days after the date of enactment of this Act with the Office of Alien Property of the Department of Justice.

SEC. 2. Claims payable under this Act shall be subject to section 20 of the Trading With the Enemy Act, and required to meet all conditions of allowability and defenses prescribed by section 34(a) of the Trading With the Enemy Act, except the provision concerning allowance of claims of persons interned or paroled pursuant to the Alien Enemy Act, and the defense that the underlying debt obligation has been released or exonerated on or after November 14, 1957, by its redemption or surrender for consideration.

SEC. 3. Claims shall be payable at the same yen-dollar conversion ratio afforded to claimants under the consent decree of the United States District Court for the District of Columbia of April 30, 1968, in Honda against Clark, civil action numbered 1179–64, to the extent funds are available therefor.

SEC. 4. Payments under this Act shall be made as expeditiously as possible. Without prejudice to the administrative authority of the Department of Justice to pass upon allowability of each claim for payment, the United States District Court for the District of Columbia is authorized to dispense with the requirement of section 34(f) of the Trading With the Enemy Act for the publication of a schedule of debt claims, and to waive or prescribe any other procedural requirement (including establishment of time limits on final proof of claim) as it may find appropriate or necessary for the fair and expeditious administration of this Act.

With the following committee amendment:

Page 3, beginning in line 2, strike out "Without prejudice to" and all that follows down through the period in line 11 and insert in lieu thereof the following: All determinations with respect to the form and content of claims under this Act, the proof thereof and all other matters related to proceedings on such claims, including the allowance and disallowance thereof and the proration of available Yokohama Specie Bank assets among allowed claims if insufficient for full payment, shall be within the sole discretion of the Attorney General or his designee and shall not be subject to review by any court."

The SPEAKER. Without objection, the amendment will be agreed to.

Mr. HALL. Mr. Speaker, reserving the right to object, I simply want to ask two points of information.

Of course, it is obvious that there had to be a preclearance for this deserving bill on the claims of the Yokohama Specie Bank depositors or it would not be up at this time and in this order in view of its date of filing. I favor this. I think it is only just and equitable that these long-held funds be returned to their rightful owners. But I would like to know if any of the funds actually to be redistributed were gained by their owners and/or depositors from trading with the enemy.

Mr. STAGGERS. No, when the war broke out the money was in the bank. It was impounded by the Government.

Mr. HALL. Mr. Speaker, I would say that that would not necessarily make it so.

Mr. STAGGERS. I know that is true.

Mr. HALL. Because it could have been deposited from ill-gotten gains, but, what I am really asking is will an investigation be made by the War Claims Settlement Fund, or whoever is going to distribute this, to determine that no ill-gotten or improper deposits made from trading with the enemy under that act will be redistributed?

Mr. STAGGERS. I would like to say this: that the money was earned by these people before December 7, and was deposited in branches of the Yokohama Specie Bank in the United States. Also I am sure that the Justice Department would have cleared up any such fact, and they would have made it clear that none of this money would have been gained illegally or by trading with the enemy.

As the gentleman knows many of their sons fought for our country in World War II. They are good people. Most of them received their American citizenships, when the law was changed in 1952.

I might further say that many of these people have died, and that there is a total of about $4.5 million involved. The Justice Department is not opposed to this. Under those conditions I am sure that everything would have to be correct.

Mr. HALL. I appreciate the gentleman's statement, and it is very reassuring. I do know that the bill itself prohibits those who were returned to their native country during the war and after the war from being included in this bill.

I have one other question, and that is why the last nine words in the bill, which simply says, "shall not be subject to review by any court"?

Mr. STAGGERS. This allows these people to file applications. After they have been filed the Attorney General will make his decision. There will not be any court ruling to hold these moneys up for years in the courts. They have been held since 1941, that is long enough. As I say, there is about $4.5 million involved.

Mr. HALL. I understand that there will be some lost claims, and I hope that those funds could be distributed for the general good of the country.

I know that some of these people who are involved, their scions and heirs served so ably and well in the 441st and 442d Infantry units in Italy.

But the answer of the gentleman is that there will be no after review by the courts after these funds are returned. And, as I said before, we have held this money long enough, and I believe these funds should be returned.

Mr. STAGGERS. Mr. Speaker, I thank the gentleman from Missouri.

Mr. Speaker, H.R. 8215, as reported by the Interstate and Foreign Commerce Committee, would permit Japanese-Americans who were interned or paroled during World War II under the Alien Enemy Act to file creditor claims with the Office of Alien Property of the Department of Justice for payment on yen certificates issued by branches of the Yokohama Specie Bank from vested assets of that bank in the custody of the Attorney General. Approximately 5,800 claimants have received payment from the vested assets of that bank, leaving approximately $4,500,000 in the custody of the Attorney General.

This bill permits the filing of claims by persons of Japanese ancestry who have been barred from recovering payments solely because of their internment or parole under the Alien Enemy Act.

The bill as reported includes an amendment recommended by the Justice Department which provides that all determinations under the bill shall be within the sole discretion of the Attorney General, and not subject to judicial review.

Enactment of the bill would not cost the Federal Government 1 cent. The Justice Department has no objection to its enactment. The bill was reported by unanimous voice votes from the Subcommittee on Commerce and Finance and the full Interstate and Foreign Commerce Committtee.

Mr. MATSUNAGA. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I am most happy and delighted to yield to the gentleman from Hawaii, the gentleman who introduced the legislation.

Mr. MATSUNAGA. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, as the introducer of H.R. 8215, a bill that would provide relief to certain prewar claimants of the assets of the Yokohama Specie Bank, I rise in support of the measure. At the outset I wish to thank the distinguished chairman of the committee, Mr. STAGGERS of West Virginia, and the distinguished chairman of the subcommittee, Mr. MOSS of California, for the most expeditious manner in which they brought this measure to the floor for House consideration. In behalf of the beneficiaries of the bill I express my deepest appreciation.

The bill which I introduced is directed toward erasing one of the last vestiges of what has been called "the blackest page in American history." I am referring, of course, to the evacuation of 110,000 Americans of Japanese ancestry and their parents, who were uprooted from their homes along the west coast and Hawaii, deprived of most of their property, and imprisoned in what the Federal Government chose to call "relocation camps" or "internment centers," but which were in fact concentration camps, complete with barbed wire fences and armed guards.

Before the attack on Pearl Harbor, Hawaii, on December 7, 1941, a great many immigrants to America from Japan held yen certificates of deposit with Japanese banks having branches in the United States. The Yokohama Specie Bank was one of these. At the outbreak of World War II, the assets of Yokohama Specie Bank and other enemy firms were confiscated, or vested, under the authority of the Trading With the Enemy Act, so that those properties would not be used to aid the enemy during the period of hostilities.

When Congress in 1946 enacted a comprehensive plan for allowing claims of legitimate creditors of the enemy alien firms and entities whose assets had been vested, payment was expressly barred to creditors who were interned or paroled as "enemy aliens."

And how did these people earn the designation "enemy alien"? For the overwhelming majority, it was disarmingly simple. In the first place, all Japanese immigrants were aliens, not because none cared to become a citizen of his new country, but because Federal law forbade it. It was not until 1953 that Japanese immigrants were permitted to become naturalized American citizens. Incidentally, once that bar was removed, thousands demonstrated their long-felt loyalty by becoming naturalized citizens of the United States. But, because Japanese immigrants were noncitizens, that was enough to classify them as "enemy" aliens, particularly along the west coast, and virtually every one of them was swept up in the internment and parole machinery. In the then Territory of Hawaii, the authorities were more discerning, since interning all those of Japanese ancestry would have tended to destroy Hawaii's economy. Nevertheless, nearly every Buddhist priest, nearly every teacher in a Japanese language school, and nearly every official in a Japanese fraternal organization was automatically classed as dangerous.

Once Congress permitted it, almost every one of the "enemy" aliens became naturalized American citizens. A great many had sent their sons to war for America, both in the Pacific and European theaters. In 1956, Congress refused to discriminate against internees when it passed the Evacuation Claims Act, which compensated Japanese Americans for certain property losses suffered during the period of wartime hysteria. Under that act, Congress expressly permitted recovery by those who had been interned and subsequently released.

But the bar created by section 34(a) of the Trading with the Enemy Act remained. When internees holding yen certificates of deposit attempted to recover their money, they were told that the statute did not permit payment. Other Yokohama Specie Bank depositors, following lengthy litigation over the conversion rate, were permitted to recover their money at the prewar conversion rate of about four yen to the dollar. After all pending claims have been litigated and allowed, the Attorney General estimates that the balance of the Yokohama Specie Bank vested assets in his custody will amount to about $4.5 million.

However, the rightful owners of this amount find themselves in a dilemma, for the one hand, vested assets of the Yokohama Specie Bank remain available, while, on the other hand, their legitimate claims against those assets have been barred by law from recovering their hard-earned savings. The purpose of H.R. 8215, Mr. Speaker, is to eliminate this obvious injustice by removing the statutory bar to those with just claims against the remaining vested assets of the Yokohama Specie Bank. The pending bill would require claimants to meet all of the other requirements of the Trading with the Enemy Act. All legitimate arguments against the claims could be raised; but having been interned or paroled during World War II on account of racial ancestry would not constitute a bar to recovery.

H.R. 8215, as reported, includes an amendment recommended by the Department of Justice, which otherwise finds the bill acceptable. The amendment would give the Attorney General final authority to decide the validity of claims filed under the bill, rather than involving the U.S. district court which has jurisdiction in the case of other Yokohama Specie Bank claimants.

No one knows how many depositors have been deprived of their life savings by our existing laws. The Justice Department estimates there may be as many as 2,000. An attorney who handled a great many of the original Yokohama Specie Bank claims estimates the number at about 800. Regardless of the number, each of these wronged individuals is entitled, in the name of simple justice, to present his legitimate claim.

To illustrate a typical case with which we are here concerned, permit me to read a few lines from a letter which I have received:

> My parents have always been honest, hardworking people who believe in saving for future needs so that they would not need to depend on others. Thus, they made periodic deposits to the [YSB] bank during the pre-War years by living economically. Since my father was employed as a clerk at the Japanese consulate [in Hawaii] when World War II began, our family suffered humiliation and loss of freedom by being placed in concentration camps in Utah and California . . .
>
> My parents are financially disadvantaged now due to my father's condition (he has been an invalid for about 11 years now). My mother devotes full time to his care. They are both very anxious to recover their money.

Mr. Speaker, because of the advanced ages of potential beneficiaries of H.R. 8215, each week and month that passes by without its enactment means that fewer and fewer of the original Yokohama Specie Bank depositors would be able to benefit personally from the righting of this inequity.

There is a great deal of truth in the maxim that "Justice delayed is justice denied." For these Americans of Japanese ancestry, justice has been delayed for more than a quarter of a century. Let us not deny them justice any longer and approve H.R. 8215 unanimously.

Mrs. MINK. Mr. Speaker, I rise in support of H.R. 8215, legislation to provide relief for Japanese-Americans whose bank funds were seized during World War II by the U.S. Government.

This legislation would help correct one of the major inequities arising from the wartime internment of these Americans.

Under this bill, those who were interned or paroled under the Alien Enemy Act may file claims with the Office of Alien Property, Department of Justice, for repayment of funds deposited by them in United States or Hawaiian branches of the Yokohama Specie Bank, Ltd., prior to December 7, 1941. The claims would be payable from assets of the bank, which were vested by the U.S. Government at the outbreak of World War II. In the long absence of this legislation, Japanese residents of our country are barred by section 34 of the Trading With the Enemy Act from presenting claims for their rightful deposits.

The amount involved is about $4.5 million presently being held by the Justice Department. The bill does not provide that the persons whose deposits were confiscated will receive any interest payments on the $4.5 million that was taken.

Thus, the bill is a small step, indeed, toward righting the tremendous wrong that was inflicted on those whose only crime was having ancestral heritage of Japan. Previous legislation has granted some relief for other types of loss, but the legislation today would permit at least some compensation for losses of moneys that would be far more substantial today had this capital accrued interest or investment gain.

Equity requires that these 1,000 to 2,000 depositors be allowed to have their claims considered. This legislation would permit just repayment for approved claims.

I urge the adoption of H.R. 8215.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

The committee amendment was agreed to.

GENERAL LEAVE

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent that all Members have 5 legislative days to revise and extend their remarks on the three bills just passed.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

LEGISLATIVE PROGRAM FOR WEEK OF SEPTEMBER 4

(Mr. ANDERSON of Illinois asked and was given permission to address the House for 1 minute.)

Mr. ANDERSON of Illinois. Mr. Speaker, I take this time to inquire of the distinguished majority whip if he can inform us as to the program for the week of September 4.

Mr. O'NEILL. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Massachusetts.

Mr. O'NEILL. Mr. Speaker, the program for the House of Representatives for the week of September 4, 1972, is as follows:

Monday, the Labor Day holiday, there will be no session.

Tuesday, the Private Calendar will be called.

Following the Private Calendar:

Conference report on H.R. 12350—Office of Economic Opportunity amendments.

Conference report on H.R. 13089—National accelerated reforestation.

Wednesday, the bill, H.R. 13514—Wheat research and promotion. An open rule with 1 hour of debate.

Thursday and the balance of the week:

H.R. 12114—Indian lands in Oregon. An open rule with 1 hour of debate.

H.R. 15003—Consumer product safety. Subject to a rule being granted.

Conference reports may be brought up at any time, and any further program will be announced during that week.

Mr. ANDERSON of Illinois. Mr. Speaker, I would further ask the majority whip with respect to the bill, H.R. 13694, a bill to amend the joint resolution establishing the American Revolution Bicentennial Commission. It is my recollection that we had finished general debate and were proceeding under the 5-minute rule on that bill and had not completed it.

Is there any intention to schedule that bill for the week of September 4?

Mr. O'NEILL. The answer is in the negative due to the fact that the chairman of the Committee on the Judiciary has served notice that the bill will not be called up during that week.

Mr. ANDERSON of Illinois. I thank the gentleman.

EXPORT ADMINISTRATION ACT EXTENSION

(Mr. BURKE of Massachusetts asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. BURKE of Massachusetts. Mr. Speaker, on Wednesday this House overwhelmingly rejected attempts to circumvent the rules of this House and rush through controversial legislation in the final days before recess for the Republican Convention. At the time, practically every speaker who addressed himself to the merits or demerits of House Resolution 1094 ended up discussing the merits or demerits of the conference report on S. 3726, the Export Administration Act extension. Before the end of the debate, there could have been very few in this Chamber that were under any illusion that, in fact, House Resolution 1094 had been specifically designed to allow that conference report on S. 3726 to be whipped through this House in record time contrary to the intent of the Legislative Reorganization Act of 1970 which requires a 3-day waiting period to allow Members to acquaint themselves as completely as possible with the complicated details contained in any conference report, particularly on controversial legislation such as the Export Administration Act extension. Still, it is interesting to point out for the record that the Rules Committee and others did attempt to maintain the pretense that House Resolution 1094 had no such purpose in mind and in point of fact, was not directed at speeding through any one conference report.

Well, today, Mr. Speaker, the masks are off and we are dealing with a much more honest, straightforward resolution, House Resolution 1102, which specifically waives the rule for our old friend—or foe, as the case may be—S. 3726, the Export Administration Act extension. In other words, Wednesday's complicated maneuverings are made plain for all to see today. The powers-that-be are going to stop at nothing apparently in their attempts to steamroll through one of the most controversial bills this session, affecting as it does, vital economic interests in different sections of this country. Somebody up there likes this bill. Somebody up there is going to stop at nothing in their attempts to get this bill through. I am under no illusions that if we do beat back today's latest ruse, we will face another maneuver later. At least, however, things are more open now. We know the bill that is the subject of such unprecedented concern. Make no mistake about it, there are powerful interests pushing for this bill and it is clear they are stopping at nothing.

Actually, nothing newer need be said against today's resolution than was said Wednesday. The Clerk would merely have to reproduce Wednesday's debate again today in order to get all the arguments for and against this resolution. The only difference would be that the Clerk could delete all references to and pious concern for such national security measures as military procurement and construction bills, OEO conference reports, and so forth and so on, because it is clear that these measures are not really what the powers-that-be had in mind with either Wednesday's or today's Rules Committee resolutions.

Mr. Speaker, if there was a genuine concern that the Export Administration Act be extended on time, why was not a bill reported from the committee with jurisdiction in plenty of time before the July 31 deadline? If the lapse of statutory authority to impose export control was really the concern of the banking and currency committee, this bill should have been before us months ago, not days ago. The fact of the matter is, Mr. Speaker, that what put fire behind this bill and got the Banking and Currency Committee moving on this bill, is that on July 17, the Secretary of Commerce exercised some of the power granted to him under the terms of the old legislation. That is when the committee galvanized itself into frenzied activity and spared itself no effort in reporting a bill out in record time and now is asking the House not even to consider it 3 days before accepting 100 percent the terms of a far-reaching conference report. Make no mistake about it, the bill behind this resolution is not an extension of export control. It is a rewriting of export control authority for all intents and purposes. No longer will the Secretary of Commerce have the authority to impose controls where needed over agricultural commodities because the Secretary of Agriculture, whose constituency should be apparent to all, is in effect being granted veto authority by this seemingly innocuous conference report which might be before us today.

Make no mistake about it, this bill does not merely extend existing legislation. It grants statutory authority to yet another agency, yet another advisory council to the President—and we all know how much this country cries out for yet another advisory council to the President. What this bill does is create another Henry Kissinger, another man that will be answerable only to his views of the world as he sees it and to the President. Big deal—Congress is going to get yet another annual report. But, is the Senate going to have the power to approve the chairman of the advisory council? No. Is either the House or the Senate going to have the right to question the chairman or members of this committee? No. But this committee will, in effect, be assuming functions now being performed by an established department such as the Treasury Department or an established agency such as the Federal Reserve over which Congress today enjoys some jurisdiction and can expect some responsiveness and accountability. Mr. Speaker, the last thing Congress needs to do is to further erode its power of questioning and review over the activities of the Executive Department. We have already witnessed what can happen in the foreign policy field when much of the State Department's authority was transferred to a presidential advisor. We should be wary indeed of making this mistake this time in the international economic field. Mr. Speaker, the backroom at the White House is already too crowded. It is time to open up the doors and the windows. It is time that we, too, received some of the confidences now intended only for the President's ears.

Mr. Speaker, the saddest part of all when you look at this conference report is the total realization that it represents one of the most incredible cave-ins on the part of this House to the wishes of the other body. Mr. Speaker, this body a few weeks ago overwhelmingly defeated title I of our own Export Administration Act extension bill only to find our conferees have brought it back in this Trojan horse that is the conference report before us as title II. What was bad as title I in our own bill is hardly better because it comes back as title II in S. 3726. As a matter of fact, title I before it was stricken contained the sort of qualifications, provisos, riders, restrictions, what have you, that alone made statutory recognition of yet another advisory committee in any way palatable.

Now why do I take the House's time today in yet another effort to make sure this House deliberates carefully and conscientiously over this particular conference report? Mr. Speaker, I do so because perhaps never before in this Nation's history have we, as an economy, been so beset with the most fundamental international problems. Trade deficits month after month are at an alltime high. Instead of a balance of payments, what we have in effect, is a continuing imbalance of payments. Foreign investment opportunities look brighter than ever before, while our own domestic economy continues in the doldrums for lack of the necessary rejuvenation which can only come from massive reinvestment. Unemployment rates stand at record levels and the story is abroad in the land that our foreign trade policies have a bearing on these figures. Mr. Speaker, all around us we see huge corporations growing like topsy. Economic power every day is further concentrated in the hands of few giants who already have too much power. These corporations increasingly know no national boundaries and not surprisingly display few loyalties to any nation. Money, jobs, goods are moved about the world as if it were a chessboard, with no regard for national boundaries or the unemployed that are left behind. Mr. Speaker, we forget, at our own peril, that there are pawns in this international chess game and they are the workers we were elected to represent. And over and above all of this, the dollar increasingly appears to be more of a yo-yo than a stable international monetary standard.

So. Mr. Speaker, at the very time we should be proceeding cautiously in this area of international economics; at the very time when we should be engaged in a national soulsearching about what has gone wrong and where we should go in the future; at the very time we should be reviewing existing trade policies that have brought us into this chaos and for the first time tackling both the challenge and the problem presented by the multinational corporation as a modern business unit; at the very time we should be having extensive foreign trade hearings before the committees with jurisdiction in this field—at the very time all of these things should be going on, we are treated to the sorry spectacle of a House passing without due consideration or concern for the far-reaching implications legislation such as that embodied in the conference report on S. 3726. Mr. Speaker, in view of the broad authorization of objectives and the glib marching orders for this new statutory committee; I cannot in all good conscience, support any attempt to save even so much as a day in considering the legislation before us. For a bill which started off as one of the most poorly written bills ever to be reported from committee this session, only to be virtually rewritten on the floor, then only to be virtually scrapped on the floor; for a bill which represents a total sellout to the other body; this bill has come a long way very far, very fast. It is time that this House had the courage to blow the whistle on its meteoric rise to the status of law and slowed it down just long enough for each Member here today to know what it is all about. Mr. Speaker, I urge in just as strong terms today as Wednesday, the defeat of this latest attempt by the Rules Committee to circumvent the purposes of the Legislative Reorganization Act.

THE SPIRIT OF '76

(Mr. DON H. CLAUSEN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DON H. CLAUSEN. Mr. Speaker, as most of us are aware, the United States will be celebrating its historic bicentennial in 1976. For this momentous occasion, the old but very fitting theme—"The Spirit of '76" has been appropriately revived.

Speaking of another kind of spirit, I should like to bring to the attention of my colleagues that, on September 20, the California Brandy Advisory Board will be hosting a reception here in Washington as part of their promotional program to bring to the attention of those people who are, as yet, unaware that we in California are now producing quality brandys for those who enjoy good brandy.

California brandy, in addition to providing comfort and pleasure to brandy fanciers, also is rapidly becoming a viable contributor to our Nation's economy at every level of government. In 1971, California brandymakers paid taxes in excess of $175 million—and that is nothing to be sniffed at.

Representing the Napa, Sonoma, and Mendocino County "Wine Country", as I do, the contribution to the economic stability of these areas, by this industry, is well known but the beauty of the vineyards in these valleys can only be appreciated by those that visit the area. The quality of the environment is matched only by the quality of the products of the area.

We invite you to come visit us and assure you that you will leave with a good feeling and a good taste in your mouth.

LABOR-HEW APPROPRIATION VETO

(Mr. O'NEILL asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. O'NEILL. Mr. Speaker, the President, by refusing to sign into law the Department of Labor-HEW appropriation bill, has proclaimed to the people of the United States that he, and he alone, is the sole director of priorities in this Nation.

Not only has the President credited to himself and his administration, action initiated, analyzed, drafted, rewritten, reported, and passed by this Congress, but he insists on calling this body reckless and inflationary because we added $1.8 billion to this human needs legislation.

Let us look at the President's record of concern for America's health, education, and manpower needs and in particular his record of Government spending.

Health, manpower legislation—the administration withheld support from the bill until the day it reached the floor. The administration's own bill provided for only about half as much funding.

Sickle-cell anemia—the Deputy Assistant Secretary for Legislation in HEW testified against the bill calling it "redundant and unnecessary."

Cancer research—long before the administration introduced a cancer bill, a Democratic initiated measure had been reported out of committee.

In fact, this administration, which claims to be second to none in its concern for America's health, education, and manpower needs, proposed an NIH budget that, exclusive of increases for cancer research, is considerably lower than last year's budget. It proposed a decrease in Office of Education expenditures and repeatedly rejected congressionally initiated measures in the manpower field. This administration may be second to none in its concern. But it is long on concern and short on action.

Apparently in the President's eyes only budget increases for human welfare are inflationary—for President Nixon has been generous in his recommendations for increased defense spending.

Despite, or in President Nixon's strange logic, because of, the SALT agreements and the "ending" of the war in Vietnam, he has proposed hikes in military spending far greater than those this Congress has made in his Labor-HEW budget.

Mr. Speaker, the $1.7 billion increase in the President's Labor-HEW request provided by Congress, though for the public's welfare, is of secondary priority to this administration. Much of the increase was necessary simply to replace funds cut by the administration. For example, President Nixon saw fit in his budget to cut $400 million in medical school, hospital and other health construction programs. In spite of the President's calls for quality education for all children, $200 million in aid to schools in federally affected areas was slashed.

Despite almost daily alarming news about drug use, the Office of Education signalled its intent to cut back Federal support for ongoing community-based drug education projects. Funding for programs directly aimed at coming up with cures for this Nation's most menacing diseases did not escape the administration's paradoxical pecuniary parsimony.

President Nixon has told us that these cutbacks and the lack of new funding in the human welfare fields are the price we must pay for the restoration of economic stability. Of course, the President's credentials as an economic prognosticator are not very good. His own action in recommending increased funds in defense appropriations, hardly strengthens his case. Even without explaining away his inconsistency, the President would be hard pressed to justify his obsessive opposition to these budget hikes.

The President neglects to mention the end savings likely to result from adequate financing of human welfare programs. Is not the President aware that estimates of the loss to the economy due to individuals suffering from Parkinsonism, stroke and cerebral palsy run in the range of $100 billion a year? Is not the President aware that the resulting burden on public agencies comes to about $10 billion a year? Why then did the administration's budget provide virtually no increases for research on the causes and cures of these diseases?

The President tells us that this appropriation is recklessly inflationary. He fails to tell us that like everyone else, the Government is affected by inflation. Additional funds are necessary just to sustain existing program levels. Financing of urgently needed new programs designed to improve our welfare demands even higher appropriations.

The President leads us to believe that the slightest addition of funds above his budgetary requests will launch us into an uncontrollable inflationary spiral. He conveniently ignores the 5.5 percent current unemployment rate. He is apparently unconcerned that the economy is now operating at only 75 percent of its capacity.

The President tells us that we must limit Federal expenditures, but the President does not do so himself. The President's programs result in billions of dollars in increased deficits, yet the President draws the line at the increases he has suggested. Is the President really opposed to new spending or is he only opposed to the spending priorities promoted by this Congress?

Let us analyze the record of recent Government spending.

For fiscal year 1972 the budget was $231.5 billion. This year the President has set a price of $250 billion as the magic mark. This means that his budget is $18.5 billion more than was spent in fiscal year 1972. In his veto message of the Labor-HEW appropriation bill, the President has stated that it is $1.8 billion more than he is willing to spend. How many thousands of people will suffer from President Nixon's unwillingness to raise the budget from $250 billion to $251.8 billion.

Let us look at the record for the last 20 years. During the Eisenhower administration, the average deficit for each fiscal year was $2.7 billion. During the Kennedy administration, the average deficit per year was $7.5 billion. During the Johnson administration, the average deficit was $11.5 billion. During the years of President Nixon, the deficit has been $27 billion a year. About 25 percent of our national debt has occurred during the administration of President Nixon.

With these figures it is hard to rationalize how President Nixon could in good conscience have vetoed the Labor-HEW appropriation bill.

The American people are tired of a President who talks about inflation while favoring substantial defense spending increases and opposing legislation that would quench the inflationary fires in the health industry by providing an adequate supply of trained manpower. They are fed up with the President who considers 5 to 5.5 percent unemployment and a 75 to 80 percent utilization rate necessary for price stability. Most of all the American people are fast catching on to a President whose major initiatives in the field of human welfare have been vetoes of bills passed by this Congress.

CALIFORNIA BRANDY: THE SPIRIT OF '76

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. MATHIAS) is recognized for 5 minutes.

Mr. MATHIAS of California. Mr. Speaker, I would like to place on record a few remarks regarding California brandy, the soul of the California grape. Not only is it steep in American history, but it is a unique blend of tradition and modern technology. In the San Joaquin Valley, the great brandymakers of this country have developed distillation techniques and established quality standards that are the envy of this worldwide industry. I heartily recommend that California brandy, the American spirit, be designated as the bicentennial spirit and that all present, at their first opportunity, avail themselves of its unique pleasures. Cheers.

THE AMERICAN SPIRIT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. McFALL) is recognized for 5 minutes.

Mr. McFALL. Mr. Speaker, I would like to take just a moment to give formal recognition to one of the great spirits of the American way of life, both past and present.

Before the birth of our country and ever since, California brandy has been a proud product of American craftsmanship, particularly that of my Golden Staters in the great San Joaquin Valley, often called America's Brandyland.

There, all of the fine brandy made in this country is produced and sent out to provide this Nation comfort and cheer. Because of the service that this spirit has furnished our citizens down through the years, I believe California brandy should be recognized formally as the "Bicentennial Spirit."

The unique history of this beverage and its development as one of the outstanding products of the Golden State and the Nation has been recorded in a recent background article prepared under direction of the California Brandy Advisory Board.

I recommend this interesting résumé, tracing the history of the beverage from its discovery through refinement to its present day esteemed status, to the attention of the Members. It follows:

CALIFORNIA BRANDY

(By Bob Flynn)

Brandy has been celebrated for centuries as one of the noblest spirits of nature and is generally considered the oldest of all distilled beverages. Traditionally referred to as the drink of kings and the king of drinks, it has borne a variety of romantic appellations down through the ages.

The French called it, *eau-de-vie*, water of life. Some Latin-speaking regions used the designation, *acqua vitae*. To others, it was *acqua vitae ardenes, acqua vini, spirits vini*, and even the intriguing, *mercurius vegatabilis*. But no matter how curious the nomenclature, the same basic thought was there as it is today: brandy, the ultimate product of wine-making, is the true soul of the grape.

The art of making brandy has been formally practiced for at least eight centuries in the Western World. It is said that a Spanish scientist, Albuecasis, first experimented with the process of distilling wine into brandy in the 12th century.

A more recent, and perhaps more appetizing footnote to the history of brandy traces it back to a Dutch shipmaster in the 16th century.

In plying the brisk wine trade between the port of LaRochelle in France and Holland, this enterprising captain was cramped for space in his small sailing vessel. He hit upon the idea of concentrating the wines in his hold by eliminating the water, or distillation, thus transporting only the spirit of wine into Holland. Once on native ground, he planned to add the water back, and make a huge profit. But when his fellow citizens sampled this new product they liked it so well they wouldn't let him change it, and a brandy trade was born.

True or not, the distillation of brandy spread from Spain to all other European countries, and thence across the seas. Since fire was used to distill the wine, it became known as "burnt wine," *brandewijn*, in Holland, *brantwein* in Germany, and *brandevin* in France. To the English tongue it was *brandywine*, and soon became just plain brandy.

California brandymaking probably began with the Mission Fathers. As civilization took hold there, so did the vine, and thus brandy. By the 1840's, brandy was one of the small amenities of frontier life in the West, and we know that Captain Sutter, whose mill started the Gold Rush, had constructed a fully equipped brandy still at his fort in 1843.

Good brandy in small quantities has always been made in California but the perfection of the distilling art and the acceptance of native brandy by Americans had to wait until comparatively recent times. Actually, it wasn't until the repeal of prohibition that brandymaking became a major part of the grape industry. And even then it was mostly a salvage operation, a way to use up excess grape crop. As one leading wine executive described the brandy of the thirties: "The quality—to be charitable—was uneven."

It took World War II, with its shortages of imported brandies and other spirits, to turn the consumers' attention to their own native brandy. Even though it wasn't then the smooth, balanced beverage it is today, the public took to it eagerly. They found that its straightforward flavor and aroma, neither as complex nor as deep as that of Cognac, made it pleasant by itself, and an ideal liquor for mixing cocktails.

Encouraged by this surge of interest, growers and distillers began a long range program of product improvement and quality control. Quietly, carefully, for about the last 25 years, they began establishing one of the great brandy centers of the world. It's located roughly in a 200-mile swath of lush green vineyards stretching from Lodi, about 150 miles due east of San Francisco, south nearly to Los Angeles.

In this warm fertile valley, which has been accurately called America's "Land of Brandy," are concentrated the grapes, the distilleries, the storage facilities and the brandymaker's skills that account for more than 98 percent of all the brandy produced and bottled in the United States.

Here the soil and climatic conditions, the vintner's heritage, and some of the most sophisticated distilling technology in the world have combined to make a native American beverage that is distinct from the brandies made in any other country. Although there is enough variety among California brandies to suit almost any palate, they can all generally be described as light, clean, highly aromatic and fruity—a unique spirit not easily confused with any other, delightful straight and almost infinite mixable.

A famous gentleman of wine, the late Andre Simon, wrote of brandy that it is, "a spirit distilled from wine, anywhere. It has been distilled in most if not all of the lands where grapes grow and wine is made." But, he added, there are wines more suitable than others for distillation. And this is one of the principles that has made California brandies by far the most popular of all brandies consumed in the United States.

In the production of beverage brandies, the primary concern is that the grape used be ripe and sound, and of a high sugar content. In addition, it has to be of such a variety that no distinct varietal flavor will penetrate into the final product. In California it was determined that among the finest grapes for this purpose were the Tokays and the Thompsons, plus the Grenache, the Emperor and the Mission. Others like the Malaga and the Petit Sirah, are used in smaller degree. But, whatever the grapes, they are fresh, whole, and sweet.

Another discovery of the California distillers was that while aging in the wood improves most wine, only fresh, newly fermented wines produced the fruity bouquet they desired for their brandy. Western brandies are distilled exclusively from young wines, and thus brandymaking begins shortly after the harvest starts, ending when the supply of fresh grapes run out.

The single most significant change made by the U.S. brandy industry, however, was the replacement of the centuries-old "pot still" with the efficient, high-capacity continuous stills now used almost universally here.

Pot stills are low, rounded copper containers with small capacity. They require emptying and cleaning with each new batch of wine. Most important, they make it difficult to separate the various elements of the distillate, and generally produce a heavier brandy.

Continuous stills are much more productive, since they do not need shutting down for reloading. These tall metal columns also give very precise control over the distilling process, allowing producers to separate off almost all the unwanted parts of the distillate.

Some distillers maintain a few pot stills and blend small amounts of this heavier brandy into the final product to add body and fullness. In general, however, brandymakers have turned to the ultra modern, towering continuous stills developed in California—capable of producing thousands of gallons an hour, and producing a beverage marked by lightness and flavor.

In the most basic terms, distillation is simply applying steam to wine. At the lowest temperatures, the ethyl alcohol is transformed into a vapor. When it goes through a condensing process and is cooled sufficiently it reverts to a liquid, but now, with the water removed, it is actually new brandy.

At this point, the master brandymaker turns to nature for two vital ingredients. One is the fine white oak used in brandy barrels and the other is simply the passage of time.

Most California brandy is aged in used oak whisky barrels, charred on the inside. A smaller percentage is aged in a new oak cooperage. The only difference is that the new oak imbues the final product with a more distinct oak flavor. The decision is the brandy master's, and depends upon his special recipe.

All U.S. brandies are required by law to be aged at least two years, but most of the California product rests in the barrel longer—probably an average of four years. Some brandies, reserved for premium use or for blending, remain in the barrel for six, eight, or ten years.

The action of the oak upon the new brandy is essential to the creation of the splendid character and softened tone of the spirit that finally results. No one knows exactly how the aging process works: part of it takes place through the interaction of chemicals in the wood and in the brandy; part of it takes place through oxygenation, as the oxygen slowly permeates the stout oak and the liquid within. All the while, the perfume and taste are being altered, and when it's time for bottling, the brandy has taken on a beautiful amber shade, a mellow taste and a delicate bouquet redolent of grape blossoms.

Making and aging brandy is not for those who have limited budgets or are faint of heart about investments in the future. When you consider that a typical California aging warehouse may contain anywhere from 10,000 to 300,000 barrels, just the cost of cooperage and storage alone is staggering, and the initial investment will not pay out for from two to ten years. In addition, there is considerable loss of inventory from evaporation during each year of aging.

Some glimpse of the fiscal responsibility entailed in the aging of brandy can be seen from the fact that an inventory of 250,000 barrels—and there are some of that size presently—has a tax value to the Federal government of about $150 million, calculated at the rate of $10.50 per proof gallon.

The consummate art of the brandy master comes into fullest play during the final steps of the production process—the unbarrelling, blending and bottling. Each brandymaker has his own carefully guarded library of formulas or "recipes," plus carefully selected samples of prior batches of brandy. Extensive periodic testing while in the barrel and just prior to bottling is essential to the art, and the flavor experts rely heavily on their remarkable recall of taste characteristics.

Some U.S. brandy is bottled straight, that is, without rectification, or blending. The only thing added to straights is distilled or deionized water to reduce the proof from the barrel. Usually these are from five to ten year-old brandies. Straight brandies are generally bottled at 86 or 100 proof, and they are favored by drinkers who enjoy the drier, more volatile spirits.

Most California brandy is rectified, or blended with other brandies. Small amounts of pot still brandy are sometimes used—but the precise formulation of each brandy remains in the trade secret category. The rectified brandies are usually bottled at 80 proof.

Finally, when the blending is completed, the brandy is filtered for perfect clarity, and moves to the bottling line. The task is done, the elixir is captured, and merit of the product is preserved in glass once and for all. Prevailing myth to the contrary, brandy, unlike wine, ages no further in the bottle. A California brandy aged six years in oak, and bottled yesterday is going to taste better than some brandy aged one year, bottled 50 years ago, and sold as "fifty-year-old Napoleon."

Although most consumers of this superior beverage have little idea of the meticulous care that goes into its making, recent consumption figures show they like the results. From 1960 to 1970, for example, sales of all brandy in the U.S. went from 2,422,000 cases to 4,842,000 cases—a gain of more than 100 per cent. About 75 per cent of yearly sales are American brandies, presently available under more than 300 labels, but all from that small corner of California that is Brandy Country. Brandy consumption is increasing substantially faster than the average consumption of all spirits, and the industry expects case sales in 1980 to be more than 9,000,000. These figures demonstrate that California brandy is gaining loyalists all across the country.

Perhaps the characteristic that is most noticeable about California brandy—especially to the novice drinker—is that it tastes good. The flavor and aroma of the grape wine from which brandy is made survives the distilling process, and gives brandy an undeniable claim to its title as "the soul of the grape."

HISTORIC BEVERAGE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. Sisk) is recognized for 5 minutes.

Mr. SISK. Mr. Speaker, when this great country of ours was being forged, the good mission fathers of the West were already producing and dispensing brandy.

It was one of the few comforts of an often harsh pioneer life. Thus, California brandy has been, and continues to be, closely associated with the spirit of '76.

One of the famous battles of the Revolution, out of which this country rose, was fought at Brandywine, Pa. And brandy doubtless warmed the hearts and soothed the cares of our freedom fighters.

Thus, I too maintain that California bandy—or American brandy, if you wish to call it by that name—should be officially called the "Bicentennial Spirit."

McGOVERN'S POW PLOY: POLITICS, PROMISES, AND PARIS PARLEYS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. Anderson) is recognized for 15 minutes.

Mr. ANDERSON of Illinois. Mr. Speaker, I think it is time we clearly recognized the emergence of a most unfortunate development in the presidential campaign of the Democratic candidate, Senator McGovern, and that is the politicization of the prisoner-of-war issue. And let me preface my remarks by saying that I have no quarrel with any elected official expressing his genuine concern about the safety and well-being of American prisoners of war, their repatriation, and a full accounting of the missing in action.

But it seems to me that Senator McGovern has far overstepped these bounds by making the prisoners of war a political campaign issue, and this is especially unfortunate and dangerous during this very sensitive stage in the official negotiations. The McGovern POW ploy may best be characterized by the terms, politics, promises, and Paris parleys.

In his opening address before the Democratic Convention, then National Chairman Larry O'Brien lectured on the need to level with the American people. "How do we level?" he asked.

> We begin, I believe, with a few simple steps: We cool the excessive political rhetoric. We lighten the purple prose. We do not promise what we know cannot be delivered by man, God or the Democratic Party . . . Now we must stop kidding the American people. We must tell them the truth.

And yet, only a few days later, in his acceptance speech, Senator McGovern made the following promise:

> Within 90 days of my inauguration, every American soldier and every American prisoner will be out of the jungle and out of their cells and back home in America where they belong.

Mr. Speaker, I would submit that if ever there was a promise that flew in the face of Larry O'Brien's advice not to promise what "cannot be delivered by man, God or the Democratic Party," that was it, for no American President has it within his power to unilaterally release American prisoners from enemy camps. To tell the American people otherwise is the cruelist form of deception for it is playing politics with the lives of human beings, both the prisoners and their families.

More recently we have been treated to the results of Mr. Ramsey Clark's impartial and objective, guided fact-finding tour of North Vietnam. Just this week, before a subcommittee of that other body, Mr. Clark reproduced the hook, line, and sinker he had swallowed in Hanoi. Mr. Clark claimed he made his visit in search of the truth because "it is very difficult to get the truth in America"; and yet he returned with props and pictures provided by his hosts and observations made on a specially guided tour. And he concluded that the treatment of American prisoners was "humane" after talking with only 10 specifically selected POW's out of 1,500 POW/MIA's.

And to bolster his impartial and nonpartisan credentials, Mr. Clark is quoted by the August 15 Washington Post as saying:

> The election of Sen. George McGovern would trigger the immediate release of some U.S. prisoners of war next Jan. 20 and the release of all of them in another three months.

While Mr. Clark was quoted in the same paper on the previous day as having said he received assurances on the release of prisoners from "high officials in Hanoi," at his subsequent press conference the only assurances he could pull out of the bag was a letter from a North Vietnamese newspaper editor.

Then, in his appearance before the subcommittee of the other body on Wednesday of this week, Mr. Clark backed off even further, saying his comments about the election of McGovern and the release of prisoners had been imprecisely reported.

Now we learn that Senator McGovern has sent his own personal emissary, in the person of Pierre Salinger, to Paris to discuss the prisoner of war situation with North Vietnamese officials—and at the very same time that the President's own special envoy, Henry Kissinger, was involved in sensitive talks with the North Vietnamese negotiators.

Mr. Speaker, as I said earlier, I do not fault anyone for making special efforts and pleas on behalf of American prisoners of war. But at the same time, I think we have to recognize the special set of circumstances which pertain in this instance. Senator McGovern, a candidate for the Presidency of the United States, sent his own personal emissary to Paris to talk with the North Vietnamese at what is perhaps the most critical juncture in the peace negotiations. Now, the Senator's intentions may have been the most honorable, and Mr. Salinger's talks with the North Vietnamese may have been harmless; but then again, it is just possible that something could have been said to jeopardize or undermine those very sensitive negotiations. This is a very real risk and possibility when it involves a spokesman for someone who is trying to replace the present administration, and I think, in the interests of peace, that Senator McGovern should have recognized that danger and risk and exercised some discretion and good judgment. But then, perhaps it is not fair to fault Senator McGovern entirely on this since his initial reaction to the report of Salinger's talks was one of surprise. He is quoted in Springfield, Ill., as saying:

> Pierre Salinger had no instructions whatsoever from me. He told me he was going to Paris and he said while he was there he might try to make some determination of what was going on in the negotiations but there wasn't the slightest instruction on my part to him.

Within 2 hours, however, Senator McGovern, presumably having been briefed by his staff on what he had done, made the following statement:

> At my request, he (Salinger) met with members of the North Vietnamese delegation in Paris. The only purpose of the discussion was to determine if any change had occurred which would permit the return of the prisoners prior to the end of hostilities.

This is a most curious reversal of positions in such a short time and not only raises the question of credibility, but would seem to increase the risks involved in the Salinger talks since he was apparently operating under rather imprecise instructions from yet to be determined sources.

Now in this morning's news we have the astounding and shocking report that Senator McGovern has charged that the Kissinger mission is a "highly publicized global junket" designed to deceive the

American people on the chances for peace in Vietnam. Mr. Speaker, I would submit that this is a highly irresponsible and reckless charge. It is specially ironic that Senator McGOVERN presumes to know the nature of the Kissinger talks when he did not even know about the instructions his own personal emissary had received. Senator McGOVERN is further quoted as having said in a Racine, Wis., press conference that—

> The President has placed the survival of Gen. Thieu's political career ahead of the interests of releasing our prisoners and bringing the troops home.

Again, I would submit, Mr. Speaker, that this is a most senseless and presumptuous charge, and is but one more example of McGOVERN's cruel politicization of the prisoner of war issue. I would, therefore, call upon Senator McGOVERN, in the interests of humaneness and decency, to cease this reckless demagoging on the POW issue and agree to a moratorium on the political exploitation of our POW's for the duration of the campaign. It seems to me this is the only proper course for restoring a sense of reasonableness and responsibility to our discussions of the real issues in this campaign.

IMPROVEMENT IN OSHA PROPOSED

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. STEIGER), is recognized for 10 minutes.

Mr. STEIGER of Wisconsin. Mr. Speaker, because the Williams-Steiger Occupational Health and Safety Act of 1970—OSHA—bears my name, I feel a special responsibility to carefully monitor its implementation.

In that effort, I have made a special point to visit a great many places of business, both in the Sixth District of Wisconsin and elsewhere, to discuss this law, respond to questions, and assess the impact of the standards and the Labor and HEW. These visits with employers and employees, along with scores of letters from across the Nation have been helpful to me in determining how well the law is operating. Given the size, scope, and complexity of this legislation, it is my best judgment that the Departments of Labor and HEW are doing a commendable job.

A great deal of attention by the Congress has been devoted to the criticisms of OSHA and a substantial number of bills to amend the act have been introduced. This is as it should be in a democracy. One must be careful, however, that changes are not made at the expense of the health and safety of workers.

The biggest criticism of OSHA has come from the small businessmen who would like to come into compliance with the standards but lack the technical staff resources to interpret how the standards apply to their operations. I have determined that this complaint is justified and for that reason I am introducing today an amendment that would enable the Labor Department to provide onsite consultation for employers of 50 or fewer employees. Such a change would, I believe, respond to the many who have said to me "I want to comply but do not know what I am supposed to do."

Under the Williams-Steiger Act, the Department of Labor is legally precluded from providing any consultation visits on an employer's premises without triggering the act's enforcement procedures. Section 9 of the act provides that, upon inspection, a compliance officer who believes that an employer has violated a requirement of the act must issue an appropriate citation and in many cases a proposed penalty to the employer. Since section 8 makes it clear that any entering upon the employer's premises is regarded as an inspection provided for in section 9, appropriate enforcement action would have to be taken following a consultation visit.

Since small employers face unique problems in complying with the act and since voluntary compliance, which is an essential aspect of the Federal occupational safety and health program, would be greatly enhanced by providing consultative visits at the jobsite, this amendment to the small-business section of the act—section 28—is being proposed to permit such visits in the case of those employers of 50 or fewer employees.

This amendment would amend section 28 of the act, so as to permit worksite visits by officials of the Department of Labor or their agents for the purpose of advising or consulting the small employer on his obligations under the act. The amendment expressly provides that the visit would take place only if the small employer requests such a visit for the purpose of discussing interpretation or application of standards or possible alternative ways of complying with the standards. The visit would be limited by the matters set forth in the request relating to conditions, structures, machines, apparatus, devices, equipment, or materials in the workplace. However, within the limits of the visit, there would be discretion to decide when and to what extent the visit would be conducted, depending on the availability of resources and other relevant factors.

The proposed amendment makes it clear that jobsite consultation visits are not inspections and investigations under the act which necessarily involve the issuing of citations and the proposing of civil penalties where circumstances so warrant. Even though hazardous conditions may be disclosed during a visit, the Department would be precluded from issuing citations or proposed penalties upon such visit. And the amendment makes it clear that the Secretary is not required under its provisions to conduct an inspection under section 8 of a workplace because it has been previously visited for the purpose of giving consultation and advice.

However, where the Secretary chooses to conduct an inspection under section 8 following a consultation visit, he may take into account in connection with the inspection any information obtained during the earlier consultation visit. The amendment also provides that the Secretary is not precluded from issuing citations and proposing penalties during an inspection by virtue of the fact that during the earlier consultation visit no advice or consultation was afforded to the employer about the particular condition which was later cited.

Further, since a consultation visit would not be an inspection under section 8, the visit would not be subject to the statutory incidents of an inspection. However, the amendment does require the Secretary to provide by regulation for appropriate consultation with employees concerning the consultation visit.

The amendment also provides that the Secretary, in issuing regulations, must insure that the persons who conduct the jobsite consultation visits are not OSHA compliance safety and health officers. Those who conduct the consultation visits should be advisers and, though fully qualified, should be completely separated from the staff of compliance officers having enforcement responsibilities.

The language of the amendment would permit the advisers to make recommendations to employers regarding the correction of workplace hazards disclosed within the scope of the visit. Such recommendations are a necessary part of an effective consultation program and would contribute greatly to workplace safety.

A very important provision of this amendment is the exception in the case of "imminent danger." While the consultation visit is not an inspection in any sense, the amendment contemplates that, if a situation constituting an imminent danger comes to the attention of the adviser in the course of conducting a consultation visit to the jobsite, he will immediately bring the matter to the attention of the employer who will be expected to abate the danger. Following this, the adviser will contact the area director, who will then promptly take whatever further enforcement action is necessary. In such situations, the Department would clearly have the responsibility to take all appropriate action to protect the lives of employees.

In clearly distinguishing between consultation visits and inspections, it should also be clear that the Secretary of Labor would not be permitted to conduct consultation visits where inspections or investigations are required under the act. For example, the Secretary may not respond to a valid employee complaint under section 8(f) of the act by conducting a consultation visit to the worksite. Nor is it contemplated that consultation visits be employed to any extent as a substitute for otherwise scheduled compliance inspections.

The amendment is not intended in any way to derogate from the Department's compliance activity; its purpose is solely to authorize consultation visits in addition to inspection activity which would normally be taking place.

Lastly, the amendment makes conforming changes in section 21 of the act and provides for a delay of 120 days in the effective date.

I am hopeful, Mr. Speaker, that this amendment will enable the small employers who wish to comply to do so while protecting all concerned in imminent danger situations. I look forward to working with my colleagues on the early consideration of this legislation in the mutual effort of employers, employees, and government at all levels to enhance our workplace environment. This legislation has been introduced at this time in order to give all interested parties a full opportunity to review the bill and provide comments and suggestions, so that the Congress can move promptly to pass a bill which embodies this concept.

RESIGNATION OF CONGRESSMAN POFF

The **SPEAKER** pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. Kastenmeier) is recognized for 10 minutes.

Mr. **KASTENMEIER**. Mr. Speaker, this month of August marks a grievous loss to the House and an immeasurable gain to the judiciary of Virginia with the resignation from Congress of our esteemed friend and colleague, Richard H. Poff, from the Commonwealth's Sixth District.

Dick Poff came to the House with the 83d Congress, in 1953, and has served continuously since then. He is closing his 11th term in order to ascend the bench of the Supreme Court of Virginia.

It has been my privilege to work with Dick in the Judiciary Committee, of which we are both members, and I cannot let the occasion pass without setting forth some of my feelings about him and his departure at this time.

Dick Poff joined the House after some years of private practice of law in Radford. He had been named Virginia's outstanding young man of the year by the Junior Chamber of Commerce in 1954.

My own closest association with Dick was in connection with our joint service on Subcommittee No. 3 of the Judiciary Committee. In connection with the copyright law revision project which led to the passage by the House of a revision bill in April 1967, it was my duty to preside over the length hearings and subcommittee consideration of this legislation. Dick was the ranking minority member and we could not have done without his vigorous, analytical intellect, and his capacity for clarifying the obscure.

Dick Poff was appointed by the President to be a member of the National Commission on Reform of Federal Criminal Laws, on which I also served. The appointment of the Commission was authorized by the act of November 8, 1966, of which Congressman Poff was the principal author. Because of his keen mind and his great reverence for the law, the Commission members elected him vice chairman.

Dick has achieved much justified prestige in his own party, having served as chairman of the Republican Task Force on Crime and as secretary of the Republican Leadership Conference.

About a year ago, Dick Poff's name was submitted by the President to the Senate as a nominee to a vacancy on the Supreme Court of the United States. For personal reasons Dick thereinafter withdrew his name from consideration for this high office. Nonetheless, Congressman Richard Poff was an eminently appropriate nomination, wholly supportable not only on grounds of legal competency and high personal integrity, but for many other highly relevant reasons. His nomination was one that I, notwithstanding fundamental philosophic differences between us, would have been constrained to support, even, as I had indicated to others, by volunteering my testimony in his behalf to the other body's Judiciary Committee.

For men of his unique dedication and fairness, his special, judicial turn of mind, come altogether too seldom to legislative bodies, whatever their political disposition. And, when they leave, we experience a grave loss.

That the jurisprudence of Virginia will be enriched by Dick Poff I have no doubt, that the Judiciary Committee of the House of Representatives can replace him I have serious concern.

Nonetheless, we, his friends who have come to admire him and his work, commend to Dick Poff our fond good wishes.

ANOTHER LEE MEMORIAL

The **SPEAKER** pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. Rooney) is recognized for 15 minutes.

Mr. ROONEY of Pennsylvania. Mr. Speaker, during my years as a Member of the U.S. House of Representatives I have watched with interest the noteworthy restoration and revitalizing of the heart of Washington's sister city, Alexandria, Va.

For a time my own working residence in the Washington area was in the historic section of Alexandria, known as Old Town. During that period numerous homes built in the late 18th and early 19th centuries were restored by private owners, many new townhouses blending in tastefully with the historic homes were constructed and an urban renewal project undertaken which culminated in development of a new shopping center including office buildings in neo-Georgian style, a variety of stores and open space in the form of a town square.

The work of preserving and restoring the city's historic houses is continuing. Most notably there was an announcement just recently that the Lee-Fendall House at 614 Oronoco Street has been acquired by a preservation society and will be put in a state of good repair and opened to the public as a memorial to General Henry "Light Horse Harry" Lee, of Revolutionary War fame.

I am sure everyone in this Chamber has at some time seen or at least gone by this large, frame house on the corner of Washington Street and Oronoco, directly on the route from Washington, through Alexandria, to George Washington's home at Mount Vernon. For many years it was known as the John L. Lewis house, for the late leader of the United Mine Workers of America lived there with his family from 1937 until his death in 1969.

Mr. Lewis was a familiar figure to Alexandrians as, in his later and retired years, he would sit in the enclosed porch on the Washington Street side of the house and watch each year the annual Washington's Birthday parade on February 22.

The origin and importance of the house, however, goes far beyond the lifetime of John L. Lewis. It was built in the late 18th century by a member of the Lee family of Virginia and for a century housed various members of the family and played host to other Lees and many other Americans prominent on the national scene.

Although Gen. Henry "Light Horse Harry" Lee, a favorite of Gen. George Washington, did not actually reside at 614 Oronoco Street, he once owned the land and spent much time in the house with his relatives since his own last home was almost directly across the street, at 607 Oronoco Street. The latter for the last 5 years has been open to the public as the "Boyhood Home of Robert E. Lee," a son of "Light Horse Harry" Lee.

It was at 614 Oronoco that "Light Horse Harry" wrote a speech containing the embryonic ideas which he, as a Member of Congress, included in a later speech eulogizing George Washington as "First in war, first in peace, and first in the hearts of his countrymen."

Still later, "Light Horse Harry" himself became in a sense a victim of war. He was injured by antiwar rioters at Baltimore during the War of 1812 and never fully recovered. He attempted to regain his health through a trip to Barbados in the Caribbean but succumbed on the way home while aboard ship off the coast of Cumberland Island, Ga., in 1818. He was buried on the estate of the widow of his fellow Revolutionary War general, Nathaniel Greene, at Cumberland Island. His remains many years later were removed to Lexington, Va., to be entombed with those of his son, Robert E. Lee, at Washington and Lee University.

Interest in preserving the Lee-Fendall House after the death of John L. Lewis 3 years ago was aroused by that supreme guardian of historic homes in Virginia, Jay W. Johns. Although a native of my home State of Pennsylvania, having been born at Uniontown, Mr. Johns, a resident of Charlottesville for many years, has devoted decades of his life to preserving historic sites in Virginia.

As the owner of "Ash Lawn," the James Monroe home at Charlottesville, Mr. Johns moved out in order to open that historic house to the public. It was through the efforts of Mr. Johns and the organization he headed, the Stonewall Jackson Memorial, Inc., that Alexandria's Fitzhugh-Lee House, now known officially as the Lee boyhood home, was saved in 1967. That handsome, brick edifice has been visited by tens of thousands of Americans who have been given the pleasure of seeing the Lee family heirlooms and works of art of the period which Mr. Johns secured to grace the house where Robert E. Lee's mother played hostess to the Marquis de Lafayette on his visit in 1824.

At the time of the death of John L. Lewis, Mr. Johns was the first to propose acquisition of the Lewis—or Lee-Fendall—house and opening it to the public in conjunction with the Lee boyhood home, across Oronoco Street. Tremendous obstacles stood in the way. Where was the money to come from, for one thing. Also, there was the possibility that the house and grounds would be sold to make way for a commercial building fronting on Washington Street.

How Mr. Johns overcame all opposition and all obstacles in securing the house is a story in itself. Almost singlehandedly he talked the city of Alexandria into providing $35,000 and the State of Virginia into appropriating $65,000 to help pay for the property. Another $125,000 is needed to complete the purchase and to pay for necessary repairs to the old house. It is the hope of Mr. Johns and associates that this money will be contributed by public-spirited history-minded individuals. At any rate, he will be campaigning to secure the funds, and deserves the support of all of us.

Announcement of the acquisition of the Lee-Fendall House by the Virginia Trust for Historic Preservation, formed by Mr. Johns, was made on July 14, at a luncheon attended by Alexandria city officials, descendants of the old Lee family and supporters of Mr. Johns' and the city's historic preservation plans.

It was no coincidence that the date, July 14, was Mr. Johns' birthday—his 84th—and the 20th anniversary of his having lost his sight. For a score of years and more this remarkable man has dedicated his life to preserving and restoring some of America's great historic buildings. He has traveled by plane, train, and bus continually across Virginia to carry on his work, which is all the more remarkable because of his age and handicap. His work, his efforts, his knowledge of history, his wit and sense of humor, and his loyal friendship are valued wherever he goes.

The half-acre lot on which 614 Oronoco Street stands was purchased by General "Light Horse Harry" Lee in 1784, but he sold it a few months later to Philip Richard Fendall, the second husband of Harry's mother-in-law, Elizabeth Steptoe Lee. Fendall began building the house almost at once. George Washington's diary notes that on November 10, 1785, he "dined at Mr. Fendall's in Alexandria." Fendall, after the death of his wife Elizabeth, married Mary Lee, a sister of "Light Horse Harry."

It was only in this century that the house finally passed out of the hands of Lees and Lee-related owners. At various times, branches of the Lee family owned or lived in a good half dozen houses in the immediate area of the Lee-Fendall House, and the corner of Washington and Oronoco Streets was known as "Lee's Corner". During most of these years, Alexandria was part of the District of Columbia—that is, until its retrocession to the State of Virginia in 1846.

Restoration of the Lee-Fendall House, made possible by Jay W. Johns, will give the city of Alexandria a big lift toward its anticipated participation in the Bicentennial of American Independence in 1976.

Alexandria's city manager, Wayne Anderson, has promised Mr. Johns that by 1976 the city will be able to put its best foot forward. In addition to the Lee Boyhood Home and the Lee-Fendall House being open to the public, he said, there will be a beautification of Washington Street and restoration will be completed on the historic Carlyle House, the Lloyd House, the Lycaeum, and Gadsby's Tavern.

Mr. Speaker, I insert in the RECORD also two clippings from the Alexandria Gazette and the Washington Star reporting the announcement of acquisition of the Lee-Fendall House by the Virginia Trust for Historic Preservation, headed by Jay Johns.

[From the Washington Star, July 15, 1972]

ANOTHER LEE MEMORIAL

(By Mary Eisner)

The historic Lee-Fendall House in the north end of Old Town Alexandria will be restored and reopened as a memorial to "Light Horse Harry" Lee, Revolutionary War hero and father of Robert E. Lee.

At a celebration yesterday, Jay W. Johns who purchased the house just hours earlier from descendents of United Mine Workers President John L. Lewis, announced the completion of his plans for the shrine, his eighth restoration project.

"For the last 20 years of my life I've dedicated myself to trying to preserve historical places in Virginia. These are the places that make America famous, and we have a duty to restore them," said Johns, who was 84 yesterday.

He added that he hopes the house would be fully restored in time for the bicentennial celebration in 1976.

Both the City of Alexandria and the State of Virginia will financially assist Johns' nonprofit company, Virginia Trust for Historic Preservation, with the restoration arrangements for the Lee-Fendall property.

Recently, the Alexandria city council authorized a grant of $35,000, contingent upon release of state funds for the project. According to city manager Wayne F. Anderson, a state contribution of $65,000 was announced earlier this week.

The combined grants will meet about 45 percent of the project's total costs, currently estimated at $225,000.

The spacious white frame, green-shuttered house, at 614 Oronoco St., was the home of various members of the Lee family beginning in the 1780s. Two other Lee houses, including Robert E. Lee's boyhood home, are located across the street.

Light Horse Harry Lee, to whom the memorial is dedicated, served as Governor of Virginia from 1791 to 1796. A captain in George Washington's Continental Army, Lee was a close personal friend of Washington.

Eulogizing Washington in 1799, Lee wrote the well-known words, "First in war, first in peace, first in the hearts of his countrymen."

According to Johns, Washington visited the Lee-Fendall House about 30 times, while Lee resided there.

[From the Alexandria Gazette, July 14, 1972]

TRUST BUYS HISTORIC HOME

Purchase of the Lee-Fendall home at the corner of Washington and Oronoco streets was announced at a luncheon here today.

The Virginia Trust for Historic Preservation has bought the home and grounds from the heirs of John L. Lewis for a reported $185,000.

The organization hopes to raise a total of $225,000 for the purchase and restoration of the historic structure, which reportedly dates to 1784.

The Virginia General Assembly at its last session appropriated $65,000 to be applied toward the project and Alexandria's City Council contributed an additional $35,000 for restoration. The remainder will be sought by public solicitation, according to Mrs. Frances Shively, a spokesman for the trust.

The Society of the Lees of Virginia, has contributed generously, she added.

Complete restoration and opening of the home is slated for April 1974, she said, and it will be operated in a similar fashion to Lee's Boyhood Home across Oronoco Street.

The house originally was built for Phillip Richard Fendall, member of a prominent Maryland family whose mother was a sister of Squire Richard Lee of "Blenheim."

Gen. George Washington mentions the home many times in his diaries, observing on Nov. 10, 1785 . . . "Went up to Alexandria to meet the Directors of the Potomack Company. Dined at Mr. Fendalls (who was from home) and returned in the Evening with Mrs. Washington . . ."

According to historical researchers, the property was purchased in 1835 by Edmund Jennings Lee Jr. for his father.

John L. Lewis, founder of the Congress of Industrial Organizations and long-time president of the United Mine Workers of America, lived in the home from the early 1930s until shortly before his death in 1969.

FOOD STAMP ACT OF 1971: TAX DEPENDENCY PROVISION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. SEIBERLING) is recognized for 5 minutes.

Mr. SEIBERLING. Mr. Speaker, implementation of the Food Stamp Act of 1971 has caused several problems in my district and throughout Ohio. Several of these provisions were written in an attempt to prevent students, hippies, and welfare chiselers from receiving food stamps. However, many needy, deserving people are now also unable to qualify for food stamps.

Today I would like to address myself to the so-called tax dependency provision of the Food Stamp Act of 1971. This provision reads in part—

> Any household which includes a member who has reached his eighteenth birthday and who is claimed as a dependent child for Federal income tax purposes by a taxpayer who is not a member of an eligible household, shall be ineligible to participate in any food stamp program established pursuant to this Act during the tax period such dependency is claimed and for a period of one year after expiration of such tax period.

The intent of this provision was to prevent students from receiving food stamps. I would like to include a copy of a letter from the Coshocton County Children Services Board of Coshocton, Ohio, describing the unfair effects of this legislation on nonstudents. In sending me a copy of this letter, Mr. Robert B. Canary, acting director of the Ohio Department of Public Welfare, stated:

> We have encountered numerous cases of need where the family qualifies and receives some form of Public Assistance in Ohio, and yet, county administrators were unable to establish eligibility for the Food Stamp Program because of the inequity of the Tax Dependency Provision of the Amended Food Stamp Act.
>
> We sincerely believe the Tax Dependency Provision of the Amended Food Stamp Act should be corrected to permit participation in the Food Stamp Program for non-college households who are in need and can otherwise qualify for the Program.

Members of my staff have talked with welfare officials across the country about the effects of this provision. It is obvious from their responses that this is not an isolated case. In one instance, a young couple, recently married and expecting their first child applied for food stamps when the husband lost his job. They were ineligible because the wife had been taken as a dependent by her parents during the previous year when she was still a student. They met all other eligibility criteria.

It is long past time we stopped looking suspiciously at anyone who is poor or in need of temporary assistance. No one needs to be told about the high unemployment rate in this country today. If we were half as harsh in extending welfare to the rich in the form of tax subsidies and special tax writeoffs we would have enough revenue to end hunger in the United States. This is only one example of the misplaced priorities in this country.

The tax dependency provision is now before a three-judge panel in the District of Columbia awaiting final decision, in the case of Murray et al. against U.S. Department of Agriculture. I sincerely hope the judges will overturn this inequitable provision under the equal protection clause of the 14th amendment. If they do not, I will introduce legislation to amend the Food Stamp Act of 1971 in this regard.

CHILDREN SERVICES BOARD,
Coshocton, Ohio, June 7, 1972.

Re: Gwendolyn Young,
Mr. HORACE BARNETT,
Supervisor, Food Stamp Program Section, Bureau of General Services, Ohio Department of Public Welfare, Columbus, Ohio.

DEAR MR. BARNETT: I am writing this letter to advise you of a situation in Coshocton County involving a client of our agency who is also a recipient of ADC through the Coshocton County Welfare Department.

On 3/9/70 the Coshocton County Juvenile Court awarded temporary custody of Gwendolyn Young's five minor children to Coshocton County Children Services Board in that they were found to be dependent children. Since that date, the children have remained in foster care placement by this agency. Since 3/9/70, and especially in recent months, it has been the combined efforts of Coshocton County Children Services Board, Coshocton County Welfare Department, and Mrs. Young to effectuate return of all or part of the children to Mrs. Young. This decision was reached after considerable effort on the part of our agency and Mrs. Young to enable her to better care for her children. At this point we feel Mrs. Young is ready for the return of her children.

The problem: During the year 1971 Mrs. Young, who was without income, lived with her brother and sister-in-law in Coshocton, Ohio. When it came time for Mrs. Young's brother to file his 1971 Federal Income Tax Return, he claimed Mrs. Young and her newborn son as tax dependents. Late in 1971 Mrs. Young found suitable housing of her own and went on ADC. She remains on ADC for herself and her one child.

Recently, the Coshocton County Welfare Department learned Mrs. Young had been claimed as a tax dependent in 1971 and informed her she would be ineligible to participate in the food stamp program until January, 1973. According to the Coshocton County Welfare Department, this decision was made in accordance with FSP-17 dated 10/26/71, p. 20, Paragraph G.

I have reviewed this situation with the Coshocton County Welfare Department, and as I read FSP-17, p. 20, Paragraph G, I interpret it as applying to those who are claimed as tax dependents by a parent or guardian. I do not see why this should apply to Mrs. Young's situation. Furthermore, I understand this section was written in the food stamp regulations to prevent college students from participating in the program while being claimed as tax dependents by their parents. This is not the case with Mrs. Young. There was no intent on either the part of Mrs. Young or her brother to deceive anyone in this matter, but rather an attempt by the brother to help his sister when she was in need and was not eligible for public assistance.

At this point, Coshocton County Children Services Board is willing to return at least part of Mrs. Young's children to her. However, without food stamps, Mrs. Young would not be able to provide for the children adequately on ADC.

I will be awaiting your reply as to what can be done to enable Mrs. Young to become eligible for food stamps and, consequently, get her children back.

Very truly yours,
MAX F. BUCEY, *Social Worker.*

STATE OF OHIO,
DEPARTMENT OF PUBLIC WELFARE,
Columbus, Ohio, June 20, 1972.

Hon. JOHN F. SEIBERLING,
Longworth House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE SEIBERLING: The Food Stamp Act of 1964, as amended by Congress, was passed January 11, 1971, and provides in Section 5(b):

"Any household which includes a member who has reached his eighteenth birthday and who is claimed as a dependent child for Federal income tax purposes by a taxpayer who is not a member of an eligible household, shall be ineligible to participate in any food stamp program established pursuant to this Act during the tax period such dependency is claimed and for a period of one year after expiration of such tax period."

However, the Tax Dependency Provision also makes non-college households such as the one described in the attached June 7th letter from the Coshocton County Children Services Board ineligible for Food Stamps.

We have encountered numerous cases of need where the family qualifies and receives some form of Public Assistance in Ohio, and yet, county administrators were unable to establish eligibility for the Food Stamp Program because of the inequity of the Tax Dependency Provision of the Amended Food Stamp Act.

We sincerely believe the Tax Dependency Provision of the Amended Food Stamp Act should be corrected to permit participation in the Food Stamp Program for non-college households who are in need and can otherwise qualify for the Program.

Sincerely,
ROBERT B. CANARY,
Acting Director.

EDUCATION FOR BLACKS: UNITY WITHOUT UNIFORMITY

(Mr. HAWKINS asked and was given permission to extend his remarks at this point in the RECORD and include extraneous matter.)

Mr. HAWKINS. Mr. Speaker, at a time when turmoil and apprehension pervade the black communities of America, it is rewarding to read the words of a man who so well understands their problems and who so brilliantly communicates that understanding to us. Dr. Bernard C. Watson, professor and chairman of urban education at Temple University presented this paper on July 31, at the National Urban League Convention in St. Louis. The paper's focus is on education, a concern of highest priority for all Americans, but especially for black people.

The article follows:

SURVIVAL PHASE II: UNITY WITHOUT UNIFORMITY

(By Bernard C. Watson, Ph.D.)

For the past several years, in black communities across the country, there has been a good deal of rhetoric about black genocide. Depending upon the community or the persons who were talking, the genocide was either physical, educational or psychological. Simultaneously, in these same communities, significant voices were calling for "community control," "nation-building" and the development of plans for "black survival". It was—and for that matter still is—a time of turmoil and apprehension. Perhaps because of it a practice of too many to attach labels to almost every Black among the spectrum of ideology: revolutionary, militant, Uncle Tom, liberal, conservative, oreo, integrationist, Aunt Sarah, separatist, zebra, colored, Negro, ad infinitum. Ideological and philosophical battles involving the most minute distinctions, differences and nuances have consumed the brains, time and energy of some of the best minds in the black community.

In its most bizarre manifestation, Blacks of acknowledged commitment, leadership ability and brains spent months opposing other Blacks with similar qualities over minor points of ideological differences. Less obvious, but no less debilitating, was the state of affairs where Blacks became immobilized as they looked inward and contemplated their navels, as it were, in agonizing attempts at introspection. The rhetoric of "blacker than thou," the ideological labeling, the withdrawal into a world of black fantasy are ultimately suicidal tactics. They distract attention from the very serious business of analyzing current developments which are inimical to the interests of Blacks and other minorities. They divert energy from the critical tasks of planning effective strategies to achieve equal rights for all minority citizens and indeed to assure their very survival.

If Blacks are to have any hope of success in negotiating the troubled waters of conservative and racist reaction to the limited gains and small victories achieved in recent years, they must be extremely wary of having too narrow a focus. Limited vision, whether it concerns people or issues, is a very real danger.

First, Blacks cannot waste time in the search for ideological purity, closing out brothers, sisters and potental allies who happen not to agree on every detail of a specific program. Even as dialogue continues in the hope of reaching consensus, options must be maintained for individuals to speak and act. In a crisis, every weapon, every vehicle, every tool must be pressed into service: the ragtag army may accomplish its goals, while the larger battalion waits, fearful of moving until it is sure of ideological uniformity.

Second, Blacks, together with the other oppressed groups of society, must recognize that the agenda is no less comprehensive than life itself. Some issues may appear more urgent at some tmes than at others, but it would be a fatal mistake to see only individual trees and lose sight of the forest. It is not possible to discuss housing without considering employment, education in isolation from the political system, or health and welfare while disregarding the war. Education is the focus of this essay, but clearly there are endless and complex relationships between educational issues and those which are usually considered beyond the scope of a paper on education. It would be infinitely more comforting if one could, with a sense of optimism, address himself to the postive achievements and promising developments in the American educational system. Unfortunately, like too many other aspects of the society—housing, employment opportunities, trasnportation, health care—the public schools and much of post-high school education are in disarray.

THE PUBLIC SCHOOLS

It is not an overstatement to suggest that the public schools which are supposed to serve the poor of this country reek with the odor of failure, despair, apathy and violence, with the result that far too many of these schools, particularly in the rural south and the urban north, are suffocating and choking. The litany of problems is too familiar to require recounting here: drop-outs, gangs, functionally illiterate "graduates," drugs, the crushing of cheerful curiosity, the deadening of the ability and will to learn. Parents send their children to school with high hopes, but when, faced with the continual failure of their children, they ask the schools what is wrong, they are told to go home and mind their own business.

Confronted by continual hostility, insensitivity or apathy, many Blacks have decided that retreat and surrender are the only courses open: they will do what they can for their own children, but for all those others, there is no more energy or time. Others may be seduced by the analyses of scholars and social diagnosticians, the Jensens and the Shockleys, who indicate that not much can be expected from people who are genetically inferior.[1] Those who have a pious bent ask: Didn't Jesus himself say that the poor would always be with us? Still others just want to rest; they are tired of the struggle. There is a great temptation to stop banging collective heads against the stone wall and be content with limited gains for some, stagnation and despair for those who are at the bottom of the heap. Ultimately, it is a matter of choice, whether to continue in the struggle for human renewal and development or to go separate ways in the misguided belief that an individual can make it alone, that the hopes, destinies and survival of other Blacks is in no way related to one's own.

FINANCE

Consider the financial crisis of the public schools. Those in large urban areas are approaching bankruptcy, if they are not bankrupt already. Along with so many other city services, the costs of education have moved well beyond the capacity of the municipal tax base—and the poor and the powerless are once again caught in the squeeze. It is ironic, however, that providing an adequate education may well be, in the long run, far less costly than allowing the school systems to decay and disintegrate.

Dr. Henry Levin, a Stanford University Professor, recently conducted a study for the Mondale Committee on Equal Educational Opportunity, and the results should be given very wide public attention.[2] Using failure to complete high school as his definition of inadequate education, he calculated the costs to the nation in lost income and in increased need for welfare services and criminal rehabilitation. Taking only the males aged 25 to 34 in 1969 who had not graduated from high school, he determined that the nation lost $237 billion dollars in income, and $71 billion in government revenues. But to have seen this group through just a high school education would have cost only about $40 billion.

Some very elementary arithmetic will indicate whether or not adequate financing of education is or is not a sound investment—even though no one has yet devised a way of measuring the differential in individual and social health. If an appeal to the American conscience does not produce results, perhaps the case can be made simply in terms of economics: scrimping on education is a dumb thing to do in terms of the Almighty Dollar. It must be noted, however, that calculations such as these and others, relating years of education to income received, are based on a rather important assumption: namely, that jobs will in fact be available for all those who seek them. Yet, high unemployment is a continuing problem of the economy; racism still prevents many minority group members from obtaining positions for which they are qualified; technology is eliminating routine jobs; and serious questions are being raised about the basic orientation of the economy (e.g., toward war and against ecology). All these factors muddy the simple equation of schooling and careers, yet they must be taken into account by those whose chief concern is education. Clearly, as was indicated earlier, education cannot be viewed in isolation: it is inextricably involved with each item on the social agenda.

The traditional basis of support for public education—the local property tax—is, however, finally being given serious examination. The California decision in *Serrano vs. Priest* rejects the property tax as the main source of educational revenue because reliance upon the property tax dictates that the quality of the school system is a function of local wealth.[3] It is a violation of the equal protection clauses of the Constitution, ruled the judge in that case, when the quality of a child's education depends almost entirely on the economic health of the community in which he happens to reside. The implications of that decision for Blacks and other minorities are clear, since most live in poor communities. The implications were not lost on the affluent either, and there will be strong opposition to a departure from past practice.

But even if new formulas are devised for allocation of educational funds, will it necessarily mean a boon to Blacks and other minorities? Equalizing per pupil expenditures across a given state may be appealing at first glance, but without careful calculation, the minorities and the poor may once again be shortchanged. Any formula has two parts: input is important, but there must be at least equal concern about output. If Blacks and other minorities are to be educated in a manner which will put them on a competitive basis with those from the wealthy suburbs, schools serving the poor and minorities may well require considerably higher allocations. As long as this society permits so many of its people to live in degrading circumstances, to suffer inadequate health services, to survive on the crumbs of a so-called culture which has systematically insulted and excluded them—as long as that situation continues (and there is little sign that massive reform of social conditions is imminent), then urban schools will *have* to be better staffed and equipped, more comprehensive than their suburban and affluent counterparts.

How can anyone in his right mind pretend that a youngster—no matter how attentive, how punctual, how well-behaved—who goes to a decaying school, is taught by inexperienced or hostile teachers, has no access to art or music or recreational facilities, has little or no example of encouragement to pursue a realistic career or college education—how can that youngster possibly compete? By the time he's out of elementary school, let alone high school, he's so far behind the starting line that it's ludicrous. Is that his *fault?* Is a racist society to continue in its comfortable illusion that it has had no hand in the screening out of minorities? Is it any wonder that so many Blacks and other minorities leave school before graduation? Graduation is no panacea, but in a credentialed society, a diploma opens doors.

The voucher plan is similarly a new development which, at first glance, shows promise of redressing some educational grievances. Unfortunately, it quickly shows fatal signs of having been conceived in the Utopian world of classical economics where the "invisible hand" will make sure that supply and demand balance neatly in a free marketplace. In the real world, unfortunately, things may not be so tidy. A family in North Philadelphia, in Pruitt-Igoe in St. Louis, or Lawndale in Chicago, may simply not be able to purchase with its voucher a quality of education even approximately what the affluent family in Scarsdale, New York or Winnetka, Illinois can buy. Voucher plans alone cannot make up for the years of neglect nor allow for the additional needs which poor, oppressed children bring to the schools.

It is important, then, to take careful note of the ferment surrounding educational finance, and to be as wary as ever of new proposals surfacing, whether for sources of revenue or for distribution. The value-added tax, for instance, which the President is contemplating as a stop-gap to avoid reform of the federal income tax, is a regressive tax which will be borne by consumers, not corporations. The Advisory Committee on Intergovernmental Relations is supposed to be looking into ways to counteract the regressive nature of this tax, but past experience indicates that one should not accept administrative proposals on faith alone. Warden has pointed out that one interesting by-product of the current discussions of the current discussions of the VAT may well be removal of educational legislation from the traditional Senate and House committees to the far less sympathetic Ways and Means or Finance committees.[4]

INNOVATIONS

For many concerned with the abysmal state of the public schools, hope seems to lie in one or another of the many new schemes for classroom or school reform. But frequently they pose more questions than answers. What about alternative schools? How does one distinguish among them? What evidence is there they provide the skills and the education needed to allow Blacks and other minorities to determine their own future options? Even more important, what are the sources of funding or financial support for these alternatives? Must they always operate on "soft money," while the bulk of tax revenues continue to flow to schools which have demonstrated their inability to educate, even in the most rudimentary way? Will these alternatives become convenient dumping grounds and enclaves for students, mostly Blacks, whom existing public schools have neither the skills nor the inclination to deal with on a regular basis?

A critical danger is the possible use of poor black children as "guinea pigs," particularly when the experiment is really meant to alleviate the private hang-ups of a few individuals. Informal classrooms, for instance, are almost everywhere touted as the lastest panacea for a host of educational woes. Like the little girl in the old nursery rhyme, when they are good, they are very, very good; but when they are bad, they are horrid. Informality, grooviness, and all the rest may become convenient covers for sloppiness and a general lowering standards. They mask the hard reality that nothing worthwhile, least of all a good education, is gained without discipline and hard work and while such innovations may in the short-run make schools happier places for some children, in the long run they may well become a new form of patronizing put-down: these kids aren't really capable of serious effort; so make sure they have fun.

Arthur Pearl, in his excellent article on the new informalism which appeared in *Social Policy* about a year ago, punctures

---

Footnotes at end of article.

many of the balloons blown up by the informality advocates.[5] He does not deny that rigidity or irrelevance or coercion commonly characterize many public schools; but he cannot buy the prescription of those who would simply throw up their hands, turn schools over to kids, and abandon adult responsibility for leadership, guidance and teaching. The fact that some curricula are irrelevant, does not lead him, he says, to the conclusion that he cannot identify relevance and teach it. To quote Dr. Pearl: "There is a body of knowledge to be taught and a position to be taken through it, and supported by it, against parochialism, against poverty and misery." [6]

Equally damaging is the kind of rhetoric heard from some who try to persuade youth that some subjects are somehow foreign to black soul. Efforts to inculcate pride in black identity, to teach a more honest version of history, to recognize the drama and grandeur of the African past, are laudable and necessary as an antidote to years of dishonesty and racism and methodical suppression of ethnic identity and self-respect. But the needs of the black community for lawyers, doctors, engineers, planners, scientists and educators will not be met by young people, regardless of how committed they are to black development, who are not learning political science and chemistry and physics.

And finally, consider "de-schooling." What does that term mean to Blacks and other minorities? They have already been deschooled, deprived, de-motivated and, too often, dehumanized by the existing educational system. They don't need another vehicle to do to them better what too many educational institutions have already done very well indeed through the years.

Besides, this is a credentialed society, requiring diplomas, certificates, degrees and other stamps of approval to enter most of the more powerful and lucrative positions. While many of these credentials are meaningless in the more important ways or unnecessarily difficult to obtain, few can afford the luxury of ignoring them even while efforts to modify them are intensified. Blacks and other minorities don't need to invent new ways to be kept out of the system; that has been done for them by others who were experts. They want in, not out.

A more pragmatic way to attack the problem of non-education and inferior education is to force those institutions charged with the responsibility for educating to do just that: educate children and youth or get out of the way so others can get about their business. One should not be deceived by the new symbolic crusades. Eternal vigilance is essential if the poor and minorities are to avoid becoming victims of the diversions and blind alleys they have endured so long. White folks aren't about to pay for their education out of the goodness of their hearts. True educational equality should be argued and fought for, *not* as a favor or a sop, but as a sound investment in a healthy and viable society.

When appropriate courses of study and methods and techniques for black students are being debated, it might be well to examine more closely the examples set by many black colleges. Through the years, these institutions—starved for funds, struggling for survival, besieged on all sides by hostile, racist whites who wanted to keep Blacks ignorant and uneducated—took the products of inferior, segregated southern *and* northern schools and turned them into competent professionals and outstanding leaders. One of the reasons Blacks have been able to develop leaders in many fields is because these institutions existed. Unfortunately, Chicanos, Puerto Ricans and Indians had no such institutions in this country.

An innovation which has received far less publicity than some others, however, is one with extremely dangerous implications: the use of drugs to control the behavior of children in the classroom. Nat Hentoff, writing in the *Village Voice*, has produced a frightening indictment of the collusion among drug companies, doctors employed by school systems, and teachers.[7] Although only about 100 pediatric psychiatrists in the country are qualified to diagnose and treat the minimal brain dysfunction known as hyperkinesis, for which certain drugs have, in fact, proved helpful, preliminary investigation has revealed that thousands of school children have been placed on a regime of behavior modification drugs, without proper testing, without careful monitoring, and often in total disregard of parental concern and opposition. It should not be necessary to point out that the victims are frequently children of the poor and the powerless. Hentoff comments: "The so-called 'divergent behavior' is a desperate reaction to teachers and administrators who don't know what to do with kids who do not fall into their 'special ideology about discipline.' Unwilling to recognize their own deficiencies as educators, these school personnel, in alliance with some physicians, turn to drugging children as the 'easy' way to solve their own problems in a classroom." [8]

The proposals for innovation, for reform, for change are apparently endless in their variety. Some may be well-intentioned, but poorly conceived and executed. Some may cost so much that they can reach at best only a minute proportion of the children who would benefit from them. Some, like the drug therapy described above, may be actually malevolent and harmful to children. As with schemes for reform of educational finance, wariness and careful analysis should precede endorsement.

POLITICS

Another subject we must examine carefully is the politics of schools and education. The educational system of any country is one of the primary means of socialization for its citizens. Any society will attempt to inculcate within its citizens the basic values, philosophy, beliefs and traditions of the society through its schools, along with other institutions.[9] Community control of the schools is inevitably, then, like other school-related problems, an issue which is political in nature.

Community control is a topic which has upset educators all over the country, largely because of the potential ramifications of the New York City controversy of several years ago. It might be pointed out in passing that here is another interesting example—like busing—of American doublethink. When whites demand community control, it is regarded as logical, normal and appropriate. In fact, they don't need to demand it, because they have always had it! But once Blacks begin to talk about control, blood pressures sky-rocket, eyes bulge and people begin to see some dark devious plot being concocted by militants and revolutionaries. Derrick Bell of Harvard University Law School has put the issue in proper perspective. "The essence of community control," Bell says, "is the sense of parents that they can and do influence policy-making in their children's school in ways beneficial to their children.

"Parents in highly regarded suburban school communities have this sense, and in varying degrees, teachers and administrators in those schools convey and understanding that their job success depends on satisfying not the board or union but the parents whose children are enrolled in the school." [10] Or as John Smith of Howard University said more succinctly: "White schools are not 'better' because whites are superior, but because those responsible are required to act responsibly." [11]

Community control is clearly an understandable and worthwhile item on the Black educational agenda. The systematic favoritism for whites and planned inferiority for Blacks is too well documented to bear repeating. But when Black parents, driven to desperation by the continued refusal or inability of white-controlled school systems to educate their youngsters, talked about taking over, the attempts to suppress or subvert community control began. In Detroit and New York, where state-mandated redistricting and local boards have been established, the results have not given disenfranchised Blacks much to cheer about.

Marilyn Gittell, one of this country's major analysts of educational politics, sums up the problem by saying that "mere election of local boards is not a guarantee of a redistribution of power." She notes that professionals have seen to it that boundaries and election procedures were such as to assure continued control by the old forces; that in any case, organized groups—even those such as parochial parents with no direct interest in the public schools—are favored; and that local boards are limited to dealing with "at best minor housekeeping arrangements." [12] Barbara Sizemore's analysis of the Chicago Woodlawn School leads to similar conclusions: there the community board was simply an advisory group, recommending policies, not controlling much of anything.[13]

The critical issue, of course, in any discussion of community control is the definition of control. Is control simply a meaningless term whereby the downtown administration can keep the slaves content, a formula without substance, a device for decentralization of systems too massive for coherent governance? Control should mean power, nasty as that word may be: power to make decisions about staff and curriculum, and to make those decisions stick. Control means money to implement new programs, build buildings, hire personnel. Without power, without money, control is a fraudulent, empty slogan. It is crucial to deal with reality, not rhetoric.

Philip Meranto, who has noted with interest the paucity of political analyses of school governance, concludes that the only hope for rejuvenating urban school systems lies in greater Black representation in both legislative bodies and in school administration. "Only if Blacks are at least modernately successful in winning these battles will the quality of education in American cities be measurably improved," he writes. "The immediate past has demonstrated that the quality of education available to groups in American society is not unrelated to the political power of the various groups." [14]

The fact that Blacks have already become a majority in many cities (if not in the general population, certainly in the school population) argues for operation of the school system for the benefit of Black children. But merely because Blacks become a majority is no guarantee that things will improve. Financial support for basic services—education, transportation, welfare, housing—is slowly but surely being shifted from the local level to state and federal government.

As Blacks and other minorities approach or become the majority in urban areas, gerrymandering of political boundaries and metropolitan schemes proliferate in transparent attempts to dilute or deny political representation, once again, to these historically disenfranchised and powerless groups. There are other developments occurring which may well undercut any kind of meaningful community control. In New York State, for instance, the NEA and UFT have united to form one monolithic teachers organization. If dealing with the union in New York City was an impossible task for local boards, how can Blacks and other minorities hope to negotiate and deal with a statewide organization of over 200,000 members.[15]

Footnotes at end of article.

And it doesn't stop with teacher organizations. Increasingly there are calls for regional or interstate plans and programs—and no one can deny the need or good sense behind such appeals for transcending artificial boundaries. The problems of transportation or air pollution certainly do not respect political divisions. But what must be understood is that community control, in and of itself, may play itself out as another hoax on minority groups. Even assuming that they were able to get themselves together—organized, united, articulate—as a community or even city-wide group, what good would that do, if the action has moved to a higher level of government or if the resources are so pitifully few that nothing much can be accomplished anyway. One may be promoted from clerk to president of the bank, but the plush office will be a meaningless symbol if all of the depositors have taken their money and gone elsewhere.

Blacks and other minorities all have a lot to learn from participation in the decision-making process. Competence in governance—no more than in any other field—does not come overnight, and it may well be as some, including Barbara Sizemore,[16] have argued, that Blacks are still at a stage in their development as a people where separatism is a healthy and necessary phenomenon. But they must beware of still another rip-off. The question of community control requires caution, and eyes wide open to see what is being controlled and what resources are available to make the control effective.

In the Brown decision of 1954, separate schools were declared inherently unequal. Documentation of the inequalities had been provided by Bond, Caliver and others.[17] Sexton and Wise,[18] among others, have shown that schools serving the poor outside the south also received an unequal share of the resources of all kinds. What happened after 1954, however, was that many people, both black and white, assumed that mixing Black and white children in schools and classrooms would magically provide quality education. Few people confronted the hard realities of what quality education meant or would cost. Few dealt with the reality of racist teachers and administrators, rigid organizational arrangements, harsh disciplinary procedures unequally applied and the psychological violence visited upon Black children who would be bused to newly desegregated schools. Segregated schools had proved damaging, but the pain and anger of desegregated schools has been no less damaging in too many cases.

Samuel Etheridge, the National Education Association's director for teacher rights, has documented and publicized the scandalous treatment of Black teachers and principals in the South during this period of desegregation.[19] In the school year just past, Etheridge reports that 4207 Black educators were dismissed, demoted, assigned out of field or unsatisfactorily placed in five southern states. Needless to say, the horror did not end there. Students have also suffered their share of the penalties.

Literally thousands have been expelled, thrown out, physically brutalized and psychologically assaulted. A survey which covered less than ten per cent of all the school districts in the eleven Southern states uncovered these figures; 12,638 students suspended; 2,470 students arrested, and 22,978 students out of school for some reasons or other, including expulsion. Intimidation, violence and even murder has attended the Southern way of life. And yet there are other instances in which young people of both races have been able, with wise and patient adult guidance, to explore their misconceptions and fears and frustrations together, and to move on to respect and friendship, putting their elders to shame.

The fact that Black school children and teachers are being systematically repressed or impoverished is not news. But when such developments occur as the consequence of implementing a goal—desegregation or integration—for which people have fought and died, it is depressing and alarming in the extreme. That many Blacks have turned away from the unequal struggle and begun to advocate separatism may be ironic, may seem a contradiction of much that has gone before, but it should hardly be viewed as a surprising development by the press or anyone else.

Black people didn't invent or create two separate societies. It was the Kerner Commission which warned of a polarized society, separate and unequal.[20] What can one expect when oppressed Blacks and other minorities watch their children emerge from school uneducated, unequipped and psychologically damaged. Tracking, testing, counseling, and guidance contribute to this and are viewed as means of keeping Black folks ignorant. Is it any wonder that people begin to say they will use any means necessary to see that their children are no longer dehumanized?

Yet understandable as these reactions may be, the focus must always be clearly on quality education. If that can be provided in desegregated or integrated schools, good. But—given the reality of housing patterns and the intransigent opposition to busing—it may well have to be provided, for many youngsters in the foreseeable future, in all-black schools. In either case, the ultimate goal must continue to be a truly open society, an open society in which all people can choose from among many options. Blacks have been fighting for options for more than 300 years; hundreds of thousands have given their lives in the struggle. Whether Blacks want their children in desegregated or integrated schools, they must have that right. This country was built in no small part by the sweat, blood and brains of Blacks. It is as much their country as other more favored groups, and they are entitled to all the rights, privileges and options available to the most favored of its citizens.

As Vernon Jordan and others have noted,[21] this period seems to be the end of the second reconstruction. The potential for violence and destruction which are building up in this country is no less than terrifying, not least because it is condoned, if not actually led, by the top executive leadership in the federal government. If the policies of this administration are not evil, they are at best stupid and shortsighted. This administration seems to have far more confidence than is warranted by history and the experience of human nature that "benign neglect" in racial conflict will somehow serve to appease white racists into a more broad-minded outlook. Apparently it has not yet learned that the quest for self-aggrandizement at the expense of other "inferior peoples" is an appetite which is never satisfied. Has the lesson of Nazis Germany been forgotten so quickly?

As early as February 1970[22] a top Presidential advisor was propounding the theory that the ship of integration had gone down and that the President would do well to disassociate himself, before it cost him more votes, from a struggle which was bound to fail. It seems obvious that he has taken that advice. Thousands of citizens, black and white alike, have agonized and worked toward the goal of equal opportunity, recognizing that their common safety and health—to say nothing of the moral and Constitutional obligation—required no less. Now they are confronted by the stunning and sorry spectacle of a leader who panders to the worst elements in the individual or collective American mentality, and inflames racist and selfish desires or fears in a classically demagogic bid for re-election. The President has talked a great deal about honor in recent years, but it is extremely difficult to comprehend how he defines it. By submitting Constitutional safeguards to popular vote? Undercutting the duty of the Supreme Court to protect the Constitutional rights of minorities? Proposing legislation which would return this nation not simply to the thinking of *Plessy vs. Ferguson*, but even further back to the concept expressed in the Dred Scott decision: "... (Negroes are) altogether unfit to associate with the white race ... and so far inferior they (have) no rights which the white man (is) bound to respect. . . ."

The nation needs people who, in view of these disheartening and frightening developments, are committed to firm and vigilant pursuit of an open society, including the desegregation of the schools and the means to make desegregation possible. This is not to ignore the fact that many schools are now, and will continue to be, all or almost all black: the children in those schools cannot be penalized any longer for an accident of geography. But there are examples of excellent black schools from which to learn. The goal remains: a national educational system in which black and white and indeed all children will learn from one another, and in spite of one another, what life in a world of diversity and change is all about.

HIGHER EDUCATION

Equally serious problems face Blacks who wish to obtain undergraduate, graduate or professional training. But first, the topic of higher education for Blacks should be placed in historical perspective. For many years, of course, black colleges comprised virtually the sole means for Blacks intent on obtaining post-secondary education. Indeed, as late as 1968, almost 80% of the baccalaureate degrees awarded black students were granted by black colleges, and almost 50% of the graduates or professional degrees.[23] Earl McGrath emphasizes, in the initial pages of his study of Negro colleges, that if young black people are "to receive *any* higher education, the institutions now primarily serving Negroes must, for a considerable span of years, provide it."[24]

People may argue, as they do, about whether these colleges were founded to assist newly freed blacks assume their rightful role in a free society or to reinforce segregation and subservience. The fact remains that black colleges have performed heroically in providing education for generations of black people and that they have done so in the face of overwhelming odds against their very survival. To this day, they have been starved for funds—and have, therefore, had poor facilities and low salaries. They have had to engage in enormous amounts of remedial work because many of their students came from schools organized around planned inferiority and academic deprivation. And make no mistake about it: it was planned, overtly in the dual school system in the South and covertly in the ghettos of the North. The deliberate design has been alluded to and documented by such diverse writers as Ambrose Caliver, Horace Mann Bond, Henry Allen Bullock and in the monumental work of Gunnar Myrdal.[25] Dubois, again the visionary, said years ago that:

"The Negro Race, like all races, is going to be served by its exceptional men. . . . Now the training of men is a difficult and intricate task. Its technique is a matter for educational experts, but its object is for the vision of seers. If we make money the object of man-training, we shall develop money-makers, but not necessarily men; if we make technical skill the object of education, we may possess artisans but not, in nature, men,"[26]

But most whites, especially the philanthropists, were not interested in the training of "men" and thus a tragic cycle was initiated.

Students in black colleges and even the alumni have rarely been in a position to support them, through high tuitions or generous bequests. Financial weakness in the colleges and lack of demand for trained Blacks in a segregated and discriminatory so-

---

Footnotes at end of article.

ciety combined to limit their offerings to "safe" fields, like education, social work and religion. Even the few professional schools were limited to providing training for those careers which could be pursued in the black community: medicine, law, theology. The tragic cycle was repeated over and over: ambitious young blacks had no opportunity to study advanced science or business administration, and the white graduate schools or employers were provided with an easy "out" for their lack of black students or employees. But regardless of their crushing problems, black colleges did and continue to provide the vast majority of educated black leaders. From their alumni have come not only the well-known spokesman for the whole spectrum of black consciousness, but also the quiet supporters for the thousand-and-one projects and programs attempting to gain freedom, opportunity and power for black people.

Look at what black institutions have done, for instance, in providing professional training. Now it is quite clear that Blacks are still under-requested in all the higher professions. For instance, only two percent of this country's practicing physicians are black. The proportion of attorneys is extremely unequal: one for every 750 whites, but only one black attorney for every 5,000 blacks. The story is similar for other post-baccalaureate programs: only 1.72 percent of graduate enrollment is black, and of all the Ph.D.'s granted between 1964 and 1968, only .78 percent went to Blacks. But without Meharry and Howard, the record would be unimaginably worse. These two are still providing the vast majority of black doctors and dentists. The Carnegie Commission on Higher Education reports that "in 1968–69, out of 35,000 M.D. candidates in the nation, 393 were at Howard and 269 at Meharry. Less than 1 percent of the students in other medical schools were black . . . out of 15,408 dental students enrolled, 136 were at Meharry and 310 were at Howard. Only 21 of the 59 dental schools, other than Howard and Meharry, had any black students and most of these had only one."[27] Despite the fact that these figures are beyond dispute, at a recent social event one of the affluent white "liberals" present refused to accept their validity. He offered no refutation other than his contention they were inaccurate! He could not accept the fact that in the 1970's black institutions were still carrying the major burden of providing black professionals in law, medicine and dentistry, not to mention basic undergraduate education for Blacks.

While the gallant efforts and real successes of the black colleges in the past should be appreciated and receive endorsement, it must be noted that the desegregation gradually taking place in higher education has its price. For instance, the integration of institutions which were formally predominantly black poses the danger of reducing rather than expanding access of black youth to higher education. The Carnegie Commission says this, for instance:

> Among historically black colleges, three recently reported that more than 50 percent of their students were white: Bluefield State College, 69 percent white; West Virginia State College: 73.3 percent white; and Lincoln University, Missouri, 50.8 percent white."[28]

Similarly, Maryland State College became part of the University of Maryland, and nine predominantly Negro junior colleges in Florida were closed in order to integrate their students into white junior colleges. Before one can determine whether these integration efforts represents advancements of the black cause, he should inquire what happened to the black young people who might have gone to Bluefield State or to Lincoln University, Missouri. Were opportunities available to them in predominantly white colleges?

The "black brain drain" is another cause for concern. The scrambling by many sectors of society for black students and professionals is certainly a refreshing change: but one must guard against satisfaction with mere tokenism. The recruitment of topnotch students or professors from black colleges to white ones may represent a net loss, not gain. The installation of a Black as a special assistant in an otherwise white office is too frequently windowdressing at best, and at worse may serve as an excuse for avoiding the need for basic institutional change to meet the needs of the black community. The days for basking in the reflected glory of the achievements of one or two have long since gone: opportunity must be available to every one.

As recently as 1969, more than six percent of the white population (25 years or older) had graduated from college, as opposed to only three percent of the Blacks. More than half the white population of this country had at least a high school diploma, but less than one third of the black population had graduated from high school.[29] Has there been an improvement in this situation? It's hard to say. Figures on current enrollment of Blacks in colleges and universities vary from a high of 484,000 reported (1970) by the Census Bureau to a low 356,836, reported by the HEW Office of Civil Rights. One can only speculate about the disputed 125,000 bodies. Indeed, Elias Blake, in his paper prepared for the National Policy Conference on Education for Blacks last April, states "Despite all the publicity on increases, no studies of any comprehensive nature exist with solid answers to these questions . . ."[30] (i.e., of how many blacks are enrolled, in what kind of programs, leading to what). Equally mystifying is the exact proportion of Black youngsters in predominantly black colleges or in predominantly white, be they private or state-supported. The Southern Education Reporting Service conducted a survey of the 100 state universities and land-grant colleges, and found that (with the exception of these institutions which were originally all black) the percentage of black students ranged from a high of not quite 3% in institutions in the Midwest to a low of less than 1½ in the Far West.[31]

It is not just mathematical inaptitude that makes one suspicious of figures: it is the all-too-common phenomenon of non-existent, scrappy or inconsistent data which, in this age of computers, is hard to understand or excuse. But of course it should not be necessary to note that even if there were an accurate clear picture of black student enrollment, one would still need to ask the even more important questions about quality and productivity.

The efforts of some colleges and universities to expand access to higher education to minority youth have been lauded by a few, but they have triggered anxiety and outright opposition among many more, including the Vice President. The late Whitney Young, Jr. and Ermon Hogan provided an excellent response to those who, "when they grumble about 'lower standards' are really using code terms for keeping blacks out." They write: ". . . it has been clearly demonstrated that now traditional terms of admission predict little or nothing about what a minority student will do in college or about his potential after graduation. At the same time, it has been clearly shown that lack of motivation is not a problem where genuine opportunity exists; academic skills can be acquired; and persons once thought uneducable at the college level, based on high school records, College Board test scores, and cut-off points, are now succeeding in their studies. . . . The best way of determining whether a potential student is capable of college work is to admit him to college and evaluate his performance there."[32]

Open admissions, like so many other highly publicized new programs, cannot be regarded as the solution to the disproportionate representation of minorities and the poor in higher education. Indeed, some serious questions must be raised about certain programs which permit students to enter but do not provide the supportive services, counseling, remediation or financial backing which will make it possible for them to remain. Similarly, the proliferating community colleges must be carefully watched to see whether, as has been charged by some,[33] they are in part becoming a convenient device to screen out applicants for the universities and direct them into lower-status and even dead-end jobs.

The enormous expense of a college education is well-known, and cost alone will continue to bar the college door to many aspiring poor youngsters whose families are totally unequipped to help them. It is doubtful that, even with the emergence of new Federal aid to higher education, this country has yet made a commitment to ensuring that all its talented young people, regardless of their social or economic circumstances, will have an opportunity to engage in advanced study.

Even if adequate financial support were assured, very serious problems remain. The pressure on black students, particularly on the recently desegregated campuses, are extremely severe. Too many black youngsters, unfortunately, are confused, misled, and finally demoralized by self-proclaimed leaders who subsist on an ideology or program based on half-truths and a single strategy. Trying frantically to get their bearings, these youngsters have few opportunities to obtain sympathetic and sane advice and examples, and they fall prey to fools and charlatans. One black college president tells of looking out his window late one night to see one of his better students tearing up the grass on the college green. When the student was invited in and asked what he was doing, he replied: "I'm planting food to feed all the hungry brothers and sisters." Whether that particular trip was caused by drugs or something else is beside the point. What matters is that some of the brightest young people today are being bombarded with false information, conflicting theories and misleading signals without any corresponding method for evaluating them or sorting them out.

A very disturbing development on some predominantly white campuses is the establishment of special colleges for open admissions students, Blacks, Chicanos and Puerto Ricans. These colleges are separate, identifiable and often run by Blacks and other minorities. But if these colleges become the repositories for all of the disenfranchised and oppressed, what of their future? How much money will be available for them when Blacks, Chicanos and Puerto Ricans go out of style? What about the responsibility of existing departments and colleges to change their staffing patterns and curricula? Permitting or encouraging such separatism may become a part of the new racism: give them their thing and let them do it; we will be done with them, and good riddance. If quality is not established and maintained, if staff is not competent and committed, if skills and education are not directed to careers of the future, Blacks and other minorities will soon realize that they have been had, put in a trick bag once again, and ripped off in the name of progress.

Art Thomas, Director of the Center for the Study of Student Rights and Responsibilities, summed up the challenge, facing Blacks concerned about young people. "Black people have to realize," he said, "that one white dude can come into an audience of 2,000 Black people and act like he's in the majority. That's a very powerful thing, when a white racist society has conditioned a white dude to believe he is superior, to act like he's in the majority even when he's in the minority. Black people, if

---

Footnotes at end of article.

we are going to survive, have to develop within our children the belief that they are beautiful, that they are brilliant, and that they can do anything they make up their minds to do. If we can educate our children at an early age to believe in themselves, the question of integration or separatism will not be important because of Black pride. When you can put one Black child in a school with one thousand white children, and he knows he is powerful, that he is brilliant, then the thousand white children will not affect his confidence. By the same token, you can have one thousand Black students in a school together who live, trust, and respect each other, and they will know that they are together and can accomplish anything they set out to accomplish."[34]

Learning how to deal with overt and covert racism may be depressing, frustrating and difficult in the extreme. But it is an essential part of the educational experience for all minority young people. If they are to deal effectively with whites in later life, as they must, they might as well begin on the campuses. They cannot do so by retreating to the illusory havens promised by separate courses of study, dormitories or other exclusive minority programs. Harold Curse, that perceptive and biting critic of the Black intelligentsia, lays bare the hollowness of much of the separatist rhetoric. "The Negro intellectual," he writes, "must deal intimately with the white power structure and cultural apparatus, and the inner realities of the Black world at one and the same time . . . he cannot be absolutely separated from either the Black or white world."[35] Calling on radical Blacks to develop "a social theory based on the living ingredients of Afro-American history,"[36] he accuses them of disdaining profound theoretical and scientific examination of historical in favor of "passion, emotionalism and prejudice."[37] But while they are caught up this fervor, he warns, the white power structure will be busy doing their theory and practice for them.[38]

Even earlier, W. E. B. DuBois had defined the Black situation: "Once and for all," he wrote, "let us realize that we are Americans, that we were brought here with the earliest settlers and that the very sort of civilization from which we came made the complete absorption of Western modes and customs imperative if we were to survive at all; in brief, there is nothing so indigenous, so completely 'made in America' as we."[39] And Imamu Baraka, still known to many as Leroi Jones, adds: "The paradox of the Negro experience in America is that it is a separate experience but inseparable from the complete fabric of American life . . . In a sense, history for the Negro before America must remain an emotional abstraction."[40] Such words are sobering but much-needed as restraints to those who are tempted, however understandably, to escape into an all-black world.

Education is a complex topic: almost every issue raised in these few brief pages—and many others to which no reference has been made here—could well become the sole topic of an article, a chapter, even a book. Exactly because of this complexity, it is always tempting to put on blinkers, to focus too narrowly on an immediate problem, to ignore the annoying ramifications of events in tangential fields. But simplistic analysis, simplistic solutions, will not do. Equal opportunity in education will not become a reality overnight—even if funding increases drastically, even if the busing question is equitably resolved, even if teacher training is improved, even if admission to college is guaranteed to all who wish to apply. Suffice it to say there is work to be done, and work enough for everyone who seeks to forward the twin causes of quality and equality.

Peter Drucker has some astute comments on the current educational crisis: "The school is not in crises just because it is suddenly doing worse. Today's school does no poorer a job than it did yesterday; the school has simply done a terribly poor job all along. But what we tolerated in the past we no longer can tolerate . . . Rather the school has suddenly assumed such importance for the individual, for the community, for the economy, and for society, that we cannot suffer the traditional, time-honored incompetence of the educational system . . . Today, access to careers, to most opportunities, and to education is through the school. We expect of the school—and it is a new expectation that no school has met before—that most if not all students will really learn something . . . We expect a person to find in school his basic experiences and the knowledge foundation for his life . . . (we) depend on the diploma, so we rightly demand that the schools perform better."[41]

But the clouds of racism and reaction to earlier gains are gathering and loom ominously over any discussion about improving education. Those who have read Sam Yette's book, The Choice,[42] whether they agree with him or not, will have some notion of the possible dimensions of the storm. What, for instance, of recent judicial decisions, such as the Supreme Court's action in permitting juries to reach majority, rather than unanimous verdicts in cases tried in state courts? Or its upholding of the rights of private clubs to maintain restrictive practices, even while they operate under liquor licenses granted by the state?

What of the psychologists and others who suggest reconsideration of theories of genetic inferiority or predict an increasing role for an elite meritocracy? What of the social analysts who depict the "pathological" condition of the Black family, or intimate that a certain segment of society is destined (one can almost hear "predetermined") to remain in squalor or ignorance? What of the consolidation of power by organizations who oppose participation by the less powerful, who care nothing for the views of poor or minority groups and communities? None of these developments is irrelevant to the concerns of those who wish to improve education and increase opportunity.

Yet first on the educational agenda must always be the definition and redefinition of what is meant by "quality." Faddists and hucksters are ever eager to sell panaceas, to advocate the substitution of "pop" Shakespeare for the genuine article, to substitute grooviness for hard work and discipline (or, as someone has felicitously put it, to "grant absolution even where none was sought"). There is no substitute for exposure to the riches of the past—not only the African or the Spanish past, but the entire range of thinkers and civilizations. Only thus will the young be instructed in their human potential, even while they learn to moderate the arrogant pretensions of so much modern ideology.

Good education depends, too, on exposure to adults—not simply teachers, but many adults who will counsel, encourage, advocate—adults who provide models of commitment and of integrity by living out in their own lives what they presume to teach young people. And quality education demands the provision of many options, alternatives and choices. It is—or should be—well known by now that learning is a life-long process which varies in rate and style from one individual to another. Yet one unfortunate consequence of universalizing education has been the equation of learning with school, as well as the subjugation of natural curiosity and interest to "professionally" defined standards of progress and behavior and attitude in the classroom.

Despite the confusion, dislocation and turbulent change which will continue to impede the halting progress of this society toward realization of its dream, there is some hope. The current liberation movements—Black, female or youth—may prove capable of liberating everyone from the bitter residue of past failure and present fear. The demands, for instance, being made by many Blacks—for quality education, for accountability by teachers, for full funding, for desegregation—are not narrow and self-serving. They are needed by all segments of society, and all segments of society—rich, poor, black, white—will benefit if they are met.

But it will not be easy, in a time of bitterness and frustration, to remember to convince others that the cause belongs to everyone. The most important things for Blacks to remember is that the struggle is about survival as human beings. In these difficult days and in the more difficult tomorrows, the temptation to strike out at each other for perceived differences in tactics and strategy will bear heavily upon them. It is imperative that they resist and actively oppose such tendencies in themselves and in others. Neither pointless violence nor abject surrender will serve, nor will idolizing or romanticizing of Black leaders.

"Malcolm X," writes a perceptive member of the Institute of the Black World, "became in his lifetime the quintessence of a free man. . . . If we are serious about the fundamental personal and structural changes which are necessary for Black people to live, then we cannot fail to take Malcolm as our model. In saying that, we are not focusing here on a specific political methodology for change. Malcolm is the prime example of what we must do if we want to prepare ourselves, not only for the struggle for freedom, but for the possibilities inherent in freedom itself. Malcolm's crucial decision, as a member of an oppressed people, was to refuse to accept the limitations imposed on him by the conditions of oppression. . . . The willingness to expose one's life to the merciless glare of truth and to make whatever changes truth demands, . . . this is the epitome of a truly religious, truly political man. This was Malcolm, and it must be us."[43]

Blacks are a humane and loving people, they care about each other. Were this not so they would have long since perished under the weight of over three hundred years of oppression. Their ability to continue to struggle has been sustained by their basic humanity, their ability to remain humane through centuries of physical and psychological violence.

As that humanity has sustained them so they must now zealously nurture and continue to develop it. Blacks—like other minority groups—do not have to agree on everything, nor should they expect agreement on all things. Unity, not uniformity must be the goal. They cannot make the fatal mistake of adopting the attitudes and behavior of their oppressors. Name calling and labeling have little place in the struggle; they must look at one another in terms of what each is doing to advance the program of Black survival and development. If the brother or sister is on the case, moving the agenda forward, right on! If they are not, they can be helped to join the struggle for survival. There really is no viable choice in this regard: the survival and development of each Black man and woman are intimately, inextricably and inevitably linked to the fortunes of all Black people, and ultimately to the fortune of the human race.

LEGISLATION FOR THE ELDERLY

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, I am introducing legislation today to implement two of the recommendations of the 1971 White House Conference on the Aging.

The first bill H.R. 16492, would encourage family contributions to elderly relatives by allowing a taxpayer to take an exemption for each relative, 62 or more years of age, to whom he gives $1,500 or more in support in a taxable year. This would mean a reduction in one's taxable income of $750 for each qualifying relative. Generally, the persons affected would be parents, grandparents, immediate aunts and uncles, and brothers and sisters who are at least 62 years of age. Presently, a taxpayer can claim such an exemption if contributing over half of a dependent's support. My bill would simply enable a taxpayer to meet the support test, in the case of an elderly relative, by contributing $1,500 or more to his or her support.

The second bill, H.R. 16493, amends the Social Security Act and provides for the payment of attorney's fees incurred by an individual who successfully challenges a decision to deny, reduce or limit Federal or State benefits, such as medicare, medicaid, old-age assistance, and disability insurance. This means 'that if a person wins a case before a Federal or State agency administering these programs, or in a court, the agency involved would pay the attorney's fees rather than the beneficiary. Today, even if a person's challenge is upheld, his attorney's fees are subtracted from the benefits awarded him.

These bills are simple but they affect two areas that work particular hardships on the elderly today. One is the basic problem of adequate income for our senior citizens. Family support and care of elderly relatives should be encouraged; H.R. 16492 would do this by giving some tax relief to families who undertake this responsibility.

H.R. 16493 amending the Social Security Act corrects a failing in a law which, through its many programs, affects a great percentage of our elderly population. If a person can successfully demonstrate that an agency has made a mistake in reducing, limiting or denying certain benefits, then the burden of correcting that error should not lie with the claimant, but rather with the agency responsible for the mistake.

Mr. Speaker, I hope that these bills will receive favorable consideration by the Congress as soon as possible.

IT IS TIME FOR THE CONGRESS AND THE ADMINISTRATION TO PROTECT THE AMERICAN PUBLIC AND DEMAND REFORM OF THE FEDERAL RESERVE SYSTEM

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, the Congress of the United States is failing to do its duty—its constitutional responsibility—on monetary issues.

The Nixon administration—fearful of alienating its big banker allies—is failing to carry out its responsibility to control the Federal Reserve System in the public interest.

Mr. Speaker, the Federal Reserve System is the only agency in this Federal establishment which is able to spend money freely—public money—without audit and without any type of review by either the legislative or executive branches. The public—because of the acquiescence of the Congress and the administration—has absolutely no protection.

The Federal Reserve System controls at least $4 billion of public funds annually and there is no one in the Federal Government—not the General Accounting Office, not the President, and not the Congress—who pays any attention to where this money goes. As public servants, and as duly-elected representatives of the people, we cannot defend these practices. The Congress, despite its timidity in the face of the bank lobbyists, had better wake up and start protecting the American public in this area.

Mr. Speaker, I cannot imagine a single Member—be he a Democrat or Republican—who would condone some of the expenditures which we know have gone on within the Federal Reserve System.

If the Department of Commerce spent $13,000 to pay the moving expenses for one of its employees, most assuredly the official who allowed the expenditure of such funds would be removed from his job and possibly prosecuted for misappropriation of Federal funds.

Or if the Department of Housing and Urban Development paid the babysitting costs for certain employees while they entertained visiting dignitaries, there would certainly be a congressional investigation into the incident.

And if the Interstate Commerce Commission paid thousands of dollars a year for membership dues in highway lobbying groups, there would certainly be newspaper stories in every paper in the country regarding this illegal expenditure of taxpayers' funds.

Yet every day the Federal Reserve System, its 33 banks and branch banks, spends money on just such items as these, and no one is held accountable for these expenses. Nor is there any prosecution for the misappropriation of taxpayers' money.

In 1964, the Banking and Currency Committee in connection with an overall review of the Federal Reserve System examined the expenditures of the Federal Reserve System and found a great waste of taxpayers' money. Again in 1969, the committee looked into the expenditures and found equally shocking examples. Presently the staff of the Banking and Currency Committee is reviewing the System's expenditures for 1971. And while the full review has not been completed, there is every indication that the Federal Reserve System is continuing to spend money in a way that would land any other official in Government in jail if he were responsible for similar expenditures.

The latest preliminary review shows for example, that one Federal Reserve bank spent more than $10,000 last year in dues to various organizations. Although the Federal Reserve System has finally agreed with me that membership in the American Bankers Association and related State banking associations is clearly a conflict of interest, this bank spent more than $7,000 of the taxpayers' money last year for membership in such banking groups as Robert Morris Associates, Bank Administration Institute, and the American Institute of Banking.

In one instance, a Federal Reserve bank paid out $13,629.78 in moving expenses to relocate its new President.

Mr. Speaker, when the Banking and Currency Committee staff in 1969 reviewed the expenditures of the Federal Reserve System, an investigator from the General Accounting Office worked along with the staff. After studying carefully a total of nearly a million dollars of expenses, about $588,200 was expended by the Federal Reserve banks for purposes which were either questionable or not considered allowable under Government regulations. Not included in that figure was an additional $132,000 for which there was no explanation given by the Federal Reserve bank for the expenditures, thus making it impossible to determine whether or not these were legitimate expenses.

PAID-UP BONDS OF $71 BILLION ARE AT THE HEART OF THE FEDERAL RESERVE'S PROBLEMS

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, there are in the Federal Reserve System serious questions about the expenditure of public funds and certainly this is an area where the Congress has an overriding responsibility. Many Members of this House have been extremely vocal in criticizing illegal and questionable expenditures of other agencies and departments of this far-flung Government. But we have a deafening silence from Members on the question of the Federal Reserve's footloose and fancy-free operation. Why is this?

Of course, there are other questions—even more basic—than the misuse of public moneys. The Federal Reserve is at the heart of our economic system and its decisions determine whether people have jobs, whether businesses prosper, or whether our cities and rural areas have a chance. In short, the day-to-day lives of every American citizen are affected by the decisions at the Federal Reserve System. This is why it is so important that the elected representatives have a say in what happens in this all-important agency.

The secret to the Federal Reserve's freedom from accountability is the $71 billion of bonds which reside in the portfolio of the Federal Open Market Committee in the New York Federal Reserve Bank. These are bonds that have been paid for once by the credit of the U.S. Government. The Federal Reserve, instead of canceling the bonds when they are purchased in the open market, continues to maintain them in its portfolio and to demand interest payments from the U.S. Treasury. No one continues to pay interest on a mortgage once it has been paid for, but the U.S. Government ignores this principle and continues to pay interest to one of its own agencies—the Federal Reserve System.

Some might dismiss this as simply a question of bookkeeping, but it is much more serious than this. It is the device that allows the Federal Reserve to thumb its nose at the people and their elected representatives. This was what the late Speaker Rayburn was referring to when he said in 1959:

> I have been forced to the conclusion that the Federal Reserve authorities . . . consider themselves immune to any direction or suggestion by the Congress, let alone a simple expression of the sense of Congress.

In an age which demands candor and at a time when politicians everywhere are being sharply criticized for the fiscal confusion surrounding our Federal Government, it is regrettable that the Federal Reserve is allowed to maintain—and draw interest on—Government securities which have been paid for by the credit of the United States. This is fiscal fiction of the first order.

This system is absurd. This system deludes the American public. This system enables the Federal Reserve to be what the Congress never intended—an agency free of control and supervision.

It does the Congress no credit to allow these absurdities to continue.

This fiction is maintained because the Federal Reserve has developed into a superagency with a superpowerful lobby behind it. The banking community—and its big business allies—want the Federal Reserve System to be free to serve the banking interests full time without worrying about any public interest strictures which the Congress might insist upon.

The Federal Reserve will always be able to serve the interests of the banking and big business community first so long as the Congress continues to allow the System its own independent source of funds by maintaining the fiction of these paid-up bonds.

Without these bonds, the Federal Reserve System would be like any other agency of the Federal Government. It would have no independent source of money and it would be required to come to the Congress and to undergo annual appropriations processes just like the Department of Health, Education, and Welfare; the Agriculture Department; the Federal Power Commission; the Federal Communications Commission; the Securities and Exchange Commission; and all the multitude of other agencies. Faced with this appropriations process, the Federal Reserve System would be much more careful about its decisions, much less likely to meet the demands of the big banking and big business community and hopefully more inclined to pay attention to the public interest.

More important, the Congress would be able to use the appropriations process to insist that the intent of Congress was met in the administration of banking and monetary statutes.

BONDS HAVE BEEN PAID FOR ONCE AND SHOULD BE RETIRED AND SUBTRACTED FROM THE NATIONAL DEBT

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, let me review the situation at Federal Reserve as it stands today. At the end of the first week in August, the Federal Reserve had $70.8 billion of bonds residing in the portfolio of the Federal Open Market Committee in the New York Federal Reserve Bank. These are all bonds which have been paid for by the credit of the United States. When the bonds are purchased by the Open Market Committee, credit is entered on the books of the bank or the seller has the right to demand payment in the currency of the United States—currency printed right here at the Bureau of Engraving and Printing. Thus, we have a situation where we have both the currency and the bonds outstanding at the same time—a double accounting against the U.S. Government. There is no dispute over this fact. Federal Reserve official after Federal Reserve official has conceded this in hearing after hearing before various committees of the Congress.

The maintenance of this system—in the face of unrefuted testimony—simply means that the Congress is perpetuating a myth and is a party to an effort to delude the American public about the public debt and the operations of the Federal Reserve.

The Federal Reserve is drawing about $4 billion annually in interest on these bonds. This interest is paid by the U.S. Treasury and the money comes from funds of the American taxpayers. The Federal Reserve uses this money as a huge slush fund for whatever it desires and the Appropriations Committee has no authority to either review or to control these expenditures in any manner. The funds are not audited by the General Accounting Office, and the Federal Reserve has engaged in a well financed and emotional campaign to lock the GAO out of the entire Federal Reserve System.

So the U.S. Government's debt ceiling of $450 billion is composed of at least $70 billion of outright fiction. These bonds should be retired, subtracted from the debt, and if this were done, there would be no need for another increase in the debt ceiling in the foreseeable future.

This could be done without any harm to either our fiscal or monetary system and I hope no one will fall prey to the emotional outcries of those who will be simply attempting to preserve their empire at the Federal Reserve. If the Federal Reserve thinks it needs these bonds for fiscal bookkeeping purposes, then it should be willing to agree that these bonds—which have been paid for by the credit of the United States—be non-interest-bearing. By making them non-interest-bearing, the Federal Reserve could continue to maintain its bookkeeping fiction, but it could no longer draw the $4 billion in interest from the Treasury Department each year.

Mr. Speaker, this situation is so absurd that many people just cannot believe that the Congress would allow this to continue. The absurdity of the situation is one of the protections that the Federal Reserve System has. The average person simply cannot believe that the Congress would allow the Treasury to pay interest on bonds which have been paid for by the credit of the United States.

So to clear up the question of whether these bonds have been paid for, I want to quote from a hearing record before the Banking and Currency Committee on July 6, 1965, when the then-Chairman of the Federal Reserve Board, William McChesney Martin, was asked about this situation:

> Mr. MARTIN. The bonds were paid for in the normal course of business.
>
> Mr. PATMAN. That is right.
>
> Mr. MARTIN. And that is the only time they were paid for.
>
> Mr. PATMAN. Just like we pay debt with checks and credit.
>
> Mr. MARTIN. Exactly.
>
> Mr. PATMAN. In the normal course of business, they were paid for once. You will admit that, will you not? They were paid for once and that's all?
>
> Mr. MARTIN. They were paid for once and that's all.
>
> Mr. PATMAN. That's right.

This is very clear. Surely the Congress does not need any more evidence that these bonds should be canceled and the Treasury relieved of its obligation to pay interest.

WHAT THE CONGRESS SHOULD DO ABOUT THE FEDERAL RESERVE SYSTEM

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, most Members of the House will be standing for reelection in November and I hope that they will see fit to speak out on the need to reform the Federal Reserve—to speak out for a responsive monetary system and for an end to the bookkeeping devices which leave the Federal Reserve outside of the democratic processes which have made this country so great.

Our constituents, of course, have the right to contact us on these issues and to demand that we initiate action to bring about justice for the people. Every voter has four people here in Washington who can be contacted on this question—their U.S. Representatives, their two U.S. Senators, and the President of the United States.

At a minimum, we should be demanding:

First, a full top-to-bottom audit of every aspect of the Federal Reserve System. This should be conducted by the General Accounting Office and it should be continued on a regular basis.

Second, a full appropriations review by the Appropriations Committees of both the House and the Senate.

Third, retirement of all Government securities which have been paid for by the credit of the United States and their subtraction from the national debt.

Mr. Speaker, there are many other reforms which are needed to bring the Federal Reserve System in line with the economic policies which the people are demanding at the polls. But these three steps are needed before we can really sit down and work out long range methods to assure that the people can control their own monetary system.

In later speeches on the floor of the House—in coming weeks—I plan to discuss how the failure to control the Federal Reserve System has resulted in serious economic harm to the Nation and has resulted in an ever-escalating round of higher interest rates.

CLOSED MINDS, CLOSED DOORS

(Mr. POAGE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. POAGE. Mr. Speaker, recently there was published a report entitled "Hard Tomatoes, Hard Times," which made a totally unwarranted and unjustified attack on the land-grant college system. The report truly is unworthy of recognition, but an excellent rebuttal to it has appeared in the form of an editorial entitled "Closed Minds, Closed Doors," which ran in the August issue of American Agriculturist, written by the editor, Mr. Gordon Conklin. I submit the editorial for publication in the CONGRESSIONAL RECORD and recommend its reading to my colleagues:

CLOSED MINDS, CLOSED DOORS

A popular shortcut to notoriety these days is to yell raunchy four-letter words at a Sunday-school picnic . . . or launch a diatribe against education at a PTA meeting. It is especially fashionable to be totally negative toward heretofore widely-esteemed symbols, institutions or customs . . . marriage, the flag, the church, or whatever.

Therefore, a voluminous report entitled, Hard Tomatoes, Hard Times . . . which attempts to discredit the land grant colleges . . . comes as no surprise. The report is published by an outfit called the Task Force on the Land Grant College Complex, Agribusiness Accountability Project. A suitable and convenient acronym, condensing both the report's title and its message, is hate.

Its contention is that the land grant college complex is a complete failure because it is allegedly a captive of the agribusiness community . . . and is responsible for the technology undergirding the social and economic revolution that has brought massive change to the nation's rural areas. Summing up his myopic views of the situation, author Jim Hightower writes, "As statistics indicate, and as visits to the countryside make clear, rural America is crumbling. Not just the family farm, but every aspect of rural America is crumbling . . . schools, communities, churches, businesses, and way of life."

Riding grimly on, this modern Don Quixote skewers the windmill. "The greatest failing of land grant research is its total abdication of leadership. At a time when rural America desperately needs leadership, the land grant community has ducked behind the corporate skirt, mumbling apologetic words like 'progress,' 'efficiency,' and 'inevitability.' Overall, it is a pedantic and cowardly research system, and America is less for it."

Flailing at all parts of the land grant college system, the report's author lines up 4-H in his gunsights, "4-H receives the largest allocation of man years . . . a third of the total. This social club for youth exists as one of the sacred cows of the land grant world. The fact is that 4-H might be an adequate youth club, but it is not doing much that seriously promises to make a change in the rural plight. It is a frivolous diversion of 72 million dollars."

My mind wandered back, as I read that broadside, to the hundreds of 4-Her's with shinning eyes whom I've seen accept awards . . . to the dozens of young people I've known personally who blossomed into capable leaders under 4-H guidance . . . to the countless volunteer 4-H workers I've visited with who devoted hours beyond measure to a task in which they deeply believed. I could no more sneer at these folks than I could curse life itself.

Special pains are taken in the report to roast the American Farm Bureau Federation at length (no mention is made of the NFO or National Farmers Union), to bitterly attack the Extension Service, and to climb all over the two most recent holders of the office of Secretary of Agriculture, Messrs. Hardin and Butz. The magazine, *Organic Farming and Gardening*, is quoted several times as documentation for the volleys fired at these folks.

My own background involves growing up on one of those hard-scrabble small farms which the report claims have been victimized by the land grant colleges. Quite to the contrary, my family (which would now be called poverty-stricken) always had respect for those colleges and both my brother and I found new opportunity and wider horizons in their classrooms and research facilities.

Later . . . as rural banker, county agent and farm magazine editor . . . I've visited hundreds of family farms from Maine's Aroostook County in the north down to Lancaster County in the Keystone State. These people, portrayed in hate as being rendered virtual peasants by the Agricultural Establishment, have no resemblance whatsoever to that distorted image, and would display little sympathy for the irresponsible accusations contained in the report's vitriolic rhetoric.

As I read the report, I found myself wishing that the effort expended on it had been more responsible in purpose . . . exploring with some perspective the very real shortcomings of the land grant college system . . . rather than merely seeking to discredit it. Hate is massively guilty of the multiple levels of overkill so characteristic of our clamorous times . . . remember the farmer who had to clobber his mule with a 2 x 4 just to get his attention so he could feed him a carrot?

Perhaps most disappointing of all was the disclaimer by the hate author, "But it is not the place of this Task Force to determine the agenda of the land grant complex." In common with so much of the protest of our time, bitter criticism is leveled without alternatives being presented . . . responsible people are totally condemned by hostile non-taxpayers operating from temporary headquarters located in the shifting sands of irresponsibility.

In normal times, the report would quickly be consigned to the oblivion it so richly deserves . . . but these are not normal times. Senator Adlai Stevenson III of Illinois, perhaps sensing some political hay to be made in the sunshine, decided to hold a Congressional hearing to air the charges made in hate.

Folks, we've all picked bones of contention from time to time with our agricultural colleges, and with their research and extension programs. But a 155-mm howitzer is hardly the best tool with which to begin a remodeling job on your house . . . just as seeking to destroy an organization is not the logical first step to making constructive changes in its philosophies and procedures. Artifical insemination techniques were not developed after first destroying the bull . . . nor were teachers of the one-room schoolhouse burned at the stake in the process of conversion to centralized schools.

The land grant colleges have done a marvelous job over the years, in terms of agricultural abundance and human development, but they of course need to change and adapt to meet the new challenges that inevitably accompany the sweep of history. The overwhelming majority of farmers . . . and rural non-farmers . . . support the overall thrust of those colleges, although they may disagree at times with specific projects or procedures.

The hate report led me to two inescapable conclusions:

It was written and researched by people seeking to document a foregone conclusion . . . closed minds that did not want to be disturbed by a wide range of facts. The report is typical of research in the legal profession where a particular position is taken, then all available arguments are marshalled in favor of that position . . . in marked contrast to scientific research which reviews all the known facts before arriving at a conclusion.

The author had obviously not visited northeastern family farms, and was woefully lacking in first-hand contact with farmers generally. He used carefully-selected statistics and statements by others (as you would expect of research in the legal profession), but had gathered little farm soil on his shoes from a wide range of personal visits . . . he had left too many doors to farm homes unopened.

Closed Minds, Closed Doors.

PERSONAL ANNOUNCEMENT

(Mr. CHAMBERLAIN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CHAMBERLAIN. Mr. Speaker, in order that my position on recent votes will be clear, I wish to make the following personal explanation:

On rollcall No. 278, I would have voted "yea."

On rollcall No. 279, I would have voted "yea."

On rollcall No. 283, I would have voted "yea."

On rollcall No. 294, I would have voted "yea."

On rollcall No. 295, I would have voted "yea."

On rollcall No. 296, I would have voted "yea."

On rollcall No. 297, I would have voted "nay."

On rollcall No. 298, I would have voted "nay."

On rollcall No. 300, I would have voted "yea."

On rollcall No. 301, I would have voted "yea."

On rollcall No. 302, I would have voted "yea."

On rollcall No. 303, I would have voted "yea."

On rollcall No. 304, I would have voted "yea."

On rollcall No. 305, I would have voted "yea."

RISING FOOD PRICES

(Mr. GUDE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GUDE. Mr. Speaker, for 20 years the American consumer has witnessed a steady and relentless increase in the cost of food, particularly the cost of meat. In the past several months, the rate of increase appears to have accelerated. Today, I would like to address myself to two topics: First, the forces underlying this 20-year trend, and second, the reasons for the sudden spurt in prices since February, particularly in the Washington metropolitan area.

To explain the 20-year trend of rising prices, it is necessary to examine the cost structure of the three major components of the food marketing chain, the farmer, the wholesaler, and the retailer.

For raw agricultural products, there have been substantial increases in prices. However, the farmer has seen his production costs rise an average of 50 percent. Despite these increases in operating costs, farm prices have risen only 6 percent in the past 20 years. Farmers have been able to survive only by virtue of their increased productivity—223 percent over the last 20 years.

While farm prices have risen 6 percent, wholesale prices have jumped 20 percent. Most of the difference can be attributed to increased costs at the wholesale level. Labor costs have risen 300 percent; freight costs 140 percent; services—rent, insurance, telephone, and so forth—240 percent; containers 160 percent; fuel, power, and light costs have jumped 135 percent; while the costs of new plants and machinery have increased 192 percent. Throughout this period of rising costs, the profit margin for wholesalers has hovered around 1 percent.

For the third component of the food marketing chain, the retailer, prices have spurted 43 percent in the last 20 years. Again, most of this increase can be attributed to rising operating costs, particularly for labor which accounts for 50 percent of expenses. Most analysts would probably agree that for the retail food industry after tax profits as a percentage of sales should ideally average around 1.5 percent. Actual profits have traditionally been lower, peaking at 1.41 percent in 1965. In 1971, the food chain industry's profits on the dollar, after taxes, was down to .86 percent.

Underlying the rising costs within the food marketing chain is the steadily increasing demand for beef. Consumer consumption of beef has more than doubled over the last 20 years, increasing from 56.1 pounds per capita to 114.3 pounds per capita. Over the last 7 years the increase was 30 percent. This steadily rising demand for meat has sustained high prices. Indeed, it has been a significant force in pulling these prices up.

To help alleviate this continuing problem of supply relative to demand there are two initiatives to which we must give serious consideration. The first is the permanent lifting of import quotas. The President has, for the balance of 1972, already suspended import quotas for meat. This means that the amount of foreign meat that can be imported is no longer limited to 6.7 percent of U.S. production.

However, only limited relief in the supply situation can be expected from the President's action. I say this because there exists a worldwide shortage of beef, and foreign suppliers are not likely to jump to the American market, possibly loosing other markets to competitors, when there is no assurance that import quotas will not be reinstituted at the end of this year. Further, the American market offers no substantial financial incentives as U.S. beef prices are only three-fourths of 1 cent above the world level.

To overcome some of this anticipated

hesitancy on the part of foreign suppliers, I have suggested to the President that in formulating the administration program for next year he give serious consideration to legislation repealing the section of the Meat Import Act of 1964 which establishes the import quota system.

The permanent lifting of import restrictions could result in some change in world market patterns, bringing a larger supply of beef to the United States. It is, however, unlikely that a permanent lifting of the import quotas would increase the supply of beef to the extent that it would depress prices. Rather, the effect would be to prevent consumer demand from further outstripping supply, thus decelerating the rate of price increase, not depressing existing prices.

The second initiative to supplement the supply of beef which must be given careful attention is increasing the available grazing land to support a larger national herd.

Under the terms of existing legislation, 50 to 58 million acres of cropland are held out of production each year. If pasturing of this land were permitted, it has been estimated that the U.S. could produce up to 2 percent more beef. If this pasturing were allowed, it is doubtful that more than 20 million additional acres would be grazed during the pasture season. However, these acres would provide substantial additional feed for the existing 116 million head of cattle on U.S. farms and ranches, eventually permitting an increase of a few million head in the U.S. herd.

Grazing set-aside cropland would not lead to an immediate increase in beef cattle markets. Some cattle would gain more weight because of improved pastures, but additional female breeding animals would be retained on the farms and ranches to utilize the additional grazing, thus slightly reducing the number of cattle marketed for the first year or two. It would not add sufficient pasturage, however, to cause a noticable reduction in current marketings.

I have written to the Secretary of Agriculture and requested that the Department study the issues surrounding this suggestion so that it can provide the Congress with a full study when the legislation implementing the set-aside progam comes up for review next year.

With an ever-growing population and rising standard of living, it is unlikely that the American consumer's demand for beef will relent. The actions I have suggested regarding meat imports and grazing land will assist cattlemen in their efforts to meet this constantly increasing appetite for meat.

To this point, I have been discussing long-term national trends and long-term potential solutions. However, to explain market behavior since February, particularly in the Washington area, it is necessary to examine a narrower time spectrum. The fluctuations in food prices, particularly for meats, can be understood in terms of: First, the market forces of supply and demand, and second, expanded retail margins.

The high demand that has characterized the food market over the past 20 years has not relented in past months. If anything, demand relative to supply has increased because the supply of beef coming to the market has decreased somewhat. The decrease is generally attributed to the corn leaf blight of 1970. In that year, much of the corn crop fell victim to the blight. With a reduced supply of corn, the price of feed corn went up. The increase in production costs, without a corresponding increase in the return to the farmer, resulted in many cattle being withheld from the market. Had this particular series of events not occurred it is still unlikely that supply would have kept pace with demand.

However, not all of the price increase that occurred in February can be attributed to the forces of supply and demand. A significant portion of the explanation is to be found in expanded retail margins of profit.

Under the Price Commission's volatile pricing rule, firms operating in a market characterized by volatile prices, such as the food industry, may immediately pass along increased costs in order to maintain their customary profit margins.

In the food industry, retailers are wary of the effect constant price changes may have on the consumer. Therefore, retail pricing policies exhibit a lag phenomenon. That is, when wholesale prices begin rising, retailers hold the line until wholesale prices reach a trigger point. At that point retailers raise their prices. During this lagtime retailers experience shrinking profits. The loss is recovered when wholesale prices begin to decline because the higher retail prices are maintained until wholesale prices drop below another trigger level. When that level is reached, retailers drop their prices. This downside lag compensates retailers for the upturn lag.

Combined with the volatile pricing rule, this lag pricing characteristic of the retail food industry set the stage for excessive retail price increases in the early months of this year. When wholesale prices reached the trigger level in February retailers increased their prices above the customary levels. Further, retailers appeared prepared to lengthen the time lag on the downside. This situation led the Cost of Living Council to meet with retail executives on a jawboning session in late March. That meeting saw an immediate reduction in retail prices.

Recently released figures indicate that food shoppers in the Washington area are experiencing another sharp, and possibly unjustifiable, price increase. The most recent monthly data on food costs shows that prices in the Washington metropolitan area rose 2.1 percent—not seasonally or annually adjusted—while the national average was 0.6 percent—not seasonally or annually adjusted. During that 1-month period, retailers throughout the nation experienced the same increase in costs as retailers in the Washington area. Yet, prices in this area increased at a much faster rate. These figures suggest that retailers may be trying to accomplish in the local area, what was attempted nationally in February—increase profits beyond the average generally accepted by economic analysts.

A characteristic of the Washington retail food market which could give impetus to excessive price increases not found generally in other areas of the Nation is the absence of independent competition to the prices charged by the leading Washington chains. In the Washington metropolitan area, the major food chains completely dominate the market, accounting for 87 percent of total sales. Contrasted to the lack of competition in this area is the situation in other metropolitan cities. In New York, the leading food chains accounted for 51.7 percent of total sales. In Philadelphia the figure is 68.5 percent, and in Boston only 53.3 percent. The lack of independent competition in Washington may significantly reduce the pressures for price constraint on the part of large retail food chains.

As a result the Washington area consumer is more readily exposed to inordinate increases in food prices. The big food chains have minimal constraints of the competitive marketplace which is in the tradition of the American economic system.

I have today formally requested the Price Commission to investigate retail food pricing policies in the Washington metropolitan area to determine if prices have indeed been raised to excessive levels, as they were last February. If this proves to be the case, the Price Commission must immediately order prices rolled back to appropriate levels.

Mr. Speaker, I am deeply disturbed by the possibility that the benefits and burdens of the President's economic stabilization program may be shared unequally. Therefore, I am urging that the Price Commission also assume a continuing active role in monitoring food prices to insure that the consumer does not bear the heaviest burden of wage-price controls.

TESTING FOR VIRUSES AT DALECARLIA

(Mr. GUDE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GUDE. Mr. Speaker, Washington, D.C., and its suburbs, without appropriate planning, can face a water shortage sometime in the next decade—the projected flow of the Potomac River will simply not be sufficient to meet the growing demand indefinitely. Washington's water problem is, however, symptomatic of the water situation in many other municipalities throughout the United States. It is no news that the time is long overdue to begin exploring and developing the potential of recycled wastewater and polluted surface waters as supplements to our existing sources of potable and recreational waters. As a matter of fact, reuse of water in America is hardly a revolutionary or novel concept. An exhaustive study of one-third of our American cities in 1961 demonstrated that these municipalities include from 0 to 18 percent municipal waste water from upstream in their drinking water with the average city having 3.5 percent recycled waste water in its supply.

One of the major concerns to use of polluted and recycled waste waters is viral contamination. Enteric viruses, which cause such diseases as infectious hepatitis, polio, and a variety of gastrointestinal disorders, are commonly found in raw sewage and polluted waters. However, before the means to remove or inactivate viruses can be fully developed, the extent of their presence must be determined.

Last week I visited the Dalecarlia Water Treatment Plant to observe the Army Corps of Engineers' virus testing operations. The Corps of Engineers, responsible for Washington's water supply, has recently awarded the Woodard Research Corp., a contract to test regularly both the raw and untreated water at Dalecarlia for viruses.

The data provided by this study will go a long way toward answering questions on the effectiveness of current water treatment processes, from the standpoint of viral contamination. And too, this study will contribute to the refinement of techniques for detecting small quantities of virus in large quantities of water, techniques that are now prohibitive because of the complexity, expense, and time involved. Just as water is now monitored for bacterial contaminants—that once constituted major public health hazards—we can soon expect viral monitoring to become the rule rather than the exception in municipal water and sewage treatment plants.

It is to the great credit of the corps that, as is the case with so many municipal water systems of the United States, despite raw sewage contamination received at the intake, with a high level of treatment executed by skilled professional and technical personnel, Washington area residents are guaranteed wholesome potable water. The Dalecarlia intake receives upstream water with an estimated one-half to two-thirds million gallons of sewage overflow from the Cabin John watershed; this contamination is of a higher degree than would be found in water from the upper estuary.

For all these reasons the Army Corps of Engineers is doing research on the effects of chlorination on enteric viruses and is studying the potential of the Potomac estuary as a supplemental water source for Washington. These three projects will provide much needed information for all concerned with averting a water crisis in Washington, and ultimately the Nation. The Army Corps of Engineers is to be commended for their foresight and leadership in the field of water supply; and I sincerely hope that others will follow their example and direct their efforts toward developing new sources of "cool, clean water."

FROM HUMAN DIGNITY TO A SECRET WEAPON

(Mr. BROOMFIELD asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. BROOMFIELD. Mr. Speaker, the McGovern-Shriver forces "unveiled" last week in the New York Times one of its so-called secret weapons. In an August 7 New York Times dispatch, James Naughton wrote:

> The "weapon" according to Frank Mankiewicz, the political director of the campaign, is the large number of young Americans who served under Mr. Shriver when he was director of the Peace Corps in the Kennedy Administration.

The article, said Mr. Mankiewicz, predicts that returned Peace Corps volunteers are "going to be a very powerful force."

Mr. Speaker, I am not a returned Peace Corps volunteer, but I am certain that if I were, I would not appreciate being referred to as a "weapon" for anyone's cause or campaign. I read Mr. Mankiewicz remarks as an appalling affront to this outstanding group of young Americans.

Certainly these people, as Peace Corps volunteers, demonstrated a predisposition for activism. They refused to sit back and allow developing countries to remain isolated from existing technologies—to remain severely handicapped by trained manpower shortages. I would expect that today, many of these same people, as individuals in this country, take an active interest in the running of this Government. I feel certain that some have already offered their help to the various political candidates on an individual basis. This is to be expected, and perhaps for the sake of improving our political system, to be hoped for.

But, Mr. Speaker, I would also hope that no attempt would be made by any candidate to round up collectively this group of Americans for service as anyone's secret weapon or powerful force.

Such an action, as I understand it, goes completely counter to the nature and philosophy of the Peace Corps. I would think Mr. Shriver and Mr. Mankiewicz, both former Peace Corpsmen, would know this better than I.

As Mr. Shriver described it some 11 years ago to a group of graduating Notre Dame seniors:

> The purpose of Peace Corps is to permit Americans to participate directly, personally and effectively in this struggle for human dignity.

Mr. Shriver said on several occasions that politics were never to have a role in the Peace Corps. Presidents Kennedy, Johnson and Nixon have all sought to preserve its non-political nature.

Mr. Shriver has said he firmly believes that:

> Peace Corps' existence and effectiveness are dangerously threatened by any confusion that may be created in the minds of the peoples of our host countries, or of our own citizens, as to Peace Corps nonpolitical nature.

But that was Mr. Shriver, the Peace Corps Director. Now it is Mr. Shriver the political candidate, and several years later. It would seem this man, whom McGovern forces claim can reactivate the loyalties of thousands of former Peace Corps Volunteers, has made a rather rough transition from his work "in the struggle for human dignity," to his utilization of "secret weapons."

GUARANTEED STUDENT LOAN PROGRAM

(Mrs. GREEN of Oregon asked and was given permission to extend her remarks at this point in the Record and to include extraneous matter.)

Mrs. GREEN of Oregon. Mr. Speaker, in recent weeks a severe crisis has developed in the operation of the guaranteed student loan program. Attempts at implementation of new guidelines resulting from the recently enacted higher education conference report have created chaos and confusion in the program. The tragic result, of course, has been that the loan volume has dropped drastically and thousands and thousands of deserving youngsters have been denied access to loans.

Yesterday, I proposed in the House a measure which would stay the effective date of any new changes in the guaranteed student loan program until March 1 of next year. In short, the program would continue to operate under the ground rules of the 1971–72 school year. The House, happily, overwhelmingly passed the measure and the Senate earlier today concurred in the House action.

Numerous and lengthy conversations with bankers, financial aid officers, college administrators, and others involved in the operation of the program have served to convince me that this action provides the best approach from which to begin dealing with the tremendous backlog of loan applications which must be processed if students are to receive loans for the fall semester. Hopefully, the time between the present and March 1 will offer us the opportunity to take a more careful look at the program and work at unravelling the maze of problems now confronting it. Two days of hearings have already been held in the Special Subcommittee on Education and I expect to schedule full hearings or the program when the Congress returns after Labor Day.

The crisis is reflected in the phone calls, letters and telegrams I have received from college administrators, and financial aid officers stressing the urgent need for the kind of action taken yesterday by the House. I would like to insert at this point in the Record some of the communications I have received, including correspondence from Mr. Edson Sample, director of the office of scholarships and financial aids at Indiana University, along with an editorial and news story from the Indiana University school newspaper discussing the severity of the problem:

INDIANA UNIVERSITY,
OFFICE OF SCHOLARSHIPS
AND FINANCIAL AIDS,
Bloomington, Ind., August 15, 1972.

Hon. EDITH GREEN,
House of Representatives, Rayburn Office Building, Washington, D.C.

DEAR MRS. GREEN: Enclosed you will find two articles regarding the Federally Insured Loan Program which appeared in the Indiana Daily Student, which is our campus newspaper. I hope you find them of interest.

We have been urging the Office of Education to either revise the regulations or to perhaps work for delaying the implementation of the regulations. In over ten years of working in student financial aid, I have never been in a more difficult position than that created in connection with the Guaranteed Loan Program. The regulations are impossible to work with and what makes the matter so bad is what we see happening to the students and parents who have benefited from this program in the past and who are no longer eligible to receive interest benefits or who are receiving smaller loans than we feel justified. Processing under the new and complicated regulations is extremely complicated and time consuming. We are finding that it takes a professional staff member fifteen minutes per application merely to do the minimum necessary paperwork. In addition, clerical staff are also involved to a large extent. Sending out the application form requires 24¢ in postage and 24¢ after we have completed the forms. As you know, the 1% administrative expense allowance was not included in the law despite its mention in the Conference Report. I urge Congress to include this provision so that colleges may be partially reimbursed for the tremendous expense involved.

I further urge you and your colleagues to return this program to its original intent by automatically allowing the interest subsidy to be paid for those students who come from families of $15,000 income or less. We have no objection to performing a needs analysis for those over $15,000 but we should be able to do so without undue restrictions or interference by Office of Education regulations.

We appreciate very much the wonderful job you are doing for Higher Education and in support of student financial aid programs. I remember so well the pleasant evening we spent at dinner at the Coronado Hotel in San Diego in January. I hope that we can reach very soon some solution to this problem. If there is any way I can be of assistance to you, please feel free to call upon me.

Sincerely yours,

EDSON W. SAMPLE,
Director.

CORVALLIS, OREG.,
August 16, 1972.

Congresswoman EDITH GREEN,
Capitol Hill, Washington, D.C.:

It is our understanding that Congress may consider postponements of amendments in the new higher education bill relative to the insured student loan program. We strongly urge that this action be taken this week, as it will directly affect several hundreds students hoping to attend our institution this fall. We estimate that at least 50 percent of our students eligible for interest subsidy benefits last year will not be eligible this fall under the current provisions of the new higher education bill. Also, we have been informed by reliable sources that money lending institutions in our State will refuse to make loans to students not eligible for interest subsidy benefits. Finally, we are very concerned that student enrollment will be seriously reduced this fall if a postponement of the new amendment is not granted.

Sincerely,

R. E. PAHRE,
Director Financial Aids, Oregon State University.

MCMINNVILLE, OREG.,
August 16, 1972.

Hon. EDITH GREEN,
U.S. House of Representatives,
Washington, D.C.:

We request that you act favorably on the President's request for postponement of the effective date of interest subsidy of guaranteed student loans as stated in the 1972 higher education amendment.

LLOYD R. SWENSON,
Director of Financial Aid, Linfield College.

PORTLAND, OREG.,
August 16, 1972.

Representative EDITH GREEN,
Capitol Hill, D.C.:

Passage of the Education Amendment of 1972 resulted in significant changes in the guaranteed student loan program. Thousands of law students are no longer eligible to receive Federal interest subsidy on their loans; we do not believe congressional intent was to prohibit students from borrowing, thereby making it virtually impossible for many to obtain a legal education. We urge you to take action to postpone the effective date of the interest subsidy provision of the loan program until further review is possible.

ANN KENDRICK,
Assistant to the Dean, Law School, Lewis and Clark College.

FOREST GROVE, OREG.,
August 16, 1972.

Congresswoman EDITH GREEN,
Third District, Oregon, House of Representatives, Capitol Hill, D.C.:

Effective date of new regulations for the federally insured student loan program contained in part 177.2 of title 45 of the OE of Federal regulations. It is essential that this step be taken. The new regulations as they now stand will deny Federal interest benefits to enormous numbers of student borrowers from middle-income families, and could make it impossible for as many as twenty percent of our students to borrow sufficient funds to remain in school. We urge that the effective date of part 177.2 of title 45 be postponed and that steps be taken to amend these regulations before such time as they do become effective.

Sincerely yours,

JAMES V. MILLER,
President, Pacific University.

HEMPSTEAD, N.Y.,
August 17, 1972.

Congresswoman EDITH GREEN,
House of Representatives,
Washington, D.C.:

Present situation on processing federally guaranteed students loans utter chaos for thousands of New York students including 2500 at Hofstra alone. President's recommendation for emergency legislation to hold new guidelines in abeyance until April 1 vital step that should be taken immediately. Unless resolved large number of Hofstra students dependent upon these loans for educational expenses will be unable to continue. Postponing of implementation to April 1 will allow time to implement properly constructive changes proposed under the Higher Education Act of 1972. At Hofstra tuition payments due late this month. Any delay on the President's urgent request would force withdrawal from college of many deserving young people call upon you and your colleagues for urgent action to support President's request.

CLIFFORD L. LORD,
President, Hofstra University.

PORTLAND, OREG.,
August 16, 1972.

Representative EDITH GREEN,
Washington, D.C.:

Urge affirmative vote on suspension of supplemental form for guaranteed loan.

Father WALDSCHMIDT,
President, University of Portland.

HEMPSTEAD, N.Y.,
August 17, 1972.

Congresswoman EDITH GREEN,
Capitol Hill, D.C.:

The present situation regarding the processing of federally guaranteed student loans has become chaotic for thousands of New York State students. President Nixon's action recommending that the new guidelines be held in abeyance until April 1, 1973, is a vital step that should be taken immediately unless the present confusion and uncertainty is resolved, the education of thousands of students who depend upon these loans to cover educational expenses will be placed in jeopardy. By advancing the date of implementation to April 1973, we will allow sufficient time to implement the constructive changes that were proposed under the Higher Education Act of 1972. On most campuses student tuition payments are due in late August. Any further delay on the President's request would make it impossible for many deserving young people to continue their education. I call upon you and your colleagues to take prompt action in supporting the President's request in this matter.

MILTON JONAS,
Chairman, Joint Legislative Committee on Higher Education of New York State.

ELECTION ASSISTANCE AND VOTER REGISTRATION ACT

(Mr. BINGHAM asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous mater.)

Mr. BINGHAM. Mr. Speaker, in the most recent primary elections in New York City, prospective voters faced long waits before casting their ballots, and many gave up in despair.

Similar disturbing breakdowns in the administration of elections have confronted voters across the Nation. Recent elections in Cleveland, to cite another example, were ordered to be held a second time, primarily because of election machine difficulties. A recount of the 1970 election in Indiana was ordered on the basis of improper registration of voters. And, as Chicago Tribune reporter Bill Anderson noted in a recent article on voting problems, "there are entirely too many votes lost, switched, or not counted in all areas of the United States for Indiana to be an isolated case."

A study by the League of Women Voters Education Fund—LWVEF—of the administration of elections in 251 communities around the country in the fall election period of 1971 concluded that "the current system of registration and voting functions inefficiently for citizens throughout the United States."

In response to this serious problem, I am today introducing the Election Assistance and Voter Registration Act of 1972. This legislation would, for the first time, make Federal assistance available on a wide scale to local jurisdictions charged with administering elections involving Federal offices in order to help assure that those elections are conducted efficiently. It also proposes changes in absentee voting and voter enrollment procedures designed to make voting more convenient for all of our citizens.

The frustrating delays in New York City were brought about in part by last-minute changes in the order in which candidates names were to appear on ballots at each polling place. The board of elections had neither the personnel nor the financial resources to cope fully with such a situation. But there were more difficulties than just those growing directly out of the change in ballots. As an economy measure, polling places had been consolidated prior to the election, adding further to crowding and confusion. A New York Times editorial summed up the resulting "electoral muddle" as follows:

> To vote at all in last Tuesday's primaries in the city reflected a triumph of citizen determination over official bungling and pettifoggery. The ballots were unnecessarily confusing. Machines jammed. Polling places were hard to find. Once found, they were often inadequately staffed. Voters at some of the worst precincts had to wait in line until midnight to register their preferences.

To help eliminate these extensive election "snafus," the legislation I am proposing would permit the granting of Federal funds and the assignment of Federal personnel on request and on the basis of demonstrated need to assist local jurisdictions to hold elections involving Federal offices, including congressional seats. The Federal funds offered by this legislation could be used to provide more and better election machines, polling places, election workers and training, or whatever local officials might reasonably determine would help eliminate election difficulties. To solve the problem of too few competent personnel to administer elections, specially training Federal supervisory personnel could also be requested by local election officials.

Another section of this proposed legislation would assure absentee balloting in congressional primaries. In many States and congressional districts, victory in a primary is tantamount to election. In such areas, primaries are far more critical than general elections, yet in many State citizens are cut off from exercising their voting rights because they are ill or must travel outside the election district in which they are eligible to vote on primary day, because absentee voting in primaries is not permitted or is extremely difficult.

The Election Assistance and Voter Registration Act of 1972 would remedy this unjust hindrance to voting by requiring that absentee balloting be permitted in Federal elections and by providing simple procedures for that to be accomplished.

Finally, Mr. Speaker, my proposed legislation would encourage States and local jurisdictions to expand and streamline their voter registration efforts by providing funds and technical assistance for that purpose. In this respect, my proposal is similar to legislation introduced in the Senate by Senator EDWARD KENNEDY, S. 3420, the Registration Assistance Act of 1972. A special category of Federal grants would be provided to States and local jurisdictions that adopt simple voter registration by postal card.

A special Election Assistance and Voter Registration Administration is created in the Bureau of the Census to carry out these provisions and to monitor the conduct of Federal elections throughout the country.

Mr. Speaker, voter participation has steadily diminished in this country. In 1968, 40 percent of the eligible population did not vote in the presidential elections. Of that 40 percent, 47 million people, about 30 million were not registered. In short, more voters sat out the election than voted for the winner in a presidential election in which the margin of victory was less than a million votes.

This November we face a particularly decisive election in view of the important issues that face the Nation. It is especially important that we act now to eliminate obstacles that make voting a chore, that discourage voters from participating in elections, and that make the electoral process less than a true reflection of the attitudes and desires of all the American people.

If we are to increase voter participation, we can no longer permit or expect voters to face long waiting lines, to wrestle with inoperative machines, to be pushed aside by misinformed and untrained election workers, to be confused by highly complex ballots, or to be discouraged from voting by elaborate and restrictive registration and absentee balloting requirements. The Election Assistance and Voter Registration Act of 1972 would go a long way toward eliminating such problems and improving the efficiency and convenience of elections in this country. It would thereby help assure fuller, more satisfying participation in our Federal elections, and I urge my colleagues in the Congress to join me in seeking its prompt enactment.

Voters simply cannot be so inconvenienced by inadequate election facilities, personnel, and procedures that they become discouraged from participating in the electoral process and distrustful of election results. That has been going on far too long in many jurisdictions, and we must do everything possible once and for all to rid elections of frustrating inefficiencies that stifle and deter voting.

Mr. Speaker, a section-by-section summary of the Election Assistance and Voter Registration Act of 1972 follows:

SECTION-BY-SECTION SUMMARY, H.R. ——

Title: "Election Assistance and Voter Registration Act of 1972."

Section 2. Amends Title 13 of the United States Code by adding a new Chapter (11):

Section 401. Definitions. Defines "election" to include primary, special, and general elections in whole or part for Federal office and any election of national convention delegates or caucuses for selecting delegates. "State" includes the District of Columbia and any political subdivision of a State of the United States.

Section 402. Establishes a bipartisan, three-member Election Assistance and Voter Registration Administration in the Bureau of the Census appointed by the President to administer the Act.

Section 403. Duties and powers of the Administration include providing grants to carry out and improve voter registration and the conduct of election, to provide assistance upon request of State officials concerning voter registration and election problems generally, to collect, analyze, and publish information on elections in the United States, and to appoint and pay for staff and facilities. An annual report to the President and Congress is required.

Section 404. Authorizes assistance by grant, contract, or other arrangement in accord with subsequent sections of the Act.

Section 405. Authorizes grants and other necessary assistance to ensure efficient and convenient conduct of elections. Grants are limited to 10¢ per potential voter in a given jurisdiction or $35,000, whichever is greater.

Section 406. Authorizes grants to conduct and increase voter registration. Grants are limited to the total direct cost of voter registration in a given jurisdiction.

Section 407. Authorizes grants to modernize voter registration procedures. Grants are limited to one-half cent per potential voter or $15,000, whichever is greater.

Section 408. Authorizes grants for implementation of simplified voter registration by postal card, and limits such grants to the full direct cost of preparing and processing such cards.

Section 409. Authorizes technical assistance further the purposes of the act, including assistance in developing programs for the prevention and control of election fraud.

Section 410. Requires that persons absent from voting residence or physically unable to vote in person be entitled to vote by absentee ballot, and provides a simplified procedure for such absentee balloting. Authorizes such assistance to State and local jurisdictions as may be needed to carry out absentee balloting procedures.

Section 411. Established requirements for grant applications including fiscal controls, auditing, and reporting.

Section 412. Authorizes Election Assistance and Voter Registration Administration to issue rules and regulations.

Section 3. Amends Section 5316 of Title 5 to include members of the Election Assistance and Voter Registration Administration under Level V of the Executive Pay Schedule (basic pay, $28,000).

Section 4. Authorizes such sums as are needed to carry out the Act.

NEED FOR "INCOME DISREGARD" TO SAVE SOCIAL SECURITY BENEFIT INCREASES

(Mr. BINGHAM asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BINGHAM. Mr. Speaker, as matters now stand October 3, 1972, will be a day of bitter disappointment for many senior citizens rather than a day of improvement and hopes, as Congress intended.

October 3, 1972, is the day when social security recipients will receive their first social security check containing the benefit increases passed recently by the Congress and approved by the President. In the case of the many thousands of Americans whose total incomes, including social security, are so modest or whose health circumstances are such that they also receive other benefits, such as medicaid, aid to the blind and totally disabled, or old age benefits, the increase in their social security benefits will be accompanied by corresponding decreases in their other benefits. In some instances, they may lose one or more of these other benefits altogether. The result for these individuals will be not a net increase in income, as Congress intended in raising social security benefits, but no increase or even a net decrease in income.

In New York City alone, unless something is done at least 10,000 elderly people will be excluded from receiving old age assistance because the increase in social security benefits will raise their income above the old age assistance eligibility level. Fifteen thousand will no longer qualify for medicaid, and an additional 23,000 will have to begin paying for drugs and certain medical services and devices which they currently receive as benefits.

Mr. Speaker, this is an emergency situation which requires immediate action by the Congress, and I am today introducing legislation which would remedy what is surely an oversight by Congress resulting from the suddenness with which the social security benefits increase was brought before the House as a Senate rider to the debt ceiling bill.

The two bills I am introducing would require the States to pass on the full amount of any increase in social security benefits as a result of the recently enacted social security amendments either by ignoring such increases in computing eligibility for other types of benefits or by any other method a State might deem appropriate. One of the two bills imposes this requirement with regard to veterans' benefits; the other imposes it with regard to such benefits as medicaid, old age benefits, aid to dependent children, and other benefits funded under the Social Security Act other than, of course, social security retirement benefits.

Mr. Speaker I am sure no Member of this House will want to be a party to the cruel disappointment that so many social security recipients will face in October unless these "income disregard" requirements are enacted between now and then. The Congress established the principle of income disregard by permitting the States to ignore the 1971 social security increase in computing eligibility for other types of benefits. Unfortunately, unless mandated to do so, many States will not be able to resist cutting other benefits in amounts equaling the social security benefits increase, thereby turning more of the cost of these programs over to the Federal Government, and nullifying the decision of Congress to provide badly needed additional spending power for our hard-pressed senior citizens. So I urge the distinguished chairman and members of the Ways and Means Committee to take up and act favorably on the "income disregard" legislation I have introduced today, and I hope all my colleagues in the House who displayed their interest in the plight of our senior citizens by voting for the social security increases will now join me in supporting this emergency legislation to make those increases a reality for all social security recipients.

HEARINGS ON THE OCCUPATIONAL SAFETY AND HEALTH ACT

(Mr. DANIELS of New Jersey asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DANIELS of New Jersey. Mr. Speaker, there has been a great deal of discussion surrounding the operation of the Occupational Safety and Health Act of 1970 since the promulgated standards took effect last year. This has been of some surprise to those of my colleagues who worked for several years to draft an equitable law that would gain consensus in both bodies while achieving our real intent: to insure a safe and healthful environment for the Nation's workers.

It is apparent that there is a lack of accurate information about the law and its provisions. But what is worse is the plethora of misinformation and rampart rumor about OSHA. Out of this confusion have come numerous accusations from all the affected groups and a resulting rush to modify the law.

I believe that it is very important for us to pause at this point and listen to all the voices who are speaking for and about OSHA, and to examine the substance of the proposed administrative and legislative changes.

As chairman of the Select Subcommittee on Labor, I have scheduled 5 days of hearings on September 13, 14, 19, 20, and 21. This is in keeping with my June 15 commitment on the House floor during the Labor-HEW Appropriations debate. A letter to this effect has been mailed out today to all Members. Any Member who wishes to request time to testify or who wishes to submit a statement should contact the subcommittee staff.

VETO OF DEPARTMENT OF LABOR AND HEW APPROPRIATIONS

(Mr. WILLIAM D. FORD asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WILLIAM D. FORD. Mr. Speaker, yesterday President Nixon vetoed the Departments of Labor and Health, Education, and Welfare appropriations bill on the grounds that it represented "a perfect example of . . . reckless Federal spending."

While I share the President's deep concern over the critical problem of inflation, I find his reasoning for the veto of this crucial legislation both illogical and indefensible. During the presidential campaign in 1968, Richard Nixon proclaimed that the one area that could not be shortchanged by the Federal Government was education. Yet, since Mr. Nixon's election, we have witnessed three vetoes of vital health and education appropriation bills.

Those of us in Congress who supported this bill certainly agree with the President that excessive Government spending must be cut in the effort to curb inflation. During the last few years, I believe that Congress has demonstrated a conscientious effort to reevaluate what our national priorities should be and to enact legislation in accordance with these priorities.

Congress has shown its willingness to cut back in several areas. In June, the House-passed version of the military procurement authorization bill reduced the Department of Defense's budget request by $1.56 billion. And most recently, the House voted to cut over $120 million in questionable programs of U.S. foreign military assistance. But the President's message completely ignored the fact that Congress has already cut the Federal budget by more than the $1.8 billion that was added to the Labor-HEW appropriations bill.

The amount of funding Congress has appropriated in recent years for health and education programs expresses the strong commitment of both Houses to the serious needs of health and education. We have recognized that any attempts to sacrifice programs in these areas are indeed efforts at false economy. Thus, contrary to the President's charges of "reckless spending" I would maintain that Congress has been carefully working to redirect our spending, not to increase it at reckless levels.

The President has failed to realize that cuts in Federal education and health programs inevitably force a greater and greater burden upon State and local governments which only tends to negate any anti-inflationary effects of these cuts.

Mr. Speaker, at this point, I would like to relate the impact of this veto to the crisis in education in my own State of Michigan.

The State of Michigan has increased per pupil expenditures from $715 in 1968 to $1,148 in 1971. This was a 60-percent increase. The State received $30,677,000 in title I Federal assistance in 1968 and $41,359,000 in 1971, an increase of only 35 percent. The difference in effort has resulted in an increased burden on the local taxpayers to educate those who are most difficult to educate.

Michigan has had an increase of children receiving welfare assistance from 145,700 to 281,200 between 1966 and 1971, an increase of 93 percent. As pointed out before, title I only provided a 35 percent increase in that time span. Therefore, because the schools in the State are retaining more and more of the poor, the cost of operating and supporting systems has brought on an extra burden to local taxpayers.

In 1972, the Federal Government will grant moneys to the State of Michigan for title I, based on a count of approximately 326,500 poor children. The 1970 census indicates that the State has 428,262 children at or near the poverty level. The bill, which was vetoed by the President, would have provided $64,234,000 compared to $55,196,000 in fiscal year 1972.

The State has a potential need of $9,337,000 to offset local taxes paid to educate 36,618 children in rural and city schools in the State who live in federally subsidized housing. The House provision in H.R. 15417 would have begun to relieve some of that tax burden from the homeowner's shoulders. This money comes to local school districts unencumbered and would have been used for maintenance and operating expenses. The House recommendations would have provided an additional $362,000, not a cut of $1,400,000 as the President's estimate proposed to do. Is this fiscally responsible to put over a million dollar bite into the Michigan taxpayers' budgets? To put an addition $200 million burden on school districts nationally?

The President speaks of inflation and the gains in the economic situation at the national level, but look at what is happening at the State level. The veto of the Labor-HEW appropriations budget by the President will have particularly adverse effects on the compensatory education programs in several States. The title I distribution formula has a built-in mechanism for taking care of the needs of school districts whose concentrations of poor children has increased since 1966. This mechanism works by redistributing the title I dollars on the basis of the increases in numbers of children in impoverished families where there are dependent children. Michigan's count of such children increased from 148,837 in 1971 to 194,106 in 1972. Michigan was entitled to nearly $8 million additional dollars for the coming year under the House bill. But Michigan was not alone. Florida was entitled to $1,206,000; Georgia to $6,427,000; Ohio to $7,415,000; Texas to $8,305,000; and North Carolina to $3,079,000 of increases.

Not only did the President's action wreck havoc with the expanded programs the districts in these States were planning for the coming year, but it also will wreck havoc with their already depleted resources to finance the regular school programs. These districts, operating on a continuing resolution, usually spend at 80 percent of last year's level. That means the district must either reduce the programs through staff, service, and or salary cuts of up to 30 percent, or run the risk of continuing to provide the full program to these children out of the local taxpayer's revenues. It is the latter course that most school boards will courageously follow, hoping fervently that the Congress will muster up enough courage and votes to give these children the Federal revenues necessary to meet their basic educational needs.

Mr. Speaker, I find it particularly upsetting that the present administration—after its economic policies for the last 3½ years have failed, dismally—has chosen to wage its fight against inflation at the expense of our health and education needs rather than at the expense of superfluous aircraft or obsolete missile systems.

THE "MISSING" ENERGY CHAPTER FROM THE REPORT OF THE COUNCIL ON ENVIRONMENTAL QUALITY

(Mr. **FRASER** asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. **FRASER**. Mr. Speaker, the National Environmental Policy Act of 1969—Public Law 91–190, 83 Stat. 852, 42 U.S.C. 4341—requires the President to report annually to the Congress on the environment. The law specifies that this report shall set forth, among other things:

> (2) current and foreseeable trends in the quality, management and utilization of such environments and the effects of those trends on the social, economic, and other requirements of the Nation; (3) the adequacy of available natural resources for fulfilling human and economic requirements of the Nation . . . (5) a program for remedying the deficiencies of existing programs and activities, together with recommendations for legislation.

Nowhere in the environmental quality report sent to Congress last week by the President was the issue of national energy policy adequately dealt with. Energy—clean energy—is perhaps the most important environmental issue today. We must face squarely the inherent conflict between spiraling energy consumption and pollution control. To do this, we need a full ventilation of the issues and of the alternatives.

Last week the press reported that three chapters had been deleted from the environmental quality report prepared for the President by the Council on Environmental Quality—CEQ. The White House and the Office of Management and Budget, according to newspaper accounts, decided that the sections on energy, recycling, and management of the Delaware River Basin were "politically sensitive" and should be withheld until after the election.

CEQ has responded that the chapters in question are "rough draft reports" of a "preliminary nature," that they require further work, and that possibly one chapter, or two, may be ready for publication on or about November 1.

The annual environmental report is incomplete without meaningful consideration of the energy question. More important is the fact that a report on this politically sensitive issue may not be available before the election. Wednesday, hearings on the CEQ report were held before the House Public Health and Environment Subcommittee. Chairman Rogers raised the question of the need of Congress for an arm to evaluate national environmental policy—a body that could give Congress and the people informed views on national policy issues without executive censorship.

My experience on the Foreign Affairs Committee indicates that our questioning of administration witnesses seldom uncovers the alternatives debated within the executive branch before the administration closes ranks around its final decision. We are often unaware that options existed. If Congress is to subject the administration's policies to the critical review that our national welfare requires, we must be aware of the options. And for this we need competent advisers.

After Senator McGovern charged the White House with suppressing the chapters in question, CEQ made a few copies available to the public, to be read in their offices at 722 Jackson Place, NW., across from the White House.

My constituents should have access to this report on national energy policy. It touches on such sensitive topics as the pricing of electricity and conservation of fuels. The fact that the chapter in its present form does not have unqualified administration endorsement does not detract from its usefulness. In fact, it may add to it.

The following excerpts from the energy chapter are reconstructed from notes taken by a member of my staff, who read the missing chapters, in accordance with executive branch ground rules, in the CEQ conference room:

INTRODUCTION

"In the past one hundred years, the nation's total consumption of energy has multiplied seventeen-fold, and this accelerating trend is expected to continue. Unfortunately, energy consumption now causes damage to the environment from the extraction of the resource to its ultimate conversion into useful energy. And as our use of energy has multiplied, so have the attendant environmental impacts. These side effects of energy consumption are a serious problem and a major public concern.

"This chapter examines the factors underlying our increasing demands for all energy. It also considers the particularly rapid growth in demand for electrical energy. For this reason, it examines the major systems which convert the raw energy resources into electricity and the environmental impacts of these alternative electrical energy systems. The chapter then discusses the major avenues open to us to halt environmental degradation associated with the generation of electricity and provides a preliminary assessment of the increased cost of electrical energy with environmental controls. Finally, it sets forth a methodology to help analyze national energy policy issues. . . .

"THE DEMAND FOR ENERGY"

U.S. consumption of energy in 1971 was almost 71 million billion (70 x 10^{15}) BTU's.

The productivity of our economy "has been substantially increased by energy intensive tools. . . ." There is a strong relationship between energy consumption and standard of living.

The following table shows: "Market Saturation—Percent of Homes with these Electrical Appliances." The table figures show a marked increase in percentage from 1960–70:

Appliance	Percentage of homes with this appliance	
	1960	1970
Electric range	37.3	55.5
Air conditioner	15.1	40.6
Dishwasher	7.1	26.5
Vacuum cleaner	74.3	92.0
Washer	85.4	92.1
Dryer	19.6	44.6
TV	89.4	141.2

". . . Residential consumer decisions to use more electricity are certainly influenced by the fact that it is not very costly. . . . These trends in the residential sector are also seen in the commercial sector, where increased use of electricity for all types of appliances is growing without any end in sight."

Our transportation system relies increasingly on energy. Twenty-four percent of all energy consumed in the nation is used to transport people and materials. Of this, 55% is used by automobiles, 21% by trucks, 8% by aircraft, 3% by railroads, and the remainder by other modes of transportation (buses, pipelines, etc.)

". . . In every area of transportation there is a growing demand for more energy, and this trend is likely to continue unless the cost of energy rises dramatically. There is now more than one automobile for every two people . . .

". . . Indeed, industry is the largest consumer of energy today."

Manufacturing production has more than doubled from 1950 to 1968. The number of man-hours worked has risen only from 23,717 million to 28,287 million—a worker-productivity increase of 85%.

". . . Capital and energy intensive processes have replaced human labor, partly because energy has been inexpensive compared with wages . . .

"One other major trend in energy demand must be emphasized—the escalation in the use of electricity. Its consumption is growing at a rate of 7% annually, or twice as fast as all other energy use. . . .

"Both total energy use and our rising dependence on electricity are largely due to the low cost of energy. Because energy is not expensive, home owners and industry are increasing their consumption. . . . Hence, the task of policy makers is to plan for energy supply systems that can meet these needs with the least damage to the environment . . .

"An energy system has six components: extraction, processing, transportation, conversion, transmission and consumption . . ."

Man, historically, first relied on his own muscle strength as an energy source. He subsequently learned to make fire, wind, water and beasts of burden work for him. In the nineteenth century, wood was the principal energy source.

Today we rely on fossil fuels. In the future, perhaps we will rely on nuclear power.

"Coal is this country's most abundant energy resource and it will continue to be an important contributor of energy to 1985 and beyond . . .

"Oil is estimated to remain the major energy source from 1970 to 1985, increasing from 42.5% of total energy resources in 1970 to 46.9% in 1985. Measured in absolute terms, oil use in 1985 is estimated to be double that of 1970 . . .

"Natural gas demand from 1970 to 1985 is expected to be great, but domestic supplies are limited. Natural gas availability will be highly dependent upon pricing policies and our longer term ability to get more gas with stimulation techniques or coal gasification. It is also expected that natural gas will decline in relative significance as a component of total energy supply . . .

"Nuclear power will be used at an ever increasing rate between now and 1985. By then, it is estimated to be 15% of total energy—all in the form of electric power. . ."

New systems are emerging. ". . . the extent of their use is largely unknown today . . .

"The factors governing these expected changes in the energy mix are complex. Historically, both supply and ultimate price have been major factors in the demand for each resource. And relative price, which leans heavily on technology, resource availability and, to an unprecedented degree on environmental protection, also will figure in any future use of energy sources . . .

". . . natural resource shortages are not likely to limit energy supply in the long-term." Our coal supply will last for hundreds of years if we can control the environmental impacts of its use. Breeder reactors can extend our uranium supply almost indefinitely.

". . . And in the short-run, the United States will have to import considerably more energy in the form of oil and natural gas, which could strain our balance of payments and make us more dependent on insecure sources of supply . . .

"The real questions about energy availability for the future are, can we plan for and build the energy systems we will need, and how much will energy cost, both in economic resources and environmental quality? . . .

"WHAT ENERGY CONSUMPTION DOES TO THE ENVIRONMENT

"Few realize the degree to which energy systems affect the environment although many are aware of damages from specific energy activities. Converting fossil and nuclear fuels into energy leads to air pollution, water pollution, solid waste generation, land disruption and aesthetic degradation. Automotive air pollution, thermal discharges to lakes and streams, and land destruction by surface mining typify the diverse environmental damages of energy consumption. Energy is central to most things we do—transportation, manufacturing, and household conveniences—but environmental degradation is the price we pay. . . .

"AIR POLLUTION

'". . . energy systems account for over 72% of the total of ——— [sic] tons of air pollutants. Emissions from the combustion of fossil fuels in transportation—diesel oil and gas—are the largest source of air pollution. The second biggest group includes emissions from powerplants and from the use of fuels that generate heat. These two groups account for over two-thirds of all air pollution by weight . . .

"WATER POLLUTION

"Industrial processes, rather than energy production, account for the major share of oxygen demanding wastes (BOD) and other physical and chemical forms of water pollution."

Various forms of water pollution resulting from energy production are: oil spills, brine generated by oil extractions, acid mine drainage and siltation from coal extraction, and thermal discharges from electric powerplants.

LAND POLLUTION

Surface mining has affected over three million acres of land. Two-thirds of this area needs to be reclaimed. Forty-one percent of the total area affected has resulted from energy fuels extraction.

Deep mining has resulted in subsidence of land over mined-out areas. Nine million acres have been undermined by deep coal mines.

". . . And by the year 2000, over thirty million acres may be damaged by all mining, if reclamation is not undertaken. That is an area as big as the states of Maine, Massachusetts, Rhode Island and Connecticut together."

By the year 2000, the land area used by overhead transmission lines will be 8.5 million acres— ". . . an area larger than Delaware and Maryland combined . . .

"SOLID WASTES

"Energy consumption also generates solid wastes. Of the estimated total of 4.3 billion tons of solid waste produced annually, mining wastes account for almost 40% of it, with coal mining a big offender . . ."

Furthermore, solid wastes can catch fire, thus adding to air pollution. These wastes, through ground runoff or leaching, can also impair surface or ground water quality.

". . . In 1970, electric power generation from nuclear plants produced about 100,000 gallons of high level radioactive solid wastes. By the year 2000, this may increase to 6 million gallons annually. These wastes must be permanently stored because they can remain highly radioactive for thousands of years and present a very long-term, environmental hazard. A search for a national repository for these wastes is currently underway, but no acceptable site has yet been found. Also one million cubic feet of low level radioactive wastes were buried in 1970 and the quantity will triple by 1980. . . .

"ELECTRIC POWER ALTERNATIVES: THEIR ENVIRONMENTAL EFFECTS

"Because energy consumption is a major contributor to environmental degradation, political decisions on future sources, conversion processes and mixes of energy systems must be carefully charted. Environmental impact data must be developed for total energy systems. . . . For example, one fuel may cause twice as much total particulate emissions as another, but supply four times the energy. . . .

"This chapter evaluates the environmental impacts of electric power generating systems to illustrate how the analysis can be done and what results to expect. . . ."

A 1000 megawatt MWe plant operating at 85% capacity for one year—typical of electric powerplants now being built—is taken as the basis of comparison. "It generates nearly 7.5 billion kilowatt-hours annually or enough to meet the demands of a city of 1.3 million people."

COAL

The extraction process results in disturbed land, solid wastes, and water pollution. Processing produces solid wastes, water and air pollution. Transportation of coal involves air pollution from railroad train engines, land used by railroad right-of-way, and human fatalities from accidents. The conversion process pollutes the air (SO_x, NO_x, and particulates) and results in solid wastes and thermal discharges to water. Transmission of energy produced by coal entails line rights-of-way.

OIL

". . . Thus for oil-fueled electric power systems, the major land impacts are from transmission lines and domestic transport. The major sources of water pollution are off-shore oil extraction and oil transport, while air emissions are a problem primarily at the powerplant and the refinery. . . ."

GAS

Natural gas causes the least damage to the environment.

"NUCLEAR

"Uranium ore is extracted surface [sic] or underground mining after which it is concentrated in a complex process called milling. Because of the high energy value of uranium, relatively little land is affected in supplying the annual needs of a 1000 MEe powerplant.

"After milling, the concentrate is chemically converted, enriched, and fabricated. Also, spent fuel from the powerplant is reprocessed and then reintroduced into the enrichment operation. These processing steps generally occur at different sites so that transportation is required. The enrichment operation in particular causes significant radioactive emissions to the air. Also, solid wastes pose a disposal problem.

"As for transportation segments, the major environmental hazard is the potential of an accident. Because the fuels and wastes are very compact, there are few other transportation impacts.

"After the fuel is fabricated, it is transported to the powerplant where the electricity is produced. At the powerplant, there are radioactive emissions to air and water, and considerable waste heat emissions to water. And, for the nuclear fuel system in particular, the transmission line rights-of-way are the dominant land use.

"Thus, the processing steps, and especially enrichment, are the largest sources of high level radioactive solid wastes and radioactive emissions to air. The powerplant produces less radioactive emissions but is responsible for considerable thermal discharges to water."

There is difficulty comparing diverse categories of energy. More sophisticated methodologies and indeces are needed.

". . . Table IV summarizes these environmental impact data for each electrical power system without environmental controls."

Severity ranking key:

5=serious, 4=significant, 3=moderate, 2=small, 1=negligible, 0=none.

System classification	Air impact	Water impact	Solid wastes	Land impact
Coal:.				
Deep mine	5	5	3	3
Surface	5	5	4	5
Oil:				
Onshore	3	3	1	2
OCS	3	4	1	1
Imports	3	4	1	1
Natural gas	2	1	0	2
Nuclear	2	4	4	2

This severity-ranking index is acknowledged to be the subjective view of CEQ.

". . . While conventional water pollution from the nuclear power system is also low, but [sic] it does produce some radioactive emissions and about fifty percent more waste heat than any of the other systems. This large heat load, rather than the radioactive discharges, accounts for its high severity rating . . .

". . . The nuclear system produces little solid waste but some of it is highly radioactive. This is the reason for its high severity rating . . .

". . . Comparing a nuclear power system and the fossil fuel alternatives points up several important environmental tradeoffs. It highlights the difficulty of identifying the most desirable system when the impacts of each system are very different.

"A nuclear power system requires a very small quantity of fuel and, consequently, only limited extraction and transportation. Because these activities are the largest sources of occupational deaths and injuries, the nuclear power system causes few deaths and injuries. Also, there is little land disruption either for extraction or transportation rights-of-way. Because the nuclear system requires no refining or combustion, there are literally no emissions of our most common air pollutants—sulfur oxides and particulates. There are, however, low levels of radioactive discharges which are persistent in all media and which, at high levels, are known to be harmful to all forms of life. Radioactive and extremely long-lived, these solid wastes must be monitored constantly, even after burial. Also, because nuclear plants are less efficient, thermal discharges to receiving waters are about fifty percent greater than for any of the fossil fuel systems. Finally, there is a great range of potential accidents from nuclear power plants and processing facilities—from very small intermittent releases of radioactive materials to major reactor malfunction. Should the worst type of reactor failure occur, which current nuclear plants are designed to avoid, the potential for large scale damage to human health and the ecosystem is vastly greater than for fossil fuel systems.

". . . Natural gas is by far the least environmentally damaging of the fossil fuel alternatives." (However, current recoverable reserves are limited.)

". . . In the absence of controls, our most abundant resource, coal, causes the widest range of environmental damages. . . .

"ENVIRONMENTAL CONTROLS FOR EXISTING ELECTRIC POWER SYSTEMS

"Controls are possible to reduce the environmental damage from electric energy production, and in many cases these have been mandated by Federal, State and local legislative or administrative action."

Table V shows what can be achieved through environmental controls:

System classification	Percentage change— Air impact	Water impact	Land impacts[3]
Coal:			
Deep mine	−88	−91	+34.0
Surface	−88	−96	−39.0
Oil:			
On-shore	−75	−64	+1.4
OCS	−75	−48	+1.4
Imports	−75	−32	+1.7
Natural gas	0	−90	0
Nuclear	(1 2)	−90	0

[1] A controlled nuclear system emits 396,000 curies to the air, or a reduction of 31 percent from existing systems.

[2] A controlled nuclear system emits 54,000 curies to the water, or a reduction of 40 percent from existing systems.

[3] Land impacts are reduced by reclamation but are increased for solid waste disposal.

. . . Not included in the table are thermal discharges to water, because wet natural draft cooling towers at the powerplant in each system can virtually eliminate that problem. . . .

"THE COST OF ENVIRONMENTAL CONTROLS

"As control techniques are implemented, the cost of electric power will rise. . . . the control costs will be significant."

The cost of coal-based electric power will increase about 25% with the implementation of control techniques. The costs of nuclear and gas-fired systems will increase under 10% and of oil-fired systems about 20%. The percentage increase estimated is in costs and not in prices.

". . . as environmental controls are required, emerging energy systems that are expensive now compared to existing alternatives, but are less economically damaging, may become more economically attractive. . . .

". . . These expected changes in the mix of energy systems are desirable. They spring from an internalization of the environmental costs of energy production and consumption. Subject to fuel availability, they will stimulate use of those energy systems that are the least damaging to the environment. . . .

". . . total energy use also may be affected. Put another way, somewhat less energy may be used than would be the case without controls, and more other products and services, which do less inherent environmental damage, may be purchased instead. . . .

"EMERGING ELECTRIC POWER GENERATING SYSTEMS

". . . Assessing the environmental impacts of emerging systems is difficult . . . but must be done before full-scale development begins . . .

"Among the many emerging energy systems, those with the greatest promise for use within the next two decades include oil shale, coal gasification and stimulation for increased gas recovery, as well as several types of advanced nuclear power systems.

"In the longer term, nuclear fusion and solar energy systems hold great promise of significantly freeing us from our reliance on the earth's natural resources."

HIGH-TEMPERATURE GAS-COOLED REACTOR

Uses helium as a coolant rather than water. Thermal wastes are thus reduced. Because the cooling-effect is greater with this type of reactor, there is less danger of a major reactor accident. A 40 MWe high-temperature gas-cooled reactor pilot plant has been in operation since 1967. A 330 MWe demonstration plant is scheduled for operation by the end of 1972.

FAST BREEDER REACTOR

The liquid fast breeder reactor (LMFBR) currently has the highest priority for development. It may be in commercial use in less than two decades—on a large scale. This type of reactor produces 40% more fuel than it consumes. This is the principal difference between the LMFBR and the conventional light water reactor. The fast breeder reactor converts uranium into plutonium.

The projected impact of the LMFBR is that there will be a significant reduction in total radioactive emissions and thermal discharges.

". . . However there are several other factors that warrant careful consideration." Theoretically, reactor failure can occur more quickly in the LMBFR than in a light water fission reactor. The plutonium generated by the breeder reactor remains radioactive for thousands of years. ". . . safe storage and handling techniques are necessary."

EFFICIENCY

There are several ways of reducing environmental problems associated with energy: one, by putting additional controls on existing energy systems; two, by developing new systems with fewer environmental problems; and three, by introducing greater efficiency into existing systems.]

". . . It is apparent . . . that each electric energy system has a very low overall efficiency . . . there are large areas for improved efficiency, particularly in resource extraction and powerplant design. . . . By locating powerplants near industrial complexes, rejected heat could be used for industrial process heat."

An energy storage system could be devised to offset peak power requirements.

". . . The graphs also indicate that with total production of electric power growing rapidly, air and water pollution emissions will eventually become more severe than they were in 1970—even after implementation of current control technology. At some point, then, even more stringent controls will be required just to keep environmental quality from declining further.

"TOWARD AN ENVIRONMENTALLY SOUND ENERGY POLICY

". . . The nation's energy demands have grown dramatically in the last several decades, and a number of economic and social factors indicate that this trend is likely to continue. . . .

"With this increase in energy use has come a tremendous increase in our material well-being. But the complex, pervasive energy system which has developed to supply this demand leads to two important interrelated effects. First, there has been widespread environmental damage from energy production and consumption. Second, because energy is inexpensive and generally fails to take environmental degradation into account, existing systems are very inefficient. They consume large quantities of energy resources to produce power in convenient forms. . . .

"In this period of increasing energy demand and growing public concern over environmental degradation, the nation must inevitably make a number of important decisions to augment current energy supplies while protecting and enhancing environmental quality. . . .

". . . the costs of various energy systems should be determined with environmental controls included. . . .

". . . The effect of price increases from environmental controls will have by far the most important impact in encouraging more efficient and environmentally desirable forms of energy use in the future. However, for energy consumers to respond to these changing costs, it is important that government actions not restrain market forces.

"Because it is not always easy for consumers to determine total energy costs for alternative purchases, the Federal Government has the role of stimulating energy conservation and providing information to the public . . .

"More difficult, perhaps, are government actions to upgrade the efficiency of energy systems. . . . Increasing attention must be paid to efficiency. The Council believes that stepped up efforts to improve the efficiency of energy systems can yield significant environmental and economic benefits.

"Finally, the Federal Government must continue to assess at the national level the impacts of proposed new technologies to meet projected energy needs. With the National Environmental Policy Act, we already have a strong tool to force assessments of the environmental impacts of new energy systems. . . .

". . . Energy is responsible for a major share of our environmental problems, and its interrelationship with the quality of the environment requires a broad policy focus. Rationalizing energy and environmental considerations is dependent both on consolidating Federal energy programs under a Department of Natural Resources and on developing analytic techniques such as those discussed in this chapter. For without a comprehensive institutional base and adequate analytical tools, we will be unable to reconcile demands for dependable energy supplies with demands for a higher quality environment."

REPORTORIAL RESPONSIBILITY

(Mr. PRICE of Illinois asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PRICE of Illinois. Mr. Speaker, as many of my colleagues know, for many years I was a news correspondent for papers in the East St. Louis area and I am still a member of the National Press Club. It seriously concerns me when I uncover bad journalism.

In the Monday, August 14, 1972, edition of the Washington Post there was an article attributed to the Associated Press which stated that the unfortunate death of two persons at the Virginia Electric & Power Company's nuclear plant in Surry, Va., was caused by a nuclear accident. The article went on to state that a Mr. Stephens, president of the Environmental Action Center, claimed that his group knew this to be a fact because of information received from VEPCO employees and from tests on the reactor.

When I learned of this article, I immediately had the Joint Committee on Atomic Energy staff try to contact Mr. Stephens or some other member of his Environmental Action Center. What I learned was that there is no such group as the Environmental Action Center. The Joint Committee was unable to contact Mr. Stephens at his Alexandria home. The staff did contact a Mr. Love from Environmental Action, Inc., and he said that Mr. Stephens had been using the name of his organization but had no contact with any known reputable environmental group. In the August 14 edition of the Star and in the August 15 edition of the Washington Post there is essentially a retraction of the original AP story.

It would seem to me that good journalism would dictate a thorough check of such a story. A simple telephone call to Mr. Love of Environmental Action, Inc., could have averted this erroneous report. Such a minor effort would have protected the Associated Press from distributing a story which borders on the science fiction put forth by those with special interests. These special interests include trying to dupe people into supporting nonexistent organizations. This is sometimes called fraud.

The fact of the matter of the unfortunate accident at Surry, Va., is that the powerplant recently came on line and is still undergoing tests. The reactor had been shut down the day before the two men were scalded, when a steam vent failed. The water was being heated by other than nuclear means at that time. No radioactivity whatsoever was involved.

Mr. Stephens should be embarrassed, as should the reporter who listened to him, for the great disservice they did this country.

In order that the Members of this body may have the benefit of the facts in this case, I ask unanimous consent to have printed in this Record a press release on this matter issued by the Atomic Energy Commission on August 17, 1972.

The press release referred to follows:

Preliminary Summary of AEC Investigation of Steam Accident at Surry Plant

On July 27, 1972, two employees of Virginia Electric and Power (VEPCO) were seriously burned by escaping non-radioactive steam at the Company's Surry Nuclear Power Station, Surry, Virginia. Both men died within a few days at the Medical College of Virginia Hospital in Richmond. The Atomic Energy Commission's Directorate of Regulatory Operation is investigating the accident. AEC inspectors were at the site on July 28–30 and August 3–5 reviewing the details of the accident, interviewing VEPCO management personnel and reactor operators and other employees, and examining pertinent plant records. While the AEC investigation is still incomplete, preliminary conclusions are as follows:

1. No radiation or contamination was encountered or released during the course of the accident or as a result of it.

2. The nuclear operation of the reactor had been discontinued on July 26 for maintenance and testing under shutdown conditions in accordance with normal practice and did not contribute to the cause or severity of the accident.

3. The accident resulted from a disconnect of the decay heat valve nozzle from its vent pipe and was a consequence of either inadequate design or installation. No weld failures have been discovered during the course of investigations which are continuing.

The following pertinent facts relate to the accident:

The Surry I reactor had completed startup testing at the 30 percent power test plateau (236 Mwe) on July 26 and was shut down that evening to conduct maintenance and additional testing with the reactor in a shutdown condition. At 7:15 a.m. on July 27, with the reactor shut down, the operator planned to control the reactor primary coolant temperature by venting steam from the secondary (non-radioactive) side of the steam generators to the atmosphere (heat was being added to the primary coolant system by operation of the main coolant pumps and reactor decay heat). The operator attempted to open the two power relief valves which vent secondary system steam to the atmosphere; however, these valves failed to open. Two technicians were sent to the equipment room where the valves are located to investigate the failure.

The operator initiated venting to the atmosphere through the decay heat release system. The decay heat release system is normally used to dissipate heat from the reactor by venting secondary steam to the atmosphere after the reactor is shut down. When the decay heat release control valve was opened, the 4½ inch valve discharge nozzle disengaged from the 8-inch exhaust pipe which vents to the roof of the building. The disengagement of the nozzle from the vent pipe was caused by the reaction force of the steam jet when the decay heat valve was actuated. This resulted in the release of non-radioactive secondary steam to an equipment room located between the reactor and turbine buildings.

The two instrument technicians, who were inspecting the power relief valves in this room at the time of the occurrence, received second and third degree burns over sixty percent of their bodies. No radioactivity was released and no personnel exposure to radiation was incurred as a result of the accident.

Excessive movement of the decay heat release system piping had been observed and had been reported by the operators during earlier plant tests. The problem had been scheduled to be corrected during the shutdown in which the accident occurred.

Corrective actions have been made by VEPCO and have been reviewed for adequacy by the AEC. These include: securing the valve nozzle to the vent pipe, securing the valve actuator to wall braces to limit movement, and several changes to improve egress from the equipment room and control access to the room. The plant is expected to resume operations in the next day or so. The AEC investigation and analysis is continuing, and a full report will be issued.

DRUG AMENDMENT PROVES VALUE

(Mr. MONAGAN asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. MONAGAN. Mr. Speaker, the decision by an appeals court in Paraguay to extradite drug trafficker, Auguste Ricord, marks an important milestone in international narcotics law enforcement. It is an action which promises improved cooperation in the future, and which demonstrates the significance of section 481 of the foreign aid program, directing the President to cut-off foreign aid to any nation which fails to cooperate in combating drug traffic. Though aid was never actually terminated in this case, this provision provided the crucial leverage on a Paraguayan Government otherwise reluctant to take enforcement action.

The Ricord case has been pending since March 1971, when Ricord was arrested at the request of the U.S. Government for his role as a kingpin in Latin American narcotics smuggling operations. Ricord was considered a particularly valuable catch for his intimate knowledge of the "Latin Connection" which is to a large degree replacing the "French Connection" as the prime source of narcotics entering the United States.

Because of Ricord's importance, the United States asked for immediate extradition. Unhappily, no action came as Paraguay officials pondered the case for more than half a year before the courts took up the matter. When the problem finally reached the courts, the judge rejected the extradition request on the grounds that Paraguayan-American extradition treaty of 1913 did not specifically mention narcotics. The Ricord case was appealed to a higher court but it appeared that Ricord might avoid major punishment.

In April 1972, I wrote to Secretary of State Rogers to express my concern over the Ricord case. As the author of section 481, I felt that the failure to extradite Ricord was a disregard of the spirit of cooperation which this provision was intended to foster. Mr. David M. Abshire, Assistant Secretary of State for Congressional Relations, informed me at that time that the text of section 481 had been "communicated" to the Paraguayan Government.

I feel that the recent decision to extradite Ricord is in large part the result of that "communication." Under the threat of a cut-off in U.S. foreign aid, and under the pressure of unfavorable international publicity, the appeals court determined that Ricord was covered by the spirit of the 1913 treaty, if not by the letter.

Hopefully, the Ricord extradition will mark a significant improvement in cooperative efforts between the United States and all nations which are located on the narcotics supply routes. The extradition of Auguste Ricord does not mean that the flow of narcotics into the United States will dry up. However, it does mean that another link has been broken. And it means that section 481 of the foreign aid program can be an important tool in combating the illegal drug traffic.

THE PRESIDENT'S ECONOMIC STABILIZATION PROGRAM

(Mr. BROWN of Michigan asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BROWN of Michigan. Mr. Speaker, it has been just over a year since the President announced his new economic policy, a program designed to curb the skyrocketing rate of inflation.

While all of us recognize that problems remain in certain segments of the economy, the progress is notable and I think we should all realize that we are better off today than we were a year ago.

For instance, inflation today is at an average annual rate of 2.7 percent. Last year at this time it was at an unsatisfactory average annual rate of nearly 4 percent. The goal is to get the rate of inflation to between 2 and 3 percent and I think the administration is well on its way toward achieving that mark. I commend the following assessment of the economic stabilization program by Cost of Living Council Director Donald Rumsfeld and some news articles and editorials to the attention of my colleagues:

AN ASSESSMENT OF THE PERFORMANCE OF THE ECONOMY UNDER THE ECONOMIC STABILIZATION PROGRAM

(By Donald Rumsfeld, Counsellor to the President of the United States and Director of the Cost of Living Council)

THE NEW ECONOMIC POLICY

Since August 15, 1971, the Administration has been pursuing a new economic policy designed to stimulate a vigorous expansion in domestic economic activity accompanied by a reduction in the pace of price inflation. The performance of one of the components of the policy mix adopted, the Economic Stabilization Program, should be assessed in terms of its ability to stabilize prices and wages, without chilling the economic recovery stimulated by expansionary fiscal and monetary policies.

THE ECONOMIC SITUATION LAST YEAR

Such an assessment must begin by reviewing the economic picture one year ago. First, although employment, productivity and output had begun to rise, the pace of the recovery was not satisfactory. There was, therefore, a need to provide greater economic stimulus for the economy to reduce unemployment and achieve a rate of output growth closer to the production potential of the economy.

Second, although the rate of inflation had been declining for more than two years, prices were still rising at an unsatisfactory rate near 4 percent. The dominant view was that the continuing inflation was mainly the result of cost increases forcing up prices, providing the necessity for further cost and price increases on a self-sustaining basis. Support for this view of the process was drawn from evidence of continuing large wage and labor cost increases under new collective bargaining agreements and continuing increases in wholesale industrial prices.

There was, consequently, widespread concern that additional stimulus applied to the economy would simply be dissipated in rising inflation with little impact on real output and employment.

It was against this background that the freeze was imposed and the post-freeze system of controls was developed. Both the freeze and the Phase II controls were designed to break the inflation psychology and to limit wage and price increases to rates compatible with a gradual return to full employment coupled with price stability.

PROGRESS UNDER THE STABILIZATION PROGRAM

The freeze was successful. It met with broad public support and voluntary cooperation. However, the freeze was too rigid and inflexible to be maintained for an extended period of time. A more flexible and equitable system was necessary to permit necessary market adjustments, efficient operation of the economy, and expansion in production and employment.

As we approach the first anniversary of the new economic policy, a review of developments in prices, production and employment over the past year provides some insight into the program's success.

PRICES

The overall evidence on the price-front clearly indicates that substantial progress has been achieved in reducing the rate of inflation. The term "overall evidence" is used because the appraisal is complicated by the sharp break in price trends generated by the freeze.

Prices were subject to a 90-day freeze after August and this was followed, as was expected, by some bulging after the freeze itself was lifted. This poses the difficult question of which period one should look to in assessing the results. Some would look to the entire period since August—but for others this produces a result that may be biased downward because it includes the non-recurring episode of virtual stability during the freeze period. Others would look only to the post-freeze period, but for some this introduces an upward bias because it includes the non-recurring episode of the post-freeze bulge. To confuse the issue further some would include raw farm prices, because people have to eat after all, while others would exclude these prices because they tend to display large movements, up and down, that are not closely connected with the overall pattern of price trends.

Given these basic difficulties, the easiest thing to do is to summarize the evidence and allow you to judge.

Before August 1971, the Consumer Price Index had been rising at about a 4 percent annual rate. The exact number varies with the span of time considered before August. The 10-month rate to August 1971 was 4.0 percent; the 7-month rate was 3.9 percent; and the 3-month rate was 4.1 percent. In June 1972, the latest month for which consumer price data are available, the rate of increase in the Consumer Price Index was about a full percentage point lower. The 10-month rate to June was 2.7 percent; the 7-month rate was 3.1 percent and the 3-month rate was 2.2 percent. The 7-month figure excludes the freeze but includes the last winter's bulge in food prices. To take the best statistic, for non-food commodities in the Consumer Price Index, the rate of increase since last August has been 1.7 percent. To take the worst, food prices have gone up 4.0 percent in the 7 months of Phase II, compared with a rate of 5.5 percent in the 7 months preceding the freeze. Since the interim price target is to get the rate of increase in consumer prices down durably and clearly below 3 percent by year-end, the evidence clearly indicates that we have made substantial progress in achieving this objective of the New Economic Policy.

Other data depicting price performance over the last year are also available. Since last August the WPI has risen at a rate one full percentage point lower than the pre-program months of 1971, even though farm prices rose abnormally during February and July. The GNP implicit deflator increased at an annual rate of 2.1 percent last quarter compared to rates in excess of 4 and 5 percent in pre-program periods.

OUTPUT, EMPLOYMENT, AND EARNINGS

The improved price performance is taking place in a context of vigorous economic expansion.

The strength of the recovery is indicated by growth in real output at an average annual rate over 7 percent during the last 3 quarters, more than double the 3 percent recorded in the 1971 period prior to the launching of the New Economic Policy. Since August 1971, there has also been an increase in employment of about 2.5 million persons pushing the unemployment rate down to 5.5 percent. The brisk economic expansion has been widely based and supported by increases in both capital investment and consumer spending. The surge in production has led to healthy gains in corporate sector income, permitting increases in both profits and real wages. The 5 percent average annual increase in productivity in the last three quarters has been reflected in real spendable earnings rising at an annual rate of over 4 percent, contrasted with virtually no growth in real wages in the last five years of the 1960's.

BALANCED IMPACT OF THE PROGRAM

Some who have criticized the operation of the program have conceded that progress against inflation has been achieved. Critics from this side have alleged that the progress that has been achieved in reducing inflation was achieved at the expense of workers and their wages. One of the purposes of the program, of course, is to reduce the rate of increase in nominal wages toward levels consistent with long-term projected productivity gains. Nominal wage rate increases have slowed considerably during the program period. The 5.6 percent increase in average hourly earnings since last August is at least one percentage point lower than in any comparable period before the program began. However, since wages have moved up faster than prices, real purchasing power of workers has advanced significantly. In fact, real take home pay of the typical rank and file worker has increased at an annual rate of 4.5 percent since the program began, reflecting both the relative behavior of wages and prices as well as the increase in hours worked and changes in Federal taxes. Finally, the real earnings growth has been more broadly shared as a result of the expansion in employment.

Skepticism has also been expressed concerning the program's treatment of corporate profits. Some have been concerned that business profits might be adversely affected by the Price Commission's profit margin limits. On the other hand, there are those who argue that prices and profits have been allowed to expand while wages were being held down. The merits of these opposing arguments can be evaluated by reviewing briefly the application of Price Commission regulations and recent movements of corporate profits.

There is no limit on either the absolute size of a firm's profits or its profit margin when increases are the result of rising sales volume or increased efficiency. If a firm increases its prices, however, its profit margin is limited to the ratio of its profits to sales during the base period. Some price reductions and rollbacks have occurred as a result of the profit margin limitation. The extent of the rollbacks and reductions is limited to either a reduction of all prices to base period levels or a reduction that leads to a profit margin equal to that in the base period, whichever is less.

Total corporate profits have risen cyclically since late 1971 primarily reflecting the strong economic recovery. Corporate profits were about 8.5 percent higher in the first quarter of 1972 compared to the same quarter one year earlier. As a percentage of income originating in corporate business, however, profits are still considerably below the average of the last half of the 1960's.

GENUINE PROGRESS

Another question frequently asked is whether the progress recorded against inflation is temporary and artificial, achieved only with the aid of the crutches of direct wage and price controls. The implication is that either prices and wages will explode when the crutches are removed or that the crutches will have to become a permanent part of the future.

A number of characteristics of the controls mechanism as well as recent program actions do not lend credence to this argument.

First the system was not designed and implemented in a way that involves significant cost absorption by business or the counterpart of cost absorption in wages. The regulations permit pass through of allowable costs for prices, and there are provisions for catch-up, tandem arrangements, and other exceptions to avoid inequities in wages.

Second, a fraction of the economy has been exempted from controls on both pay and prices under the exemption of small firms with 60 employees or less. An additional large segment of the work force was exempted under the low wage exemption of $2.75 per hour. Reliance has therefore been placed on a combination of competition and controls. These factors help to assure that the basis is being laid for continued improvement in price performance when cost-push forces recede and controls are no longer needed.

LIMITED PURPOSE AND EXTENT OF THE CONTROLS

Finally, after one year of controls, it is appropriate to ask whether the mechanism has been efficiently administered while maintaining the characteristics of a limited control program.

The controls have remained limited in the sense that there has not been a major expansion in the bureaucracy involved in implementing the controls. Indeed, significant sectors of the economy have been progressively removed from the controls. We have registered the tendency to expand into more and more detailed regulation of all economic transactions. We have not become so enamored with the operation of the controls that the fundamentals in avoiding demand-pull inflation through responsible monetary and fiscal policy have been neglected or de-emphasized. Indeed, they are most important in avoiding a repetition of our experience in the late 1960's.

The Economic Stabilization Program has operated in a manner sufficiently flexible to avoid the emergence of significant waste and in efficiency in the economy. The controls have not placed undue strain on institutional arrangements in the economy. The standards have been implemented with sufficient flexibility and the goals that were set were sufficiently realistic so that major industrial disputes have been avoided. The level of strike activity, traditionally high during a control period, has been below that of other recent years. This industrial peace is attributable to the cooperation of labor and management under the program in collective bargaining situations, and has been a significant factor in achieving a high rate of growth in real output under the New Economic Policy.

PROGRESS SEEN ON ECONOMY

(By Hobart Rowen and James L. Rowe Jr.)

President Nixon asserted yesterday that his year-old New Economic Policy has produced "tangible pocketbook progress for the American people."

But he noted that the unemployment rate must be cut "much further" and that "the price of food remains a major concern." He reiterated an earlier warning that congressional failure to impose a $250 billion spending ceiling could result in "big increases in the cost of living, or big new taxes—or the first followed by the second."

The President's assessment of economic performance since Aug. 15, 1971, was contained in an introduction to an economic report by his Council of Economic Advisers, which updated the July 24 testimony before the Joint Economic Committee by the members of the council.

It was met by a prompt challenge from Democratic presidential candidate George McGovern, who said the results were but a "mini-recovery which didn't make up for the maxi recession" he said the Nixon administration had previously engineered.

The President's statement also was criticized sharply by the Democratic members of the committee to which it was addressed, who charged the administration with complacency about high unemployment.

Last Aug. 15, President Nixon instituted a 90-day wage-price freeze, allowed the U.S. dollar to "float" in world markets and imposed a 10 per cent surcharge on about half of total imports. He also proposed tax changes, including reintroduction of the investment credit to stimulate business investment. The freeze was followed by the current Phase II of wage-price controls.

The current debate about the results is occasioned by the imminence—on Tuesday—of the first anniversary of the Aug. 15 decisions. The administration not only marked the event with the special Presidential statement, but held a day-long briefing last Thursday for about 100 of the nation's business and economic writers. Reports on the briefing were embargoed for today.

Appearing before the reporters were Treasury Secretary George P. Shultz; Economic Council Chairman Herbert Stein and the other members of the CEA; Secretary of Commerce Peter Peterson; Secretary of Labor James Hodgson; Cost of Living Council Director Donald Rumsfeld; Office of Management and Budget Director Caspar W. Weinberger, and Paul A. Volcker, Treasury undersecretary for monetary affairs.

These officials echoed the President's claim that his new policies had substantially slowed the rate of inflation, stimulated the economy to new heights of economic growth and started workers' real earnings on an upward curve.

But they acknowledged that the inflation problem had not been licked. And they sidestepped questions about how along the present Phase II controls system will last. Current enabling legislation expires April 30, 1973.

With respect to inflation, Stein told reporters during the course of the Thursday briefing that the consumer price index in July—and probably in August as well—will rise more rapidly than in the past few months because of skyrocketing food prices.

But Stein said "the underlying trend of prices as a whole is very satisfactory" and consistent with the overall objective of limiting the consumer price index rise to 2 per cent to 3 per cent by the end of the year.

President Nixon, in claiming an interim success for his economic policies, cited:

The rate of increase in the cost of living, "which had been cut by one-third before the freeze, has now been cut in half."

An increase of 2.5 million civilian jobs over the past year.

A decrease in the rate of unemployment from about 6 per cent to 5.5 per cent.

A nearly 9 per cent annual increase in Gross National Product in the second quarter.

A 4 per cent rise in workers' real spendable earnings over the past year, "three times the average rate from 1960 to 1968."

Agreements among the world's major industrialized countries to confer on international financial and trade reform "which will susbtantially help us to improve our international competitive position as well as help other countries strengthen their economies."

The President said, however, that "we still have economic problems to solve . . . We must firmly establish a lower rate of inflation—both in fact and in the public expectations which help shape the economic future."

His comments came on the eve of a joint meeting between the Pay Board and Price Commission to discuss the current wage guideline, which restricts most pay increases to 5.5 per cent per year.

Administration officials and others, including Federal Reserve Board chairman Arthur F. Burns, feel that the 5.5 per cent standard must be reduced next year to keep the rate of inflation from rising again.

However, Treasury Secretary Shultz last week told a group of reporters that reduction of the pay standard probably had to await some further success in moving prices down. Democratic critics of the wage and price control have argued that the controls have curbed wage increases while allowing prices and profits to rise.

The Joint Economic Committee, in its statement, said "the wide publicity given to the improvements in economic performance in the last few months should not delude the public into believing that all is well with the economy.

"For the last three years, the economy has experienced a prolonged recession brought on through a deliberate policy of reducing the growth of output and employment in the vain hope that this would reduce inflation.

* * * * *

McGovern and vice presidential candidate R. Sargent Shriver, picking up on the Nixon administration's original analogy of an economic "game plan," said that in the first half of the year the economy gained almost enough ground to reach its own 2-yard line.

They charged that on unemployment and inflation the administration was "deep in its own end zone" in 1969, 1970 and 1971.

They noted that "Unemployment has been shaved to 4,785,000, a mere 75 per cent higher than in January, 1969. This is a mini-recovery, and the administration is entitled to take credit for it—as long as it takes the blame for the maxi-recession which it had previously engineered."

The Joint Economic Committee charged that unemployment is still too high and will remain so "without further policy efforts to reduce it." The committee said the administration's policies are "unduly influenced by a fear of inflation and by a stubbornly held, but erroneous belief that the way to control inflation is to restrict the growth of output and employment."

Stein told reporters at the briefing that in calling for a budget ceiling, "We have been accused of being in danger of stepping on the brake too soon; that is not our intention or expectation. But we are concerned about stepping too hard on the gas too soon, or too long, and that, of course, is the basis for our concern with the budget for fiscal 1973 and for fiscal 1974."

Cost of Living Council director Rumsfeld told the reporters that people can be "lulled" into thinking that the existence "of wage-price controls can enable us to do things in the area of fiscal and monetary policy you might not otherwise do."

Rumsfeld, who has headed the wage-price program since it was put in place in mid-November, called the President's new economic policies a success.

He named three key officials who deserve "hero's medals" for their efforts, including his predecessor, Arnold R. Weber, now a Pay Board member; Pay Board chairman George H. Boldt, and Marvin Kosters, the Cost of Living Council's top policy planner.

Conspicuously absent from the list was Price Commission chairman C. Jackson Grayson Jr., whose seven-member panel in late June urged the administration to extend price controls to farm products to alleviate rapidly rising food costs.

Grayson is known to have irritated a number of administration officials because of his insistence on an independent stance.

Also at the Thursday briefing:

Treasury Under Secretary Volcker said the nation is seeking an international trade and financial system that will produce a "continuing equilibrium" in both the U.S. balance of payments and "in the balance of payments of other countries." The Economic Council lists elements of a trade agreement the nation would like to see.

Office of Management and Budget director Weinberger reiterated his charge that "Congress is on a rather dangerous spending path," and said the administration has done its part in reducing federal spending.

Labor Secretary Hodgson said that "for the rank and file worker" for the "earning scenario written by the President's program has been upbeat, with continuing money increases and, what is really more critically important to men that work for a living, a sharp improvement in real wage increase."

Commerce Secretary Peterson said the devaluation of the dollar, among other factors, has had a significant impact on the automobile industry. As a result of the lessening of the price differential between American cars and imports, foreign share of the U.S. auto market dropped from 18.8 per cent last August to 14 per cent in June.

Neither Grayson nor Boldt appeared on the Thursday program because, a White House spokesman said, Rumsfeld would be able to discuss the entire program. On a number of occasions, however, Rumsfeld declined to comment on such topics as revising the wage guideline or corporate profit margin tests because he said they were totally under the purview of the respective panels.

The Economy Issue—Whose Will It Be?

(By Edward Rohrbach)

Washington, August 12.—Whose issue will the economy be this election year?

The answer seems to depend on whether voters will judge it according to how well off they feel they are or what the cold economic statistics tell them. And the stories are different.

At a White House briefing this week, Donald Rumsfeld, director of the Cost-of-Living Council, admitted that he can't even convince his wife that the Nixon administration is checking inflation—as the indicators indicate.

Rumsfeld added that the polls show "people aren't feeling it yet." But he insisted that wage earners have more to spend and prices are going up at a markedly slower pace. He noted that real earnings are up 4.5 per cent since last August and the rate of increase in the cost of living is down since last August.

PUSHED BY DEMOCRATS

The irony is that for the administration, the economy should be positive issue, if for no other reason than the successful controls program was pushed hard by many Democrats months before President Nixon finally adopted it.

A year ago it looked like the deteriorating state of the economy was going to escalate it beyond the Viet Nam war as the administration's achilles' heel in the Presidential election.

"To take the best statistic, for non-food commodities in the consumer price index," Rumsfeld told reporters, "the rate of increase since last August has been 1.7 per cent."

"To take the worst, food prices have gone up 4 per cent in the seven months of phase 2, compared with a rate of 5.5 per cent in the seven months preceding the freeze [begun Aug. 15, 1971]."

The stated goal on the inflation front was to reduce the price rise to a rate of 2 to 3 per cent by the end of this year.

BETTER THAN RESULTS ABROAD

Herbert Stein, chairman of the President's Council of Economic Advisers and another of the top officials the administration presented at the press conference to tell the good economic news, cheerfully admitted that the results of the stabilization program since Nixon sprung the freeze on wages and prices a year ago on a surprised nation and world have been almost better than could have been hoped for.

Stein pointed out that the controls program in the United States has worked "without generating some of the evils" that virtually every other similar incomes policy has when attempted in other countries.

Massive confrontations with labor and strikes have been avoided, Stein said, while there has been no adverse effects on output.

The facts Labor Secretary James Hodgson supplied are even more impressive. He noted that the period of controls has registered an eight-year low for industrial work stoppages.

REAL GROWTH DOUBLED

So far as output is concerned, real growth not counting inflation has accelerated to an average annual rate of over 7 per cent in the last three quarters, more than double the pace of the nine months preceding the new economic policy. The last quarter increase was a whopping 8.9 per cent.

Hodgson projected productivity gains for the nation's work force at 4.5 per cent for the year, a very healthy increase. He called the second quarter's 6 per cent "extraordinary" and doubted it could be repeated.

JOB FIGURES NEAR GOAL

On the international front, Commerce Secretary Peter Peterson said there are signs the country's trade deficit is turning around. The best evidence overall, he said, is the sharp reduction of U. S. inflation, making American products generally more competitive in the world market.

Even the employment figures, which the Democrats are zeroing in on as the softest spot in the economy, are trending better and appear headed for the stated administration goals. Unemployment for the last two months has settled to 5.5 per cent, at mid-year halfway to the 5 per cent target.

The jobless rate for heads-of-households is down to 3.3 per cent, Hodgson noted, and the rate for married men has fallen to 2.7 per cent.

Treasury Secretary George Shultz focused on the rise in real spendable earnings, that is, what people earn after the inflation and tax bites are taken out.

He noted that in the 1965–70 period, there was no real gain in this indicator, which should show whether they are getting ahead of the game or not. Since the start of 1971 this has risen markedly, increasing since the start of the stabilization program at an annual rate of 3.8 per cent.

PERMANENT CONTROLS DOUBTED

The thrust of the day-long comments on the economy by the top administration officials almost led to the conclusion that controls in some form might be a good idea as a permanent feature of the American landscape.

But free-marketers Shultz and Stein scotched that. Calling them "self-limiting," Stein added: "I think it is extremely unlikely that we are going to need or get any benefit from permanent controls of the kind we now have."

Shultz put it more succinctly:

"Freedom is part of your standard of living, too, you know."

[From Newsweek magazine, Aug. 21, 1972]

Mr. Nixon "Told You So"

The setting was a small, thickly carpeted auditorium nestled in a nook of the massive, baroque old Executive Office Building next to the White House. Present were the Nixon Administration's top economic seers, and their task was the happiest duty they had faced in months. For the first anniversary of President Nixon's new economic policy was at hand, and the Administration had gathered some 100 economic reporters to review the year's record. And for many of the correspondents, skeptical from the start about the value of the new Nixonomics, the charts, graphs and figures amounted to a forced diet of crow. With the Presidential campaign just getting down to business, Mr. Nixon's economic scenario seemed almost dead on target.

Treasury Secretary George Shultz, who had himself opposed wage-price controls right up to the time they were imposed on Aug. 15, 1971, began with the proud word that the rate of increase in consumer prices had dropped from 6.1 per cent in 1969 to 2.7 per cent since the freeze ended last November—"and if you take the last four months, the rate of inflation is less than 2 per cent." Even the price of food isn't as bad as the average housewife thinks, chimed in Donald Rumsfeld, chairman of the Cost of Living Council. "Food prices have gone up 4 per cent in seven months of phase two," he said, "compared with 5.5 per cent in the seven months preceding the freeze."

The economy itself was in a state of near boom, having chalked up an awesome growth rate of 8.9 per cent in the second quarter. Nobody expected that pace to continue; yet, in Shultz's words, "All the different kinds of things that you look at tend to show that this expansion is going to continue to be a strong one." The Treasury Secretary had been even more ebullient in private before the briefing, telling a White House colleague that the economy was "roaring" at such a clip that tax revenues for fiscal 1973 would almost surely top the current forecast. And this rosy view was generally shared last week by experts outside the Administration. "The U.S. has the fastest growth rate in the world, except for Japan," said William Wolman of Argus Research Corp., who predicted a jump of 9.8 per cent in gross national product this year and a gain of 9.5 per cent more in 1973.

Jobs: Problems, of course, remained—most conspicuously the continuing high unemployment rate. The best the Administration could promise was that the rate may fall to 5 per cent by the end of this year, and Democrats will surely make that a campaign issue. But Labor Secretary James D. Hodgson pointed out that the economy has added 2.5 million civilian jobs in the past year and that joblessness is now concentrated among teenagers and women who are not heads of families. Similarly, even though the nation's trade balance continues to deteriorate, Treasury Under Secretary Paul Volcker and Commerce Secretary Peter G. Peterson predicted that the full effects of last year's dollar devaluation would soon improve the picture. "Beware of generalizations in terms of competitiveness," Peterson cautioned. "We are very competitive in agricultural products. And remember that competitiveness depends on fair exchange rates."

The most ominous cloud on Mr. Nixon's economic horizon, it seemed, was that the economy might run altogether too strong. "We don't want a less rapid expansion," said Herbert Stein, chairman of the Council of Economic Advisers, "but we are concerned it might be too fast." Most economists are conceding a slight increase in the rate of inflation in the coming months in any event, if only because of the continuing Federal budget deficits. Wolman of Argus Research sees a rise of 3.6 per cent in inflation next year, compared with a 3.3 per cent increase in 1972.

Slack: That would still be a long way down from the 6 per cent price rise of 1969, and few forecasters see any dangers of a return to runaway inflation soon. If, for instance, Federal tax revenues are accelerating as Shultz indicates, a major inflationary danger lurking in the background could well be stamped out. And other economists point out several equally dampening influences: growing productivity, slack in both the unemployment rate and the utilization of factory capacity, and the historically high rate of private savings ,that should permit the Federal Reserve Board to avoid any excessive increase in the money supply.

And around the country, Newsweek correspondents found businessmen, bankers and economists alike in a rarely unanimous glow of approval for the state of the economy. There was carping about the unemployment rate, the equity of wage and price controls and the continuing pace of inflation, but the only real heat came in debating whether Nixonomics had been responsible for the current economic climate. A year ago, says economist Walter Fackler of the University of Chicago, inflation was already subsiding and the economy was already headed upward, and the President's emergency program was merely "cosmetic and political." Oddly enough, that view is not altogether rejected even in the Administration; Shultz concedes that "it is going to be a long while before one can really disentangle the results and get a careful and considered assessment of just what has happened."

But however the bed was made, the Administration is more than content to sleep in it. "We are not out of danger," summed up Caspar Weinberger, director of the Office of Management and the Budget, "but we are better off today because of the new economic policies that were adopted at Camp David a year ago." And President Nixon's men are in no mood to tamper with their successful formula. "It is extremely unlikely," said Stein, "that the wage and price controls will be abolished before Nov. 7."

[From U.S. News & World Report, Aug. 21, 1972]

Controls—Success or Failure?

Peacetime wage-price-rent controls, now entering their second year, have been trimmed back to cover only half of today's workers and renters and even fewer corporations. Here is how controls have worked out—and the changes to expect.

Hope is growing in Washington that the second year of extensive wage and price controls, just now beginning, will be the last.

Most federal officials believe that controls, as they exist at this time, will be lifted well before next August 15—provided that the cost of living continues to increase by not more than 2.5 to 3 percent on a yearly basis.

Right now, the rate of inflation is down to the lower part of that bracket. For the three months ended June 30, 1972, the rise in prices at retail was held to an annual rate of 2.5 percent.

The law authorizing the controls is scheduled to expire next April 30. There are indications that the present program may be ended by that time.

DATE INDEFINITE

The Cost of Living Council, which sets over-all policy for regulating the economy, is not ready to rule out an extension beyond that date, however. Top officials explain that, if they announce a definite time for ending controls, people may then begin to act in ways that would make the job of slowing inflation all the more difficult—buying heavily in advance, for instance, or demanding large pay raises to take effect after the deadline arrives.

Furthermore, there is growing sentiment for retaining some federal sway over prices and wages for an indefinite period, to be used from time to time on a limited basis.

Behind the scenes, the present control agencies are operating on the assumption that even if formal controls are ended when the present law expires in April, a "residual controls unit" will be kept on duty.

Meanwhile, the question is being raised, in public-opinion polls and by political debates, of, whether controls have been successful over the past year. Has inflation really slowed down appreciably? And if it has, should the federal price and wage ceilings get the credit?

WHITE HOUSE VIEW

The Nixon Administration gives a qualified "Yes" answer to both questions. Even officials who opposed the imposition of the "freeze" last August 15 are happier with the controls than they ever expected to be.

Looking back over the year since the President announced his "new economic policy," the Government's economists point to generally favorable trends, as indicated in the chart on page 15.

Aims of the new policy, as Mr. Nixon described them last August, were to check inflation, reducing it to from 2 to 3 percent by the end of 1972; to speed up business recovery, reduce unemployment and restore confidence in the dollar abroad.

All of this was to be accomplished by a series of steps, starting with a 90-day freeze on wages, prices, rents and dividends, plus the imposition of a 10 percent tax on imports, an end to the excise tax on autos, a tax cut for individuals and a suspension of gold payments. The freeze then was lifted, more-flexible control machinery was set up, and by year's end the dollar was devalued, the import surcharge removed and taxes cut.

LESS INFLATION

After a year of this three-pronged new policy, these things have happened:

Inflation is substantially lower.

While there is no one accepted measure, the consumer price index—retail prices that concern most people—dropped from about a 4 per cent annual-increase rate in the three months prior to the freeze to 2.5 per cent in the last quarter.

Wages are not rising quite as fast as they had been before controls.

During the year, the Pay Board authorized wage increases affecting 11.6 million workers, averaging 4.9 per cent.

That was below the general guideline of 5.5 per cent, and helped to hold the over-all increase in average hourly earnings to 6.2 per cent—compared with 6.6 during the preceding year.

"Real" pay, after taxes and after inflation, increased by an average of 4 per cent, after making no appreciable gains in the year before controls. This resulted from lowered taxes and a smaller rise in living costs, plus a larger hike in pay.

Employment increased and unemployment declined a bit, under controls.

The number of workers with civilian jobs rose by 2.4 million during the year, one of the biggest one-year increases on record. But the size of the U.S. civilian labor force increased almost as much—by 2.3 million people, including 400,000 who were cut from the armed services. So the latest unemployment reading, for both June and July, is holding at 5.5 per cent, just under the 6 per cent rate before the freeze.

Productivity now is rising more rapidly, as the economy gains momentum.

Output for the average man-hour of work in the nation's nonfarm economy, as measured officially, is up from an annual rate of 3.1 per cent in the three months preceding controls to 5 per cent in the most recent quarter.

Economic recovery, over all, has picked up speed despite the controls.

Key indicators are nearly all pointed upward, with retail trade up 8.6 per cent during the year since the freeze began, auto sales up 9.2 per cent, and housing starts up 12.2 per cent. The index of industrial production reached a new record high and is now 5 per cent above the level of a year ago.

Even more impressive is the increase in real "gross national product"—total national output of goods and services, discounted for the effect of inflation—which rose at an annual rate of 8.9 per cent in the past quarter of 1972. That is the biggest gain in GNP since 1965, when the Vietnam war was being cranked up. It compares with a 3.4 per cent increase for the quarter before controls.

Not all indicators are good, though.

The dollar is still in trouble abroad, with no early solution in sight.

Despite a devaluation of about 8 per cent and other efforts to restore confidence in the dollar overseas, the U.S. balance-of-payments deficit last year was a record-breaking 29.8 billion dollars. This was due in large part to capital outflows associated with a run on the dollar in the second and third quarters of 1971. That deficit dropped to an annual rate of 13 billion in the first quarter of 1972, but a new period of weakness in the dollar developed in June.

Wholesale prices, often a key to future inflation, have moved higher.

A sudden spurt in wholesale prices—those which businessmen pay and then pass on to the public—occurred in July and shot that price index up at an annual rate of 8.4 per cent. This stemmed in large part from skyrocketing food prices and leaves the outlook for future living costs much in doubt.

All in all, the indicators show, the economy has done well since controls were imposed. Yet economists concede that there are still major problems—the dollar dilemma, the prospect that inflation may turn up again if wholesale prices continue to rise, and a growing federal deficit that may lead to even more inflation. Unemployment, too, is still above 5 per cent. And interest rates remain high by historical standards.

Donald Rumsfeld, Director of the Cost of Living Council, was interviewed by "U.S. News & World Report" on his views of how successful the wage-price controls have been, and what lies ahead.

On the results of the controls, Mr. Rumsfeld commented:

"Well, I would have to ask, in answer to the question, 'How are we doing compared with what?' Compared with where we were a year ago? Pretty good. Compared with what the President's goals were? Quite good. Compared with where we would have been if we had not had an economic-stabilization program? Clearly, I think we're doing considerably better than where we would have been had the President not instituted the new economic policy."

Asked whether he foresees any further easing or tightening of the controls in the near future, Mr. Rumsfeld said:

"No, I don't.

"To the extent we find that there is a need for an adjustment of one sort or another, either a tightening or a loosening on one side or another, certainly we're capable of doing it. But I don't see any persuasive argument at the present time that would lead me to believe that there's an immediate need for any major alteration in the system."

SUBSTANTIAL CUTBACKS

At this time, as the chart on this page shows, the emergency controls that once covered virtually all except farm prices, all wages and all rents, have been cut back bit by bit so that large segments of the economy are no longer directly covered.

Fewer than half of the nation's 59 million nonfarm civilian wage earners are covered now, for example, as a result of rulings exempting organizations with fewer than 60 employes, and workers with pay of under $2.75 an hour.

Price controls have been lifted from 95 per cent of America's 400,000 business firms, in turn, largely because of the 60-employe exemption.

Rent controls are gone, too, from about 45 per cent of the country's rent-paying tenants. Here, the chief exemptor was a ruling that limited controls from any landlord who owns fewer than four rental units.

EYE ON THE FUTURE

What's the next step? Mr. Rumsfeld was asked whether he expects present controls to stay on for a prolonged period, to be dropped gradually, step by step, or to be ended abruptly. His response:

"My impression is that the lifting of controls will occur where the President's goals have been achieved. Whether it would be before the date [April 30, 1973, when the law expires] or after is something I can't predict. I don't think anyone can at this point.

"The one thing I'd say about what might happen is that it seems to me that there might be some sectors that may merit some special attention.

"Just as the construction industry received some special attention prior to the institution of formal controls last August, it may be that after the present phase of formal controls, there might be some areas, such as construction, that would merit attention and where special attention would make sense from the standpoint of the country."

In the longer run, will the success achieved by the control program thus far provide a pattern to be used any time inflation appears to be getting out of hand? Mr. Rumsfeld observed:

"Well, I would hope not. The present controls were imposed to perform a specific role under a particular set of economic circumstances. And if I've learned anything after a year of being this deeply involved in this activity, it's that those of us in Government—and those outside of Government—ought to have a very cautious attitude about injecting Government deeply into these essentially private decisions either frequently or for a prolonged period of time.

"It's an incredibly complex and difficult business to do well."

[From the Wall Street Journal, Aug. 14, 1972]

YEAR AFTER CONTROLS: WHITE HOUSE CLAIMS CURBS WORK BUT WON'T SAY WHEN THEY'LL END

WASHINGTON.—President Nixon is claiming something close to victory in the battle against inflation, but hedging that the final outcome depends on "the people" and the Congress.

"The rate of increase in the cost of living, which had been cut by one-third before the freeze, now has been cut in half," the President said, calling the result "impressive." But the budget situation is critical, Mr. Nixon added, pledging that "if the people join me in insisting that federal spending be held down, to avoid reviving inflation now and paying higher taxes soon, the government will act responsibly."

His statement noting the anniversary tomorrow of the New Economic Policy begun last Aug. 15 was associated with a day-long press briefing, by top economic aides, and accompanied by widespread rumors in the business community that present Phase 2 wage-price controls would be lifted soon.

Herbert Stein, chairman of the President's Council of Economic Advisers, acknowledged—indeed volunteered—the rumors at the Thursday briefing, which was embargoed for weekend release. Mr. Stein made light of the calls from lawyers that he said had "deluged" his office and that of Donald Rumsfeld, director of the Cost of Living Council; and he assured reporters that the rumors that controls would be ended that day were false.

WHAT ABOUT YEAR-END?

Asked whether controls are likely to be ended before the Nov. 7 presidential election, Mr. Stein first said that is "extremely unlikely." But when asked whether he would repeat his remarks made in early May that controls probably wouldn't end before Dec. 31, Mr. Stein huddled briefly with Mr. Rumsfeld and then said only that "the date of Nov. 7 is irrelevant" to the decision on controls.

Later, Mr. Stein explained to a reporter that he didn't respond directly to the Dec. 31 question because that would only have prompted someone else to ask about the likelihood of controls remaining by Feb. 1. "I will say it now," he said Friday, it is "very unlikely" that the controls program will end by Jan. 1. It would be "silly" and "rash" for anyone "not to count on its still being here by Dec. 31 or Jan. 1," he asserted.

Obviously, Mr. Stein added, "the probability of it still being here diminishes the farther out you go." Thus, he said, he couldn't offer the same degree of assurance about controls continuing next June 1, for example, that he could about their still being in effect next Jan. 1.

Asked at the briefing whether the Nixon administration would ask Congress to renew the basic controls authority before it expires next April 30, Mr. Rumsfeld said that is "obviously under discussion and thought" but "isn't the kind of question I think would be decided during the present period."

As a parade of officials praised the New Economic Policy, reporters from across the country kept concentrating on the subject of when the controls would end. That isn't a "fruitful subject," Treasury Secretary George Shultz said, explaining that setting a terminal date could undermine compliance. "Right now, we need to keep our eye on getting as much out of the control system as we can," he said.

Noting his original opposition to controls, Mr. Shultz said they have "worked out pretty well," remarking also that "freedom" is "part of our standard of living, too." Some negative factors have emerged with controls, he said, mentioning a few employers' "very insidious" practice of granting large pay increases to please their workers, and counting on the Pay Board to cut back the amounts.

COST-PUSH INFLATION

The present controls are designed to work against "cost-push" inflation fed by excessive wage demands, Mr. Stein said, declaring: "I don't think they will operate in a situation of general excess demand," referring to "demand-pull" inflation fed by federal deficits and easy-money policies. The present controls are "essentially temporary and self-limiting," he said, adding that he doesn't think they have a continuing place in the American economy.

Supporting the claims of progress against inflation, the Council of Economic Advisers noted in a mid-year report that the consumer price index climbed 6.1% in 1969 and 5.5% in 1970. The average seasonally adjusted annual rate of rise slowed to 3.8% between December 1970 and last August, however, and to only 1.8% from February through June of this year, the report said.

But Mr. Stein cautioned that after edging up at only a 1.2% annual rate in June, the index is likely to show "considerably more rapid increases" for July and August due to previously reported higher wholesale prices for food, particularly beef.

While Marina Whitman, a council member, voiced optimism that retail food prices probably will turn down shortly, Mr. Rumsfeld expressed concern about the time it takes for the public to believe that such relief exists.

Polls show that "most people probably aren't feeling it," Mr. Rumsfeld said, adding that "the other night my wife sat down and I told her food was up 0.0% (from February through June) and she said, 'Do me a favor—don't ever say that in public—no one will believe it.' She said, 'all I know is my bill is up $10 a week.' "

IMPROVEMENT IN SPENDABLE EARNINGS

The public feeling about inflation will be important in 1973's much heavier labor bargaining schedule, Mr. Shultz said, expressing hope that the improvement in "real spendable earnings" will moderate contract demands. This measure of actual after-tax purchasing power—adjusted to strip away the effects of inflation—caused a "great sense of frustration" by leveling off between 1965 and 1970, but since then it has been moving up "rather well" at about a 4% annual rate, he said.

Also over the weekend, the Democratic majority on the congressional Joint Economic Committee issued a statement contending that "the wide publicity given to the improvement in economic performance in the last few months shouldn't delude the public into believeing that all is well with the economy." While the present wage-price controls "shouldn't remain for long," the lawmakers said, "some form of continuing price and incomes policy will clearly be needed."

The Nixon administration's economic policies are "unduly influenced by a fear of inflation," the panel charged, "and by a stubbornly held, but erroneous, belief that the way to control inflation is to restrict the growth of output and employment." The joint committee Democrats said that while inflation "remains a most serious problem," the best way to deal with it is "a rapid return to prosperity, accompanied by carefully formulated price and incomes policies."

The unemployment rate "can and should" be brought down to 4% of the labor force from the current 5.5% within the next 18 months, the Democrats said, promising to outline a plan to do this soon. "Fiscal and monetary stimulus will continue to be needed," they stated, arguing that it "appears unlikely that the strength of the private economy alone in the second half of 1972 will be sufficient to sustain the growth needed for rapid reduction of unemployment."

Aides of Democratic presidential nominee George McGovern issued a separate rejoinder, charging that "high unemployment has been a deliberate policy of the Nixon administration." The administration "is entitled to take credit" for the "mini-recovery," they said, "as long as it takes the blame for the maxi-recessing which it had previously engineered."

[From The New York Times, Aug. 13, 1972]

ECONOMIC ANNIVERSARY

A year ago on a Sunday evening in mid-August, President Nixon went on television to loose three economic bombshells—the floating of the dollar, the freezing of wages and prices, and a big package of tax cuts in the face of a big budget deficit. This was his New Economic Policy, an about-face from the policies his Administration had pursued through its first two and a half years.

An alarming worsening in the balance of payments, signs that inflation—after a brief slowdown—was again accelerating, and the persistence of unemployment had combined to force adoption of policies similar to those the Administration's political opponents had long counseled—and which Mr. Nixon and his advisers had vociferously denounced.

Although the American economy still bears scars of the long delay in changing the original Nixon game plan, the N.E.P. appears to be on the way to success in most respects.

INDUSTRIAL RECOVERY

The economy is rising strongly. The total output of goods and services, corrected for inflation, rose at an annual rate of 8.9 per cent in the second quarter of this year. Even though so spectacular a rate of increase cannot be expected to continue, it still appears likely that real gross national product will climb by nearly 6 per cent in 1972 and that this increase will continue well into 1973.

The economy's recovery has been accompanied by a slowing of inflation—partly due to the delayed effect of the long recession and the wide gap it opened between the country's actual operating rate and its potential, partly to the increase of productivity, and partly to the impact of wage-price controls.

After rising at an annual rate of nearly 6 per cent in 1970 and the first half of 1971, the price index for the economy as a whole slowed to a 2.1 per cent rate in the second quarter of this year. It will almost certainly not stay so low for the year as a whole; yet the chances are good that 1972 will see a rise of only about 3.5 per cent for the over-all price index.

WORRISOME UNEMPLOYMENT

Unemployment has also come down from the 6 per cent plateau. However, five million workers, 5.5 per cent of the labor force, are still out of work, and the outlook is for unemployment to stay above 5 per cent for the rest of this year and 1973 as well. The Administration is unduly complacent about so high a level of joblessness.

Even granting that some structural changes in the labor force may make the attainment of full employment more difficult today than in earlier years, the White House deserves criticism for its failure to launch a more forceful direct attack on unemployment. It has depended too much on general fiscal and monetary policies to deal with idleness that results from social causes, imperfection in labor markets and shifts in job availabilities.

The Employment Act of 1946 did not imply a goal of "maximum employment" to mean whatever unemployment rate existed as long as business was in a boom or semi-boom. The time has come for the statutory pledge of full employment to be interpreted—by this or any future Administration—to mean that every American who wants a job can be assured of getting one—either in the private or in the public sector.

DEVALUED DOLLAR

In the international area, the Administration warrants great credit for severing the link between the dollar and gold and for forcing a realignment of exchange rates. Sooner or later this will mean a strengthening of the American balance of payments, although the nation is far from out of the woods. Compared to the enormous monetary drain in 1971 there has already been much improvement. That is true even though the balance of trade has worsened, due to the initial effects of dollar devaluation.

While the Administration can be faulted for the rough bargaining tactics used by former Secretary of the Treasury Connally, the over-all international strategy of the Administration was correctly based on the conclusion that the United States dollar was overvalued. The net devaluation of the dollar by 12 per cent has reduced this country's cost and price structure relative to its foreign competitors. The White House has sought to pressure other countries into granting unilateral trade concessions to the United States. Thus far, the Administration has little to show on the trade front and it has raised doubts about its commitment to maintaining close economic and political relations with its allies. Indeed, the Administration's balance-of-power approach to economic policy—with this country playing a lone hand among the Western European countries, Japan and the Communist states—could split the Western world into antagonistic blocs.

Mr. Nixon, furthermore, remains too willing to yield to protectionist demands of some industries and labor unions, although it must be granted that those pressures have been intense. Full employment policies would do more than any other thing to contain protectionist demands.

One of the major pieces of unfinished business facing the Nixon Administration or its successor will be the negotiation of reform in the international monetary system. The more cooperative attitude and actions the Federal Reserve and Treasury have displayed toward other nations in recent weeks have improved the outlook for the international monetary negotiations that begin in Washington next month.

POCKETBOOK CONTROLS

Short of embracing Marxism, no economic approach was more abhorrent to President Nixon in his first thirty months in the White House than the notion that an inflation-beset economy might benefit from mandatory controls on wages and prices. It was an item of dogma for him that such controls never had and never could work in a democracy except in periods of total war.

In the year since Mr. Nixon imposed a ninety-day freeze as Phase One of his embarkation on a regulated economy, his Administration has been giving a generally persuasive demonstration that, even in the face of hostility from most of organized labor, controls can moderate the wage-price spiral without stifling economic growth or building up a monstrous bureaucracy.

It is true, however, that the evidence remains inconclusive, both as to how fairly the program has been applied thus far and, even more, as to how adequate it is to meet the triple-barreled challenges just ahead of faster business expansion, mounting Federal deficits and a heavy 1973 calendar of union demands in major industries.

LOOPHOLE ON FOODS

Most observers give the Price Commission high marks for the vigor with which it has sought to achieve its goal of holding the over-all level of price increases to 2.5 per cent, but the exemption from controls of raw foods has proved a handicap so severe that the commission itself vainly appealed for White House action to put the whole family market-basket under ceilings.

The Administration response, born of reluctance to tangle with the farmers in an election year, was to settle for a much milder curb, a temporary lifting of meat import quotas. That hole in the price net makes it probable that 1972 will end with the price level a full percentage point above the anti-inflation target. On top of that, the high level of second-quarter corporate profits has brought a fresh deluge of labor complaints that the whole program is unfairly loaded in favor of big business.

The Pay Board, aided by a relatively light collective bargaining schedule, did an even more effective job than the Price Commission after an exceedingly rocky baptism. Despite the walkout of four of its five union members, the board has succeeded in trimming first-year pay increases in new contracts involving large unions from better than 11 per cent in the year before controls to just above 7 per cent now.

Even the rampaging construction unions, operating under a semi-autonomous stabilization mechanism of their own, have come way down. More important, the wage regulators faced up to such tough customers as the East and West Coast longshoremen on the need for shaving negotiated increases that would have torpedoed the whole control effort—and did it without touching off strike defiance of the kind British dock workers are currently directing against that country's new Industrial Relations Act.

WAGE GUIDEPOST

The combined average of increases approved for oganized and unorganized workers is running at 4.9 percent, well below the 5.5 percent basic yardstick established by the Pay Board last November. It will meet this week to consider cutting the guidepost still lower, though there is no prospect it will come down to the old Kennedy-Johnson productivity standard of 3.2 percent. Much more progress toward price stability will have to be made before that becomes a realistic guidepost for pay envelopes.

The real election test for both parties will be to tell the country what monitoring machinery they plan to hold the line of wages and prices. An abrupt termination of controls when the present Economic Stabilization Act runs out next April would almost certainly reactivate the senseless leapfrog which wiped out the purchasing power of higher wages before workers could get to the supermarket to spend them.

It is plain that the factors of monopoly power in big industry and big labor which prompted a conservative Administration to move from Adam Smith to John Maynard Keynes are only temporarily in check. The question now is how best to balance the imperatives of social responsibility and economic freedom when Phase Two ends.

We all know that food prices still are a problem. Even Mrs. Rumsfeld so advised her husband, as reported in the following dispatch Reuter News Service:

[From the Washington Post, Aug. 13, 1972]

Rumsfeld's Wife Sets Him Straight

The director of the Cost of Living Council has confessed he is unable to convince his wife the Nixon administration is holding down grocery prices.

Donald Rumsfeld revealed this to reporters at a briefing on the controls program.

"I told my wife food prices have been almost unchanged for the past few months," Rumsfeld said. "She told me, 'Don't tell anyone that. They will never believe it. My grocery bill is up $10 a week.' "

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. Corman, for Friday, August 18, 1972, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. Kyl) to address the House and to revise and extend their remarks and include extraneous matter:)

Mr. Anderson of Illinois, for 15 minutes, today.

Mr. Steiger of Wisconsin, for 10 minutes, today.

(The following Members (at the request of Mr. Seiberling) to address the House and to revise and extend their remarks and include extraneous matter:)

Mr. O'Neill, for 5 minutes, today.

Mr. Gonzalez, for 5 minutes, today.

Mr. Kastenmeier, for 10 minutes, today.

Mr. Rooney of Pennsylvania, for 15 minutes, today.

Mr. Seiberling, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. Hawkins, notwithstanding it exceeds two pages of the Record, and is estimated by the Public Printer to cost $977.50.

Mr. Bingham, in two instances and to include extraneous matter.

Mr. Fraser and to include extraneous matter, notwithstanding the fact that it exceeds two pages of the Record and is estimated by the Public Printer to cost $510.

Mr. Brown of Michigan, and to include extraneous matter, notwithstanding the fact that it exceeds two pages of the Record and is estimated by the Public Printer to cost $977.50.

Mr. Price of Illinois to revise and extend his remarks and include extraneous matter.

Mr. Mayne (at the request of Mr. Widnall) to revise and extend his remarks on S. 3726.

Mr. Murphy of New York to revise and extend his remarks on H.R. 14847.

(The following Members (at the request of Mr. Kyl) and to include extraneous matter.)

Mr. Schwengel.

Mr. Bell.

Mr. Coughlin.

Mr. Scherle.

Mr. Winn.

Mr. Whitehurst.

Mr. Findley.

Mr. Bray.

Mr. Myers in three instances.

Mr. Mathias of California in 10 instances.

Mr. Kemp in five instances.

Mr. Mizell in 10 instances.

Mr. Robinson of Virginia in three instances.

Mr. Ashbrook in three instances.

Mr. Hansen of Idaho in three instances.

Mr. Frenzel.

Mr. Wyman in two instances.

Mr. Brown of Ohio in two instances.

Mr. Don H. Clausen.

Mr. Keith.

Mr. Mallary.

Mr. Rousselot in two instances.

Mr. Dellenback.

Mr. Hosmer in four instances.

Mr. Shriver in two instances.

Mr. Hutchinson.

Mr. Dennis.

Mr. Crane in five instances.

Mr. Buchanan in five instances.

(The following Members (at the request of Mr. Seiberling) and to revise and extend their remarks.)

Mr. Matsunaga in five instances.

Mr. O'Neill in two instances.

Mr. Edwards of California.

Mr. Mills of Arkansas.

Mr. Rarick in three instances.

Mr. Gonzalez in three instances.

Mr. Fraser in 10 instances.

Mr. Jacobs in two instances.

Mr. Drinan in two instances.

Mr. Mathis of Georgia.

Mrs. Sullivan in three instances.

Mr. Wolff in three instances.

Mr. Hamilton in five instances.

Mr. Leggett in three instances.

Mr. Harrington.

Mr. Roe in two instances.

Mr. Pepper in three instances.

Mr. Zablocki in three instances.

Mr. Rooney of Pennsylvania in three instances.

Mr. McCormack.

Mr. Long of Maryland.

Mr. Mahon.

Mr. Carey of New York.

Mr. Rangel.

Mrs. Green of Oregon.

Mr. Pike.

Mr. Dellums in five instances.

Mr. Moorhead in three instances.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 32. An act to amend the National Science Foundation Act of 1950 in order to establish a framework of national science policy and to focus the Nation's scientific talent and resources on its priority problems, and for other purposes; to the Committee on Science and Astronautics.

S. 3594. An act providing for Federal purchase of the remaining Klamath Indian Forest; to the Committee on Interior and Insular Affairs.

S. 3762. An act to extend the program for health services for domestic agricultural migrant workers; to the Committee on Interstate and Foreign Commerce.

S. 3811. An act to amend the act entitled "An Act to provide for the establishment of the Indiana Dunes National Lakeshore, and for other purposes," approved November 5, 1966; to the Committee on Interior and Insular Affairs.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED

Mr. HAYS, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills and a joint resolution of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 755. An act to amend the Shipping Act, 1916, and the Intercoastal Shipping Act, 1933, to convert criminal penalties to civil penalties in certain instances, and for other purposes;

H.R. 2394. An act for the relief of Antonio Benavides;

H.R. 2703. An act for the relief of Mrs. Concepcion Garcia Balauro;

H.R. 3413. An act for the relief of Dr. David G. Simons, lieutenant colonel U.S. Air Force (retired);

H.R. 5158. An act for the relief of Maria Rosa Martins;

H.R. 5814. An act to amend section 2735 of title 10, United States Code, to provide for the finality of settlement effected under section 2733, 2734, 2734a, 2734b, or 2737;

H.R. 8549. An act to amend title 10, United States Code, to broaden the authority of the Secretaries of the military departments to settle certain admiralty claims administratively, and for other purposes;

H.R. 9256. An act for the relief of Kyong Ok Goodwin (Nee Won);

H.R. 10310. An act to establish the Seal Beach National Wildlife Refuge;

H.R. 10713. An act for the relief of Wilma Busto Koch;

H.R. 11185. An act to amend the Internal Revenue Code of 1954 with regard to the exempt status of veterans' organizations, and for other purposes;

H.R. 12392. An act to amend title 28, United States Code, section 1491, to authorize the Court of Claims to implement its judgments for compensation;

H.R. 12931. An act to provide for improving the economy and living conditions in rural America;

H.R. 15474. An act to amend the Public Health Service Act to provide assistance for programs for the diagnosis, prevention, and treatment of, and research in, Cooley's anemia.

H.R. 15580. An act to amend the District of Columbia Police and Firemen's Salary Act of 1958 to increase salaries, and for other purposes; and

H.J. Res. 1278. Joint resolution making further continuing appropriations for the fiscal year 1973, and for other purposes.

SENATE ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

The SPEAKER announced his signature to enrolled bills and joint resolutions of the Senate of the following titles:

S. 2166. An act to authorize the establishment of the Grant-Kohrs National Historic Site in the State of Montana, and for other purposes;

S. 3159 An act to authorize the Secretary of the Interior to establish the John D. Rockefeller, Jr., Memorial Parkway, and for other purposes;

S. 3726 An act to extend and amend the Export Administration Act of 1969 to afford more equal export opportunity, to establish a Council on International Economic Policy, and for other purposes;

S. J. Res. 182. Joint resolution authorizing the President to invite the States of the Union and foreign nations to participate in Farmfeast-U.S.A. and the World Ploughing Contest in September 1972.

S. J. Res. 213. Joint resolution to authorize and request the President to issue a proclamation designating October 6, 1972, as "National Coaches Day"; and

S. J. Res. 260. Joint resolution to suspend until March, 1973, the effectiveness of certain amendments made by the Education Amendments of 1972 to the guaranteed student loan program.

BILLS PRESENTED TO THE PRESIDENT

Mr. HAYS, from the Committee on House Administration, reported that that committee did on the following dates present to the President, for his approval, bills of the House of the following titles:

On August 16, 1972:

H.R. 5065. An Act to amend the Natural Gas Pipeline Safety Act of 1968, and for other purposes.

H.R. 9092. An Act to provide an equitable system for fixing and adjusting the rates of pay for prevailing rate employees of the Government, and for other purposes;

H.R. 13324. An Act to authorize appropriations for the fiscal year 1973 for certain maritime programs of the Department of Commerce, and for related purposes; and

H.R. 15097. An Act making appropriations for the Department of Transportation and related agencies for the fiscal year ending June 30, 1973, and for other purposes.

On August 17, 1972:

H.R. 10676. An Act for the relief of Lester L. Stiteler; and

H.R. 16254. An Act making certain disaster relief supplemental appropriations for the fiscal year 1973, and for other purposes.

ADJOURNMENT

Mr. SEIBERLING. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to.

The SPEAKER. In accordance with Senate Concurrent Resolution 94 of the 92d Congress, the Chair declares the House adjourned until 12 o'clock noon on Tuesday, September 5, 1972.

Thereupon (at 5 o'clock and 46 minutes p.m.), pursuant to Senate Concurrent Resolution 94, the House adjourned until Tuesday, September 5, 1972, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2267. A letter from the Deputy Secretary of Defense, transmitting a semiannual report on funds obligated in the chemical warfare and biological research programs, covering the second half of fiscal year 1972, pursuant to section 409 of Public Law 91–121; to the Committee on Armed Services.

2268. A letter from the Chairman, Cost Accounting Standards Board, transmitting the first progress report of the Board, covering the period from its organization in January 1971, through June 30, 1972, pursuant to section 719(k) of the Defense Production Act of 1950, as amended; to the Committee on Banking and Currency.

2269. A letter from the Chairman, Equal Employment Opportunity Commission, transmitting a list of all persons employed by the Commission, by name, title, grade, and salary, as of the end of fiscal year 1972, pursuant to section 705(e) of the Civil Rights Act of 1964, as amended; to the Committee on Education and Labor.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. PERKINS: Committee of conference. Conference report on H.R. 12350 (Rept. No. 92–1367). Ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ASPIN:

H.R. 16478. A bill to amend title 10 of the United States Code to strike out the provision whereby the head of an agency may waive the submission of cost or pricing data by contractors prior to the negotiation and award of, or pricing of changes and modifications to, certain military contracts; to the Committee on Armed Services.

By Mr. BURTON (for himself and Mr. BEGICH):

H.R. 16479. A bill to establish the Golden Gate National Urban Recreation Area in San Francisco and Marin Counties, Calif.; to the Committee on Interior and Insular Affairs.

By Mr. CABELL (by request):

H.R. 16480. A bill to amend the law in the District of Columbia with respect to zoning regulations to create a presumption against the making of special exceptions to such zoning regulations in certain cases; to the Committee on the District of Columbia.

By Mr. CAREY of New York:

H.R. 16481. A bill to encourage and support the dissemination of news, opinion, scientific, cultural, and education matter through the mails; to the Committee on Post Office and Civil Service.

By Mr. CAREY of New York (for himself, Mr. SARBANES, Mr. COUGHLIN, and Mr. MURPHY of New York):

H.R. 16482. A bill to provide payments to States for public elementary and secondary education and to allow a credit against the individual income tax for tuition paid for the elementary or secondary education of dependents; to the Committee on Ways and Means.

By Mr. CELLER:

H.R. 16483. A bill to prevent the unauthorized manufacture and use of the character "Woodsy Owl", and for other purposes; to the Committee on the Judiciary.

By Mr. DON H. CLAUSEN:

H.R. 16484. A bill to prohibit the importation into the United States of birds, or parts thereof, unless inspected and found to be free of communicable diseases; to the Committee on Ways and Means.

By Mr. DENHOLM:

H.R. 16485. A bill to assure maximum national nutrition with the highest quality and greatest quantity of food and fiber at the lowest possible cost to consumers with emphasis on people, performance and production; and to achieve a balance in national economic growth and social stability by reducing or tending to reduce the cost of living, by reversing the pressures of continued inflation and by providing alternatives to economic coercion of national population trends; and to encourage maximum conservation in the preservation of ecological and environmental values in the optimum utilization of human and natural resources; and for other purposes; to the Committee on Agriculture.

By Mr. FOLEY:

H.R. 16486. A bill to authorize the transfer of earned purchasor credits between national forests timber sale contracts; to the Committee on Public Works.

By Mr. FRENZEL:

H.R. 16487. A bill to deem certain disabilities incurred pursuant to State National Guard service during World War I to be service connected for purposes of chapter 11 of title 38, United States Code (relating to compensation for service-connected disabilities); and for other purposes; to the Committee on Veterans' Affairs.

By Mr. FREY:

H.R. 16488. A bill to restrict travel in violation of area restrictions; to the Committee on the Judiciary.

By Mrs. GRASSO:

H.R. 16489. A bill to provide for an investigation by the General Services Administration of various problems involved in providing toll-free telephone numbers for incoming calls at each regional office of most executive agencies; to the Committee on Government Operations.

H.R. 16490. A bill to amend title 39, United States Code, to authorize the transmission without cost to the sender, of letter mail to the President or Vice President of the United States, to Federal executive departments and agencies, or to Members of Congress, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. GUBSER:

H.R. 16491. A bill to provide for disciplined and responsible action in the consideration and execution of the Federal budget; to the Committee on Government Operations.

By Mr. KOCH:

H.R. 16492. A bill to amend the Internal Revenue Code of 1954 to provide that in the case of a dependent 62 or more years of age the support test shall be satisfied if the taxpayer contributes $1,500 or more to the support of such dependents to the Committee on Ways and Means.

H.R. 16493. A bill to amend the Social Security Act to provide that the Secretary of Health, Education, and Welfare (in the case of the old-age, survivors, and disability insurance program or the medicare program) or the appropriate State agency (in the case of any of the public assistance or medicaid programs) shall be liable for attorney's fees incurred by an individual in successfully challenging a decision which denies him the benefits or assistance, or reduces or limits the benefits or assistance, to which he is entitled under such program; to the Committee on Ways and Means.

By Mr. McFALL:

H.R. 16494. A bill to prescribe a minimum rate of interest which member banks of the Federal Reserve System shall pay on time and savings deposits; to the Committee on Banking and Currency.

By Mr. MATHIS of Georgia:

H.R. 16495. A bill to amend title 38 of the United States Code to liberalize the provisions relating to payment of disability and death pension; to the Committee on Veterans' Affairs.

By Mr. MIKVA:

H.R. 16496. A bill to terminate the airlines mutual aid agreement; to the Committee on Interstate and Foreign Commerce.

H.R. 16497. A bill to further amend the Social Security Act, as amended, to provide for grants to the States for the development and implementation of coordinated State programs for individual and family social services; to the Committee on Ways and Means.

By Mr. PEPPER:

H.R. 16498. A bill to authorize a program of research, development, and demonstration projects for non-air-polluting motor vehicles; to the Committee on Interstate and Foreign Commerce.

H.R. 16499. A bill to establish a National Economic Conversion Commission, and for other purposes; to the Committee on Interstate and Foreign Commerce.

H.R. 16500. A bill to prohibit the alteration of streambeds unless the Administrator of the Environmental Protection Agency certifies it to be in the public interest; to the Committee on Public Works.

H.R. 16501. A bill to amend the Internal Revenue Code of 1954 to allow a credit against the individual income tax for certain expenses paid by the taxpayer for the vocational or higher education of any individual; to the Committee on Ways and Means.

By Mr. ROE:

H.R. 16502. A bill to provide increases in certain annuities payable under chapter 83 of title 5, United States Code, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 16503. A bill to amend chapter 83 of title 5, United States Code, to eliminate the survivorship reduction during periods of nonmarriage of certain annuitants, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. ROYBAL:

H.R. 16504. A bill to amend title 38 of the United States Code to provide that any social security benefit increases provided for by Public Law 92-336 be disregarded in determining eligibility for pension or compensation under such title; to the Committee on Veterans' Affairs.

H.R. 16505. A bill to require States to pass along to public assistance recipients who are entitled to social security benefits the 1972 increase in such benefits, either by disregarding it in determining their need for assistance or otherwise; to the Committee on Ways and Means.

By Mr. ST GERMAIN (for himself and Mr. Carney):

H.R. 16506. A bill to authorize the Secretary of the Interior to establish national parks or national recreation areas in those States which presently do not have a national park or national recreation area; to the Committee on Interior and Insular Affairs.

By Mr. SCHERLE (for himself, Mr. Poage, Mr. Steiger of Arizona, Mr. Sebelius, Mr. Price of Texas, Mr. Thone, and Mr. Mayne):

H.R. 16507. A bill to amend the Federal Food, Drug, and Cosmetic Act to revise certain requirements for approval of new animal drugs; to the Committee on Interstate and Foreign Commerce.

By Mr. STEIGER of Wisconsin:

H.R. 16508. A bill to amend the Occupational Safety and Health Act of 1970 to provide additional assistance to small employers; to the Committee on Education and Labor.

By Mr. WAMPLER:

H.R. 16509. A bill to require States to pass along to public assistance recipients who are entitled to social security benefits at least half of the 1972 increase in such benefits, either by disregarding it in determining their need for assistance or otherwise; to the Committee on Ways and Means.

By Mr. YATRON:

H.R. 16510. A bill to amend the National Flood Insurance Act of 1968; to the Committee on Banking and Currency.

By Mr. GIAIMO:

H.J. Res. 1293. Joint resolution making supplemental appropriations for the fiscal year ending June 30, 1973, for certain activities of the Department of Agriculture, and for other purposes; to the Committee on Appropriations.

By Mr. ROYBAL:

H. Res. 1105. Resolution expressing the sense of the House of Representatives with respect to reruns of television programs; to the Committee on Interstate and Foreign Commerce.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BROYHILL of Virginia (by request):

H.R. 16511. A bill to allow International Risks, Inc., to use within the District of Columbia the name "Special Risk Covers of the District of Columbia, Inc."; to the Committee on the District of Columbia.

By Mr. CEDERBERG:

H.R. 16512. A bill for the relief of Lealla Laura Melvin; to the Committee on the Judiciary.

By Mr. FASCELL:

H.R. 16513. A bill for the relief of the Cuban Truck & Equipment Co., its heirs, and assigns; to the Committee on the Judiciary.

By Mr. FRASER:

H.R. 16514. A bill to permit the Capitol Yacht Club of the District of Columbia to borrow money without regard to the usury laws of the District of Columbia; to the Committee on the District of Columbia.

By Mr. GUDE:

H.R. 16515. A bill to permit the Capitol Yacht Club of the District of Columbia to borrow money without regard to the usury laws of the District of Columbia; to the Committee on the District of Columbia.

EXTENSIONS OF REMARKS

THE IMPORT OF PUBLIC WORKS AND ECONOMIC DEVELOPMENT ACT AMENDMENTS OF 1972 TO THE EIGHTH CONGRESSIONAL DISTRICT AND THE STATE OF NEW JERSEY

HON. ROBERT A. ROE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 16, 1972

Mr. ROE. Mr. Speaker, in April 1972 we were successful in having the Secretary of Commerce determine that Passaic County, Eighth Congressional District of New Jersey, statistically qualifies, based on the continuing high unemployment rate in our county confirmed by the U.S. Department of Labor, for designation as a title I area eligible for long term economic development grants and loans for the construction of public works and development facilities including added Federal supplementary grants under the Public Works and Economic Development Act of 1965, Public Law 89-136.

This action was most important to my congressional district, one of the most highly industrialized and major labor market areas in the northeast metropolitan region of our country, where we have suffered among the highest unemployment ratios in the United States. Eligibility under title I of this act authorizing grants for public works and development facilities, as it is presently constituted, provided us with the opportunity to apply for 50 percent direct matching Federal assistance funds for:

First, acquisition or development of land and improvements for public works, public service, or development facility usage; and second, acquisition, construction, rehabilitation, alteration, expansion or improvement of such facilities including related machinery and equipment, as well as supplementary grants for a total maximum Federal share up to 80 percent to take maximum advantage of:

First, designated Federal grant-in-aid programs defined in the act; second, the forementioned direct grants enumerated under first—above—and third, Federal grant-in-aid programs authorized by the Watershed Protection and Flood Prevention Act and the 11 watersheds authorized by the Flood Control Act of December 22, 1944—including the Passaic River Basin—for which these areas are eligible but, because of their economic situation, they cannot supply the required matching share.

All essential factors in generating permanent jobs for long-term employment in our economically depressed areas and contributing substantially to the establishment of stable and diversified local economies.

Mr. Speaker, it is important to note that the amendments to the Public Works and Economic Development Act scheduled for consideration on today's congressional calendar will provide my Passaic County District with the following benefits which are essential to help meet the desperate need for economic development programing and capital economic expansion in our county, State and Nation—and particularly in our urban centers where the highest level of unemployment prevails throughout our country.

The amendments would strike the requirement that supplementary grants for public works and development facilities can be used only to increase the Federal contribution above the authorized maximum, thereby permitting use of supplementary grants to raise the Federal contribution from the amount of the basic grant to the authorized maximum. The bill would also decrease the required local share for grant-in-aid projects from 20 to 10 percent.

The amendments authorize operating grants at a rate not to exceed 75 percent of operating costs for vocational training facilities constructed with direct grants under title I of the act. These transition grants would be available for any two years during the 5 years following enactment to help communities make permanent arrangements to fund such operating costs.

The eligibility criteria provisions of the amendments under the public works impact program are most significant in providing immediate short term employment for pockets of high unemployment without sacrificing the limited funding available to other areas under the Public Works and Economic Development Assistance Act. The public works impact program would receive $500 million in each of the next 2 fiscal years. The amendment redefines special impact areas as areas, urban and rural and without regard to other boundaries, which have a large concentration of low-income persons, substantial unemployment, or actual or threatened unemployment due to closing or curtailment of a major source of employment and provides 100 percent Federal matching funds for these areas of high unemployment, concentrated low income, or substantial outmigration.

Mr. Speaker, by citing only benefits as they apply to title I of the Public Works and Economic Development Act, I trust no one will misconstrue the value of any of the other amendments contained in today's legislation as being less important. I firmly believe that the bill, as presented, has incorporated many of the desperately needed improvements in existing law that have been brought to the attention of our Public Works Committee and our committee staff members, and particularly our legal counsel, have done an excellent job in encompassing the evaluations made of the existing programs as well as recommendations received during our public hearings in the substantive 1972 amendments to the Public Works and Economic Development Act. The extension of these economic programs for an additional fiscal year to June 30, 1974 is, as the committee has reported, essential to assist economically depressed areas so that they may be brought into the mainstream of our Nation's economic growth.

REPORT TO THE HOUSE ON THE THIRD PARLIAMENTARY AND SCIENTIFIC CONFERENCE OF THE COUNCIL OF EUROPE AT LAUSANNE, SWITZERLAND

HON. JAMES W. SYMINGTON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. SYMINGTON. Mr. Speaker, the pace of scientific information and application has increased at an exponential rate since the 18th century, especially since World War II and the advent of sophisticated information systems. Science and technology have in the last 200 years changed beyond comprehension the potential for improvement in man's quality of life. Science and technology are inextricably bound to the social and economic fabric of modern society, and the effects which their development has on society are so great that they can no longer be permitted to evolve at random or to suit the needs of isolated interests. Decisions regarding the social impact and desirability of new scientific and technological innovations have increasingly been thrust upon political bodies because their effects are, as the Director of Oak Ridge National Laboratory has stated, trans-scientific—that is, their impact and behavior go beyond the predictive capabilities of science. Yet politicians have, with uncomfortable regularity, been asked to make decisions on technological proposals without having an adequate evaluation of the possible impacts of the technology on society. Recognizing the crucial need for more knowledge and careful assessment of those impacts before we vote our decisions, the House of Representatives voted in February to establish an Office of Technology Assessment—to provide us with adequate information for managing science and formulating a rational science policy for our Nation.

Although many countries in Europe have established such an office, either serving their parliaments directly or stemming from their ministries of trade, the Members of the Council of Europe determined that there was sensed a need to discuss science policy as it affects the member states collectively rather than individually. Therefore, the Consultative Assembly of the Council convened the Third Parliamentary and Scientific Conference of the Council of Europe. Mr. Speaker, I would like to submit for the RECORD a report to the House on this excellent conference.

The conference, which was held in Lausanne, Switzerland in April, was organized by the council's committee on science and technology to consider three topics pertinent to science in Europe today:

First, parliamentary democracies in the scientific-technological age.

Second, European science policy.

Third, management of technology and parliamentary control.

Some 150 members of parliament, scientists and science managers, and industrialists met to discuss the issues and to make recommendations as to how the European community might best organize meaningful scientific and technological policies for its citizens. To enlarge the scope of debate representatives of foreign countries were invited to participate in the conference. It was my privilege to attend by special invitation directed to our House Committee on Science and Astronautics. Among other non-European representatives were the Honorable Ian Watson, member of the Canadian House of Commons, who attended as a representative of the Canadian NATO Parliamentary Association. Also attending from the Canadian Parliament was Senator Allister Grosart, Chairman of the Steering Committee of the Special Committee of the Senate on National Science Policy. Mr. Takao Fujimoto, director of the special committee of the house of representatives for the promotion of science and technology, represented Japan.

The conference lasted for 5 days and consisted of working sessions at which the attendees considered each of the three conference themes. Thought-provoking papers were presented at each session and were followed by a general discussion and debate of the issue at hand. All conference attendees were encouraged to submit recommendations which they thought should be incorporated in the conclusions of the conference.

Regarding the role of parliamentary democracy in the scientific and technological age, the conference concluded that the power shift in modern states between administration and parliament, to the detriment of the latter, has resulted from specialization of the machinery of administration due to the demands of the complexities of modern life. In recent years the rapid development of technology has tended to speed this tendency. "Since parliamentary democracy is still the system of government best suited to safeguarding individual freedoms and human rights in a technical age," the conclusions state, "the decline in the authority of parliaments must be countered by providing them with the means to function independent of the executive power." Parliaments must provide themselves with operating methods and structures and up-to-date information systems so that the members are fully aware of the import of the decisions they must make.

Recognizing the need to develop trans-European institutions capable of synthesizing scientific and technological data, making recommendations to parliaments, and implementing a program of action, the conference concluded that European governments should encourage organizations like CERN where the cost of equipment for fundamental research can be shared by the participating governments, thus enabling European governments to tackle together research which they could not afford individually. The conference further recommended that European governments:

First, encourage intergovernmental and international scientific and technical organizations;

Second, facilitate the movement of scientists and scientific instruments for participation in programs developed by governments or international institutions;

Third, refrain from undertaking large joint technological projects when there may be parallel efforts on a national level;

Fourth, make necessary arrangements at the outset of a joint project for joint industrial exploitation and marketing of the results—thus emphasizing the importance of technology transfer;

Fifth, establish, in cooperation with the Organization for Economic Cooperation and Development, a data bank "designed to identify the described current research in Member States of the OECD and the Council of Europe."

I also made a recommendation which was incorporated into the conclusions of the conference on European science policy: "that European governments, in pursuance of the objectives set out in the preceding paragraphs bearing on fundamental research, give consideration to the establishment of a European Science Foundation under the direction of a Board of Governors drawn from both the physical and social science communities."

Further conclusions reached by the conference were that economic growth in Europe will, in the future, be based less on manpower reserves and more on the management of technological innovations; that European nations acting separately will be increasingly limited in the field of advanced technology; and that "so far European cooperation has above all been hampered by an insufficient integration of policies and action programs and too vague an appreciation of the dynamic nature of the new political power relationships between industry and the public authorities, whereby the latter intervene on at least three different levels: research, structures, and contracts." Considering these conclusions, the conference made the following recommendations, which I quote in full because they are so relevant to our own development of a rational science management policy:

A. At the national level

(i) that European governments should identify the public and private research and development centres and organisations capable of contributing to product and process innovation in order to establish in ocncert a group of priority objectives to which public funds may be allocated;

(ii) that European governments should assess the contribution of state enterprises to process and product innovation and their role in the state's general economic policy;

(iii) that European governments should analyse the role of the multinational corporations which regulate a significant proportion of technological innovation in Europe in the interest of a world-wide business policy in order to determine whether or not the strategy of the multinational corporations is in accordance with the co-ordination of innovation activities which the State seeks to attain;

(iv) that European governments should carry out an analysis covering the above areas in order to make possible the comparisons of different programmes against social and political objectives;

(v) that European governments, in order to provide a basis for evaluation of programmes, should increase their support to research in the social and political sciences concerning the interrelation between technological, economic, social and political development, as well as studies of decision-making processes and of structural arrangements for improved control and regulation of the development and uses of new technologies;

(vi) that European governments should take the necessary steps to encourage universities in Europe to undertake individually and jointly interdisciplinary research and examination in order that universities may contribute effectively and constructively towards the solving of the problems threatening the future well-being of mankind.

B. At the European Level

(i) that the European governments concerned institute co-operation in international institutions in the field of economic and technological long-range forecasting and planning, in order that those responsible for selecting research and development objectives at European, national, regional, company or laboratory level, and in particular parliamentarians, may be supplied with a full and coherent range of detailed studies of the situation;

(ii) that European governments grant European institutions and the European Communities in particular the necessary powers and means to formulate advanced technology policies, especially on those three levels where action is most urgently needed: research and development, the re-adjustment of industrial structures, the concerting of public contracts; and that European States should be given the opportunity of collaborating in these activities;

(iii) that European governments encourage concerted action by public authorities and organisations (international, national or regional) in order to ensure that their initiatives in advanced technology are complementary;

(iv) that European governments ensure that the purchasing policies of such authorities and organisations contribute to the elimination of administrative obstacles to the establishment of a unified market for the products of advanced technology, even in fields not covered by a common research and development programme.

Summing up the conclusions of the conference, it can be said that in the modern industrial state there is a grave necessity to reorder priorities and to direct scientific and technological efforts toward social objectives. Science policies must begin to mesh with and further those objectives, and parliaments must initiate the process and contribute to the formulation of objectives and review implementation of policy. With such conclusions the Council of Europe is trying to avoid the pitfalls of modern states noted by the Secretary-General of the United Nations, Kurt Waldheim, in March:

> Failure to assert the primacy of policy over technology is an alarming and increasingly dangerous phenomenon of the modern world. All too often, those responsible for the future development of technology are insufficiently aware of the far-reaching political, economic and social implications of their choices.

The European community as represented by the Council of Europe is on its way toward making itself aware of its problems and responsibilities in the areas of science and technology management. At a time when our own national priorities need serious reevaluation—when we face a breakdown of our social order because the major application of our technology has been directed at the military rather than toward solving our great domestic problems like transportation, housing, health care, trash disposal, and the energy crisis—it would be good for us as Members of Congress to study the recommendations of this Third Parliamentary and Scientific Conference of the Counil of Europe as food for thought in approaching our own science and technology policy and management problems.

Moreover, our peacetime technology effort that is our public investment in basic and applied research, having taken a back seat—even a rumble seat—to military needs, may find itself at a competitive disadvantage with a resurgent continental technology of a united Europe. While we applaud their initiative we had better look to our own.

NOTE.—The Council of Europe was formed in 1949 to forge a greater unity among its members. Its aims of facilitating economic and social progress and safeguarding common ideals and principles are pursued by the Council through "discussion of questions of common concern and by agreements and common action in economic, social, cultural, scientific, legal and administrative matters and in the maintenance and further realization of human rights and fundamental freedoms." (Article 1 of the Statute of the Council of Europe). Membership in the Council is dependent upon observance of parliamentary democracy; there are at present seventeen member states: Austria, Belgium, Cyprus, Denmark, the Federal Republic of Germany, France, Iceland, Ireland, Italy, Luxembourg, Malta, the Netherlands, Norway, Sweden, Switzerland, Turkey, and the United Kingdom of Great Britain and Northern Ireland.

FOURTH ANNIVERSARY OF THE SOVIET INVASION OF CZECHOSLOVAKIA

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. ROBISON of New York. Mr. Speaker, August 21, 1972, will mark the fourth anniversary of the Soviet invasion of Czechoslovakia. By this act of foreign interference, Czechoslovakia's right of sovereignty over its own affairs was clearly, and unjustifiably, violated.

It is without question appropriate that we once again express our outrage over this action but, at the same time, we must be cautious not to act in a manner inconsistent with the overriding goal of American foreign policy. That goal, which now more than ever must be our constant guide, is to establish an atmosphere of peace in a world in which the people of Czechoslovakia can resume the great strides they were making toward obtaining increased liberties prior to the abrupt act of Russian intervention which we decry today.

Rather than to continue deploring this act in tired political rhetoric—although expressions of moral support are not without value—it is now time for us to encourage the Czech people to set out, once again, along the road to freedom. It is for us to determine, and then, to act, in whatever ways we can most-significantly aid them in this critical project. Very possibly, the most constructive activities the American people can undertake are those which will, by expanding our influence through diplomatic channels, liberalize the Czechoslovakian nation as well as those other nations engaged in similar struggles. This implies increased cultural exchange, more flexible trade agreements, and serious consideration of the future role of NATO and the possibilities for mutual and strategically-equitable troop reductions in Europe.

This approach will not only aid the people of Czechoslovakia in their efforts to regain their freedom from Soviet control, but it could have wider benefits as well, in the contribution it will make to the overall betterment of international relations and the making of a more-peaceful and understanding world.

NAACP SHOWS CONCERN FOR AFRICAN AFFAIRS

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. DIGGS. Mr. Speaker, recent actions taken by a number of black organizations indicate that there is an ever larger concern for African affairs among all segments of the black community. National organizations in every area of endeavor, be they political, cultural, social, or economic, are taking firm and unequivocal stand on the right of African peoples to determine their own fate.

I am pleased to note that the National Association for the Advancement of Colored People—NAACP—has taken such a stand. I am certain that we will be hearing more from the NAACP as they move to implement the foreign affairs resolutions adopted at their most recent national convention in Detroit, Mich.

Mr. Speaker, I insert these resolutions into the RECORD:

VII. Foreign Affairs

AFRICA

The NAACP since its inception, has expressed a continuing interest in the Mid-East and Africa, opposed Colonialism, supported Pan-Africanism, the struggles of Africans for independence and self-determination. As expressive of our interest and concern with the problems of these areas, we commend our Executive Director, Roy Wilkins, for his recent trips to South Africa and Israel.

After independence, we have urged our nation, through grants and aid and technical assistance, to help the emerging new nations to develop their economic potential, increase their trade relations with the United States and other countries.

We have long recognized that South African apartheid, is one of the world's most iniquitous and debilitating practices separating black and non-white Africans from the white minority and discriminating against them in education, housing, employment as well as denying civil and political rights to this non-white majority.

Noting that the practice of apartheid support by foreign governments, including the United States, through investment policies, presence of foreign corporate enterprises, which follow the practice of a racially discriminating nation, and desiring to bring about an end to such practices in South Africa and other African nations, which likewise are guilty of denying equal rights and opportunities to natives, we call for the following:

1. Expansion of Economic aid to Africa;

2. An end to United States complicity with apartheid and the minority-ruled minority of Africa;

(a) Support of South African students in their courageous stand against segregation and discriminatory educational policies. Especially do we deplore and condemn the repressive action of the South African Government which closed the tribal colleges and universities because of student protests against expulsion of an African University student leader who attacked the Bantu Education System.

We also applaud and support the protest of white students against apartheid and we condemn the action of the South African governments in banning protest meetings from the campuses.

(b) A fresh review by American corporations of their employment policies and practices in South Africa and the pressing of corrective steps to insure equal opportunities for employment, training, upgrading and advancement of blacks in all categories of employment.

(c) A fresh review as of 1972–73 by U.S. organizations and individuals of their investment portfolios with firms doing business in South Africa with attendance at stockholders' meetings to insist that such firms use their corporate powers to help bring about remedial, non-discriminatory policy changes in management, employment, training, upgrading in South Africa, or withdraw their financial investments and franchise arrangements if such policies remain unchanged. We call on our members to withhold economic support from such companies doing business with the Union of South Africa where those companies do not accede to our request that they use their good offices to bring about a favorable change in the apartheid policies in South Africa.

We urge the appropriate NAACP officials to make available a list of American companies doing business in South Africa for the guidance of our members.

(d) Effective implementation of measures against illegal South African administration of Namibia.

(e) Closing of NASA Tracking Station in Johannesburg.

(f) Strict adherence to UN Arms Embargo against South Africa and Portugal.

(g) Termination of sugar quotas to South Africa and its redistribution to black Africa.

3. Termination of Azores agreement and of all military aid to Portugal.

4. We are dismayed and angry by the peremptory action of the United States Senate in disregarding the sanctions against Rhodesia in the matter of Rhodesian chrome, especially since it is acknowledged that the stockpile of the United States is more than enough to meet our needs for the next decade.

We reaffirm our long standing position regarding support of equal rights to Black Rhodesians and urge full support of UN sanctions against Rhodesia and an end to importation of Rhodesian chrome into the U.S.

5. Support of UN efforts to aid in the realization of self-determination and majority rule in Africa.

6. End to nuclear cooperation with countries, such as South Africa, which have not signed non-proliferation treaty.

7. Increased economic cooperation and assistance to the emerging African nations by the United States.

CZECHOSLOVAKIA—4 YEARS LATER

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. CRANE. Mr. Speaker, 4 years ago this month the Soviet Union sent its army into Czechoslovakia to eliminate the effort by the people of that country to achieve self-determination and freedom.

What has been referred to so often as the Prague Spring of 1968 was indeed short lived. For a short time, the people of Czechoslovakia, who have suffered so much as a result of both the Nazi and Communist occupations of their country, felt in control of their own destiny. For a short time, people could express their thoughts openly, could read the press and literature of the Western world of which they feel culturally so much a part, and could travel outside of the Soviet orbit.

Despite the fact that many in the West believe that the Soviet Union has, in some sense, altered its traditional policies and goals, the evidence seems quite to the contrary. Not only has the Soviet Union reimposed its iron grip upon the people of Czechoslovakia, but at this very moment, as if in celebration of the Soviet invasion of 4 years ago, a new purge of dissenters is taking place.

Since July 17, seven trials have been known to have occurred. The most recent is that of former Czech Communist Party College Rector Milan Hubl, and two other men who were accused of distributing "provocative printed matter" in order to weaken "the socialist system in the state." What they did was to pass out pamphlets during Czechoslovakia's elections last fall, informing voters of their constitutional rights to cross out names of the government-sponsored slate or not vote at all. Hubl, who was also accused of making contact with Italian Communists, was given a 6½-year sentence. One codefendant received 20 months.

The fact is that freedom has been obliterated in Czechoslovakia, and tyranny is regaining its iron grip on that country. That this is being done at the very moment when many in the West hail the new approach which is said to be emerging from the Communist world makes the suffering of the Czech people doubly ironic.

Commenting upon the recent series of trials, the Washington Post declared that—

> Once again, the world is paying heed to Czechoslovakia and observing the barren quality of its public life. It is less a handful of doughty individuals than the government itself which is on trial. Prague's hopes of pacifying the people with economic improvements and of quietly nursing the country back into international respectability have had to yield to the domestic imperatives dictated, or so one must presume, by the Soviet Union.

The Post notes that—

> Ironically, the invaders of Czechoslovakia currently enjoy a higher world standing, including a closer relationship with the United States, than does the victim.

Following is the editorial, "Czechoslovakia: A county On Trial," which appeared in the Washington Post of August 3, 1972:

> #### Czechoslovakia: A Country on Trial
>
> Such is the political ambiguity that still hovers over Prague four years after the Soviet invasion that it is hard to tell whether the current trials of "subversives" mark the darkening of a long night of the knives—as one defendant, Milan Hubl, reportedly warned Gustav Husak, the leader of Czechoslovakia—or whether, as the government contends, the trials are simply meant to erase the last public traces of resistance to the post-invasion status quo. That Mr. Husak chose the period of the trials to go on vacation, in the Soviet Union, would seem to illustrate the point.
>
> The Czech government notes that it is not the liberal leaders of 1968, long since purged (but not tried) who are in the dock, but others who are charged with "crimes" committed—after repeated official warnings—in the 1970s. The political overtones are nonetheless apparent. The several dozen defendants did in fact support Alexander Dubcek in 1968; they support what he stood for still. But their acts—like distributing leaflets urging citizens to ignore government voting instructions in the 1971 elections—are not those which either a democratic country or a confident socialist country would regard as criminal. Indeed, some defendants, admitting the charges against them, claim that what they did was for the *good* of Czech socialism. But of course the trials are not about the perfecting of socialism; they are about the consolidating of an uneasy regime's power.
>
> If the internal effects of the trial are as yet uncertain, the external effects are not. Once again the world is paying heed to Czechoslovakia and observing the barren quality of its public life. It is less a handful of doughty individuals than the government itself which is on trial. Prague's hopes of pacifying the people with economic improvements and of quietly nursing the country back into international respectability have had to yield to the domestic imperatives dictated, or so one must presume, by the Soviet Union.
>
> Ironically, the invaders of Czechoslovakia currently enjoy a higher world standing, including a closer relationship with the United States, than does the victim. The reason is simple: the Soviet Union has the power. Yet

> as the fourth anniversary of the invasion nears, the plight of the Czechs remains infinitely sad.

There has been an outcry throughout the world against the new series of repressive trials. Italian, British, and Swedish Communist newspapers have criticized the trials, and so has the acting head of the French Communist Party, Georges Marchais. An underground organization calling itself the Citizens' Freedom Movement has invited Angela Davis, the black militant leader, to come to Prague to attend the trial. The purpose of the visit would be, as the open letter to Miss Davis puts it, to help the defendants, who are being "persecuted for having questioned the wisdom of their rulers," but who, unlike Miss Davis herself during her recent trial, were unlikely to be accorded "the elementary right to defense in court proceedings."

The British magazine, the Economist, in its issue of July 22, 1972, reports about the invitation to Angela Davis, and notes that—

> There can be little doubt that the publicity surrounding the appeal to Miss Davis and another recent protest by a large group of prominent left-wing western intellectuals, including the philosopher Jean Paul Sartre and the novelist Graham Greene—have embarrassed both the Husak regime in Prague and the Soviet leaders. The open persecution in Czechoslovakia of right and left alike makes a bad impression on left-wing opinion in western Europe just at a time when some left-wing, non-Communist groups appear to be increasingly ready for close political cooperation with the communists in France, Italy, and elsewhere in the non-Communist world.

It is certainly time for the world to understand the true nature of communism. We have been given many examples, and if we fail to come to this realization it means that the brave people of Eastern Europe—particularly those of Czechoslovakia who face a new repression at this very moment—have suffered in vain. As we commemorate the fourth anniversary of the Soviet invasion, and as we observe the new persecution which is now taking place, we must make it clear to the world that wherever freedom and dignity are under attack, the sympathies of the American people are with the oppressed, not with the oppressor. We must keep faith with the brave people of Czechoslovakia, and must look forward to a time when their freedom and independence will once again be restored.

A RAY OF HOPE STILL EXISTS

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. HALPERN. Mr. Speaker, the streets of Prague, Czechoslovakia, will be quiet Monday. Quiet, not because the people of the Czech nation are content but because the tanks and soldiers of the Soviet Army extinguished all hope of freedom and liberty 4 years ago. Few will forget the tragic day on August 21, 1968 when the Soviet Union brutally and tyrannically overran the nation of Czechoslovakia. For over 20 years of Soviet domination, the independent minded Czechs sought some form of freedom amidst the dictatorship of communism. Alexander Dubcek, who ruled Czechoslovakia for only a 15-month "brief spring of freedom," was ousted and many of his supporters, Mr. Speaker, are now being tried in Prague for "subversive activity." These gallant freedom-fighters of Czechoslovakia are daily being sent to prison or death by the Soviet authorities. Participants in the August 1968 uprising are being rounded up and some are even being sent to insane asylums.

The Western world cries out for liberty and freedom for the persecuted Czechs. The Czech people have shown their outrage time and time again through work stoppages and other means of defiance. The puppet regime in Prague will continue to bend to every Soviet whim, realizing its only hope for political survival is the never-ending threat of a return of Soviet troops.

Mr. Speaker, the Czech-Americans should be commended for their continued vigilance in reminding us of the repression that exists in Czechoslovakia. With groups as the Czechoslovak National Council of America leading the fight to inform America and the world of what really is happening to their countrymen. Perhaps a ray of hope still exists. America condemns the Czech invasion of 1968 as much as the Nazi onslaught on Czechoslovakia in 1939. The spirit of freedom and the light of liberty in Czechoslovakia will never be crushed.

THE RISING COST OF MEAT

HON. GILBERT GUDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. GUDE. Mr. Speaker, for 20 years the American consumer has witnessed a steady and relentless increase in the cost of food, particularly the cost of meat. In the past several months, the rate of increase appears to have accelerated. Today, I would like to address myself to two topics, first, the forces underlying this 20-year trend and, second, the reasons for the sudden spurt in prices since February, particularly in the Washington metropolitan area.

To explain the 20-year trend of rising prices, it is necessary to examine the cost structure of the three major components of the food marketing chain, the farmer, the wholesaler, and the retailer.

For raw agricultural products, there have been substantial increases in prices. However, the farmer has seen his production costs rise an average of 50 percent. Despite these increases in operating costs, farm prices have risen only 6 percent in the past 20 years. Farmers have been able to survive only by virtue of their increased productivity—223 percent over the last 20 years.

While farm prices have risen 6 percent, wholesale prices have jumped 20 percent. Most of the difference can be attributed to increased costs at the wholesale level. Labor costs have risen 300 percent; freight costs 140 percent; services—rent, insurance, telephone, and so forth—240 percent; containers 160 percent; fuel, power, and light costs have jumped 135 percent; while the costs of new plants and machinery have increased 192 percent. Throughout this period of rising costs, the profit margin for wholesalers has hovered around 1 percent.

For the third component of the food marketing chain, the retailer, prices have spurted 43 percent in the last 20 years. Again, most of this increase can be attributed to rising operating costs, particularly for labor which accounts for 50 percent of expenses. Most analysts would probably agree that for the retail food industry, after-tax profits as a percentage of sales should ideally average around 1.5 percent. Actual profits have traditionally been lower, peaking at 1.41 percent in 1965. In 1971, the food chain industry's profits on the dollar, after taxes, was down to 0.86 percent.

Underlying the rising costs within the food marketing chain is the steadily increasing consumer demand for beef. Consumer consumption of beef has more than doubled over the last 20 years, increasing from 56.1 pounds per capita to 114.3 pounds per capita. Over the last 7 years the increase was 30 percent. This steadily rising demand for meat has sustained high prices. Indeed, it has been a significant force in pulling these prices up.

To help alleviate this continuing problem of supply relative to demand there are two initiatives to which we must give serious consideration. The first is the permanent lifting of import quotas. The President has, for the balance of 1972, already suspended import quotas for meat. This means that the amount of foreign meat that can be imported is no longer limited to 6.7 percent of U.S. production.

However, only limited relief in the supply situation can be expected from the President's action. I say this because there exists a worldwide shortage of beef, and foreign suppliers are not likely to jump to the American market, possibly losing other markets to competitors, when there is no assurance that import quotas will not be reinstituted at the end of this year. Further, the American market offers no substantial financial incentives as U.S. beef prices are only three-fourths of 1 cent above the world level.

To overcome some of this anticipated hesitancy on the part of foreign suppliers, I have suggested to the President that in formulating the administration program for next year he give serious consideration to legislation repealing the section of the Meat Import Act of 1964 which establishes the import quota system.

The permanent lifting of import restrictions could result in some change in world market patterns, bringing a larger supply of beef to the United States. It is, however, unlikely that a permanent lifting of the import quotas would increase the supply of beef to the extent that it would depress prices. Rather, the effect would be to prevent consumer demand from further outstripping supply, thus decelerating the rate of price increase, not depressing existing prices.

The second initiative to supplement the supply of beef which must be given careful attention is increasing the available grazing land to support a larger national herd.

Under the terms of existing legislation, 50 to 58 million acres of cropland are held out of production each year. If pasturing of this land were permitted, it has been estimated that the United States could produce up to 2 percent more beef. If this pasturing were allowed, it is doubtful that more than 20 million additional acres would be grazed during the pasture season. However, these acres would provide substantial additional feed for the existing 116 million head of cattle on U.S. farms and ranches, eventually permitting an increase of a few million head in the U.S. herd.

Grazing set-aside cropland would not lead to an immediate increase in beef cattle marketings. Some cattle would gain more weight because of improved pastures, but additional female breeding animals would be retained on the farms and ranches to utilize the additional grazing, thus slightly reducing the number of cattle marketed for the first year or two. It would not add sufficient pasturage, however, to cause a noticeable reduction in current marketings.

I have written to the Secretary of Agriculture and requested that the Department study the issues surrounding this suggestion so that it can provide the Congress with a full study when the legislation implementing the set-aside program comes up for review next year.

With an ever-growing population and rising standard of living, it is unlikely that the American consumer's demand for beef will relent. The actions I have suggested regarding meat imports and grazing land will assist cattlemen in their efforts to meet this constantly increasing appetite for meat.

To this point, I have been discussing long-term national trends and long-term potential solutions. However, to explain market behavior since February, particularly in the Washington area, it is necessary to examine a narrower time spectrum. The fluctuations in food prices, particularly for meats, can be understood in terms of, first, the market forces of supply and demand, and second, expanded retail margins.

The high demand that has characterized the food market over the past 20 years has not relented in past months. If anything, demand relative to supply has increased because the supply of beef coming to the market has decreased somewhat. The decrease is generally attributed to the corn leaf blight of 1970. In that year, much of the corn crop fell victim to the blight. With a reduced supply of corn, the price of feed corn went up. The increase in production costs, without a corresponding increase in the return to the farmer, resulted in many cattle being withheld from the market. Had this particular series of events not occurred it is still unlikely that supply would have kept pace with demand.

However, not all of the price increase that occurred in February can be attributed to the forces of supply and demand. A significant portion of the explanation is to be found in expanded retail margins of profit.

Under the Price Commission's volatile pricing rule, firms operating in a market characterized by volatile prices, such as the food industry, may immediately pass along increased costs in order to maintain their customary profit margins.

In the food industry, retailers are wary of the effect constant price changes may have on the consumer. Therefore, retail pricing policies exhibit a lag phenomenon. That is, when wholesale prices begin rising, retailers hold the line until wholesale prices reach a trigger point. At that point retailers raise their prices. During this lag time retailers experience shrinking profits. The loss is recovered when wholesale prices begin to decline because the higher retail prices are maintained until wholesale prices drop below another trigger level. When that level is reached, retailers drop their prices. This downside lag compensates retailers for the upturn lag.

Combined with the volatile pricing rule, this lag pricing characteristic of the retail food industry set the stage for excessive retail price increases in the early months of this year. When wholesale prices reached the trigger level in February retailers increased their prices above the customary levels. Further, retailers appeared prepared to lengthen the time lag on the downside. This situation led the Cost of Living Council to meet with retail executives in a jawboning session in late March. That meeting saw an immediate reduction in retail prices.

Recently released figures indicate that food shoppers in the Washington area are experiencing another sharp, and possibly unjustifiable, price increase. The most recent monthly data on food costs shows that prices in the Washington metropolitan area rose 2.1 percent—not seasonally or annually adjusted—while the national average was 0.6 percent—not seasonally or annually adjusted. During that 1-month period, retailers throughout the Nation experienced the same increase in costs as retailers in the Washington area. Yet, prices in this area increased at a much faster rate. These figures suggest that retailers may be trying to accomplish in the local area, what was attempted nationally in February—increase profits beyond the average generally accepted by economic analysts.

A characteristic of the Washington retail food market which could give impetus to excessive price increases not found generally in other areas of the Nation is the absence of independent competition to the prices charged by the leading Washington chains. In the Washington metropolitan area, the major food chains completely dominate the market, accounting for 87 percent of total sales. Contrasted to the lack of competition in this area is the situation in other metropolitan cities. In New York, the leading food chains accounted for 51.7 percent of total sales. In Philadelphia the figure is 68.5 percent, and in Boston only 53.3 percent. The lack of independent competition in Washington may significantly reduce the pressures for price constraint on the part of large retail food chains.

As a result the Washington area consumer is more readily exposed to inordinate increases in food prices. The big food chains have minimal constraints of the competitive market place which is in the tradition of the American economic system.

I have today formally requested the Price Commission to investigate retail food pricing policies in the Washington metropolitan area to determine if prices have indeed been raised to excessive levels, as they were last February. If this proves to be the case, the Price Commission must immediately order prices rolled back to appropriate levels.

Mr. Speaker, I am deeply disturbed by the possibility that the benefits and burdens of the President's economic stabilization program may be shared unequally. Therefore, I am urging that the Price Commission also assume a continuing active role in monitoring food prices to ensure that the consumer does not bear the heaviest burden of wage-price controls.

WHO IS DESTROYING OUR ARMED FORCES? (III)

HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. SCHMITZ. Mr. Speaker, a UPI dispatch of January 23, 1971, said:

> The U.S. Army had built a wall around its installation at Cam Ranh Bay to keep out drug pushers and prostitutes. Now, however, the official policy is permitting ladies of the evening to be signed onto its bases officially in central Vietnam to meet American troops in their barracks. The key for admission to such bases is a Vietnamese identity card, a document that any undercover Viet Cong agent can obtain without difficulty. The Army admits that the girls are smuggling dope into the formerly walled installations, as well as posing serious security risks; but says the Army: the risks are worthwhile in the interests of keeping the peace within an increasingly disgruntled and demoralized Army.

That is an example of how Armed Forces policy, which should be building up the morale of our men in uniform has been contributing to their demoralization in Vietnam. The origins of that policy can be traced to very high levels.

Until June 1970, for instance, two Navy lieutenants were giving morning intelligence briefings to the Chairman of the Joint Chiefs of Staff. Their names were Gordon Kerr and James Pahura, and both were members of the Concerned Officers Movement, an organization which has shown itself to be not concerned about victory over communism, but preferring Communist victory in Southeast Asia.

Going down one step in the chain of command, we come to Adm. Elmo R.

Zumwalt, author of the famous Z-Grams. It was these Z-Grams that promulgated more sideburns, more liquor in the quarters, and similar changes in policy leading to what one source in San Diego would call "a dangerous undermining of Navy discipline and morale." It was in San Diego that 180 active and retired admirals voiced their vehement objections to the trend reflected in a New York Times report that San Diego "and other Navy towns were filled with off-duty sailors in unpressed dungarees often spotted with grease stains and paint and sometimes ripped." No wonder a Navy man would comment in the Navy Times for November 1970:

> It is patently obvious Admiral Zumwalt intends to haul the U.S. Navy (willingly or not) into consonance with liberal America as it girds for the 21st century.

As this goes to press, Admiral Zumwalt has hauled the Navy still further in that direction by announcing his capitulation to the women's liberation movement in the form of plans for young ladies to man battle stations aboard ship and perhaps even fly combat missions in Navy aircraft.

These trends were put in clearer perspective upon discovering that on June 2, 1965, Elmo R. Zumwalt became the youngest rear admiral in the Navy while serving as executive assistant and naval aid to Paul H. Nitze, then Secretary of the Navy, now negotiating for President Nixon's Disarmament Agency in Geneva. It was Paul Nitze who headed a five-man committee for the National Council of Churches in 1958 that called for—among other things—opposition to the development of U.S. military strength, except under United Nations control; opposed retaliation by the United States even if attacked; advocated turning over the Strategic Air Command to the United Nations; and urged that Quemoy and Matsu Islands be handed over to the Chinese Communists. Congressman WAGGONER of Louisiana described this document as "a running theme of appeasement, coexistence, and surrender, the like of which probably cannot be found in any other document this side of the Iron Curtain."

At Fort Carson, Colo., once known as one of the toughest training areas in the United States, the Rocky Mountain News reported November 17, 1971:

> Bikini-clad go-go girls dance nightly in the enlisted men's service clubs. The post has two coffee houses, operated with government funds, where the GI's gather to rap with their commanders, practice arts and crafts and many to vent their anti-Army, anti-Vietnam war views.

This undermining of our military by "pressure from above and pressure from below" follows the classic pattern outlined in Jan Kozak's book "And Not a Shot Is Fired." In a future series I will explore the part that tax-exempt foundations have played and are playing in these developments. Every American would do well to think very deeply on these words of the late Gen. Douglas MacArthur in his annual report as Chief of Staff of the U.S. Army in 1933:

> The unfailing formula for production of morale is patriotism, self-respect, discipline, and self confidence within a military unit, joined with fair treatment and merited appreciation from without. It cannot be produced by pampering or coddling an army, and it is not necessarily destroyed by hardship, danger or even calamity. It will quickly wither and die if soldiers come to believe themselves the victims of indifference or injustice on the part of their government, or of ignorance, personal ambition, or ineptitude on the part of their leaders.

POWERS OF THE HOUSE ADMINISTRATION COMMITTEE CHAIRMAN

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. FRASER. Mr. Speaker, a news article appeared in today's New York Times which reports the attempts of the chairman of the House Administration Committee to include within his authority the power to remove from the payrolls House employees with whose work he disagrees.

One quotation from Chairman HAYS, in particular, deserves the attention of concerned Members of the House. In reference to a Foreign Affairs Committee staff member whose salary he withheld, he is quoted as having said:

> We're going to have a showdown when the guy gets back here from a European junket. After that, I'll decide if he'll keep on getting paid.

Nowhere in the rules of the House am I able to find any provision which delegates to the chairman of the House Administration Committee the authority to make such a decision concerning employees outside his committee's jurisdiction.

I include the entire article from the New York Times in the RECORD at this point:

REPRESENTATIVE WAYNE HAYS BECOMES A NAME TO RECKON WITH IN THE HOUSE

(By Marjorie Hunter)

WASHINGTON, August 16.—Around the halls of Congress, in these waning days of summer, the lawmakers have begun asking themselves: Who actually controls the House? The mild-mannered Speaker, Carl Bert Albert of Oklahoma? Or a brusque Ohio Democrat, Representative Wayne L. Hays?

To most Americans, Wayne Hays is little known, if at all. But to colleagues in the House and to the thousands of House employes on Capitol Hill, his name has become the Household word.

For in the year or so since becoming chairman of the House Administration Committee, Mr. Hays has assumed more and more power over the internal workings of the House, even challenging several recent appointments by the Speaker.

The latest disputes, involving efforts by Mr. Hays to dismiss some House employes, arose on the floor yesterday, threatening at one point to halt all House business for the day.

A challenge came from Representative Donald M. Fraser of Minnesota, former chairman of the Liberal Democratic Study Group, as he protested attempts by Mr. Hays to dismiss a staff member on the Fraser subcommittee.

QUORUM CALLS HALT HOUSE

By demanding a series of time-consuming quorum calls, Mr. Fraser effectively halted House business for nearly an hour and a half.

It was only during the third such quorum call that the matter was resolved during an off-the-floor conference attended by the Speaker, Mr. Hays and Mr. Fraser.

Minutes later, Mr. Hays returned to the floor and announced that he had agreed to sign the pay voucher of the Fraser subcommittee staffer, Robert Boettcher, for July.

But Mr. Hays disclosed later that "we're going to have a showdown when the guy gets back here from a European junket." He added, "After that, I'll decide if he'll keep on getting paid."

Still unresolved, however, is whether Mr. Hays will continue trying to dismiss two press gallery staff members recently appointed by Speaker Albert.

With the retirement in July of Clarence T. Day as superintendent of the House periodical press gallery, the gallery's executive committee, headed by David Searles of Business Week, recommended promotion of Mrs. Jeanne C. Hundley, the assistant superintendent, to the top job. The executive committee also recommended appointment of David Holmes as assistant superintendent.

Speaker Albert, in early July, confirmed the two appointments. At the same time, he named Ruth Tate to a vacancy on the staff of the House radio and television press gallery.

Mr. Hays subsequently informed Mr. Holmes and Miss Tate that he would sign their paychecks only through mid-August and after that, they would have to look for new jobs. He said he felt the two gallery staffs should be cut.

Payroll vouchers for a number of other House employes, including doormen and pages, also went unsigned, at least for a while, at one point this summer. Some were forced to borrow money for subsistence.

Mr. Hays said yesterday that the delay in signing these pay vouchers was only for a few days when he was out of town.

"No one on my staff has authority to sign my name," he said. "I want no rubber stamping around my office."

CREATES SUBCOMMITTEE

In addition, Mr. Hays has created a House Administration subcommittee on nonessential employes, headed by Representative Frank Annunzio, Democrat of Illinois.

Mr. Annunzio informed the House yesterday that his subcommittee had asked representatives of the Civil Service Commission to prepare a brochure" on every House employe to determine whether the jobs were essential and not just "make-work patronage" jobs.

The survey, however, will not include staffs of House members. These are named directly by the members and not by officers of the House.

In challenging the attempt to dismiss his own subcommittee staff member, Mr. Fraser proposed that the House amend its rules to bar any further attempts at dismissal or withholding of pay until the House Rules Committee approves any proposed set of hiring procedures devised by the House Administration Committee.

No action has been taken on the Fraser proposal.

Mr. Hays contends that Mr. Boettcher, staff director for the last year of the Fraser subcommittee of the House Foreign Affairs Committee, had meddled in scheduling business of still another Foreign Affairs subcommittee, headed by Mr. Hays.

Mr. Fraser, in turn, contends that Mr. Boettcher merely sought to line up a witness to testify in behalf of a Fraser bill pending before the Hays subcommittee.

The pay disputes are but the latest in a series of clashes touched off by efforts of Mr.

Hays to obtain a tighter grip over House administration.

Since taking over the committee, he has raised the price of haircuts in House barbershops from 75 cents to $2, removed jump seats from Capitol elevators and ordered operators—many of them students working their way through college—not to read on the job.

He has trimmed House restaurant deficits by sharply raising prices, removing linen tablecloths, dismissing employes he said had been stealing food, collecting thousands of dollars in overdue meal bills from fellow Congressmen, and converting one restaurant into a carry-out facility.

He also tried to eliminate breakfast table service in the House members' dining room, but gave up after one angry member reportedly threw a self-service tray against a pantry wall.

MOVES INTO CLERK'S SPHERE

He has succeeded in wresting authority to operate the House computer service and electronic voting system from the Clerk of the House, W. Pat Jennings, and has taken over other functions once performed by the Clerk.

And he has taken over the authority, with approval of the House, to determine the members' fringe benefits, such as paid trips home, stationery allowances, telephone services and office expenses.

With these and other moves, he has converted the once relatively obscure House Administration Committee into a powerful force in the daily lives of his House colleagues and Capitol employes.

House employes who fail to perform to his satisfaction are summoned to his newly decorated office and given tongue lashings. He frequently reminds the employes that it is he who signs their paychecks.

What many consider his heavy-handed approach has put him in conflict with various House officials, including Mr. Jennings, the Clerk; William M. (Fishbait) Miller, the Doorkeeper, and the Capitol Architect, George White.

He brushes aside such criticism, insisting that he is merely trying to put the House on an efficient operating basis.

"Congress does a lot of talking about economy," he said recently, "but economy must start at home."

His moves have gone largely unchallenged by Speaker Albert despite grumbling by some members that Mr. Hays has become what they call "the real czar of the House."

One member recently complained: "Wayne's a big bully, and he's walking all over the Speaker. And there's nothing we can do about it."

SALUTE TO THE U.S. OLYMPIC TEAM

HON. JOHN DELLENBACK

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday August 17, 1972

Mr. DELLENBACK. Mr. Speaker, today we have received the U.S. Olympic team in this Chamber. I must confess it excites me to know these men and women will be carrying the Stars and Stripes to Munich.

These athletes, the best amateur athletes in this Nation, take their strengths and skills to the Olympic games. But they also carry with them something far more important—they carry the dreams and aspirations of every person in this country who has ever competed in athletics, who has ever been caught up in this infectious competitive spirit of a baseball game, a basketball game, a race.

These young men and women carry the spirit of America to the Olympic games. And when any one of them wins and stands on the highest step to receive his or her medal, some of us will feel goose bumps.

It is exciting to realize that many of these men and women come in effect from down the street, or, perhaps, next door. They are Americans from neighborhoods across this land. Yet they are not ordinary Americans. They are Americans who deserve our admiration and get it.

I should like to recognize and salute all of our Olympians, but especially those from my State, Oregon. A sportswriter for the Portland Oregonian, Leo Davis, has identified 22 athletes with ties to Oregon. He says:

Undoubtedly Oregon can lay claim, however tenuous, to more Olympians per capita than any State in the Union.

We in Oregon are proud to be so well represented in the Olympic Games. We are proud that Eugene, Oreg., was chosen as the site for the Olympic track and field trials this year. We are proud that University of Oregon track coach Bill Bowerman has been named head track coach for the United States. We are proud that the United States will be so well represented in Munich.

I. W. ABEL TESTIMONIAL

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. GAYDOS. Mr. Speaker, this past weekend thousands of steelworkers in the 20th Congressional District of Pennsylvania honored the man who has led their national organization for the past 7 years, Mr. I. W. Abel, president of the United Steelworkers of America.

Mr. Abel has collected numerous honors throughout his illustrious career as a union leader but I am certain he holds those given him by his fellow steelworkers above all else. I have no doubt he will long remember the tribute paid him by the members and pensioners of Steel City Local Union 1272, USWA, on Friday, August 11.

Mr. Speaker, I offer my personal commendations to the officers and rank and file members of No. 1272, who put together an outstanding program honoring one of the greatest labor leaders our nation has known: Francis E. McNairy; James P. Comer, local president; Louis N. Pierro, general committman; Chester "Obie" Obiedzinski, treasurer; Donald E. Hammerle, vice president, and Samuel Davich, president of J & L Veteran Employees Association.

SUPPORT FOR THE PUBLIC WORKS AND ECONOMIC DEVELOPMENT ACT AMENDMENTS

HON. MICHAEL HARRINGTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. HARRINGTON. Mr. Speaker, although I regret that my absence yesterday forced me to miss the vote, I strongly supported the Public Works and Economic Development Act amendments which passed by a vote of 285 to 92.

The major focus of the bill is its extension of the economic development programs through fiscal year 1974. These programs, created in 1965, call for financial assistance to alleviate conditions of substantial and persistent unemployment in economically distressed areas. I have consistently urged congressional action to stem this problem, through my introduction of the recent Emergency Employment Act extensions and other legislative efforts. Unfortunately, economically distressed areas still exist, and unemployment in many areas remains high. The Lawrence-Haverhill area, in my district, is a sad example, with over 9-percent unemployment. Other areas in the Sixth District, Massachusetts, and across the Nation are similarly suffering under this economic malaise.

In this public works bill, we have made fundamental and vital progress toward addressing this problem through the public works impact program. By providing grants for public works projects to specified areas of high unemployment or a large concentration of low-income persons, this program has already benefited many areas with needed employment for the jobless and the construction of community service facilities for all. This program has received the extension it deserves.

But although these kinds of financial assistance programs are crucial to stabilize the economy and ease the plight of many of our jobless, we must not overlook the importance of the "environmental effects" section of the bill. For the past few years, as you know, a growing interest in environmental quality has brought forth from the Congress a broad range of pollution abatement laws. In the process of mandating certain air and water quality levels, the Congress has largely ignored the plight of those who must comply with these pollution requirements.

A recent study by the Council on Environmental Quality indicated that some small businesses would be adversely affected by these laws. These smaller operations often contain older equipment, have more limited resources, and in general, are unable to cope with the demands of the new laws. The study found that some of these "marginal plants" would be forced to close down, unable to meet the costs required for acceptable pollution control.

In light of present economic conditions, such plant closings might have disastrous effects on many areas with already high unemployment and business difficulties. It was never our intent to solve the pollution problem at the cost of forcing workers out of their jobs and small companies out of business. Recognizing this need, I introduced on August 8 the Small Business Pollution Abatement Loan Assistance and Worker's Readjustment Assistance Act, which would provide assistance to small businesses for the purpose of meeting pollution control standards mandated by all Federal, State, or local laws and regulations. It also provides readjustment allowances, relocation benefits, job training and relocation services for workers whose plants are forced to close down because of pollution laws. I was pleased to see this concept embodied in the public works bill which passed yesterday.

Although I welcome this early step to aid compliance efforts, I remind you that some aspects of the problems are not fully met by the bill. Now that we have recognized the problem, we must continue to insure that environmental progress is not made at the expense of the Nation's workingmen and small businesses.

TEAMSTERS PENSION FUND AND ORGANIZED CRIME

HON. SAM STEIGER

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. STEIGER of Arizona. Mr. Speaker, the August issue of the magazine Overdrive, carried the third in a series of three articles on the Teamsters' pension fund and organized crime. I would like to include in the CONGRESSIONAL RECORD the first part of the article entitled, "How The Central States Pension Fund Finances The Nevada Schemes of Organized Crime." Since it is a rather long article, the second part will be included later.

The article follows:

HOW THE CENTRAL STATES PENSION FUND FINANCES THE NEVADA SCHEMES OF ORGANIZED CRIME

ORGANIZED CRIME, INC.

Some may say that it will become boring, hearing about the same kinds of corruption month after month. There is that danger, no doubt, but readers should keep in mind that what we are describing is not happening in some dream world. It's happening to you in the trucking industry, and it also seriously affects all phases of democracy in this country. The criminal conspiracy of organized crime can only exist by using fear and corruption to gain immunity from the law.

The activities of the Mafia that are publicized attract attention to their particular crimes. But organized crime is much more than that, more subtle, more sinister, and its leadership would frankly prefer that all attention be devoted to the Mafia, leaving them free to pursue their unpublicized schemes.

Think of the Mafia as a division of a company called Organized Crime, Inc. You should, because that's the way it is. The real manipulators of this criminal conspiracy always attempt to remain in the background. Names like Lansky, Mulligan, Groves, Chesler and Shenker are not in the news often, but their influence on the fabric of American life is more persuasive and damaging than any 10 Mafia leaders. In months to come, we will show more and more of the "quiet" crimes like influence-peddling and political corruption, the basic ingredients to the success of the Mafia and other elements of organized crime, and how the Fund actively promotes them.

MOE DALITZ AND THE FUND

Oddly enough, the first Pension Fund loan in Nevada was made to a hospital. As innocent as that may seem on the surface, a careful examination of the backgrounds and activities of those behind it show a continuing web of organized crime stretching beyond the borders of the United States to Switzerland and the Bahamas.

The Sunrise Hospital on Maryland Parkway in Las Vegas first received a Fund loan in August of 1959. Those connected with the Sunrise at that time were Morris (Moe) Dalitz, Allard Roen, Irwin Molasky and Merve Adelson.

Dalitz' intriguing background shows that he was involved in bootlegging during the 30's. Shortly thereafter, he was the leader of what was known as the Cleveland Syndicate, a huge bookmaking operation in that area. His first known contact with the Teamsters came in 1949, when he arranged a payoff to Hoffa from a group of employers in order to settle a contract dispute.

THE DESERT INN

Two years before, Dalitz had made his entry into Nevada gambling. He and others from the Cleveland gambling fraternity arranged for the money to complete construction of Wilbur Clark's Desert Inn—for 74% of the take.

Perhaps the most fascinating of Dalitz' associates is Meyer Lansky, considered the financial wizard of organized crime, and a "director" of the syndicate which oversees it. Currently, Lansky is in Israel to avoid prosecution in this country, and he has been indicted for skimming millions of dollars out of the Vegas Flamingo Hotel and arranging for its disposal in other countries. Dalitz is a close friend of Lansky, and both have been involved in various "businesses" over the years.

* * * * *

Both Roen and Dalitz were among the original developers of La Costa, the 3,000 acre spread near San Diego which has become a retreat for the top men in organized crime. La Costa, it should be mentioned, has been financed exclusively with Pension Fund money. Roen's activities with underworld figures go back many years, including stock transfers to gangster Bugsy Siegel and Lansky. In 1962, Roen pleaded guilty to stock fraud in a case involving a $100,000 bribe being paid to a United States Senator.

Since 1959, the Dalitz group has managed to direct $11,350,000 into the Sunrise Hospital. The latest loan occurred in 1971. At that time, a $5,500,000 loan to the hospital was made by the City National Bank in Beverly Hills. Under the terms of the agreement obtained by OVERDRIVE the Pension Fund will buy that loan from the Bank in January 1973, making Sunrise indebted still further to the Fund.

The Dalitz group has arranged a number of other Fund loans which have filtered through a bushel basket of corporations in a bewildering tangle of financial wizardry.

THE STARDUST AND FREMONT

Between 1961 and 1964, the Fund dumped $8,200,000 into the Dalitz-controlled Stardust Hotel. The amount still owed on those loans is $5,700,000.

In 1962, the Fremont Hotel received a total of $4,600,000 of which $2,500,000 is still owed the Fund. The year before that, a company called Three-O-One Corporation picked up an $850,000 loan for a downtown Las Vegas building. Over $500,000 is still due on that one. Both of these were controlled by Dalitz & Company.

Two other corporations which had members of the Dalitz group or their associates involved were United Resort Hotels, Inc. and the Lodestar Corporation. These two pulled out $10,850,000 in Fund loans, including one for a hotel on Lake Mead than ran into financial difficulties. Slightly under $8,000,000 remains unpaid on these 6-year old loans.

Although Dalitz sold his gambling interests in Las Vegas to Howard Hughes recently, there is little reason to doubt that he still has influence there. Nowadays, Dalitz operates his various enterprises out of La Costa.

"OWNERSHIP NOT OFFICIALLY RECORDED"

In 1965, the government began prosecution of a Dalitz associate on income tax charges. Three years later, however, the case was dismissed under curious circumstances, which arose when it was discovered that the FBI had bugged the casinos of at least five hotels, including the Stardust and Desert Inn, both of which were controlled by Dalitz. Lawsuits were filed against the government for this bugging, and in an apparent attempt to stop them, the government dropped its tax prosecution in return for the other side dismissing its lawsuits. What was learned from those bugs has never been released, but one FBI agent frankly stated that they contained what "I would refer to as ownership which is not officially recorded with the state of Nevada."

A Las Vegas-based real estate company which is run by those from the Dalitz group is Realty Holdings, Inc. Pension Fund records show that they have borrowed close to $15,000,000 within the past two years. Other records and agreements obtained, however, lend strength to the belief that considerably more money is involved. Many of these documents do not contain what amount of money is involved from the Fund, referring only to "value received" and "for a valuable consideration." But whatever amounts they are, they indicate that Dalitz and his men are far from being without power in Nevada.

MORRIS SHENKER AND THE DUNES

When it comes to manipulating Pension Fund money without having to answer to anyone, St. Louis attorney Morris Shenker is at least equal, if not superior, to convicted swindler Allen Dorfman. Shenker, a shadowy, behind-the-scenes operator who shuns publicity, has arranged hundreds of millions of dollars in Pension Fund loans. And in the process, he has received millions of dollars in fees for his "services." Although Shenker's activities are too numerous to detail here (they will be enumerated in an upcoming article), some general comments can be made. He is an acknowledged financial genius when it comes to setting up complex money deals (and hiding their ownership), and even IRS experts admit that he has been able to stump them. Further, he has been cited as the number one lawyer for organized crime in this country. Although he has dazzled and confused the IRS on many occasions, OVERDRIVE has learned that federal agencies are beginning a massive investigation into his affairs. Shenker's main activity with Fund loans in Nevada has involved the Dunes Hotel in Las Vegas.

When the Dunes opened in 1955, the owner was listed as Joseph Sullivan. Later, it was discovered that the hidden owner was Raymond Patriarca, chief of all Mafia operations in the New England states, and headquartered in Providence, Rhode Island. Just recently, however, Patriarca was sent to prison as the culmination of a major offensive against him by the Justice Department.

Later, Sullivan sold out to James (Jake) Gottleib, who died this past April; he owned, among other things, Western Transportation in Chicago and Missouri-Oklahoma Express in St. Louis. Gottleib reportedly then gave $100,000 to Major Riddle (Major is his name, not a military title) to buy control of the Dunes' casino operation. An outfit called

M & R Operating Company was then formed, composed of a group of gamblers, with Riddle in charge. M & R then leased the casino operation from Gottleib.

FRIENDS OF HOFFA

In 1962, the first loan from the Pension Fund was made to the Dunes. Since both Gottleib and Riddle were friends of Hoffa, it can be assumed that this friendship had something to do with the loan approval. In early 1963, Shenker's involvement with the Dunes surfaced publicly for the first time.

A partnership called Leonard J. Campbell Enterprises was formed in order to buy the Dunes from Gottleib. The main stockholders of Campbell Enterprises were William Vogler and Rollins Furbush, both executives of American National Insurance, Galveston, Texas; the shareholders of M & R (now called M & R Investment Company); and E. Perry Thomas, Chairman of the Bank of Las Vegas, and who has also been connected with Fund loans. In a complex series of transactions involving the funneling of money through various corporations, M & R ended up with the Dunes again, and Campbell Enterprises was dissolved. Leonard Campbell, though, still remained, ending up in charge of the slot machines in the casino.

In 1967, Shenker, Furbish and Vogler, together with 22 others, bought a controlling interest in Continental Connector Corporation, which bought M & R (and therefore the Dunes) in 1968.

ANOTHER FUND BORROWER IN THE DUNES

Since 1970, a company called Rapid-American Corporation in New York was attempting to gain control over the Dunes through the purchase of its stock. Apparently a takeover couldn't be finalized, so Rapid-American rescinded its agreement to buy 500,000 shares of Continental stock at around $18.50 per share. It has been learned that the shares will be sold to Shenker, E. Perry Thomas (who is now chairman of Continental) and Irvin J. Kahn. In months to come, the story of Kahn will be told—the man who has borrowed hundreds of millions from the Fund is a business partner of Shenker's, and is another phantom operating in the twilight zone of organized crime).

Throughout these past ten years of tangled corporate schemes, the Fund has been dumping millions of dollars into the Dunes. Today, documents indicate that the Dunes has borrowed a total of $15 million from the Fund. The last transaction recorded shows that the Fund picked up a Dunes loan in January, 1969, which had been made by the First Security Bank of Utah for $3 million. Interestingly enough, the Dunes still manages to owe the Fund a total of $12 million.

INDICTMENTS FOR SKIMMING

But in December, 1971, the owners of M & R ran into a problem. A federal grand jury handed down indictments charging six men with skimming cash from the casino receipts prior to their being counted for tax purposes and income tax evasion.

The officers of M & R who were indicted are Sydney Wyman, Robert Rice and George Duckworth, all former big-time gamblers from St. Louis, and Howard Engel. Also charged in the same case is Leonard J. Campbell and Charles Speck, former Dunes credit manager.

PRISON REFORM

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. EILBERG. Mr. Speaker, today I introduced a comprehensive plan to reform the Nation's prison system. The purpose of the Prison Reform Act of 1972 is to make the prisons institutions for rehabilitating and training criminals so they can become useful, productive members of society when they are released.

In most cases our prisons are nothing more than warehouses where men and women are stored until they are released to commit another crime. The current estimates are that four out of every five felonies are committed by persons who have already served a prison term.

There is a great deal of information about life in prisons, but too much of it comes from "experts" who have only second hand knowledge.

Only recently have the men and women who have served time in prisons been looked to as the best source of information about our jails and what can be done to improve them.

Many of these former prisoners are intelligent and articulate and they are making important contributions to the movement to help prisoners and improve prison conditions.

One of these men is James Burgess, a former inmate of Holmesburg Prison, which is in my northeast Philadelphia district. Mr. Burgess is now back at Holmesburg as a community-prison worker for the Episcopal Community Service of Philadelphia.

Mr. Burgess is an expert on prison conditions and their effect on the prisoners. At this time I enter his statement on the need to improve our Nation's prisons into the RECORD:

PRISON REFORM

When will we ever learn from our past mistakes? For a hundred years we have been putting people behind walls as punishment for their crimes, and then further punishing them by abusing them, robotizing them, stripping them of whatever dignity they have left, and housing them in cells the SPCA would not tolerate for animals. After their sentence is served, they come back to society unable to cope because instead of being taught to compete, they have been taught to conform, and instead of being taught self confidence, they have been taught that they are worthless. When they come from behind the walls, they are bitter, afraid, and feel there is no future for them. In addition to being crippled emotionally, they have been crippled socially. Their family ties have deteriorated over the years of incarceration. They have no funds. They have no job, and know that most employers will treat them as lepers when they find out they have a criminal record. Even if they could find a job, it may take two weeks before they get their first paycheck: leaving them with the pressures of survival for that time.

When you put a bitter, confused, frightened man, with no money and no family in a society he can't cope with, what do you think the result will be? I am not surprised that the guesstimates of the recidivism rate go as high as 75%. It is a wonder to me that they are not 100%!! Our present philosophy of put the criminals behind walls where we don't have to think about them is failing miserably. Will we never learn?

If we are ever to clamp shut the revolving doors in our prisons we are going to have to take one of two avenues. Either we are going to have to throw the key away, or we are going to have to spend the time, effort and money to work with the people behind the walls and find out what is causing their antisocial behaviour and take steps to correct it.

It sounds easier to throw away the key, but it isn't. With no turnover our present prisons would soon fill to overflowing. You would have to build hundreds of new warehouses to store people. New prisons are expensive, and so are the staff and logistics it takes to run them. There is also a moral problem. Can we turn our backs on people who need help, and be at peace with ourselves? If we were walking along the river front, and saw someone drowning, we would attempt to save them. At the very least we would send for help. We would have difficulty living with ourselves if we just passed them by. Yet there are thousands of men, women and children in our prisons, drowning, and crying for help. Can we continue to ignore their cries?

If we have to put people behind walls to protect society, let us at least work with them behind the walls and try to solve the problems that are keeping them from leading normal happy lives.

My own prison experience has been in the country prisons. At that level, the overwhelming majority of people are incarcerated for drug related crimes. My experience has been that addicts, once detoxified, and released from the pressures of supporting their habit and their every day needs, undergo a complete personality change. While in prison they almost always express a desire to rid themselves of their psycological habit. It is tragic that they have to wait for their release from prison to enter a drug program, when the prison itself is the most logical place to run a large scale therapy program. There is no question in my mind that effective drug programs are the number one need in the prisons today.

We also need to give inmates the opportunity to get an education while incarcerated. I have known many men in prison who could not read or write. Is it any wonder they could not survive in our highly competitive society? Very few college graduates steal pocketbooks from little old ladies.

In line with this reasoning, we also need to provide vocational training, so ex-offenders will have the skills needed to secure decent, self gratifying employment.

I do not feel that the schools and training programs should necessarily have to be within the confines of the prison. I feel that letting inmates commute to established schools in the community would not only increase their enthusiasm but would also give them a healthier mental attitude.

Those incarcerated for minor offenses, and who can secure employment should be allowed to work during the day and return to the prison at night. This will allow them to maintain the dignity of being self sufficient, and will also make them tax paying citizens rather than tax receiving.

If we are ever to bring about prison reform, we are going to have to change public attitude. There are too many people who feel that implementing prison programs will eventually turn the prisons into country clubs. They do not realize that no matter how good conditions in the prison become the inmates will be suffering a very severe punishment—that of loss of their freedom and separation from their loved ones. That punishment is so severe, that there is no need to add on the punishment of bad living conditions and hostile attitudes of correctional staff. All the bad conditions of the prisons accomplish is to make the inmate bitter, and render him unreceptive to positive change.

We have tried the philosophy of punishment, and it has not worked. It is time to try a new tack—that of trying to give offenders a feeling of self esteem.

Most inmates whom I have interviewed have become antisocial, or started using drugs because they have had a very low opinion of themselves. Many actually hate themselves. They feel completely inadequate, worthless, and not capable of being loved by anyone. How can a person who does not respect himself, respect others? No wonder there are so many violent crimes in America today. All our prisons are doing today, is reinforcing this feeling of worthlessness.

In the interest of being brief I have listed only the most important needs in our prisons. As you well know there are reams and reams of printed material by learned authors; all pointing out the inadequacies of the prison system and calling for specific changes. But they only amount to so much waste paper and trash, as does this report, if no one is moved to act upon them. So I pray that you not consider this report as just more information about prison reform (God knows we have more than enough of that already); but as a plea to act on all the information we have gathered. Every day, every hour, that we delay putting intelligent reforms into effect more lives are being wasted, more people who need and deserve our help are drowning.

TELEPHONE PRIVACY—XXXV

HON. LES ASPIN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. ASPIN. Mr. Speaker, I reintroduced the telephone privacy bill on May 10, 1972, with a total of 48 cosponsors.

This bill would give individuals the right to indicate to the telephone company if they do not wish to be commercially solicited over the telephone. Commercial firms wanting to solicit business over the phone would then be required to obtain from the phone company a list of customers who opted for the commercial prohibition. The FCC would also be given the option of requiring the phone company, instead of supplying a list, to put an asterisk by the name of those individuals in the phone book who have chosen to invoke the commercial solicitation ban.

Those not covered by the legislation would be charities and other nonprofit groups, political candidates or organizations, and opinion polltakers. Also not covered would be debt collection agencies or any other individual or companies with whom the individual has an existing contract or debt.

I have received an enormous amount of correspondence on this legislation from all over the country. Today, I am placing a 33d sampling of these letters into the RECORD, since they describe far more vividly than I possibly could, the need for this legislation.

These letters follow—some of the names have been omitted:

MT. PROSPECT, ILL.,
August 7, 1972.

DEAR SIR: We, and everyone we know, are very much in favor of H.R. 14884 to outlaw telephone soliciting if the subscriber so requests. We would be really grateful for prompt action.

Sincerely,

——— ———.

WOODBRIDGE, VA.,
August 11, 1972.

DEAR REPRESENTATIVE ASPIN: I am writing in support of your bill concerning telephone solicitation.

In our area calls average perhaps 3 per week usually from Land Developers. These calls are, needless to say, very annoying.

I hope your bill passes, and I would like to add my support.

Sincerely,

——— ———.

TYLER, TEX.,
July 28, 1972.

Representative RAY ROBERTS,
House of Representatives,
Washington, D.C.

DEAR SIR: I, along with many of my friends and neighbors, are continuously being bothered with telephone solicitation. I don't have time for these calls and I regard them as an invasion of privacy. The things people try and sell over the telephone are a waste of time and money and I don't enjoy being bothered with such calls. I get several a month.

I understand that Rep. Les Aspin of Wisconsin is trying to get something done about this with his Telephone Privacy Act. I urge you to support this act. The idea of putting an asterisk by the names of people, in the phone book, who do not want solicitation is a good idea.

Would you please see what you can do about this situation?

Sincerely,

——— ———.

BAYLOR COLLEGE OF MEDICINE,
Houston, Tex., August 3, 1972.

Hon. LES ASPIN,
The House of Representatives, Congress of the United States, Washington, D.C.

DEAR REPRESENTATIVE ASPIN: This letter is to indicate my strongest support for your bill which would allow the American public to put a "no solicitors" designation on their telephone numbers.

Rest assured that many Americans from all walks of life share our dislike of being interrupted at the most annoying moments by telephone solicitors. This bill has my sincere, whole-hearted support.

With best wishes for your success in passing this bill, I remain

Sincerely yours,

——— ———.

PALATINE, ILL., *August 2, 1972.*

Hon. LES ASPIN,
House Office Building,
Washington, D.C.

SIR: Please add my name to those in support of your proposed bill, H.R. 14884, to keep nuisance calls off the phone.

What a bore they are. I resent them intensely.

Very truly yours,

——— ———.

AUGUST 7, 1972.

DEAR REPRESENTATIVE ASPIN: Enclosed are the names of four voters who support bill HR-14884. We feel it is about time some one st (excuse me the phone is ringing) opped this infernal bothering by the telephone. Please keep us informed of the bill's progress and if there is anything else we can do let any of us know.

Thank you.

DAVID MICHAEL DEMALA,
CHARLES FRANK DEMALA,
VIOLET ANN DEMALA,
JUDITH ANN MARX.

FIGHTING INFLATION AFTER PHASE II

HON. EARL F. LANDGREBE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. LANDGREBE. Mr. Speaker, the June 1972 issue of Fortune magazine carried an article entitled "Fighting Inflation After Phase II," which spurred a letter to the editor of 1,825 newspapers by C. C. Moseley, president of Grand Central Industrial Centre, Glendale, Calif.

For the benefit of my colleagues, I insert here some excerpts from Fortune, and the letter from Mr. Moseley:

[From Fortune magazine, June 1972]

FIGHTING INFLATION AFTER PHASE II

Fiscal policy will be a particularly difficult problem because the federal budget is in a quite literal sense out of control. The aggregate cost of individually meritorious programs tends, of course, to exceed any viable total; let the congressional budegtary process focuses only on the programs and includes no explicit consideration of the total budget. The result is federal commitments, by direct outlays and through credit guarantees, that are growing at a more rapid rate than the economy can accommodate.

The figures concerning this matter are dramatic. In his latest budget message the President noted some serious shrinkage in our future "budget margin." Only last year the fiscal 1976 margin was put at $30 billion—i.e., federal expenditures implied by programs to which we were already committed would be $30 billion below the revenues that the tax system would produce in 1976 if the economy were operating at reasonably full employment. In the budget message for this year, the unspent margin for fiscal 1976 was down to $5 billion. The governmental process must again be made subject to fiscal discipline, or the price-cost battle, and even the free economy itself, will be in serious jeopardy.

GRAND CENTRAL INDUSTRIAL CENTRE,
Glendale, Calif., July 17, 1972.

DEAR EDITOR: Has the majority in Congress gone completely nuts? Don't sneer at this remark—you be the judge.

In the June Fortune magazine, in an article by President Nixon's former chief economist Paul W. McCracken, it was stated that ". . . federal commitments by direct outlays and through credit guarantees, are growing at a more rapid rate than the economy can accommodate," and that federal expenditures to which we are already committed would be $30 billion (yes, $30,000 million) short of the revenues that the tax system would produce in 1976. Unbelievable, but true!

Imagine the size of the deficit (money to be borrowed) by the time Congress gets through with additional projects! The writing is on the wall—greater inflation and higher taxes. The "Spenders" in Congress are bankrupting the country. Let's throw the "Spenders" out before we all go broke!

Sincerely,

C. C. MOSELEY, *President.*

FAIR AND IMPARTIAL ELECTIONS

HON. DONALD W. RIEGLE, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. RIEGLE. Mr. Speaker, it has come to my attention that the left and right in the country can come together on the issue of fair and impartial elections. At this time, I would like to submit these nationally syndicated articles, by James A. Wechsler and William F. Buckley, Jr., which speak for themselves.

[From the New York Post, July 20, 1972]

DEMOCRACY IN ACTION

(By William F. Buckley, Jr.)

When the South Vietnamese had their election in 1967, Lyndon Johnson invited a bunch of liberal professors to go over there and satisfy themselves that the election was clean. This they did, and one professor from the Boston area reported to the President his conclusion that the election in South Vietnam was as clean as the typical election in the Commonwealth of Massachusetts.

This comment was the source of enormous underground mirth among the cognoscenti, who understood exactly what the good professor was trying to communicate. That democracy in South Vietnam, while passably fair, is a pretty relaxed thing, along Massachusetts lines. I think it was in Boston, or maybe it was in Chicago, a little while back that an election district reported 183 votes, all of them for the Democratic candidate, and guess what? By sheer coincidence, the 183 citizens had filed in and voted alphabetically! That is democracy plus law and order.

I have always thought that if you're going to have democracy, you may just as well do it right. After the decision is reached as to what voter qualifications are, let them vote, and go ahead and count their votes. The evidence is overwhelming that the political machine in Brooklyn was recently concerned to return the incumbent to office, rather than to ascertain whom the majority wanted.

It would have been absorbed as routine Democratic graft except that the challenger is none other than Allard Lowenstein, the president of Americans For Democratic Action. Mr. Lowenstein has a particular stake in the contest, unrelated to the question of whether he will be sent to Congress.

He is the young man who has already made the history books in virtue of having persuaded Eugene McCarthy to make the race against Lyndon Johnson in 1968, thereby proving that The System was alive and well. He is as influential among the young as anyone in America, and if he gives out the word that you cannot have a reliable democratic contest in the heart of metropolitan New York, his constituency will experience a disillusionment that wil redound to the benefit of the crazies in American politics.

In his primary contest, every kind of fraud and harassment was exercised. New voters found their registration cards missing. Others were given runarounds. Some spent as much as four hours trying to locate the right polling place, and filing their votes. Others found machines rigged.

One lady wrote: "I was told that I had been redistricted. That I should vote at 75 Cadman Plaza. I left; (but there is) no 75 Cadman Plaza. On my walk back I noticed that that some people were voting at 140 Cadman Plaza. I stopped in there and was told I would have to go to 75 Henry St. When I got to 75 Henry St. I was told that it would be another two hours' wait. I gave up."

There were only 30,000 votes cast, and yet the Lowenstein forces are talking about as many as 14,000 irregularities, and hard-core fraud in 4000 to 5000 cases. At that, the incumbent beat Lowenstein by only a few hundred votes. The evidence suggests that Lowenstein would have won by something like a landslide.

* * * * *

So now it goes to the courts. It being widely suspected that local state judges are not going to upset the political machine that put them where they are, Lowenstein will probably end up in federal court. There he will be given an opportunity to document his grievances, in behalf of the electorate. And the message may go out to the bosses: Cut it out.

It happens that Mr. Lowenstein backs enthusiastically almost every mistaken political idea that ever issued out of the social imaginations of man. But that isn't the point, any more so than when us good guys sat around in 1964 worrying about how many votes would be stolen from Barry Goldwater by the Democratic poll tenders.

Fair elections, like precautions against accidental wars, are in everybody's interest. It is lucky for our international reputation that we didn't invite any South Vietnamese professors over to monitor the Lowenstein election.

[From the New York Post, July 7, 1972]

FIGHTING BACK

(By James A. Wechsler)

For many long, wearying hours of the past two weeks, a dedicated battalion of Allard Lowenstein's volunteer supporters has been quietly assembling evidence to document the charge that he was defrauded of victory in his Congressional battle with John Rooney and the Esposito machine. Their findings will form the bulwark of the case his attorneys will present in his legal fight to force a rerun.

Lowenstein's move grew out of a meeting with his campaign workers on the morning after primary day when Rooney had been reported winning by 1005 votes. (The final official margin, according to the Lowenstein camp, was actually closer to 800). Lowenstein's initial impulse was to go on a holiday with his family and then take up other endeavors. His campaign was deeply in debt; despite his own conviction, based on first-hand inquiry and reports he had received throughout the night, that he had been robbed of a hard-earned triumph, he knew how much hard, tedious labor would be involved in preparing a challenge. He was reluctant to ask his tired troops to begin another mission.

In a sense they made the decision for him that morning. One after another of the veteran community figures and activists who had carried his banner rose to describe primary-day chicanery and plead for a counterattack.

"After listening to them, I really felt ashamed that I'd even contemplated giving in," Lowenstein remarked yesterday. "So many of them kept saying that I was the one who had urged them to work within the electoral process—and now we had to show that we wouldn't let the machine steal an election from us. So I told them I had had my half-hour vacation and now we'd go back to work."

There are two major thrusts in the documentation now being prepared under the able, spirited direction of Terry Lenzner, former chief of legal services in the OEO.

One is the contention that more than 2000 prospective Lowenstein voters were disfranchised in varied ways; many found their registration cards mysteriously missing when they went to the polls. The principal victims, it is alleged, were blacks and Puerto Ricans, many of whom were bruskly turned aside when they went to the Board of Elections seeking help. (Additional frustrations, such as the breakdown or shortage of voting machines, were widely reported in the city that day, but the Lowenstein forces assert they can show the chaos was significantly conspicuous in areas favorable to him).

The parallel charge is that the Rooney total was flagrantly padded by use of names of the dead or departed, repeat voters and other hallowed practices of the old-line machines. A court order opening the Board of Elections files has already produced much confirmatory material.

The intensity of feeling among those participating in the challenge can be quickly discerned in interviews with a group of them. Thus Bertha Thomas, a warm articulate community worker in the predominantly black Fort Greene area declared:

"For the first time many minority citizens became aware of their right to vote in a primary. Now we're out to see that justice is done—not just for Al but for all the community people who were turned away. It was worse than in the deepest South."

Wilfredo Vargas, a 26-year-old Vietnam veteran who helped to rally Puerto Rican voters for Lowenstein in Williamsburg, said:

"This was the first time we could get a big Puerto Rican turnout—maybe 40 per cent instead of 15 per cent of those registered. But I know there were two or three hundred right in my own area who were told there were no cards for them—in some cases even when a husband and wife registered together, only one card was there. The people are watching to see what happens now. If the system is not going to be fair, why be part of it? I'm grateful to Al for fighting back—at least the machine will know it didn't get away with this."

John Mulhern, a former priest in a Puerto Rican neighborhood, said "I've never seen an election like this—everything was done to confuse and frustrate people by shifting polling places out of their areas and even refusing to give them directions."

A rerun would admittedly pose formidable problems for the Lowenstein forces, whose ardor is unmatched by any hidden fiscal resources. They would be counting heavily, however, on the anger stirred by what so many regard as a fraudulent exercise. The savagery of the Rooney campaign may also produce a backlash; by now, for example, many of the Hassidic Jews whom the Rooney machine recruited must have learned of the crudely anti-Semitic whispering campaign staged by Rooney adherents in such areas as Greenpoint.

Meanwhile echoes of the fight will be heard shortly in Miami Beach, where some young Lowenstein campaigners like Steve Morgan and Dennis Concilla plan to air their story before the youth and black caucuses at the Democratic Convention, the battle of Brooklyn's 14th CD may have just begun.

HEROIN MAINTENANCE

HON. PETER A. PEYSER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. PEYSER, Mr. Speaker, Mr. Don Miller, Chief Counsel of the Bureau of Narcotics and Dangerous Drugs has prepared the following memorandum regarding heroin maintenance for the congressional ad hoc Committee Against Heroin Maintenance. I thought it might be of interest to my colleagues:

MEMORANDUM ON THE USE OF HEROIN UNDER THE COMPREHENSIVE DRUG ABUSE PREVENTION AND CONTROL ACT OF 1970

The question has been raised as to the interpretation of the law regarding the use of heroin in treatment or research under the Comprehensive Drug Abuse Prevention and Control Act of 1970 (CSA of 1970).[1] The question is posed incident to certain proposals to establish pilot programs to determine the feasibility of maintaining addicts on heroin as a treatment modality.

As early as 1918, heroin had become known as a drug particularly liable to abuse and to produce ill affects, and that such liability is not offset by substantial therapeutic advantages not possessed by such drugs as morphine. On March 16, 1918, the New York Psychiatrical Society and the New York Academy of Medicine made the following recommendation: "We recommend that the Federal Government take such measures as are feasible to abolish the manufacture of heroin altogether."[2]

Next, in 1920, the American Medical Associ-

Footnotes at end of article.

ation made the following recommendation: "We therefore recommend: . . . 2. That heroin be eliminated from all medical preparations, and that it should not be administered, prescribed or dispensed; and that the importation, manufacture and sale of heroin should be prohibited in the United States."[3]

The Congress fully subscribed to this medical consensus, and in the Act of June 7, 1927, amended the law relating to the importation of opium and declared that ". . . no crude opium may be imported or brought in for the purpose of manufacturing heroin."[4]

This action was immediately followed by physicians becoming widely aware of the dangers of heroin, and it was abandoned as a drug having an acceptable medical use. It has been deleted from the United States Pharmacopeia and the National Formulary; the United States Dispensory (26th Ed.) states that heroin has "so great an addiction liability it is available only for research purposes;" and Merck Index (8th Ed.) states that "Because of its addiction liability, the importation or manufacture of [heroin] . . . is forbidden in the United States by Federal statute."

In 1956, the Congress acted again against heroin and declared that all heroin legally possessed had to be surrendered with a specified time.[5] By this action, Congress virtually outlawed the use of heroin for treatment, providing only that the surrendered heroin could be used for scientific research purposes.

By 1970, all heroin in legal channels had been surrendered. Knowing that there was no need to retain the features of the 1956 Act, the Congress repealed the heroin surrender provision when it enacted the CSA of 1970. However, also knowing that there was no currently accepted use in treatment in the United States, the Congress placed heroin in Schedule I of the CSA of 1970. Also, the Congress retained the opium importation provision by providing in Section 1002 of the Act that "No crude opium may be so imported for the purpose of manufacturing heroin . . ."

From the history, it is prefectly clear that both the medical community and the Congress have concluded that heroin is not to be used in treatment. Even if research does find a therapeutic usefulness, the Congress has blocked its manufacture. The only way heroin could be brought into the United States would be for the Attorney General to declare an emergency under Section 1002(a)(2)(A) of the Act which specifies that he may allow the importation of any drug "during an emergency in which domestic supplies of such substance or drug are found by the Attorney General to be inadequate." It is not probable in view of other medications available that the Attorney General would be justified in declaring such an emergency regarding heroin.

As for research with heroin, the CSA of 1970 contemplates that researchers may conduct scientific investigations with heroin. Just how the researchers may acquire the heroin is not spelled out in the Act. Considering that Section 1002 does not allow opium to be brought in to manufacture heroin and that the Attorney General probably would not be authorized to declare an "emergency" to bring in the heroin, only one source for the heroin is left; that is, the use of seized heroin.

Under Section 511 of the CSA of 1970, the Congress provided that "Whenever property is forfeited under [the Act] the Attorney General *may* . . . forward it to the Bureau of Narcotics and Dangerous Drugs for disposition (including delivery for medical or scientific use to any Federal or State agency under regulations of the Attorney General)." Emphasis has been added to show that the word "may" places the decision entirely in the hands of the Attorney General. He may, or he may not do so; it is purely an act of grace on his part to make seized heroin available for research. Certainly, there is no requirement that the Attorney General must make heroin available to conduct heroin maintenance programs even under the aegis of research. Moreover, confiscated heroin is totally unsuitable for intravenous injection in humans; the heroin is neither pure nor sterile. Therefore, all confiscated heroin would have to be purified—a procedure that BNDD could not undertake. It is doubtful that the Congress intended for BNDD to perform commercial manufacturing services to researchers.

There is also a legal consideration that requires further consideration by the Federal Food and Drug Administration. Section 303 (f) of the Controlled Substances Act of 1970 provides that "Registration applications by practitioners wishing to conduct research with controlled substances in Schedule I shall be referred to the Secretary [of HEW], who shall determine qualifications and competency of each practitioner requesting registration, as well as the merits of the research protocol." It is believed that FDA must consider heroin as a "new drug," and, therefore, probably require researchers to go through the regular new drug procedures, including research on animals prior to its investigational use in human beings. BNDD has no jurisdiction in this regard; it is pointed out only as a matter that warrants further consideration before a heroin maintenance program is approved.

My conclusion is that it is not permissible to bring heroin into the United States; it has no currently accepted medical use in treatment; the Attorney General has complete discretion as to whether seized heroin may be available for research; and it is highly doubtful that Congress ever intended that BNDD should become a manufacturer and distributor of heroin for use in such a long range program.

MEMORIAL SERVICE FOR RABBI URI MILLER

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. LONG of Maryland. Mr. Speaker, the members of Beth Jacob Congregation, Baltimore, and the American people have suffered a grave loss in the death of my friend, Rabbi Uri Miller. On July 9, a memorial service was held to pay tribute to Rabbi Miller. Rabbi Nahum M. Ben-Natan, who succeeded Rabbi Miller as spiritual leader of Beth Jacob Congregation, did a superb job of organizing and conducting this service, and I want to pay tribute to him for his efforts.

I should like to share with my colleagues my eulogy and the names of those who participated in the service.

Eulogy for Rabbi Uri Miller

The death of Rabbi Uri Miller has saddened the nation. That Rabbi Miller was a brilliant spiritual leader is, of course, well known, but he was also a man of action. In government he served as co-chairman of the President's Commission on Civil Rights nearly a decade ago. In religion he served as chief executive of many distinguished national organizations. His compassion was deep—for the young, for the old, and for the people of the Jewish faith who have been trapped in the Soviet Union.

The Jewish people with their thousands of years of cultural, economic, and intellectual leadership can be described as the great success story of the human race. Rabbi Uri Miller can be described as one of the great success stories of the Jewish people.

I valued him as a friend, I respected him as a leader, and I shall miss him as you will miss him. I am deeply proud to have been his Representative in the Congress of the United States.

Rabbi Nahum M. Ben-Natan, Beth Jacob Congregation, 5713 Park Heights Ave, Baltimore, Maryland.

Rabbi Samson R. Weiss, 13 Even Haazel, Jerusalem, Israel.

Father Thomas Peterman, Perry Point VA Hospital, Perry Point, Md.

Rabbi Louis J. Lehrfield, Hebrew Theological College, 7135 N. Carpenter Rd., Skokie, Illinois.

Rabbi William Herskowitz, Rabbinical Council of America, 220 Park Ave. South, New York, N.Y.

Rabbi Jacob Weinberg, Ner Israel Rabbinical College, Mt. Wilson Lane, Baltimore, Md.

Rabbi Leon Adler, Synagogue Council of America, 432 Park Ave., New York, N.Y.

Mr. Fred Neal, Mayor's Office, City Hall, Baltimore, Md.

Hon. Theodore R. McKeldin, 10 Light St., Baltimore, Md.

Rabbi Benjamin Bak, 3407 Menlo Drive, Baltimore, Md.

Rabbi David S. Goldstein, Baltimore Hebrew Congregation, 7401 Park Heights Ave., Balto., Md.

Rabbi Albert Pattashnick, Talmudical Academy, 4445 Old Court Rd., Balto., Md.

Hon. George L. Russell, Jr., Tower Building, Balto., Md.

Rabbi Israel Goldman, Chizuk Amuno Congregation, 8101 Stevenson Road, Balto., Md.

Judge Solomon Liss, 3207 Fallstaff Road, Balto., Md.

REPUBLICANS CONSISTENTLY SUPPORT THE CAPTIVE NATIONS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. DERWINSKI. Mr. Speaker, a telling testimony was presented at the recent platform hearings of the Republican National Convention in Miami. Delivered by the chairman of the National Captive Nations Committee, Dr. Leo E. Dobriansky of Georgetown University, it stresses the consistent record of the Republican Party in incorporating planks in its convention platforms since 1952. The committee was represented by Mr. Joseph Lesawyer, an executive member and also executive vice-president of the Ukrainian Congress Committee of America, at the Democratic Party convention in July. Because of its purely factual elements I commend this testimony to the reading of my colleagues.

Incidentally, in reviewing news reports from Miami, it is unfortunately true that publicity seeking critics, such as Representatives McCloskey and Riegle, are receiving far more attention from the media than a responsible man like Dr. Dobriansky.

The news release follows:

Republicans Consistently Support the Captive Nations 1952–1972

Mr. Chairman and distinguished members, it is a veritable privilege for me to testify again at a Republican Convention Platform hearing on a fundamental issue thaat has confronted us Americans for some time and will starkly face our people in the foreseeable future. Since 1948, in Philadelphia, it has been in the nature of a moral obligation for me and others to appear quadrennially in testimony for the incorporation of a strong plank on all of the captive nations in Central Europe, within the Soviet Union, in Asia and Cuba. And it is a striking and glorious fact, deserving of prime emphasis at the outset, that from 1952 thru '68, Republicans at each national convention have consistently and unequivocally supported the freedom cause of the captive nations as a basic, integral factor in our national security interest. This enviable record of expressed principle, moral conscience and political perception must be extended in the forthcoming '72 Platform.

A detailed review of this superb and unsurpassed record makes for exciting and constructive reading. By more recent examples, it is sufficient here to just quote in part from the '64 and '68 Platforms. The '64 plank began, "Republicans reaffirm their long-standing commitment to a course leading to eventual liberation of the Communist-dominated nations of Eastern Europe, Asia and Latin America . . .;" the '68 plank declared in part, "The peoples of the captive nations of Eastern Europe will one day regain their freedom and independence. We will strive to speed this day by encouraging the greater political freedom actively sought by several of these nations".

What is equally important is the fact that in the spirit and terms of this long-standing Party commitment, our President has in his Administration issued four successive Captive Nations Week Proclamations, the most recent of which, last month, emphasized that "in much of the world, the struggle for freedom and independence continues." Nowhere does this observation apply more powerfully, more strategically, and more meaningfully for world peace and freedom than to the areas of the captive nations. From the total viewpoint of our American body politic, it is in a real sense regrettable that, in contrast to Senator Humphrey and others, the Democratic Presidential candidate has consistently shown no concern whatsoever for the plight and strategic importance of the captive nations, as so prominently indicated by his absence of participation in last month's 14th Observance of Captive Nations Week which the President appropriately proclaimed. It appears that many have stiff to learn the Lincoln proverb: "Those who deny freedom to others deserve it not for themselves."

Now for a few essential facts and truths justifying a concise, meaningful and perpetuated captive nations plank in the '72 Platform. First, in addition to reflecting the above tradition, such a plank would also reflect the principles for which millions of Americans during the Captive Nations Week observances. Following Publication 86–90, which President Eisenhower signed in 1959, the 14th Observance last month was featured by extensive Congressional addresses, over two dozen Governor and Mayor proclamations from New Hampshire to Texas and Alaska to Georgia, rallies and events in Boston, New York, Philadelphia, Cleveland, Chicago, Los Angeles, New Orleans and other major cities, and even in 17 allied countries.

Second, despite both transient and power balance changes in the past two decades, the massive reality of the captive nations in toto has remained unchanged. Here is the list with the years of communist takeover:

Armenia, 1920; Azerbaijan, 1920; Byelorussia, 1920; Cossackia, 1920; Georgia, 1920; Idel-Ural, 1920; North Caucasia, 1920; Ukraine, 1920; Far Eastern Republic, 1922; and Turkestan, 1922.

Mongolian People's Republic, 1924; Estonia, 1940; Latvia, 1940; Lithuania, 1940; Albania, 1946; Bulgaria, 1946; Serbia, Croatia, Slovenia, etc. in Yugoslavia, 1946; Poland, 1947; Romania, 1947; and Czecho-Slovakia, 1948.

North Korea, 1948; Hungary, 1949; East Germany, 1949; Mainland China, 1949; Tibet, 1951; North Vietnam, 1954; and Cuba, 1960.

With regard to South Vietnam, Free China and others, the question of "Who's Next" on this list is a most valid one if you consider the policies advocated by those who oppose the President.

Third, as the President indicated in his '72 Captive Nations Week Proclamation, a year doesn't pass without new eruptions for freedom and independence among the captive nations. To mention just a recent few, the self-immolations in Lithuania, the mass arrests of dissidents in Ukraine, religious resistance in Czecho-Slovakia, the upsurge of Croat nationalism in Yugoslavia, the swim of hundreds of youth from Red China are indicators of the persistent struggle for freedom in the captive nations. Fourth, it is vitally important to distinguish between detente, involving negotiations with Red regimes, and any politico-moral acquiescence to the permanent captivity of these nations. There is nothing that Moscow, Peking, and others politically crave for more than the latter from us, but the very fact of the President's issuance of these proclamations demonstrates that such immoral acquiescence is unattainable. And fifth, the far-seeing diplomatic offensive of the President toward both Moscow and Peking underwrites the growing importance of those numerous captive nations in the USSR and Red China, opening up new frontiers of contacts and knowledge that in due time will dissipate typical American myths that these two imperial complexes are made up of only Russians and Chinese respectively.

In the light of these and my other observations, the following captive nations plank is proposed for your acceptance:

"The Republican Party has consistently and unswervingly upheld the goals of freedom and independence for all the captive nations in Eurasia and in Cuba. 'Yet,' as President Nixon's latest proclamation of Captive Nations Week stresses, 'in much of the world, the struggle for freedom and independence continues'. In fixed principle and by flexible deeds we support this struggle, and sharply distinguish between detente for peaceful negotiation and any immoral acquiescence to the permanent captivity of nations in the communist empire. Our firm faith in and dedication to the eventual freedom of all the captive nations from imperialist communist rule countervail in the spirit of 'peaceful coexistence' the communist ideology of subverting free world institutions."

FINANCING EDUCATIONAL SYSTEM IS SERIOUS PROBLEM

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. EILBERG. Mr. Speaker, it was my privilege today to present to Chairman Mills and his colleagues of the Ways and Means Committee Msgr. Francis B. Schulte, superintendent of schools of the Archdiocese of Philadelphia. The monsignor testified on the Public and Private Education Assistance Act of 1972 (H.R. 16141, H.R. 16215), which it is my pleasure to cosponsor with the gentleman from New York, Hon. Hugh Carey.

I have long felt that the Congress must come to grips with the ever more serious problem confronting the nation in the financing of its educational system—public and private. I am certain the Monsignor Schulte's cogent comments on this matter will be of great interest to the membership of the House. Therefore, I insert his testimony in the Record at this point:

Testimony of Msgr. Francis B. Schulte

August 17, 1972.

I am Francis B. Schulte, Superintendent of Schools for the Archdiocese of Philadelphia. Under the general supervision of this office are 279 parish elementary schools, plus 4 special schools, and 31 diocesan high schools, educating altogether 223,000 students. (These figures are exclusive of the private Catholic schools and Catholic colleges and universities in the Archiocese.) The territory of the Archdiocese includes the City of Philadelphia and the four surrounding counties—Bucks, Chester, Montgomery, and Delaware. Almost 60% of these students are in Catholic schools in the City of Philadelphia. About 15% of the city students are from minority groups, and more than 20% of these are non-Catholics.

DECREASING ENROLLMENT AND INCREASING COSTS

The Catholic schools of Philadelphia are facing an increasingly serious financial crisis. A brief look at enrollment figures over recent years will provide us with some understanding of the situation. In 1964–65 our schools in the five counties served some 271,379 pupils in contrast with last year's enrollment of 223,000, a decline of some 48,000 students.

These enrollment figures are related undoubtedly to steadily rising costs in education. A tradition of little or no tuition in the schools of the Archdiocese of Philadelphia had produced a uniquely democratic clientele over the years. As recently as 1965–66 high school "tuition" was $20; today the charge to each student is $300 a year, in addition to $150 per student from the parishes. Only in this last school year was tuition officially introduced into the elementary schools, so that, until very recently, there was no financial deterrent to the exercise of parental rights in education, and rich and poor alike were accepted into our schools as a result of the outstanding sacrifice of our Catholic people and friends.

Today, however, with the steadily rising tuition, we are faced with the distasteful specter of becoming less democratic, less "Catholic"—forced more and more to a position of being open only to those who can afford to come to our schools.

CITY AND SUBURBAN SCHOOLS AFFECTED

The Report of the Gurash Committee, recently completed and made available to this Committee, indicates that operational costs of Catholic schools in the city and suburbs will rise astronomically by 1976. The picture of many Catholic schools in the City of Philadelphia is one of deteriorating buildings, empty classrooms, rising tuition, and enormous debt. These conditions have already begun to limit freedom of parental choice in education.

The financial crisis of the Catholic schools affects the public schools' financial problems. Unfortunately, many Catholic schools serving families least able to absorb any added costs are located in the center of a large public school system which is itself struggling under the threat of bankruptcy. One out of every three children in the City of Philadelphia attends Catholic school. Unless immediate, substantial aid comes to these schools, both public and nonpublic schools will find their mutual problems gravely intensified.

In suburban areas of the Archdiocese the two-pronged debt factor of newer school buildings and families laboring under the costs of resettlement likewise limits parental freedom of choice in education. Those parents who continue to struggle to keep their children in our schools experience the added burden of increased school taxes to enable the public schools to absorb the transfer of their neighbors' children.

State and federal legislation over the past few years has provided various kinds of supplementary assistance to our schools. Valuable as these materials and services are, they do not touch upon the basic burdens of salaries and other operational costs. More and more, our schools must depend on tuition charges which cannot do otherwise than increase drastically.

SOCIAL AND EDUCATIONAL CONTRIBUTIONS OF CATHOLIC SCHOOLS

The Gurash Report, to which I referred briefly, is the work of a group of outstanding leaders in our community—Catholic and non-Catholic, business and professional people. Their independent study of our schools encompasses the social contribution of our schools as well as their present financial need. The Report stresses the important role played by Catholic schools in the total educational effort of the Philadelphia community and lists the following considerations:

1. Education encompasses the entire spectrum of social political, and spiritual values that are part of the fabric of life in a free society.

2. Catholic and other parochial schools are committed to an educational philosophy involving morals, conduct, and spiritual as well as intellectual excellence.

3. The American tradition of educational diversity has been a great strength to our educational system and should be preserved.

4. The individual citizen's right to choose the kind of education which he wishes his children to have is an important right and should be preserved.

5. Catholic schools are a stabilizing factor in the life of our urban communities.

6. The example set by the Catholic schools of efficient and economically constructed and operated facilities is also important.

7. In addition to the foregoing, the resources committed to supplying Catholic education in the Philadelphia area provide this community with:

A quality education for one out of three children in the City of Philadelphia and comparable numbers in the four suroundlng counties.

An important source of a skilled labor force and an educated citizenry.

A source of community and business leaders.

A full range of student activities which provide educational, social and recreational services to the community at large and develop in the students themselves a sense of social responsibility.

Substantial facilities and personnel to undertake the education of minority groups and the poor. This aspect of social contribution of Catholic resources was prominently noted by President Nixon in his Message on Educational Reform, March 3, 1970, in which he comments:

"They offer a wider range of possibilities for education experimentation and special opportunities for minorities, especially Spanish-speaking Americans and black Americans."

These resources exist today and present potentially a powerful instrument for social awareness and change. The resources so committed should be conserved along with our other national resources.

The community stake—both economic and social—is high. Independent of full acceptance of the benefits claimed or value judgments implied, the Catholic and other nonpublic schools of the Philadelphia community are a substantial factor to be reckoned with and assessed.

8. There exists between the public and Catholic schools of Philadelphia a large measure of interdependence, cooperation and interaction.

FINANCIAL IMPACT OF CATHOLIC SCHOOLS

The major findings of this Committee in the financial area may be summarized in these words:

1. By 1975 the deficit in the schools of the Archdiocese will reach $55.4 million.

2. Costs will continue to spiral due to:

a) Rising teacher salaries;

b) Decline in availability of Religious teachers; and

c) Improving (declining) student/teacher ratios.

3. Despite all these pressures, costs in the Catholic schools will remain substantially below the public school system when measured on the basis of cost per student.

4. The Catholic schools of the five counties represent a saving of more than 800 million dollars a year in operating costs alone, not to mention the housing of the children.

FREEDOM OF CHOICE IN EDUCATION

Finally, I would like to reaffirm our belief in the primary rights of parents in the education of their children. As was stated in the Wall Street Journal of December 8, 1970, in a letter to the editor, written by E. Earle Ellis, of New Brunswick Theological Seminary:

"Is it not understandable that the religio-philosophical framework of current public education is for many Christians and Jews confessionally offensive? The state's use of the taxes of such people exclusively for public school represents a two-fold infringement on their religious liberties. First, it is a discriminatory distribution of tax aid to one kind of educational structure, one that is confessionally objectionable to them. More seriously, it forces such persons of moderate income to send their children to these schools whatever their confessional preferences may be. It needs to be stated again, loud and clear, that whatever proper educational requirements the state may make, the primary rights in educating a child belong to the parents—not to the state."

CONCLUSION

Based on my observations and experience as Superintendent of Catholic Schools in a large metropolitan area, I urge prompt action on legislation to provide some relief in the form of tax credits for parents of children attending nonpublic schools.

SUMMARY OF TESTIMONY

Catholic schools make an important social and educational contribution to the total educational effort of the Philadelphia area. These schools also have a most significant financial impact on educational costs in the area. The contributions of Catholic schools have been widely recognized, most recently by the Gurash Report.

In recent years, Catholic schools, along with most American schools, have faced rapidly increasing costs. More and more of these costs have been met by rising tuition. This increase in tuition is limiting the availability of this form of nonpublic education and placing greater and greater burdens upon poor and middle class parents.

Relief for these parents in the form of tax credit legislation is urgently needed. Such legislation would be wise public policy for our nation.

BATTLE IN BROOKLYN

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. MIKVA. Mr. Speaker, fair and open and honest elections are at the very heart of this democracy. When there are serious doubts about the validity of an election, when there is substantial evidence of fraud and deceit, it is vital that those doubts be resolved, the evidence heard. People must be able to trust the democratic process. If they cannot trust the process, they cannot trust the government that it supports.

Vote fraud and dishonest elections are not unknown in this country. Almost every election, there are charges that one candidate or another has been "cheated" out of the election. All too often, the charges lack substance, based more on sour grapes than sound evidence. Because of that, it is often easy to ignore all charges of vote fraud—even the serious ones, the ones with substance. It would be a tragic mistake to ignore the charges and the evidence now being raised in New York's 14th Congressional District. The charges are not frivolous. The evidence has substance.

The newspaper article which follows explains what happened on primary election day in New York and what is being done about it. If the charges are proved, if the election was not honest, the only way to restore the trust and confidence of people in democracy is to hold a new election. Because of the principles involved, because of the importance, I think it is something all of my colleagues will want to follow. The article is attached:

[From the New York (N.Y.) Post, July 1, 1972]

BATTLE IN BROOKLYN

(By Jose Torres)

It seems as if the battle over who won and who lost in the 14th C.D. in Brooklyn is not yet over. I mean, as far as many Puerto Ricans are concerned, Al Lowenstein didn't lose to incumbent Rep. John Rooney. And these countrymen of mine are willing to go all the way to prove to the world that Lowenstein was cheated.

Until now figures say that Rooney received 14,292 votes to Lowenstein's 13,403. The arithmetic says that Lowstein was the loser by 889 votes. But a lot of Puerto Ricans disagree. And, 14,500 Puerto Rican registered voters make a big 22 percent of the C.D.'s total.

I was having lunch yesterday in Otero's Restaurant on Smith St. and Pedro Sanchez, a young man I know, came to me and said: "Al was cheated." Frankly, I didn't know what this man was talking about.

"I've been voting for years," he continued, "and as usual, I went to vote to I.S. 293." He asked for a beer, asked me if I wanted one, and as he pulled a dollar bill from his pocket he almost yelled: "It's a shame. Here we are in a democratic country. I was always proud of it. But now I don't know what to think. Some people here believe we Puerto Ricans are dumb people."

The young man took a sip from the can of beer and kept talking. "You know, Chegui," he almost yelled my nickname, "I didn't vote. Not because I didn't want it, but because 'the machine' didn't allow it. I was told that they couldn't find my card. So, for three hours I argued and I screamed, but 'they' didn't let loose. Man, 'they' prevented me from exercising my right to vote." "The machine" he meant was the Democratic machine in Brooklyn.

"What are you talking about?" I finally was able to sneak a word in.

"The Lowenstein-Rooney fight," he said with a broad smile. "Al Lowenstein, the Kennedy man, was cheated. And he was cheated in the most obscene way." Pedro was sincerely angry. He was not putting me on. "If Mr. Lowenstein don't put these bunch of crooks in jail, I'll do it."

Elba Rodriguez, 21, was more frustrated than mad. "I think I should blame myself," said Elba, entering the conversation. "I was given the chance to vote and blew it." Then she went on to explain that it was the first time she had been in a voting booth and she didn't know what to do.

"I was told to pull this way (she motioned her right hand to the right direction) and then this way (she moved her right hand to the left) and that's exactly what I did." So, automatically her votes were cancelled out.

When a third man, Raul Bones, joined the conversation I decided that this was no joke. There was a serious problem involved here. And I didn't laugh anymore when I heard Sanchez complaining: "It was a fraud."

The important thing here is that Sanchez, Rodriguez and Bones were not political activists. In fact they had said that they were going to vote for Lowenstein and that was about all they said about politics. "But that was enough," claimed Sanchez. "We had trouble for saying that we were for Lowenstein and not for Rooney."

I personally don't feel that Rooney himself would involve himself with this kind of maneuver. Rooney had shown me in the past that he's a decent man. In fact, he had been one of the few politicians in New York who has always wished me luck before my fights and sent me congratulatory telegrams after my boxing victories.

Of our personal relationship I have no complaints. But I began to dislike his political views about three years ago, after a few of my close friends died in a war that Rooney thought was proper.

But also Rooney is part of a machine, and although he is a Democrat, he's one of President Nixon's favorite Democrats. In fact, of all of New York's Congressmen in Washington, Rooney has been one of the most consistent backers of Nixon.

He's also been for jets to Taiwan, no jets for Israel; help for the South African government; help for fascist governments like Spain and Greece; more money for defense. But backing Nixon on the Vietnam war is what really turned me off from Rooney.

And if what all these countrymen of mine are saying about the primary vote foul-up is true, I see no reason why they should stop pressing the authorities to cancel the results.

Said Wilson Bones, son of Raul: "The complaints have been many. And there are many people who will testify to the fact that they didn't vote because they were somehow stopped from voting."

If Wilson is right, there is only one thing for me to say: Help!

ANNUNZIO DEMANDS STRICT ENFORCEMENT OF THE LAW

HON. FRANK ANNUNZIO

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. ANNUNZIO. Mr. Speaker, there has been a 30-percent increase in the reported crime rate in the last 3 years. The latest FBI figures show that during the first 9 months of 1971, there were increases of 10 percent for violent crimes and 6 percent for property crimes compared with the same period in 1970. Compare these figures with the total number of arrests, which increases about 5 percent a year.

An attorney and investor in Palm Beach, Fla., who understated his capital gains, thus avoiding taxes and penalties of over $1 million, was given 2 years' probation and fined $5,000. A numbers operator in Detroit was fined $5,000 for false wagering on his excise tax returns. The taxes on his income amounted to well over $1½ million.

How can average citizens maintain their respect for the law when "big-time operators" are dealt with so leniently?

It is obvious that in spite of all the talk about a war on crime being fought by the Justice Depatment's Law Enforcement Assistance Administration, the crime rate has gone up, millions of dollars have been wasted and the program has been badly administered. Large lump-sum money grants to the States have helped to create new and unmanagable bureaucracies caught up in politics.

This Federal program has supplied the Birmingham, Ala., Police Department with three Army tanks to the tune of $67,000. Just how a tank will help to apprehend the burglar and the mugger is a question nobody seems to be able to answer. I am not even sure that a tank would be particularly effective under riot conditions.

In 1967, the President's Crime Commission urged that the courts adopt modern administrative and business management methods that would avoid repeated appearances and continuances. This recommendation has been ignored, even though by adopting it, both the courts and the police would be helped. Prosecuting witnesses, including policemen, are often required to come to court on five or more separate occasions for a single case. These delays reward defendants. Last year, 94,000 felony arrests in New York City resulted in only 550 trials. The other cases were dismissed or reduced to misdemeanors in return for guilty pleas.

Drug addiction, a major reason for the increase in crime, is spreading among young people. This problem, and innovative ways to deal with it, has received too little attention. In a 2-year period, when Federal appropriations for the Law Enforcement Assistance Administration program increased from $270 million to $700 million, funds for the Federal juvenile-delinquency programs were cut from $15 to $10 million. Tragically, young people are involved in the vast majority of crimes.

Flashy gadgetry and unplanned, unthinking spending is not the answer to the problem of rising crime rates. We must support the overhaul of our court system and insist that justice be administered promptly and fairly without reference to the defendant's financial status. When our young people see the millionnaire tax cheater get off with a slap on the wrist—and the financial tycoon rewarded for dishonesty in the marketplace—it becomes easy to accept lawlessness as a way of life.

It was in this spirit that I introduced a resolution in the House urging that economic and military assistance to Thailand be suspended for its failure to take adequate steps to control the illegal traffic of opium through its borders.

I believe that if we take vigorous action to enforce the law at all levels of criminal activity and see that prompt court action is taken against all offenders, we will have gone a long way toward the solution of our crime problem.

CENTRAL NEW YORK IS RICHER HAVING KNOWN CALVIN THOMPSON

HON. JOHN H. TERRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. TERRY. Mr. Speaker, in our time there have been giants in history whose names will continue to be used as comparison with leaders of the future. This morning, the central New York area learned of the death of a man whose contribution to our spiritual and temporal well-being will constantly be used as an example of true concern for service to one's community.

Dr. Calvin M. Thompson, Jr., pastor of the Delaware Street Baptist Church for 37 years, established a position in the Syracuse community as both a religious and civic leader. In addition to his duties as pastor of his church, he broadcast a weekly radio program on WSYR titled "Sunday Morning at the Crossroads."

Dr. Thompson's willingness to help in difficult times was represented by his membership nearly 4 decades ago on the Syracuse Housing Authority when public housing was extremely new and certainly not something that a clergyman would dare lend his name to.

We have in our Nation a tradition of separation of church and state which has served us well during our 200 years of existence. Dr. Thompson represents that unusual man who could combine his religious duties with civic participation and never create a conflict because of the two responsibilities he held.

The death of Dr. Thompson brings sorrow to the hearts of all who knew him and sought his counsel in times of need. The entire central New York area is richer for having known him. His contribution to the Greater Syracuse area was recognized this morning in an editorial in the Syracuse Post Standard, as follows:

> CALVIN M. THOMPSON, JR.
>
> Through extension of his personality far beyond his pulpit by way of radio, the press and civic leadership, the Rev. Dr. Calvin M. Thompson, Jr., who died yesterday, was in a very real sense a minister to the entire Central New York community.
>
> Pastor of Delaware Street Baptist Church for 37 years until his retirement in 1970, Dr. Thompson exerted a tremendous influence with his own congregation but he served also thousands of shut-ins and persons of all faiths through his "Sunday Morning at the

Crossroads" radio program on WSYR since 1934, and in retirement had continued as religious adviser of that station.

Ever alert for any chance to carry his message to a wider audience, Dr. Thompson had "exchanged pulpits" 20 years ago with the late Richard H. Amberg, then general manager of this newspaper, with Mr. Amberg preaching at Delaware Church and Dr. Thompson writing the lead editorial in the Sunday Post-Standard.

Dr. Thompson was particularly proud of the fact that he had never missed a Sunday morning broadcast, even on the tragic Sunday in 1958 when his beloved church was in flames and he made his way to WSYR.

But it was as a doer of deeds as much as a preacher of sermons that Dr. Thompson made his greatest impact on the community and on every organization with which he was associated.

He was a member of the Syracuse Housing Authority nearly 40 years ago, when public housing was a highly controversial issue, and he served faithfully both as a member and for several years as chairman while the SHA withstood a storm of opposition and while Pioneer Homes was being established as Syracuse's first low-cost housing project.

He was a past president of the Syracuse Council of Churches, past moderator of the Onondaga Baptist Association, former chaplain of the State American Legion, former grand chaplain of the New York State Masons, and a leader of the New York State Baptist Convention, among numerous other secular and religious responsibilities.

He never refused an opportunity to serve when he thought his help was needed.

He was a friend of the poor and the rich, a counselor of the old and the young, a benefactor of all races, and a true practitioner of the "oldtime religion" which moves men's souls to follow the basic teachings of Christianity.

Many will miss his inspirational messages but will recall his firm loyalty to his principles. Syracuse is richer for having known Calvin Thompson.

STILL NC JUSTICE FOR KENT STATE

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. MOORHEAD. Mr. Speaker, I have come before this House in several occasions to plead the case of those who feel that justice has been dealt a low blow by the Nixon administration in connection with the killing of four college students at Kent State University, May 4, 1970.

The circumstances surrounding those killings and the wounding of several more students, many of them innocents who were merely traveling between classes, have never been made public.

Twenty of us in this body formally asked the administration to convene a Federal grand jury to investigate the questionable behavior of certain Ohio National Guardsmen during the shooting. Our request was denied.

An independent researcher suggested there was a conspiracy to kill those students. I put his account into the RECORD for the information of my colleagues on July 22, 1971.

Today I will introduce another item for your perusal. I have edited the report slightly to conform with our RECORD extension rules, but the message remains powerful.

It is the account of bureaucratic runaround and blatant lying carried on by the administration with respect to the request by more than 10,000 Kent State students for a Federal grand jury investigation of what happened at their school on that fateful day.

After you read this account, ask yourself why the young people of this Nation have so little faith in their elected leaders. From this report the answer to that question is clear. The report follows:

KENT STATE UNIVERSITY'S PETITION TO THE WHITE HOUSE: TEN MONTHS OF DECEIT

Attorney General John Mitchell said today there are "apparent violations of federal law" in the Kent State shooting case. He said the federal government will move to prosecute the violators "if Ohio authorities do not." Mitchell did not specify the nature of the violations but said they involved both students and Ohio National Guardsmen.—*Akron Beacon Journal,* July 29, 1970, "Mitchell Eyes Prosecution By U.S. In Kent State Case"

"Watch what we do instead of what we say."—John Mitchell, Attorney General of the United States, July 1969.

BACKGROUND TO THE PETITION FOR A FEDERAL GRAND JURY INVESTIGATION OF THE KENT STATE UNIVERSITY TRAGEDY

Although several investigations were held following the Kent State University killings, none could determine why Ohio National Guardsmen fired into a crowd of K.S.U. students on May 4, 1970. The evidence indicated that the shootings were totally unjustified, but the President's Commission on Campus Unrest and the Justice Department could do no better than to speculate why the shootings occurred.

In the summer of 1970 Justice Department officials analyzed the 8,000 page FBI investigative report on the May 1–4 K.S.U. disorders to determine whether Federal prosecution was warranted. On July 29 of that year former Attorney General John Mitchell said there were "apparent violations of Federal law" involving both students and Guardsmen. The Justice Department reportedly was gathering evidence for presentation to a Federal Grand Jury in Cleveland if Ohio authorities did not prosecute.

In early August former Ohio Governor James Rhodes directed his attorney general to convene a special state grand jury. Twenty-five persons, mostly students, were indicted on October 16 for various offenses which allegedly occurred during the four days of disorder at the University. Despite advice from the Justice Department's Civil Rights Division that six Guardsmen could be criminally prosecuted under Ohio law, no indictments were returned against any Guardsmen.

The conclusions of the special Ohio grand jury have long been discredited. Its report, which contradicted both the Commission on Campus Unrest and the Justice Department's summary of the FBI report in concluding the Guardsmen fired in self-defense, was physically destroyed by Federal Court order in November 1971. In December 1971 state prosecutors dropped charges against 20 of the 25 defendants for lack of sufficient evidence.

Almost immediately after the special Ohio grand jury's report was released, K.S.U. student and faculty legislative bodies issued a joint statement calling for a Federal Grand Jury investigation of the May 1–4 disorders. Such an investigation was under consideration at the Justice Department, which resumed and intensified its evaluation of the matter in October, 1970. In November Jerris Leonard, the former chief of the Department's Civil Rights Division who had earlier promised federal action if the state proceedings were not capably handled, said a decision whether to convene a Federal Grand Jury would be reached before the end of the year.

For the next eight months, however, the Justice Department refused to say what it intended to do about the case while the parents of the four slain K.S.U. students, five members of the Commission on Campus Unrest, many Congressmen, organizations and individuals appealed for a Federal Grand Jury investigation of the shootings. In response to these numerous pleas, Department spokesmen publicly and privately promised that a decision would be announced at "the appropriate time."

On August 13, 1971, over fifteen months after the shootings, Mitchell finally announced the Justice Department's decision. He said that his personal review of the case prompted him to agree with the Commission on Campus Unrest's conclusion that the rifle fire was "unnecessary, unwarranted, and inexcusable." But in the next breath he said, "there is no credible evidence of a conspiracy between National Guardsmen" and that he believed further federal action in the case was unwarranted. Mitchell did not comment on the fact that four lives had been taken without due process of law, which attorneys for the parents of the four slain students had asserted was a violation of Section 242 of the U.S. Code, Title 18. "The appropriate time" for the announcement, the *Christian Science Monitor* commented, "was late on Friday (4:00) to minimize news coverage and safely after Congress had left town for summer recess."

Two weeks after Mitchell's announcement Senator Edward Kennedy, chairman of the Senate Judiciary Subcommittee on Administrative Practice and Procedure, indicated his subcommittee would investigate the Justice Department's refusal to convene a Federal Grand Jury. During the subsequent eleven months Kennedy's numerous requests that the Justice Department provide his subcommittee with its investigative file were refused.

THE PETITION FOR A FEDERAL GRAND JURY INVESTIGATION OF THE KENT STATE UNIVERSITY TRAGEDY

In his August 13 announcement, Mitchell said that he was satisfied that justice had been served. Over 10,380 K. S. U. students and faculty, however, did not agree with him. That number signed a petition circulated after classes resumed for the Fall quarter urging President Nixon to reverse the decision.

The unique circumstance of Dr. Glenn A. Olds, the University's new president, being a friend and former adviser to President Nixon, provided the inspiration for dormitory counselors Paul Keane and Greg Rambo to co-author the petition. Olds himself refused to sign the petition, saying he was not familiar enough with the facts of the case, but promised to convey the results of the petition to President Nixon if a clear mandate of the student body was obtained. On October 20 Olds brought Keane and Rambo to Washington in a University airplane and presented the signatures to Presidential Counselor Leonard Garment in the White House during an hour long meeting. Olds spoke forcefully on the students' behalf and told Garment he could not get on with the "creative or innovative work of the University" until the issue had been resolved. Rambo requested an answer to the petition by December 1, and, should President Nixon decide to uphold Mitchell's decision, they at least be provided with a detailed explanation of why it was reached.

Although the petition was addressed to the President and urged him to reverse Mitchell's decision, Garment referred the petitions to the Justice Department. On November 14 he said "the matter is now under consideration here (at the White House) and at the Justice Department." Garment said he hoped a response would be forthcoming "within the next couple of weeks." On December 9 Keane and Rambo returned to Washington with K. S. U. Student Body President Bill Slocum to present Garment with 23,000 more signatures obtained when the petition was circulated on other campuses. (The nationwide petition drive ultimately resulted in a total of 50,000 signatures.) Garment said then that the dropping of charges against 20 of the 25 persons indicted by the special Ohio grand jury could possibly speed up the Justice Department's decision. The students were prepared to distribute packets to every member of Congress along with a request that they sign the petition. After the meeting was over and the students left, Garment came out of his office and walked double-time halfway down the White House hallway to ask them not to distribute the packets. Still reading the information in the packets, Garment cautioned "this might cause people to make statements which wouldn't be helpful and which you have no reason to understand." The students agreed not to distribute the packets.

Justice Department officials had previously said that new evidence would help the call for a Federal Grand Jury. In October and November Garment received two detailed briefs from Keane and Rambo. The thrust of the briefs was that sufficient evidence already exists warranting the convening of a Federal Grand Jury.

There were a few indications that the Administration intended to respond to the petition before Mitchell resigned as attorney general and officially resumed his role as campaign manager for President Nixon's reelection effort. On February 17, a Justice Department spokesman said there would be a response soon, but added he was unable to specify when it would come in terms of days. On February 23, after Attorney General-designate Richard Kleindienst testified before the Senate Judiciary Committee that he would not reverse Mitchell's decision if confirmed as his successor, Garment reaffirmed that there would be "a review and a response in a formal fashion by the administration" within a few weeks. Garment indicated the response was being held up until President Nixon returned from his trip to China.

The Justice Department, however, became involved in a controversy in early March after columnist Jack Anderson printed a memo linking the Department's out-of-court settlement of three antitrust cases against International Telephone and Telegraph with ITT's pledge of an estimated $400,000 contribution to the Republican National Convention. On March 1 Mitchell resigned as attorney general without a response to the petition and Kleindienst's confirmation as his successor was held up while the Senate Judiciary Committee probed the circumstances of the ITT settlement. On March 10 a Justice Department spokesman said there was "no time fix" for a response to the petition.

The same day Keane placed a surprise call to David Norman, chief of the Justice Department's Civil Rights Division and the official Garment said he had been working with. It was this telephone call which convinced the petitioners that they had been deceived by the Nixon Administration.

Asked whether he received the two detailed briefs from Garment, Norman said, "I *think* they are in the packet Len (Garment) gave me." (emphasis not added) Norman told Keane that "we're getting a new attorney general in here and he might want to consider the petitions after he is confirmed."

Not only had Kleindienst testified before the Senate Judiciary Committee two weeks earlier that he would not reopen the Kent State case if confirmed as attorney general, but he had been saying essentially the same thing in response to questions after several speeches he had given since the petition was received in the White House. Norman's statement was another example of the curious lack of communication between Justice Department officials (and some White House aides) which also surfaced during the Senate Judiciary Committee's hearings on the ITT case. Kleindienst told the Senate Judiciary Committee on February 23 that he was "not aware the case is being reconsidered." His testimony contradicted Mitchell's December 20 letter to Ohio Congressman William Stanton in which Mitchell assured him the petitions were "receiving careful consideration."

In the telephone conversation, Norman was asked about one of the important points involving Federal law cited in the two detailed briefs: the assertion which appears in the Justice Department's very own summary of the FBI report that some Guardsmen may have jointly fabricated claims of having had to fire their weapons in self-defense. Norman, as if he had never heard of Kent State, said only he thought he had seen that point mentioned "in a memo prepared during the course of the (Justice Department and FBI) investigation." Significantly, when one of Garment's aides was asked the same question on July 13, 1972, he seemed equally unsure of the authority of that assertion.

The Nixon Administration continued to ignore requests for a response to the petition throughout the spring quarter. In April Garment told Olds that "we're still waiting for advice from the Justice Department." It was never explained why Kleindienst could not give his advice as Acting Attorney General. The issue of a Federal Grand Jury investigation, which dominated the campus news during most of the first two quarters of the academic year, seemed to fade and was replaced with protests over fresher issues: University budget cuts and President Nixon's Indochina war policies.

When the academic year ended without a response to the petition, Olds lamented that the "long delay has crippled my effort to persuade students the system will work." On July 10, nine months after Garment received the 10,380 signatures, Keane and Rambo finally were informed that a Federal Grand Jury would not be convened. The promised "review and a response in a formal fashion by the administration" came in the form of photocopies of a letter Garment sent to the parents of the four slain students on July 6. Since neither the White House nor the Justice Department made a public announcement nor issued a formal press release, and since the letter was received the first day of the Democratic National Convention, there was almost no press coverage of the letter.

Garment's five paragraph letter stated that Kleindienst "was asked about this matter in a public question and answer session and has answered for himself and for the Administration that he has not seen presented to him sufficient new evidence of information which would compel him to reverse the decision of former Attorney General Mitchell concerning the submittal of this matter to a Federal Grand Jury."

None of the points involving Federal law which were raised in the two detailed briefs were addressed in Garment's letter. Garment did respond briefly to the conspiracy charges suggested by Michener and Davies. Garment wrote, "Willfulness or specific criminal intent or planned or purposeful conspiracy must be proved in order support a federal indictment; there is still no evidence available to prove such a violation of the Federal criminal statutes. . . . There is still no evidence known to the Attorney General of a *federally* punishable conspiracy." (Garment's emphasis).

On July 12 Justice Department spokesman John Wilson was asked whether the Department had contacted Michener concerning his statement that the conspiracy theory was 'irrefutable'. Wilson said he did not know and added it would probably be up to Michener to contact the Department with any new information rather than the other way around.

The next day Brad Patterson, Garment's aide, was asked whether Garment's July 6 letter to the parents was considered to be the response to the petition by the Nixon Administration. Insisting that he was not an official White House spokesman, Patterson said the Administration's response to the petition was actually Kleindienst's response to a question asked at his first press conference after being confirmed as attorney general on July 13. Patterson said that confirmation that Kleindienst's remarks was the Administration's official response to the petition would have to come from Garment himself. It was subsequently learned that all calls to Garment's office concerning the matter were being referred to the Justice Department.

The text of Kleindienst's remarks, as provided by the Justice Department:

QUESTION. Has the matter of whether or not to have a Federal grand jury investigation regarding the shootings at Kent State ever been resolved?

Mr. KLEINDIENST. Since March 1 when Mr. Mitchell left, I have appeared before the Senate Judiciary Committee in which I testified about this. I have been on several campuses throughout the country in which I have had students ask me what am I going to do about Kent State. I've said publicly and I've said before the Senate Judiciary Committee that there has not been presented to me, since I have been the Acting Attorney General, sufficient new evidence or information or material that would compel me to reverse the decision of Mr. Mitchell concerning the submittal of this matter to a Federal grand jury.

QUESTION. I don't think they (the petitioners) have ever been told, have they?

Mr. KLEINDIENST. Well, they might not have gotten a personal letter from me. I don't want to appear insensitive or callous. I think you all know about my family and the affinity I have toward young people, but I don't know to what extent the Attorney General of the United States, in the proper execution of his responsibilities, is called upon to respond to matters of this kind that don't come about in the ordinary operation of our Department. Certainly in no attitude that I have attempted to conceal, as much as I grieve for those families, as much as I grieve for America, that this unfortunate situation occurred. But my position tonight is that I just don't think that the circumstances would alter Mr. Mitchell's basic decision, prior to the time that he left.

Several months before, Olds had asked Pepsi-Cola President Don Kendall and TV entertainer Art Linkletter to speak to President Nixon about the petition. Olds told Keane and Rambo that Kendall had told him Nixon had put the petition as "top priority" on the White House agenda.

When Olds also received a photocopy of Garment's July 6 letter to the parents and was unhappy with the White House treatment of the petition, he asked Billy Graham to intercede for a personal response from President Nixon and a reply to the briefs. Olds made a similar plea to Garment, who told him that he wanted to respond in more detail in his letter to the parents but could not.

Garment did write a short note on July 27 to Keane and Rambo to apologize "for my failure to write to the two of you when I wrote the parents. There is not much I could have added, certainly nothing of substance, but it was the least I could have done in view of our meetings and dealings and the sincerity of purpose and good faith with which you conducted yourselves throughout."

On July 25 Keane, Rambo and the new K. S. U. Student Body President, Bob Gage, wrote to Kleindienst requesting a meeting, a detailed explanation of why the Justice Department will not convene a Federal Grand Jury on the grounds cited in the briefs, and a thorough explanation of what Kleindienst meant by asserting there was no evidence known to him of a *federally* punishable conspiracy. On July 25 the students also wrote to Garment asking for a meeting with him and President Nixon to discuss the Nixon Administration's handling of the petition. As of the writing of this report (August 8), neither letter has been acknowledged. Nor are they expected to be, considering the numerous letters sent to the Justice Department and the Nixon Administration concerning the Kent State case which have never been acknowledged.

POLITICS, 1972

HON. WILLIAM R. ANDERSON

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. ANDERSON of Tennessee. Mr. Speaker, as the United States approaches its 200th anniversary the American people face the twin tasks of improving the conduct of our nation's foreign relations and building a better country for our own 210 million citizens. Because of these important needs, the elections that will be held this November will be among the most significant in our Nation's history.

The American electorate must, therefore, choose wisely from the many candidates who seek to govern our communities, our States and our Nation. We cannot allow ambitious candidates to ride into office on the crest of inflammatory rhetoric. We cannot allow demagogues to divide us by appealing to our emotions rather than our reason. Arousing the public and appealing to the people on the basis of their fears rather than their hopes is an inadequate substitute for bringing an issue to light on the basis of its merits. Too often in the past, we have permitted emotional issues to serve as a smokescreen obscuring debate on pertinent matters.

It is vital that in this year's election, the American people should scrutinize the record of candidates using past voting rather than glittering promises as a criterion in selecting the best men for various offices.

Recently, the Communications Workers of America, which represents more than 550,000 people, passed a resolution at its annual convention calling for a close examination of the voting records of all candidates for political office.

Because of its timeliness and importance, under unanimous consent, I insert this resolution entitled "Politics 1972" in the Record. I agree with the CWA not on every single issue, but with by far the great majority of issues discussed in the resolution.

The resolution follows:

Politics, 1972

Less than half a year from now, hundreds of thousands of Communications Workers of America members, their families, and millions of other Americans will file into voting places all over the country. Young and old, rich and destitute, radical and reactionary, Democrat and Republican—all will make their marks, and flip their levers, in the ritual which determines how well or how poorly our communities, our states and our nation are run.

This Resolution will not tell you whom to vote for.

But it will say that you and those associated with you should choose wisely, because if you and they choose wisely, our communities and states and the nation will be governed well.

Choosing wisely is not always easy.

In the hot atmosphere of American political campaigning, charges are replaced by counter-charges, claims are superseded by counter-claims, today's promises smother yesterday's and tomorrow's smears lie in ambush, awaiting their call into the political action.

Despite this, we must choose well.

And we can, if we disregard the charges and the counter-charges, the claims, the promises, and the smears.

Wherever possible, whenever there is a record, we must look at the record.

Fortunately in many elections there is a record.

All of the national candidates seeking the nominations of the major parties have records. All of the incumbent Congressional candidates for the House and Senate, and many of those seeking state and community offices have records.

But they must be looked at carefully.

Some politicians have so small a sense of truth, and so vast an imagination, that they can convert votes against us into votes for us, when they are campaigning.

It is not unusual for an anti-labor legislator—on the state or national level—to tell us that he has just voted to protect the rights of working people, when he has actually just voted for "compulsory open shop"—a vote directly opposite the interests of working people.

And it is not unusual for an anti-labor legislator to tell us that he has always been in favor of tax reform, but neglect to tell us that to him tax reform means taking taxes off corporations, and the very wealthy, and putting them on middle and low income workers.

So the record requires scrutiny.

Every Local President and Local legislative chairman in our Union has been sent a voting record analysis of each incumbent member of Congress. Many state central bodies prepare a voting record analysis of members of the state legislature.

These should be reviewed, so that our votes are given or withheld on a basis of the facts and the record, and not on emotions or erroneous information.

We must oppose those legislators who would take away our right to strike, and who would end collective bargaining by installing a compulsory arbitration system, with arbitrators chosen by the government.

We must oppose those legislators who try to pass off a sales tax in disguise, such as the value added tax, as tax reform, when value added tax is actually the opposite of tax reform.

We must support the true tax reform legislators—those who would correct the errors in the system which now place an unfair share of the tax burden on low and middle income earners, while the wealthy and the corporations too often can avoid any tax payment at all.

We must support those who would eliminate the percentage depletion allowances for minerals and the intangible drilling costs loophole, who would disallow special treatment for stock options and other favoritisms, including accelerated depreciation, investment credit, long-term capital gains, and who would tax profits held overseas by multinational corporations.

We must support those legislators who will work for passage of the Kennedy-Griffiths version of National Health Insurance, which would give Americans a true health delivery system. We must support those legislators who will work for the Hart-Magnuson No-Fault auto insurance bill, which will give Americans real insurance protection in auto accidents.

We need comprehensive child care, an education policy which provides every American with all of the education he or she can utilize without regard to ability to pay, and we need a full range of consumer protections in the market place.

We need an environment that is healthful, we need enforcement of laws which protect workers, and we need welfare reform without destroying job rights of welfare workers.

We need livable cities for all Americans, jobs for everyone who can work, and we need a climate of considerateness toward each other, not a climate of confrontation.

That is not a long list—that is only a beginning.

Where a candidate has a record, it should be checked, and where a candidate does not have a record, positions should be established before support is offered.

Those seeking our support for the highest national office, the Presidency of the United States, also have held or hold office, and they have records.

Therefore, when we make our decision on the Presidency, we should check their record.

If a candidate tries to sound as though he invented tax reform, we have a right to ask where he stood on it before the campaign started, and where he stood on it when he had the authority to do something about it?

As we might expect, we will find our longtime friends through the years have consistently voted to remove the inequities in the tax burden, and take some of it off workers. And we will find that some who claim to be our friends are capable of delivering an emotional spiel about taxes, but did not deliver the votes to do anything about it when they could have helped us.

If a candidate takes an obviously emotional issue—any emotional issue—and attempts to ride it into office by inflaming the voters, we have a right to ask—what is the candidate's record? What has the candidate accomplished on the issue? How many of his promises has he actually delivered on, and how many are just hollow, crowd-inflaming promises?

The facts and the answers will be in the record, for every issue that concerns us.

Therefore, Be It Resolved: That the Communications Workers of America will give maximum consideration and exposure to the record of each candidate for office who seeks our support and our votes, and

Be It Further Resolved: That we will disseminate the facts from the record showing which candidates are true friends of workers, and which candidates want to woo our votes from us with emotion instead of substance, and

Be It Finally Resolved: That the members of the Communications Workers of America will strive throughout the months between now and election day, November 7, to give our fellow workers, and others we know and talk with, the true facts from the record about candidates running for office.

INDIAN HEALTH SERVICE EYE CARE PROGRAM

HON. SAM STEIGER

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. STEIGER of Arizona. Mr. Speaker, the Navajo Times, of Window Rock, Ariz., on April 6, 1972, contained an editorial in praise of the recently passed Interior appropriations bill, H.R. 9417.

I would like to take this opportunity to place this editorial in the CONGRESSIONAL RECORD.

The editorial follows:

NAVAJO TIMES EDITORIAL

We have been informed that the House Appropriations Committee and the Subcommittee on Interior have approved an additional $400,000 for an expanded eye care program in the Indian Health Service.

Also, the Appropriations Committee has approved an additional $1 million for the Contract Health Care Program for procuring those health services the Indian Health Service cannot provide because of lack of staff, distances and other factors.

It is gratifying that Important Committees of the U.S. Congress have recognized that serious vision and health problems exist among Indians and that they have taken steps to solve these problems.

Statistics abound on the problems the Indians have faced in the overall health field. In the field of vision, even the most casual observer who has spent some time among Indians will conclude that their eye problems are much more serious than that of the general population.

The American Optometric Association, composed of eye specialists, has as members, over 18,300 optometrists who provide over 70 percent of this country's eye care.

Yet, there are reportedly only twelve of these eye specialists serving in the Indian Health Service!

The eight Indian Health Service Areas representing the greatest concentration of Indian population have an estimated Indian population of 477,546 Indians. Of these, 179,174 are children in the school age bracket. Yet, a total of about 40,000 of these children receive vision examinations each year which is only 22 percent of the total Indian students in these areas.

Students in the general population not only get frequent vision and health examinations through various school systems, but they do not have the problems which have plagued most Indian children from birth.

For Indian non-students the situation is even worse. It is estimated by the American Optometric Association that less than 10,000 of these Indians in the Areas cited have received an annual examination. This is less than 4 percent of this population of Indians.

For the school age five years and for non-students in the Indian population this means that many or most would never get an examination!

While perhaps it could be argued that even more is needed, the House Appropriation Committee and the Subcommittee on Interior are to be highly commended for their far-sighted and concerned action.

We hope that the Senate Appropriations Committee and the other bodies who will be involved will join in this humanitarian effort to give the First Americans assistance so that they can eventually have equal health treatment with the rest of society.—CHET MACRORIE, Editor.

WENDELL G. SCOTT, M.D.

HON. JAMES W. SYMINGTON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. SYMINGTON. Mr. Speaker, one of the most gallant and talented men of medicine ever to challenge the grim specter of cancer both personally and professionally was my friend and distinguished constituent, Dr. Wendell G. Scott of St. Louis, Mo. The great new cancer attack bill bears the imprint of his patient devotion to that cause, and I think it can fairly be said that while he may have lost his own battle, he has done more than his share to help us win ours. He will be greatly missed.

At this point in the RECORD I would like to place the remarks of his own friend and colleague, Dr. Ronald G. Evens, director of the Mallinckrodt Institute of Radiology:

WENDELL G. SCOTT, M.D., 1905–72

(By Ronald G. Evens, M.D.)

Wendell G. Scott, M.D., died of cancer on May 4, 1972 at the age of 66.

Born and raised in Colorado, he attended the University of Colorado as an undergraduate student. He came to Missouri in 1928 to attend Washington University Medical School; and fortunately for this Medical Center, decided to stay. After graduating with the Class of 1932, he interned at Barnes Hospital and accepted a residency in radiology at the Mallinckrodt Institute of Radiology. Throughout his professional career he was associated with the Mallinckrodt Institute and Washington University Medical School, holding the position of professor of clinical radiology.

Dr. Scott exemplified excellence to all who knew him. His competence as a radiologist and concern for his patients was evident at all times; his desire to further the specialty of radiology and the care of patients was the driving force behind his many scientific and organizational activities. His accomplishments as a scientist and radiologist include more than 70 publications and active participation in the development of radiographic kymography and rapid film changers for diagnostic radiographic use. The latter project was an important step in the development of angiographic evaluation of the heart, brain, lungs, and the organs of the abdomen.

He was called to active duty in the United States Navy in 1941, and served with typical devotion to duty to all causes that he believed important. He received several commendations for activities in radiology and general medicine, and continued to be active in the United States Naval Reserves and as a consultant to the Surgeon General's office, attaining the rank of rear admiral.

Dr. Scott was a great diplomat, understanding the art of compromise with an uncanny ability to lead individuals or societies towards accomplishment of goals. He served as president of the Barnes Hospital Medical Society and the Washington University Medical Alumni Association, president of the St. Louis Radiological Society, vice president of the Radiological Society of North America and the American Radium Society, president of the American Roentgen Ray Society, and was national president of the American Cancer Society in 1964. He was an important contributor to numerous organizations including the American Medical Association, Veterans Administration, American College of Radiology, and the James Picker Foundation. He also served as editor-in-chief of the American College of Radiology publication, *Your Radiologist*, editor of the *Planning Guide for Radiological Installations*, and editor of the journal of *Cancer*. He recently was commissioned by President Nixon to the National Cancer Advisory Board.

Dr. Scott's recognitions include the Gold Medal of the St. Louis Medical Society, the President's Medal of the American Roentgen Ray Society, the Gold Medal of the American College of Radiology, the National Award of the American Cancer Society, and the distinguished alumni awards of the University of Colorado and Washington University. He received an honorary degree of Doctor of Science from the University of Colorado and was to receive an honorary degree from Washington University in May of 1972.

Scottie had a mix of qualities, rarely found, that makes a great man. He was demanding and persevering, yet warm and loyal. He could involve himself in several important projects, yet give each his seemingly undivided attention. He could be active in university and national medical affairs, yet find time to remain a loving husband, father, and grandfather as well as a busy radiologist.

Many of Scottie's loves and accomplishments cannot be found on certificates or awards. His close family relationships are signified by his grandchildren who called him "O.K." His farm, near St. Louis, provided a place for pleasant interludes in a busy schedule.

His family, his profession, and his University will miss him greatly. Friends and colleagues have established a living memorial to his loyalty and excellence in the Wendell G. Scott Annual Lecture at the Mallinckrodt Institute of Radiology.

IS KINDERGARTEN TOO LATE?

HON. ORVAL HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. HANSEN of Idaho. Mr. Speaker, Dr. Richard L. Willey, Dean of the College of Education at Idaho State University, was one of the featured speakers at the recent Early Childhood Conference I sponsored in Idaho to focus on the needs of young children. Dr. Willey is well known in Idaho as a researcher, and I include his remarks on "Is Kindergarten Too Late" in the RECORD and commend them to the attention of my colleagues:

IS KINDERGARTEN TOO LATE?

(By Dr. Richard L. Willey)

The subject of my talk, duly assigned, was to cover what "Research Finds About Early Childhood Education." This topic, if you have been listening, has been more or less covered this morning and afternoon. My title is not original. It actually was taken more or less unconsciously at the time, but in my "research" I find it is the title of an article in Saturday Review of some three years ago. An article that I read and quietly filed in the kindergarten section of my mind.

Before I launch into my researched talk I want to pose a puzzlement to this assembled group. It is an interesting puzzle even if it adds nothing to the discussion at hand.

Certain leader and/or legislators feel that to justify early childhood education, kindergartens, etc. one should be able to point to research that points to casual relationships between kindergarten preparation and scientific designed test results. To the thinking and rational person this makes sense. Remembering, of course, that in Idaho we do not have general public kindergarten programs and the expectation is that if we have the research pointing to the need, QED Kindergartens. Let us examine this type of premise from another view point or perspective.

How much research do you know about that has been done on the specific value of a college education? Does it matter what curriculum one takes over another? Is there the real value (instead of just the stated value) of a liberal education? Has this been scientifically demonstrated? Most institutions of higher education require a general education spread that covers social science, science, humanities, art, literature and language. Does research show the value of a particular course or sequence? How about high school; is there scientific evidence that shows that high school students correctly prosper by the traditional courses that they have been taking for generations? Against what do we measure the evidence? The early appraisers of goals, objectives, and/or functions of secondary education said that there were seven objectives (these were formulated in one form or another since the turn of the 20th Century): Health, Command of Fundamental Processes, Worthy Use of Leisure; Citizenship, Ethical and Moral Behavior; Vocation. As an aside Health was the number one priority. Does our evaluation system and research of the secondary school point out that we have been extremely successful in this goal? What does research show us on this? Do we succeed in making good citizens? What about vocational education? What does research show about it? Really! Does it point out that a person is better off to start his preparation in high school; after high school? Is it best to make youngsters decide about 11 or 12 as to avocation or vocational future? Does the pursuit of a graduate degree and the course work that students take really make for success?

With rare exception the schools that I have mentioned were started without any information on the research. Noble experiments but what does the research still show? But I need not limit the discussion to other agencies that we have in our country and the efficacy of a research base. What does research have to say about the advantage of the family system that we have? What does research show on school district reorganization?

My simple and over-extended and over-simplified answer is that when research has something to say, more often than not the findings are blocked by counter-valling beliefs or old wives tales. We have our beliefs about government, about economies, about college preparation, about secondary education, about elementary education, and we have very seldom let our research stand in the way of our beliefs.

Yet, in the case of kindergartens we have asked for the scientific proof once and for all to point out that if they are not the entire answer to all our problems then there can be no justification.

The point, and I believe there is one, is that those un-believers don't really give a whit about what research shows or doesn't show with early childhood education. It is simply a ruse; a delaying tactic. That when the research is replicated and replicated and studied and reported on, there will be a request by the power to make one more study and to report just one more time.

Perhaps we all should review most briefly the history of the kindergarten movement. Friedrich Froebel (1782–1852), a German educator, philosopher, is known as the "Father of the Kindergarten." He organized the first kindergarten (Kinder-children, Garten-garden). He was strongly influenced by the thinking of such men as Rousseau, Pestalozzi, and Comenius. Froebel was convinced that education should serve to develop the whole child—physically, morally, and intellectually. Credit must also be given to such Americans as Susan Blow (1843–1916), G. Stanley Hall (1846–1924), and John Dewey (1859–1952), for their influence. Some years before Froebel's death, kindergartens were banned in Germany. Shortly after his death, however, there was a great surge in the kindergarten movement. Froebel even predicted that the kindergarten movement would find its most fertile field in the U.S. It was in 1873 that the first public kindergarten was established in St. Louis. By 1880 there were 400 kindergartens scattered through 30 states. By 1914 there were 7,554. By 1962 there were public kindergartens in 42 states and the District of Columbia. Eight states did not provide public kindergartens—Alabama, Arkansas, Idaho, Mississippi, New Mexico, North Carolina, South Carolina and West Virginia (all but Idaho could be classified Southern, at least in geographical terminology).

But you are not really too interested in the per-cents of youngsters in kindergartens; the number of private kindergartens in Idaho; the percent that are qualified as teachers, etc.

You want to know what research does show about kindergartens. To this end I reviewed many sources of kindergarten research. I reviewed the old sources, and I reviewed the new. I read the generalizations and I read the specific reports. I even made such a report on findings in the Spring of 1966. This was widely circulated in Idaho—to legislators, IEA members and other interested citizens. It was part of a report to "Designing Schools for the Future in Idaho."

But with many crusades, or ideas, there seems to be a time when their time has come—examine pollution. You knew about it and so did I but there suddenly seemed to be a bursting of the idea and we knew that changes had to take place. We knew it with the population problem. Maybe we knew it about bussing and we seem to know it with Viet Nam.

The time of the kindergarten seem to come within the last ten years for even as late as the early 1960's early childhood education was considered by most people to be a desirable luxury for those who could afford it, but it by no stretch of the imagination was considered an essential part of every child's education. But within the last 5 to 7 years early childhood education has come to occupy the focus of attention in public education. It would be fair to say that the surge most likely can be traced to the Federal Government and its many programs in early childhood (perhaps this can be traced to the Federal Government at least reading the research reports on what researchers found about early childhood education). Project Head Start was the most monumental project so conceived. First conceived only eight years ago as an eight week summer crash program for 100,000 preschool children. So phenomenal was the response from local communities that the original plan was extended to accommodate more than 500,000 during the summer of 1965. By 1966 it was a year round program with more than 1,000,000 children between the ages of 3–5 enrolled. What they found with these youngsters is not all contained in research reports. Youngsters in Head Start programs were given complete medical and dental examinations. In Tampa, Florida (to make sure the stigma doesn't stamp it as Idaho) of 1,150 examinations, 230 revealed children who needed psychiatric help; 100 had visual problems; 24 were so serious that the children might never have learned to read without treatment; 12 had tuberculosis; 10 had serious hearing defects; 4 had brain damage; half of all the children suffered nutritional deficiencies. A superintendent from Idaho told me about one of his experiences with Head Start. He went by the lunch room to observe one day at the recommendation of his supervisor. He told me how he observed some of the children eating. One little fellow put his left arm encircling his plate and about two or three inches off the table. With the other arm and his hand cupped like a shovel, he proceeded to scoop the food from the table to mouth. Using, of course, his left arm to fend off others who might take his food. And the Superintendent exclaimed, "That wasn't an Indian child, it wasn't a black child, that was a white child."

One of the great tragedies in our country is the continual waste of human life. I'm not talking about auto accidents and murders but primarily the destruction of children. When children are born they are clean, ready and expectant to begin a viable and productive life. When they begin to malfunction, along about the time they are eight or later, we hire special teachers, policemen, youth workers, and build special classrooms, penal and mental institutions, and special hospital beds to get these children under some type of control, artificial as it may be. We say we cannot afford at the beginning to feed and nourish their bodies, and their spirit, but the children that survive in the environs I describe, as one person put it, "In my neighborhood an adult is a dead child." In the end the justification for the drop-out, the misfit, the welfare family, is that this is the way things are done in the free enterprise system, but in view of the fact that all the money is wasted, as well as the children, and surely young children are as valuable as our other natural resources, we wasted money and wasting money is not part of our capitalistic system.

Finally, what has recent research shown about children under six? About fifteen years ago, a growing number of educators began to conduct experiments with young children to determine the factors that influence intelligence and personality. They investigated environmental factors (environment was interpreted to be physical, psychological, and social climate as well). The results of these studies, they say, have been conclusive: The environment of the early years has lasting effects upon the individual's intelligence, personality, and physical and mental health.

One investigator of the relationship between early environment and intelligence is Bloom, of the University of Chicago. As a result of experiments conducted over several years at the Center for the Advanced Study of the Behavioral Sciences, Dr. Bloom had concluded: "Whatever may have been the genetic potential for learning, there is little doubt that the environment will determine what is learned and even the extent to which learning does take place. We would expect the variations in the environments to have relatively little effect on the IQ after age eight, but we would expect such variations to have marked effect on the IQ before that age, with the greatest effect likely to take place between the ages of about one to five."

In the preface to the publication I sent out in 1966, I had this quote from Bloom, "A child has gone 50 percent of the way in organizing the thinking patterns that we call intelligence by the time he has reached the age of four, and the next 30 percent by the time he is eight. The patterns of aggressiveness in a boy are normally 50 percent established by the time he is three.

Half a child's capacity for learning in school is established by the age of nine."

Studies by Lee also point out the importance of the environment in the early years and the diminishing effects of the environment as children grow older. Hunt, in his research regarding intelligence and experiences, suggests that the early years are crucial in the development of the ability to think and generalize; Jersild and Wann emphasize the importance of early experiences in development of children; Piaget's research over the past thirty years indicates that the thought processes comprising intelligence are continually changing as a consequence of a person's encounters with his environment. Kirk has demonstrated that preschool experiences which promote understanding and wide use of language result in greater success in the later years in school.

In a comprehensive review of the research evidence of over twenty years concerning the relationship of the early environment to personality development, Saul and Wenar state, "The emotional pattern is basically shaped during the first six years of childhood." Whether the child grows up to be dependent or self-sufficient, passive or aggressive, tense or composed, inhibited or communicative is, in large measure, determined by his experiences during early childhood.

The relationship between early childhood and environment and physical development also has been substantiated by numerous medical studies. Vision, hearing, speech, muscular strength and control—all develop rapidly before the age of six.

In view of these reports, it is apparent that an educational program for children under six no longer can be viewed as a luxury for the privileged or as compensation for the underprivileged. It must and should be recognized as an essential part of the education of *every* child.

But what does a good kindergarten do for a child? Headley states that it has been convincingly shown that kindergarten helps in the following manner:

To help the child to become a more friendly, likeable, helpful person; to grow in power to cope with individual and group problems; to respect the rights and ideas of others; to respond to intellectual challenges; to achieve good muscular and eye-hand coordination; to understand concepts essential to his continuing success pursuits of learning; to be responsive to beauty in all its many manifestations; to realize his unique, creative potential.

Things up to this point have been general in nature. The following are merely illustrative and are not meant to be definitive:

1. Almy, Milles C., "Children's Experiences Prior to First Grade and Success in Beginning Reading," *Contributions to Education*, No. 955, New York; Teachers College, Bureau of Publications, Columbia University, 1949.

"A significant positive relationship exists between children's beginning success in reading and their earlier response to all sorts of reading stimuli. Almy makes no case for any formal reading program, but stresses the importance of exposure to the awareness of the function of printed words in everyday life."

2. Dickerson, Ann E., *The Value of Preschool Education From a Review of Experimental Literature*, an unpublished research survey conducted at the Institute of Child Development, University of Minnesota, 1958.

"After summarizing 157 separate pieces of research bearing on early childhood education, Dickerson concludes that early childhood education has a positive influence on later academic achievements; that it provides a wide variety of opportunities for building skills necessary to intelligent behavior, helps to safeguard health, and develops good social attitudes."

3. East, J. K., "Kindergarten Is a Good Investment," *School Executive*, May 1953, 52–53.

"In comparing the achievement of kindergarten and non-kindergarten children in the first grade on the Metropolitan Achievement Test, East found that the average achievement for the kindergarten group was a grade equivalent of 2.1; for the non-kindergarten group, 1.65. He concluded that it is better and cheaper to give children the right start, i.e., kindergarten, than to have them cope with failure in the earlier years of their formal education."

4. Goetch, Edward W., "The Kindergarten as a Factor in Elementary School Achievement, *"University of Iowa Studies in Child Welfare*, III, 4(1962)

"Goetch found the grade means of reading scores higher for those children who had attended kindergarten than for those who had not."

5. Lee, J., et al., "Measuring Reading Readiness, *"Elementary School Journal*, (May 1934), 656–66.

"Lee found that the scores made on the Lee-Clark Readiness Tests by children with kindergarten experience better predicted their ability to learn to read than did the scores made by children who had not had kindergarten experience. He concludes that a background of common experience is an asset in a formal reading situation."

6. Meyers, V. C., "It is Worthwhile to Send Your Child to Kindergarten," *Educational Method* (April 1936), 388–89.

"In comparing the achievement of kindergarten and non-kindergarten children in first grade, Meyers concludes that the kindergarten children did "decidely better" than the non-kindergarten children, both in their ability to adjust to school and in content subjects."

7. Morrison J. Cayce, "The Influence of Kindergarten on the Age-Grade Progress of Pupils in New York's Elementary Schools, *"Portfolio on Kindergarten Extension*, Washington, D.C.: Association for Childhood Education, 1941, 1945.

"Morrison concludes that the provision of kindergarten instruction reduced first grade failure by 14 per cent and that normal or accelerated promotion through the grades was made by 80 per cent of the group with kindergarten experience, by only 59 per cent of the group without kindergarten experience."

8. Teegarden, Lorene, "The Kindergarten and Reading Reversals, *"Childhood Education* (November 1932), 82–83.

"Teegarden points out differences in the reading achievement in children from different socio-economic backgrounds. At the end of first grade, 70 per cent of the children in the middle socio-economic group who had had kindergarten experience, and 56 per cent of those who had not, were reading satisfactorily. In the lower socio-economic group, 40 per cent of the children who had had kindergarten experience, and 34 per cent of those who had not, were reading satisfactorily. In the lower socio-economic group it was a fact that children with kindergarten experience showed less tendency to confuse and reverse letters and figures than did those children who had not had kindergarten experience."

In May of 1970, Mary Wallace Smith of Boise completed her M.S. Ed. thesis on *A Comparative Study of the Effectiveness of a Volunteer-Run Kindergarten Program for Low-Income Children in Boise, Idaho*. In comparing two matched groups of low income children, one group with no kindergarten, the other group in attendance at the YWCA volunteer kindergartens, she found the following results. At the end of the school year, 71% of the non-kindergarten group showed below average readiness for school while only 33% of the kindergarten group fell into this category, even though the test scores were equal at the beginning of the year. Comparison of tests at the beginning and end of the school year showed the kindergarten group had made a 67% greater gain in school readiness. The results of these readiness tests are significant as they have been found to have a high correlation with the child's academic success during the first grade.

Far from running into problems when they enter school, as so many parents fear, children who learn to read early maintain their lead in reading achievement over the years, according to a longitudinal study by Professor Dolores Durkin of the University of Illinois College of Education. She carefully compared thirty early readers (children who learned to read before the age of six) with thirty children who learned later. The two groups had the same average IQ and the same first grade teacher. By the end of the third grade, the early readers were still an average of one year ahead. Both this study, which was made in New York City over a three year period, and an earlier study made by Dr. Durkin in California over a six year period support the premise that an early start in reading has most value for a slow learner.

Conclusions

Some conclusions may be drawn from a survey of current educational research concerning the value of kindergarten attendance as measured by school success in later years. The first would be that most educators and child development experts agree that kindergarten experience does positively influence the later school success of that child. The second conclusion would be that while disadvantaged youngsters make dramatic and necessary gains in achievement and IQ after attending kindergarten, even middle-class youngsters make significant and lasting gains. Study after study emphasized the fact that the disadvantaged child enters school as much as a year or more behind his middle-class counterparts in intellectual development, and he seldom catches up with them. Without a doubt, the disadvantaged child or the slow learner stands to gain more from a kindergarten than a middle-class child with an average IQ or above from a rich environment.

A third conclusion would be that a kindergarten program would essentially reduce costly and often ineffective remedial programs later in the school years. The kindergartens would be able to diagnose and work with physical, social and mental problems at their early stages. The fourth conclusion, and perhaps the most significant one is that a reappraisal of the kindergarten program necessarily means a reappraisal of the entire educational program. An enriched kindergarten program geared to the individual child would require that similar type program be then offered in the first grade and throughout the school years. If any of the advantages of a kindergarten program are to be carried beyond kindergarten, this is both desirable and necessary. The Carnegie Corporation said in its 1969 annual report on Early Education: "It seems clear that the schools must be changed in order to accommodate the abilities of the children who enter them—which sounds like a truism, except that much current thinking seems to hold that the purpose of early childhood education is simply to prepare children to do well in the schools as they are now organized and managed."

I have in my hand a volume simply entitled, "Current Research in Early Childhood Education: A Compilation and Analysis for Program Planners" by Annie L. Butler.

Its contents dwarf any attempt that I have made to give information relative to Research Finding on Early Childhood Education. It serves out the conflict between the environmentalists and the geneticists; the hurry, hurry and the go-slow philosophy. The reading versus the socialization. But the overwhelming conclusion that can hardly be argued is that things, positive things, can occur in Early Childhood programs of this type.

HOW MUCH POWER IS ENOUGH?

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. ROBISON of New York. Mr. Speaker, now that the so-called energy crisis is a topic of national discussion, we hear a lot about projected future energy requirements. National planners have evidently done too thorough a job in predicting the country's future energy needs, since the immense figures included in their projections seem to be intimidating and even debilitating those public institutions charged with finding the energy resources to meet these future needs. Perhaps talk of billions of tons of coal and barrels of oil, and hundreds of trillions of cubic feet of gas, has simply overwhelmed our traditional "can do" attitude. How else do we explain the Congressional unwillingness to stir itself on this question and to do the hard work necessary for legislative action.

If mega-volumes of coal and oil are in fact "psyching us out," we might best take another tack in our approach to the energy question, one that does not bury us in the weight of gigantic future needs but, instead, offers more immediate and more obvious solutions. Close consideration of energy conservation might offer one such possibility. It is not a new idea—and I am proud to say that Joseph Swidler, chairman of the Public Service Commission in my own State of New York, has been a long-time advocate of it—yet it is a concept that has been given too little attention.

Finding ways to conserve energy is a most pragmatic beginning for building a new energy policy, and it is an area of endeavor which may offer some surprising perspectives on our present careless use of energy. I am told, for instance, that some air conditioners are more than one-third more efficient than others in the use of electricity, and that the ordinary light bulb converts no more that 10 percent of the electricity it uses to light, the rest being given off as heat.

It is, then, encouraging to find the recent Christian Science Monitor editorial titled, "How Much Power Is Enough?", and, in reading through it, to see that Chairman Joseph Swidler will soon conduct a noteworthy investigation of electricity use in the New York City area. I commend this brief editorial to my colleagues, and suggest that during future discussions of energy needs we also ask: How much is enough?

HOW MUCH POWER IS ENOUGH?

The chief response to the 1965 electric power failure in the Northeast United States was to improve the power grid and make it more reliable in times of heavy demand. This was a sensible thing to do. It was also sensible to work out emergency plans for cutting back power to select large users, and this was done.

But one thing not done was to question whether so much electrical power need be used at all, or indeed whether limits should be put on the use of air conditioners and other electricity devouring inventions on a broad enough scale to keep electrical use down.

This week, with New York suffering a prolonged heat wave, that state has announced that an electricity-use investigation will be launched by its Public Service Commission this September.

Such an investigation makes sense.

Hitherto, it has been accepted as if it were some natural law that electrical power consumption would double each decade—as it has since the war. One factor affecting the ever greater use of electricity, of course, is simply the economy of scale—the more electricity is used the cheaper it becomes, and in turn the more it is used. Another factor is that electrical heating units are cheaper to install than other forms of heating, adding to the growing emphasis on its use.

But the main factor has been that unbridled power use has been simply accepted as the way things are done.

There is no reason Americans cannot moderate their demands for electrical or other forms of power. They are being compelled to moderate the power and design of their automobiles, an industry which only a decade ago were given heavily preferential treatment—until it was apparent that the auto was creating as many problems in pollution and urban congestion as it was solving in giving mobility to people. The use of land is likewise being moderated in ways once land-rich Americans never would have imagined.

So perhaps Americans should consider new building codes that keep structures more temperature constant, should take an honest look at how many electrical appliances may be needed—in other words, economize on electrical use as much as strive to produce ever-larger supplies.

We hope the New York investigation into ways of moderating electricity use is a step in this direction, and not largely a bridge over public outcries during the heat wave power shortage at hand.

IT IS TIME TO BALANCE BOOKS

HON. DON FUQUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. FUQUA. Mr. Speaker, one of the finest new Members of the U.S. House of Representatives is the distinguished Congressman from my neighboring district to the north, the gentleman from Georgia, the Honorable DAWSON MATHIS.

Congressman MATHIS posed a question which needs answering. The Florida Times-Union of Jacksonville, Fla., on Monday, August 14, carried an editorial on this subject which I believe deserves repeating here.

I also feel that the time has long past when the American people were due an answer.

The editorial is as follows:

IT IS TIME TO BALANCE THE BOOKS

Brash newcomers often have a way of asking questions which stump the experts.

But Georgia's Rep. Dawson Mathis of Albany, now completing his first term in Congress, deserves an answer to a simple question he has asked, without success.

So far as he has been able to determine, Mathis says, nobody in Washington seems to know precisely how much money foreign governments owe the United States, or how much of such obligations are in default.

In an effort to force an answer, Mathis and several of his House colleagues have joining in offering a resolution calling on the Treasury department to provide the information within 90 days, along with a statement of what measures it proposes to take to collect debts already in default, some extending back as far as World War I.

"We as a people," Mathis said, "have been most fortunate through our history, to have been able to help other nations less fortunate than we, but the time has come for some of these nations to recognize that they have an obligation to pay back the money owed to the United States. These funds were loans, not gifts."

Among the chief beneficiaries of U.S. assistance in the past are countries now taking their place among the world's leaders in economic and industrial development, and which are not only challenging the United States in international trade, but are moving in to compete with U.S. production in domestic markets.

The entire world economic picture has undergone radical change since many of these foreign loans were made, when the U.S. dollar and U.S. industrial might dominated the world scene. Today, with its far-flung international commitments, the United States is sustaining heavy unfavorable balances of payments, and the dollar is periodically under attack by international traders.

However, much the generosity of the United States in earlier years in extending financial help to others was justified, both morally and in America's own enlightened self-interest, it is ridiculous for foreign beneficiaries of U.S. assistance in the past, who are now enjoying robust economic health, to be allowed to forget or ignore their valid debts.

It is, as Rep. Mathis said, "inconceivable" that no one in Washington "knows how much money is owed to the United States." Beyond question, the information is there. What is needed is for those in possession of it to be required to put it on the record.

THE THREE "R'S" PLUS "H"

HON. FRANK J. BRASCO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. BRASCO. Mr. Speaker, heroin pours into America from France and through the good offices of our Southeast Asian allies. Our State Department looks the other way, hoping this horror will just go away. Never has self-delusion been more futile or dangerous. Hard drugs are permeating many schools in our largest communities, especially New York City.

If Brooklyn schools have heroin today, then suburbs of Chicago, Los Angeles, New Orleans and St. Louis will receive its blessings by Christmas. By this time next year, Pocatello, Louisville, Tallahassee, Sheboygan, and Waco will be awash in this poison.

The House Select Committee on Crime recently conducted hearings on drug abuse in schools of New York City. Let me share some observations and evidence emerging from them. They are ominous, chilling and fraught with peril for all our children.

Estimates of drug use in schools varied. However, all witnesses agreed that a drug epidemic is engulfing our public school system.

All concurred that this horror cuts across every racial and economic line, striking middle-class and ghetto schools alike. Testimony was graphic and corroborated by stunning films depicting sale and use of heroin in schools, grammar and junior highs included.

Even worse, this traffic is not hidden in closets or dark recesses of school buildings. Rather, both traffic and use are open, in broad daylight and close proximity to school personnel at all levels. Here is what we can expect. Children arriving at school with lunch money in their shoes to evade shakedowns and extortion by student addicts or gangs. Students chronically absent because they are too badly addicted to function in any school environment. Unaddicted students being drawn into heroin networks by student addicts attending the same school and sitting beside them.

Overwhelming evidence was presented showing that the New York Board of Education knows all this and has not acted on behalf of New York's children.

Highly respected educators, aware of the spread of heroin in the schools, described attempts to have the board act with courage and vigor. Such pressures were matched by concerned, apprehensive parents all over the city. Yet as late as 1969, the New York Board of Education did not devote a single meeting to discussing this menace, literally growing before its eyes.

The board was not the sole entity abdicating responsibilities. Subordinates throughout the school system took a cue from those at the top. Everywhere, principals denied police reports of heroin use in their schools. Principals even hindered undercover police work. Teachers were helpless. If school and city authorities let it pass, how could they stop it?

Today, the Board of Education of New York continues this criminally negligent attitude toward heroin. The chairman of the State Commission of Investigation testified that despite a year-old report vigorously criticizing the board's head-in-the-sand attitude, nothing had changed.

The board and its apologists place this peril in the same category with failure to do homework or truancy. The people of New York should place them on notice that they will, in the very near future, be held personally responsible.

Worst of all, the board has yet to publicly admit there is a heroin problem. How can the public be mobilized when there is no alert on dimensions of the problem from those charged with sounding alarms? What do these moral cowards require—addicts shooting up outside their meeting chamber?

Who is a greater criminal—the mugger or a responsible public official looking the other way when he must do his duty? Citizens are just as dead from bureaucratic inaction as from a robber's pistol. A no-holds-barred investigation must be mounted into the heroin situation in our schools and inaction by the board.

One point should be made constantly until the public realizes what is going on. The whole heroin horror is perpetrated with complete knowledge of officialdom. Heroin permeates American society. Those looking the other way are fools or worse. We have little time to lose. Half a million addicts, at a minimum, are on our streets. To those who inevitably rise to pooh-pooh hysterical outcries, I recommend a guided tour of some neighborhoods and schools, and will gladly take them on such a tour.

Our Government knows where heroin comes from, how it travels, who deals in it and how it enters the U.S. France is mainly to blame. France is where it is refined. They are up to their necks in this nefarious traffic. Agencies of their government are involved. The "French Connection" is far more real than the movie. Turkish opium is processed in Marseilles and shipped here. John Cusack was packed up and shipped home because he made an honest effort to halt traffic the French Government wants continued. Seizing a few refining labs only points up how much they know and can do. We are being thrown a few bones to silence us. In a few weeks the heroin supply could be seriously curtailed, if those with power and knowledge acted.

In every American city, local authorities know where it comes from, who wholesales and distributes and pushes it. Society and history will pronounce a merciless, damning verdict on those who now sit quiescently and allow this.

New York's Board of Education is a good place to start. Yet Americans should know that not an ounce of heroin can move from Turkey to France to New York to Toledo and into our children's veins without the knowledge of foreign, national and local authorities.

Dick Gregory has a devastating line:

> If a 10-year old child can find the heroin man, how come the people in charge can't?

Now let's hear some anguished denials from those dedicated officials. Anybody for geometry?

BILL TO REQUIRE COURT IMPACT STATEMENT

HON. LOUIS FREY, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. FREY. Mr. Speaker, I am introducing legislation today that would require the Congress to consider the needs of the courts at the same time that it considers the needs of the country for new legislation. This concurrent resolution would, in essence, require a court impact statement in each report of legislation from a committee of either House of Congress to that House.

Each report accompanying a bill or joint resolution of a public character would have to contain an estimate, made by such committee, of the number of cases in Federal courts which might result from the adoption of such bill or joint resolution, and of the number of additional court personnel required to handle the increased caseload.

The quality of justice in our Federal courts has decreased as a result of the explosive increase in the caseload without a commensurate increase in Federal judges and court personnel. Cases filed in the U.S. district courts have increased from 92,000 10 years ago to 145,000 this year. The U.S. Court of Appeals will have 14,500 cases this year as opposed to 4,200 10 years ago; the Supreme Court had 2,400 cases docketed 10 years ago and this year had 4,500.

Chief Justice Burger in his "state of the judiciary" message on August 15 stated that the two major reasons for the present case overload on the Federal court system were population increase and litigation stemming from new legislation. He went on to conclude that awareness of the impact of new legislation would help the Congress and the courts "plan rationally for the future with regard to the courts' burden."

The legislation I introduce today would accomplish that result. I invite the cosponsorship of my colleagues in the House.

NEWS BULLETIN OF THE AMERICAN REVOLUTION BICENTENNIAL COMMISSION

HON. G. WILLIAM WHITEHURST

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. WHITEHURST. Mr. Speaker, I am inserting in the Record the August 14 edition of the news bulletin of the American Revolution Bicentennial Commission. I take this action to help my colleagues be informed of events and developments taking place across the Nation in preparation for the country's 200th anniversary in 1976. The bulletin is compiled and written by the Communications Committee staff of the ARBC.

The bulletin follows:

[August 14, 1972]

Bicentennial Bulletin

Acting ARBC Director Hugh Hall will appear before the Platform Committee of the Republican National Committee on Tuesday, August 15, at the Eden Roc Hotel in Miami Beach to present the ARBC's program and urge that it be incorporated in the Party's '72 Platform.

Copies of the complete Hearings on the Bicentennial before the Senate Judiciary Subcommittee on Federal Charters, Holidays and Celebrations will be available soon and can be procured from the Government Printing Office or through the Senate Judiciary Committee.

Northbrook, Illinois' Bicentennial Olympic Park Committee sponsored a "Super Skytacular" utilizing the famous Goodyear Blimp, America, to help raise funds for the Park, which the Committee hopes can be built by 1976. Part of the August 11–13 program included raffled rides aboard the blimp. Special guests on board included Northbrook's "Golden Girls," Dianne Holum and Anne Henning, both 1972 Winter Olympic's Speedskating Gold Medalists.

Bob O'Brien, a member of the ARBC's Communications Committee represented the Commission as keynote speaker at the Oklahoma Bicentennial Workshop on August 4th. Representatives of ARBC Communications will also be participating in the National Newspaper Association Managers convention in Disneyworld, August 14–17. Communications member Ted Serrill has informed the ARBC that several thousand newspapers will be represented that are interested in developing support programs for the Bicentennial.

Robert Tarlecki, who originated the famed Dogwood Trail, one of Chester County's (Pa.) Bicentennial projects, reports that he has received the support of the Southeastern Pennsylvania Nurserymen Association. The group, which has 170 members, promises to donate one tree from each nursery to the Dogwood Trail.

Representatives from the Wind River Reservation in Wyoming presented a Bicentennial proposal for an Indian arts and crafts center and museum at a recent meeting of the Wyoming Bicentennial Commission. Mrs. Peggy Curry of Casper, Commission Chairman, said the group is seeking more projects from various groups and individuals in Wyoming.

Governor Dale Bumpers of Arkansas stated in a recent news release that the $45,000 grant from ARBC to the Arkansas Bicentennial Celebration Committee would be used "to develop local and statewide observance projects, to provide liaison among participating groups and individuals and to coordinate Arkansas's Bicentennial program with the national effort."

Frederick Seaton, Commission Member, who represented the ARBC at the Fourth of July ceremonies at Mt. Rushmore, said that the spirit with which Rapid City area people are rebuilding from the devastating floods on June 9 "is not only typical of the spirit of '76, but also of the spirit of cooperation and refusal to accept defeat that has made America grow, and grow great. In the face of disaster and tragedy, South Dakotans are rebuilding, renewing and rededicating themselves."

The Florida Commission has recently released an exceptionally fine film on Bicentennial plans for the state. Designed to create additional interest in the Commission's activities, the film was produced by Tel-Air Interests, Inc., of Miami and highlights statewide programs in Heritage '76, Festival USA and Horizons '76.

"From These Roots" A Mosaic of Stories, Legends and Facts from and about our 50 states, makes worthwhile reading. The author, Carolyn Gitman, is a one-woman campaigner for Americans to see America. The book is entirely edited, researched and compiled by Mrs. Gitman, the wife of Dr. Joseph Gitman, Professor at King's Point Academy. The book is published by Vantage Press Inc., and Mrs. Gitman is listed as distributor, Post Office Box 804, Great Neck, New York 11022. Cost: $7.95 plus 65¢ for postage and handling with a 10% discount to libraries, historical societies and State Bicentennial Commissions.

Author of the forthcoming Bicentennial *Songs of '76*, Oscar Brand, noted recently, "My curiosity drove me to books about the Revolution, and to further collections of songs. I perceived strange stories in these antique accounts and marvelously interesting sidelights that seemed more vital than the standard accounts of historical chronology. Having noted them down, I shared them with my audiences on television, radio or in concert. That's how I came to write this book. That's why it's a 'singer's history.' *Songs of '76* is a volume of sidelights on history from the vantage point of the folk balladeer; with 65 songs, with words and guitar accompaniment, it is all fresh and mostly unfamiliar. It is an eyewitness report of events that have paraded before the balladeer's imagination—events that you may never have read about in your history book but which were important to the balladeers of '76 and are still important to the music lover today."

LEGISLATIVE REPORT TO LAW ENFORCEMENT OFFICIALS, POLICEMEN, FIREMEN, AND AMBULANCE TEAMS

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday August 17, 1972

Mr. HELSTOSKI. Mr. Speaker, under leave to extend my remarks, I include at this point in the RECORD a legislative report which I have prepared for law enforcement and other public safety personnel:

TO ALL LAW ENFORCEMENT OFFICIALS, POLICEMEN, FIREMEN, AND AMBULANCE TEAMS

Having always been among those who are seriously concerned with the welfare and effectiveness of our law enforcement personnel, firefighters and ambulance teams, I am listing for your information and guidance, summaries of legislative measures that have been proposed by me during the 92nd Congress. It is my hope that you will carefully review this material so that I may have the benefit of your views on these proposals, as well as any other suggestions and ideas you may have that you think should be considered.

H.R. 8933. Law Enforcement Officers' Bill of Rights: To amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide a system for the redress of law enforcement officers' grievances and to establish a Law Enforcement Officers' Bill of Rights in each of the several States. This bill would guarantee the civil rights of our police officers and give national recognition to their fight to maintain their highly honorable and trustworthy stature during these most critical times. A firm and strict approach is necessary to stop the attack on our public safety officers and what they stand for in order to hold secure their dignity and honor and to provide them with the rights enjoyed by other citizens throughout the country.

H.R. 10500. Amends the Internal Revenue Code to provide that the first $5,000 of compensation paid to law enforcement officers shall not be subject to the income tax.

H.R. 10287. Amends the Internal Revenue Code to permit an exemption of the first $5,000 of retirement income received by a taxpayer under a public retirement system or any other system if the taxpayer is at least 65 years of age.

H.R. 9091. Amends the Internal Revenue Code to provide that pensions paid to retired policemen or firemen or their dependents, or to the widows or other survivors of deceased policemen or firemen, shall not be subject to the income tax.

INSURANCE BENEFITS

H.R. 16397. Law Enforcement Officers' Group Life Insurance Act. Authorizes the Attorney General to provide group life insurance and group accidental death and dismemberment insurance for state and local law enforcement officers. This program would closely parallel the Servicemen's and the Federal Employees' Group Life Insurance programs.

H.R. 12629. Public Safety and Criminal Justice and Correctional Personnel Benefits Act. Authorizes a type of insurance program providing death benefits to survivors of certain public safety and law enforcement personnel and public officials concerned with the administration of criminal justice. Over 500 State and Local policemen have been killed in the line of duty in the past five years. Except for rather limited workmen's compensation laws, 15 states provide no specific benefits to the survivors of officers killed in the line of duty, Federal survivor benefits are available to the family of a local law enforcement officer killed in the line of duty if he is dealing with a federal law. This legislation would provide for the payment of a gratuity of $50,000 in survivor benefits when a law enforcement officer is killed in the line of duty leaving a spouse or one or more eligible dependents as defined by the bill.

H.R. 12740. Police & Fire Officers' Benefits Act. Provides benefits to survivors of police officers, firemen and corrections officers killed in the line of duty and to police officers, firemen, and corrections officers who are disabled in the line of duty.

H.R. 6145. Extends maximum benefits of $50,000 to law enforcement officers and firemen (and their survivors) not employed by the United States who are killed or totally disabled in the line of duty. Such benefits would include: medical, surgical, and hospital services and supplies; compensation for disability; and compensation for death based on the number of survivors. However, in the event of such death, the total monthly compensation shall not exceed 75% of the decedent's monthly pay. Extends such benefits to professional state and local policemen and firemen, volunteer firemen, and to members of a legally organized State or local law enforcement agency who are serving without compensation.

H.R. 4232. Provides compensation for totally disabled local firemen or survivors of local firemen killed or disabled while performing their duties in an area of civil disorder.

H.R. 16313. Federal Injury & Death Benefits for Volunteer Firemen, Ambulance Teams and Rescue Squads. Such benefits would be extended to members (and their survivors) of a legally organized volunteer fire department, ambulance team or rescue squad who are killed or totally disabled in the line of duty.

You will be pleased to know that the House Judiciary Committee has held hearings on most of these death and disability measures. Hopefully, progress will be made during further committee consideration and the bills will be ready for action in the House this fall.

LAW ENFORCEMENT

H.R. 13052. Nationwide Emergency Telephone No. "911". Amends the Safe Streets Act to provide funds to assist state and local governments for the purpose of developing and improving communications procedures and facilities with respect to prompt and efficient dispatch of police, fire, rescue and other emergency services.

H. Con. Res. 630. Prevention of Hijacking. Makes it the sense of Congress that the President should immediately cut off all aid to countries failing to take sufficient antihijacking measures or harboring hijackers.

H.R. 15498. National Crime Victims Compensation Act—Public Safety Officers' Group Life Insurance Act. Provides for the compensation of innocent victims of violent crime in need; makes grants to states for the payment of such compensation; authorizes group insurance program similar to that proposed by H.R. 16397.

H.R. 3821. Permits the disposal of surplus Federal property to State and local governments and volunteer firefighting and rescue organizations at 50 percent of the estimated fair market value.

H.R. 3127. Seeks to improve law enforcement in urban areas by making available federal funds to improve the effectiveness of police forces.

H.R. 12628. Emergency Crime Control Act. Extends special federal funds to high crime urban areas.

As you know, last year the Congress enacted the Organized Crime Control Act and passed the Omnibus Crime Control and Safe Streets Act Amendments providing further federal aid to local law enforcement agencies. And, considerable legislation on overall police and law enforcement matters is pending in Congress. In addition, the Revenue Sharing proposal passed by the House, with my active support, provides $30 billion over a five year period to states and localities for high-priority areas such as law enforcement and fire protection. At present, the Senate is considering this measure.

PRISON REFORM

Perhaps the greatest aid which public officials can extend to law enforcement officers is to end the role of our prisons as breeders of even more hardened and skilled criminals. In the area of prison reform, I have filed the following measures:

H.R. 11062. Assists in combatting crime by reducing the incidence of recidivism, providing improved federal, state and local correctional facilities, strengthening the administration of federal correctional agencies, and tightening control over probationers, parolees and persons found not guilty by reason of insanity.

H.R. 11063. Provides minimum standards in connection with certain federal financial assistance with respect to correctional institutions and facilities.

H.R. 11178. Provides financial assistance for state and local community based correctional facilities; for the creation of innovative programs of vocational training, job placement and on-the-job counseling; for improved educational programs and probation services.

CONCLUSION

Measures such as these which have been proposed by me, I believe, would enable public safety officers to carry out their proper duties in seeking to achieve optimum public safety and protection while assuring equitable treatment and benefits for the services rendered in the line of duty.

In closing, I welcome your comments on any of the measures I have discussed and your views on possible new legislative approaches I might take. And, if you wish to obtain a copy of any of the bills listed here, please feel free to contact me.

LEGISLATION TO CORRECT THE ADVERSE EFFECTS OF THE 20-PERCENT INCREASE IN SOCIAL SECURITY BENEFITS

HON. PETER A. PEYSER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. PEYSER. Mr. Speaker, today, I am introducing legislation to correct a number of unforeseen adverse effects of the recently enacted 20 percent increase in social security benefits. This legislation is necessitated by the fact that the increase in retirement and disabilities benefits, under the present Social Security Act, is going to make a great number of people ineligible for other forms of Federal-State public assistance.

Title I of my bill amends five sections of the Social Security Act that determine eligibility of individuals for such programs as: State old-age medical assistance; State plans for aid and services to needy families with children; State plans for aid to the blind; State plans for aid to the permanently and totally disabled.

Under the present law, eligibility for assistance, such as Medicaid and food stamps, is determined by need, and is limited to individuals with an income of less than $2,100. In New York City alone, there will be approximately 38,000 people, now receiving between $1,750 and $2,100 annually who, on October 3, will suddenly be ineligible for Medicaid and other services because of the 20-percent increase in social security. Thus the social security increase will in effect be negated almost entirely by the loss of other benefits.

Title II will amend two sections of title 38 of the United States Code, veterans' benefits, to insure that increases in the retirement and disabilities benefits will not be included in determining the eligibility of an individual for pensions or compensation under this title. If the amendments contained in this title of my bill are not enacted by January 1, 1973, veterans, dependents of veterans, widows on VA pensions, and dependent parents on dependency and indemnity compensation will face a loss of, or a reduction in, their pensions.

It is my hope that this legislation will insure that the 20-percent increase and future increases will not result in reductions in other forms of assistance.

WE MUST TIGHTEN THE PURSE STRINGS OF GOVERNMENT

HON. ROBERT PRICE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. PRICE of Texas. Mr. Speaker, the President of the United States has delivered a simple message to the Congress of the United States. We must move quickly and decisively to control government spending or be faced with "higher taxes, higher prices and a cut in purchasing power for everyone in the Nation."

Over the years lipservice has been given to "balanced budgets" and "fiscal responsibility," but the fact is, the liberal majority of the U.S. House of Representatives, as managers of the Public Treasury, has done an appallingly bad job. So bad has been the majority's performance that were the Congress to exchange places with the board of directors of General Motors or any other corporation, they would bankrupt the business in short order by their profligate spending policies. Fortunately or unfortunately, the U.S. Treasury has a greater capacity to absorb debt than any private enterprise. And the liberals in Congress have not lost any time in piling up that debt upon debt by adding millions upon millions of dollars to almost every program that comes before the Members for a vote. From fiscal year 1963 to fiscal year 1971, outlays—expenditures plus net lending—have increased from approximately $111 billion to about $211 billion. During the same period, receipts increased from $106 billion to $188 billion. Only once during that whole period, in fiscal year 1969, did receipts exceed outlays—$188 billion as opposed to $185 billion—for a budget surplus of about $3 billion. And even then the budget was only in balance when the collections of the trust funds were incorporated into the total for government revenues. In every other year since 1963, outlays were greater than receipts, resulting in budget deficits which ranged from somewhat less than $2 billion in fiscal year 1965 to an alarming high of $23 billion in fiscal year 1971. The almost continual annual deficits of course have led to substantial increases in the gross Federal debt. The debt increased from $311 billion in fiscal year 1963 to $408 billion in fiscal year 1971, the highest in American history.

Estimates for fiscal years 1972 and 1973 are very disturbing. The most current data available for fiscal year 1972 indicate an outlay level of $233 billion versus anticipated receipts of $207 billion, for an expected budget deficit of $26 billion. Initial forecasts estimated an even greater deficit of almost $39 billion. The expected reduction in the deficit is fortuitous rather than planned. A deliberate policy of expanding Federal outlays was adopted; only the inability to spend money fast enough—the incapacity to translate plans into on-going programs—prevented outlays from reaching the intended level. With lower outlays, and higher receipts than originally estimated, the fiscal year 1971 budget deficit is now projected at $26 billion—less than expected but still the highest since the peak deficit years of World War II. Furthermore, the deficit for fiscal year 1973 is expected to be even higher: $27 billion, with outlays programed at $250 billion and receipts anticipated to be $223 billion. Several nongovernment economists, however, predict that the eventual fiscal year 1973 deficit will be significantly higher than the official $27 billion. Because of the continuing deficits, the growth in the public debt will persist; the debt will be about $436 billion for fiscal year 1972 and is expected to reach $477 billion at the end of fiscal year 1973. Interest on this debt is presently costing the taxpayers billions of dollars per year.

Some economic theorists have advanced the proposition that fiscal policy—the management of outlays and receipts to create desired budget surpluses or deficits—is a useful tool to counter the ups and downs of the business cycle. Implementation of such a countercyclical policy would in theory result in the creation of surpluses during periods with high levels of business activity and low rates of unemployment, and in the creation of deficits during times of depressed business activity and high unemployment. Budget surpluses tend to inhibit the economy whereas deficits serve to stimulate economic activity. Pursuit of this policy would, in addition, operate to increase the public debt during depressed periods but to decrease the debt during prosperous times. The history of the past few years indicates that there has been no consistent attempt to follow such a countercyclical policy and there is good reason to question the basic premises of the theory. Deficits have been produced both in depressed and prosperous years. Failure to control the increase in expenditures, combined with failure to increase taxes in prosperous years, have, as I have already noted, added to inflationary pressures on the economy.

Overall Federal expenditures continue to increase even though costs for the Vietnam War have been declining. Vietnam War costs reached their peak in fiscal year 1969 when the incremental costs of the war—costs over and above what would have been spent for defense in peacetime—reached $19.8 billion. War costs since then have declined to an estimated $6.8 billion in fiscal year 1972 and an expected $3.5 billion in fiscal year 1973. These latter estimates do not take into consideration the current expansion of the bombing program. But this decline in Vietnam costs has been accompanied by increases in income maintenance and Great Society programs. A recent study by the Brookings Institution indicates that from fiscal year 1963 to fiscal year 1973, defense and defense-related expenditures dropped from 53 to 34 percent of the total budget, while civilian outlays grew from 47 to 66 percent. Furthermore, the study concluded that many of the numerous social programs, costing billions of dollars, had failed, indicating that money and good intentions alone cannot provide solutions to social problems. Nevertheless, the Brookings experts predicted that Federal expenditures for existing programs will increase in the future and that there will be demands for new services from the Government. With the tax reductions effected during recent years, the Federal Government will be hard-pressed to find the resources needed to finance these increased demands.

The continued increases in expenditures, in budget deficits and in the national debt have fortunately led to renewed interest in proposals to reduce or control Federal expenditures, to balance the budget, and to limit the growth of the public debt.

We must recognize that, despite the control over the Federal purse strings given to Congress by the Constitution, in practice, the Executive exercises extraordinary control over spending. However, the President frequently cannot take the most desirable action in the public interest when Congress enacts appropriation bills in excess of budget requests. His only recourse may be to veto the entire appropriation bill, which in many cases will be impractical. It has therefore been suggested that the Chief Executive be given the item veto power, whereby he could prevent specific increases which he considers without merit or of low priority.

Several critics believe that there is presently too little coordination between expenditure and revenue decisions by Congress. Congress now views the budget largely as a series of separate and unrelated acts, with decisions on taxes and expenditures made independently by separate committees in each House. I believe that some way must be found to insure that Congress considers the budget as a whole and relates revenues to expenditures. One attempt to accomplish these purposes was the Legislative Reorganization Act of 1946, which established the Joint Committee on the Legislative Budget. The committee was to meet early in each session of Congress, consider the President's budget proposal in relationship to economic conditions and efficiency, set an annual ceiling on appropriations, and coordinate taxes with expenditures. This committee did not live up to expectations. It was probably too large to be effective, and the overall expenditure limit was difficult to implement. At any rate, the committee died after it was unable to agree on a ceiling in 1947 and after its 1948 ceiling was not enforced.

The Committee for Economic Development has recommended creation of a "joint budget policy conference", to include congressional leaders, majority and minority representatives from the revenue and appropriations committees of both houses, and members of the Joint Economic Committee. This conference would study the budget as a whole, and would provide communication among the revenue and appropriations committees of the two houses and the Joint Economic Committee.

There appears to be much room for improvement in the coordination of appropriations decisions. At present, appropriations are determined in some thirteen separate appropriations bills, with little consideration given by the subcommittee responsible for each bill of its effect on total new obligational authority, total obligations to be incurred, or the likely level of expenditures. The costs of the programs considered in each of the individual bills are not considered in relationship to the costs associated with the other bills. Thus, Congress does not look at appropriations and other expenditures as a whole and compare alternative programs. The omnibus appropriation bill, associated with the fiscal 1951 budget, was an attempt to introduce the necessary coordination, but this proposal met the same fate as the Joint Committee on the Legislative Budget.

It is apparent that the Government has not heeded the advice of Thomas Jefferson when he said:

> To preserve our independence, we must not let our leaders load us with perpetual debt. We must make our election between economy and liberty, or profusion and servitude.

Over the years, many Members of Congress have proposed various methods to bring to the attention of responsible Federal officials the need to restrict expenditures to available receipts and thus to assure a balanced budget. Unfortunately, as the record testifies, these efforts have not been successful. Expenditures keep climbing, deficits continue to occur, the national debt continues to increase. The time for positive and drastic action has long since arrived. I believe that the only way to insure fiscal responsibility is by means of the constitutional amendment. I am therefore introducing a constitutional amendment which would contain the following provisions:

Total appropriations as well as total expenditures for any fiscal year cannot exceed total expected revenues for that year. There is to be no permanent increase in the national debt.

The existing debt is to be redeemed.

The above provisions may be suspended only in times of war or national emergency.

When Federal officials are forced to observe the mandates of this constitutional amendment, the financial integrity of the country will be insured. Less drastic steps have clearly failed. It is high time to adopt this amendment as rapidly as possible.

WORK IN ENGINEERING SCARCE

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. GIAIMO. Mr. Speaker, however much it is said that our national economy is improving, the plight of millions of people out of work or underemployed has remained dismayingly the same.

Foremost among that group are the scientists and engineers of our Nation, out of work, without pension rights or new employment opportunities, allowed to let those faculties that have made our Nation, the greatest industrial nation, grow idle.

In Connecticut this problem is particularly acute, as chronicled in many stories over the past few years, and remains so as shown in the following article from the August 13 edition of the Hartford Courant. While some help from the U.S. Labor Department and voluntary groups of scientists and engineers has cushioned the blow, the unemployment of these men and women remains a national disgrace and an economic tragedy.

Mr. Speaker, I commend this article to the Members of this body, and particularly to those who are charged with maintaining a vital defense budget and promoting our aerospace industry. Stimulating those industries is the greatest step we can take for the national economy, and bringing scientists and engineers back to their proper work is the best stimulus to those industries.

The article follows:

UNEMPLOYED HARDPRESSED: WORK IN ENGINEERING SCARCE

(By Barry Schiffman)

A 62-year-old engineer with a PhD degree had three children in college, a $60,000 house in the suburbs and membership in an expensive country club before he lost his job.

Now, after more than two years of unemployment, he and his wife are living in two furnished rooms in Hartford. His three children were unable to stay in school, and one is also unemployed.

"He wore the best of clothes when he first came in here, but now he's dressed shabbily," says Martin Meany, coordinator for the Connecticut Volunteer Engineers, Scientists and Technicians (CONN-VEST) a self-help group for unemployed engineers.

The engineer, whose name was withheld, had sent about 350 resumes of his work history to firms, but received only two responses, Meany says.

Meany, an employe of the State Employment Service which provides office space at 90 Washington St. for CONN-VEST, says "he's licked because of his age."

The 62-year-old engineer is just one of an estimated 5,000 aerospace engineers and technicians looking for work in Connecticut.

As defense expenditures were cut back in the past two years, the engineers started turning up on the unemployment lines.

CONN-VEST was established in Connecticut last November, shortly after a layoff of some 500 engineers at the Pratt and Whitney Aircraft Division, United Aircraft Corp. Similar organizations had been formed in other states to help engineers find employment.

CONN-VEST holds workshops for the engineers to help them know where to look for jobs and how to do well on interviews. And the group canvasses industry in the state trying to get the first word on job openings that may be filled by the engineers. It also provides a referral service.

Manpower for these activities is provided by the out-of-work engineers who must give at least four hours a week. Some financial support comes from the U.S. Labor Department, and office space and the coordinator's salary are given by the state Labor Department.

Some of the engineers who have found jobs contribute money to CONN–VEST to help the most successful groups of its kind and has compiled a 53 per cent placement rate in its first half year. John J. Nolan, CONN–VEST director, says the average placement rate is about 20 or 30 per cent.

The engineers encounter particular problems in finding work, and when they do get a job offer it often is not in their specialty and usually pays less than they were getting in their previous jobs.

A former chemical engineer is now working as an undertaker's assistant; a broadcast engineer is manager of a fast food franchise and an electrical engineer is manager of a shoe store.

Their new jobs often pay several thousand dollars a year less than what a top-level engineer can earn. Top engineering positions in the aircraft field pay between $18,000 and $20,000 a year, Nolan says.

The fact that many of the unemployed engineers have aerospace experience blocks them from some positions. The Connecticut Bank and Trust Co. donates computer time and prepares a weekly print-out of the registered job seekers and their specific skills.

"It's not true, but it's believed. Aerospace contracts are on a cost-plus basis, and aerospace engineers have a reputation of thinking money is no object," Nolan says.

"Age, however, is the biggest problem. They might have laws against discrimination, but it's difficult to prove anything," he says.

"We hear we're overqualified. They tell us we'll leave as soon as we find a better job up to our qualifications," he says.

"But, when a company wants to hire someone, they'll get an engineer to fill a technician's spot at a technician's salary and have him do the work of three men," Nolan says.

There is resentment among the engineers who a decade ago had felt a great demand for their skills and now face tremendous competition for less desirable jobs.

When engineers talk about their problems, unions are usually mentioned. One engineer at the CONN-VEST office in Hartford suggested that organization like a construction union—which controls hiring and firing and apprenticeship programs—would have been a good idea. This engineer was once a vice president of a large aircraft firm.

"Engineers had an outlook that each individual could do the job better than anyone else and felt secure that he would survive." Nolan said "They didn't trust any idea like basing job security on seniority."

PERSONAL PROBLEMS

Besides the economic difficulties the loss of a job creates, the men are faced with tremendous personal problems.

"It's difficult for a man who has worked all his life and has only a few years left. He had kids in college and he's running out of unemployment benefits. What do I do? How do I tell him to pay his bills? It's hard to send him to welfare," Nolan says.

"If he goes on welfare and still owns his home, it'll be attached. But most of our people are 40 or 50 or older. A man of that age has little chance of getting a job," he says.

Among the CONN-VEST members there has been one suicide, a heart attack believed to have been brought on by anxiety, and four or five divorces attributed to unemployment and drop in standard of living. There may be more problems, but the CONN-VEST staff does not seek personal information about the registrants.

Security becomes a great concern of the job seekers, but jobs are so scarce that most will return to the aerospace companies if given the opportunity, Nolan says. "There's nothing around at all. You have to take it," he says.

But further cuts are expected in the areospace field and some engineers at the CONN-VEST office said 20 percent of those now employed will lose their jobs before the field stabilizes.

One former engineer is studying to become a male nurse. Monthly Labor Department reports have continually shown a demand for nurses since the beginning of the recession.

HOPES TO EXPAND

CONN-VEST hopes to expand activities and develop more services for the unemployed engineers. Although only 10 percent of the estimated unemployed are registered, the group feels it has been successful.

"Many engineers live too far from Hartford to be attracted to the organization and many do not realize what we can do," Nolan says.

"We're efficient. Once we had a call for a German-speaking engineer and we sent someone for an interview in a half hour. The next day we found two more," he says.

The directors of the group have been among the most successful in finding jobs. Since last November five directors have found jobs, and Nolan is waiting for security clearance before he becomes a sixth former director.

HON. ALLEN J. ELLENDER, SENATOR FROM LOUISIANA

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. RARICK. Mr. Speaker, the death of the late Honorable Allen J. Ellender, the distinguished senior Senator from Louisiana and President pro tempore of the U.S. Senate, is a great loss to the people of this Nation and the State of Louisiana.

Formerly chairman of the Senate Agriculture Committee and at the time of his death its ranking member as well as chairman of the Senate Appropriations Committee Allen J. Ellender was a great American and a particularly favorite son of the people of his native Louisiana.

Allen J. Ellender's public life was a model for all Americans. Sincere, honest, and dedicated, his life in public service spanned virtually a half century without a breath of scandal or conflict of interest. His death leaves a void that the people of Louisiana and this Nation will find difficult to fill.

Allen Ellender loved his people and they returned his affection. He will be missed. The Nation has lost a great legislator. Louisiana has lost a favorite son, a man from the bayou country who rose to heights of power never before attained by its people, yet a man who never lost touch with the folks at home—his people, the people who were the source of his strength and determination.

THE SLOW PARLIAMENTARY DEATH OF THE PRODUCT SAFETY ACT

HON. FRANK J. BRASCO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. BRASCO. Mr. Speaker, in recent years we have come to realize that a wide variety of commonly utilized consumer products are hazardous to the point of causing death and injury to millions of people annually.

Toys, lawnmowers, clothing, drugs, pesticides, glass doors, unvented gas heaters, household chemicals, children's car seats, floor furnaces, cars, baby furniture, and a host of other items take a devastating toll annually. Many very young lives are lost as a result of this state of affairs. Nor is industry interested in making any effort or spending money to make such products safe.

A variety of laws have been passed to remedy specific ills in respect to certain categories of products. One such was the Toy Safety Act, designed to remove thousands of different kinds of dangerous toys from the market. Another was the Poison Prevention Packaging Act, which aimed at insuring that all hazardous products came equipped with childproof safety closures. Yet another was the Flammable Fabrics Act, which sought to require availability of flameproofed nightwear for children.

Various Government agencies were specifically charged with responsibility for enforcement of these measures. The first two were placed in the jurisdiction of the Food and Drug Administration. The last was placed under the Department of Commerce.

In each case, the agency charged with protecting the public through enforcement of the law has totally abdicated its responsibility at the expense of an unsuspecting public. None of these laws are now being effectively enforced. Years have elapsed since Flammable Fabrics was placed on the books. The textile lobby has been able to influence the Department of Commerce, and today no across-the-board Federal protection is available. Thousands of young children die horrible deaths annually because of this Federal inaction.

President Nixon signed the poison prevention packaging law in December of 1970. We are still waiting to see aspirin packages equipped with childproof closures this month. Hurray for FDA, the consumer protection agency which only protects industries it is supposed to regulate.

This is why a new Product Safety Act was just passed by the Senate. It would establish a new Government agency to replace FDA to act as a consumer protection watchdog to guarantee that consumer products in the American marketplace are safe.

The House Commerce Committee has overwhelmingly approved a similar measure. Most observers are agreed that if presented to the full House, the bill would receive approval.

Yet since June 22, this House bill has reposed on the shelf in the Rules Committee of this House. Is it not one of the major functions of that same committee to see to it that important bills are given priority for floor consideration? It was my understanding that this was indeed the case.

Yet the Rules Committee of this House has given priority to much less important legislation in the interim.

The National Commission on Product Safety reported that annually 20 million injuries and 30,000 deaths are associated with consumer products. Reams of testimony have informed Congress that much of this could be prevented by removing unreasonably hazardous items from the marketplace. The bill now awaiting a rule would effectively accomplish such an objective.

In spite of a promise from the Rules Committee that it would consider the bill, it is not on their agenda. There are five bills on that agenda. Here they are:

Air passenger fees; a middecade sample census survey; wheat research; amendments to the public works law; interim SALT agreements.

If the product safety bill is not allowed out to the floor for full House consideration, it will be effectively killed, depriving the entire Nation of a vitally necessary and long overdue defense against what is revealed to be an appalling state of affairs.

Who wants to kill this essential measure? Let us drag a few resident Washington inhabitants out from under their accustomed rocks and examine them. First there is the drug lobby, which wants the bill dead as soon and completely as possible. FDA would be abolished under the Senate version, which the drug industry fears might be accepted in conference, as was the stronger version of the Poison Prevention Packaging Act of 1970. They do not want to take a chance on such an unhappy event. FDA enforces laws, by and large, of, by and for our drug and food industry, and the consumer can go hang. No mere page of the CONGRESSIONAL RECORD can do justice to the list of FDA failures when the public interest is at stake. The recent DES fiasco is a proper example. In the face of overwhelming evidence that this additive has some connection with cancer, the agency has stubbornly refused to act in the public interest. Yet the chemical is banned in a score of foreign countries.

So the crux of this lobbying effort is to preserve intact for as long as possible the entity we know as FDA. Should the agency be abolished, and a new consumer protection entity created, some very neatly stacked houses of cards would be destroyed.

The Senate bill would establish a new product safety agency and give to it FDA's present functions of regulating food and drug manufacturers. It would also give that new agency responsibility for ensuring safe consumer products.

Recently, the General Accounting Office did some food plant inspecting of its own, and submitted a report flaying FDA for lax inspection of facilities processing foods we commonly consume. Is there any wonder, then, that the food industry wants this bill on the House side to die a quiet death in the Rules Committee? It is their last chance to kill it.

How fascinating to observe the edifying spectacle of industries, lobbying to preserve an agency charged with policing them. Industries, we might add, which the agency has been charged often with favoring in the past at public expense. Coincidence, no doubt. Certainly, it must be just that and no more.

The Senate passed this measure overwhelmingly, by a vote of 79 to 10. The House is ready to debate and vote on this bill in our own version. The need for such a measure is proven. The Rules Committee of this House has a duty to the public, our leadership, and the House membership as a whole to perform its function and grant a rule.

EARLY INTERVENTION

HON. ORVAL HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1972

Mr. HANSEN of Idaho. Mr. Speaker, Dr. Bettye M. Caldwell, director of the Center for Early Development and Education in Little Rock, is one of the Nation's leading authorities on the subject of young children. At the recent early childhood conference I sponsored in Idaho, Dr. Caldwell discussed the impact of early childhood programs and the rationale for early intervention.

I am including excerpts from Dr. Caldwell's very timely remarks in the RECORD:

THE RATIONALE FOR EARLY INTERVENTION

(By Dr. Bettye M. Caldwell)

The second reason for our becoming so focused on the importance of early childhood is what I have called the emperical rationale. I have suggested in my paper on early intervention that our present literature basically consists of an old wave of data and is terribly old—that is pre-1960—and then a new wave of data that to a great extent is post-1965; Head Start is but seven years old.

There were actually a number of studies conducted prior to 1960 that pointed to the importance of early experience but as I said in my opening remarks it is an idea whose time has come, and the idea of time had perhaps not come during that period and I think many of us were less willing to listen to the facts at that time.

A classic example is a very famous study by Harold Fields that was done in 1939. This is a study in which a number of children who had been diagnosed as mentally deficient—that was the word that was used at that time—and who were residing in an over-crowded orphanage in Iowa, but who had to be taken out of the orphanage because they were retarded or deficient, were transferred to an institution for older retarded girls. It sounds like hardly an infant enrichment experience, if you will, and yet it proved to be exactly that.

I have re-read this article several times in recent years and I have found it full of all kinds of wisdom that was overlooked. The adult-child ratio was 50:1; there were 50 adolescent girls on a ward who had been institutionalized for the most part for many years and into those wards came one baby. Can you think of anything that would have meant more to those girls and can you think of anything perhaps much more wonderful than for those babies who had been neglected and who simply had not had enough attention over in the orphanage? The results of this study were most encouraging. The children were left in that environment for awhile, then almost all of them were later found to be adoptable and they were taken out of the orphanage, out of the institution altogether and were placed in foster homes and eventually adopted.

In the early 1960's, Harold Fields followed the sample. It is a very interesting thing because we protect the identity of adopted children in order to help them and their new families, and he had to carry out a fantastic sleuthing enterprise to track them all down, but he found them and the results of the follow-up were as encouraging, if not more so, than the analysis that he made at the time they were at the institution.

The contrast group, which lost close to 30 points in IQ; the other group gained close to 30 points. The contrast had remained over this 30-year period. All 13 children in this experimental group were found to be self-supporting and none was a ward of any institution, public or private. In the contrast group of 12 children, one had died in adolescence following continued residence in a state institution and four were still wards of institutions. The cost to the state for the contrast group for whom intervention was essentially custodial care was at least five times that of the cost of the experimental group.

Of course, it is very difficult to get into what it means in terms of this intangible thing that we call the quality of life, but it would seem without question that the ones who were able to go out into the society at large had a much more meaningful life experience.

That study has been quoted and re-quoted for one particular reason, not because he proves that the environment was so important, but this was the first study that got into the literature that could be really called an infant enrichment study. These infants were transferred not at age four or five, but when they were between one and two, or thereabouts. It was really the first study that demonstrated that apparent retardation that could be measured at that point in time, could actually be corrected by placing the children in an environment that was more conducive to their growth.

Now, what about the new wave of studies? Dr. Zigler has mentioned the studies of Susan Gray and her colleagues in Nashville, Tennessee. They have now followed their children through the second grade. In contrast with some of the accusations that have been made in the Westinghouse study, not all the differences that were shown in the groups were "washed out by grade two". Studies completed throughout the nation including my own work at Syracuse are now reasonably established as offering some evidence that you can indeed improve the cognitive functioning of children as a consequence of enriching them during their early years.

Of the studies that I have mentioned only the Syracuse study, and that is the one I was involved with, had children in an enrichment project during infancy. When I pooled children from all the years that I directed that project—1964 to 1969—I can come up with the generalization that you can increase the quotient on the developmental quotient (I resist calling them IQ's at this early developmental period) something like 12 to 15 points the first year, and 3 to 5 points for the second year. If children participate in a program of this sort over any length of time, obviously this can result in substantial gain. Not all of the children gained and in our program, gain was inversely correlated with what you might call the general adequacy of the home. That is, the children who were from the most depriving environments tended to show the greatest gain.

The one thing that we did not find at Syracuse that I had expected to find was that when we divided our groups at age three, because that is the ordinary cutting point for acceptance to a nursery school program, we did not find that the children who were admitted prior to age three gained any more than the children who were admitted after age three.

If you will look at the gradual divergent, at the fact that children tested cross sectionally—as 1, 2, 3, 4—you will tend to see a slight decline in children from disadvantaged circumstances. This means that if you have a young group that is going to enter an enrichment program, that is tested at one, where is he in relation to these other groups. He starts out higher, which means that it is more difficult for gain to be greater. If you come here at age three, there has already been a certain decline that has been associated with the environment and therefore it is easier for the gains to be greater. I think that this is probably a valid interpretation and I hope that within the next few years we will be able to get more information about these very precious first three years in order to tell whether that is a rationalization or whether it is a rational answer.

In my remaining time I want to try to comment briefly on some things that I feel now are obligations of all of us if we are to move forward with the kind of program that Congressman Hansen is interested in, and the kind of program that Dr. Zigler in his key position can help generate throughout America. There are a few obligations that I feel we have—those of us who represent the bread and butter of the field. That is, we are really there working with children and are trying to carry out these programs and have the responsibility for seeing to it that quality does indeed exist.

The first one of these needs that I see now is that we need to develop comprehensive early childhood programs, embodying a full range of services. I like very much what Dr. Zigler said about Head Start entering an orthodox phase long before it had a chance to really be experimental. We do not need orthodoxy at this time; we need a great deal of flexibility. We need a willingness to look at different models and to search for different models. We need a willingness to think that we don't know all of the answers right now. We also need to have our heads battered against the wall when we find ourselves thinking in extremes—that is, it's full day care or nothing; does a child have to be in Head Start five half days a week? It may be that for many children the kind of enrichment or intervention that is needed might be one hour a week, and if so we need to develop the kind of model that is sensitive to that particular child and his family.

This, to me, is an extremely important thing for us to do, for us to be willing to think of new models and to develop a full range of services. I could not agree more with Dr. Zigler's remarks about the importance of day care and if you want to really know what hurts my feelings, it is to have day care indicted as something that is breaking up families in American life. Day care is perhaps doing more to help family life than many of the other social institutions that we have. Anything that provides a service that is develop mentally oriented and that the children need is helping families. Day care has been created and there is a need for more day care because of family problems. Family problems do not increase because we have more day care and it is extremely important for us to keep this distinction in mind as we develop programs for young children.

A second point that I wish to make here, and this is so very important, is that researchers who are conducting studies dealing with the effects of early intervention are obligated to follow their children in subsequent developmental periods. We are constantly hit with the thing that Head Start does good, but then they go back. I don't believe this is true. I even offer a different analysis of the Westinghouse report. There were still some gains that could be found and gains that were associated with a very brief period of time in the span of life of those individual children. It is mandatory and I am willing to mandate that people who accept grants to do studies of this sort must be obligated to build in some kind of machinery for long-term follow up. You should not be permitted to kiss and run; you should be required to do this work and say "I will see to it that a machinery is set in motion" so that we will indeed be able to say what happens in subsequent developmental periods.

My next point is that there must be continuity, not only of research but of programs between early childhood and the elementary years. We cannot continue to have this chasm at age six or age five as it is in some states. It is utterly ridiculous, it is what is called the naive environmentalism that says, "you step in here now and then you are through." That is all you have to do. That is an absolute denial of the very basic premise that says that the environment is important in the first place. If it is important initially, it is important later on and we simply must develop programs that provide for continuity from very, very early childhood up to the attainment of biological maturity.
